Supply of Cattle Dwindling Steadily

Packers are concerned about future cattle supply. The long advertised shortage is steadily materializing with a prospect that a year hence it will become acute. Although packers profess to sell much of the beef they handle at actual loss making their money out of the by-products ,the fact is indisputable that the cattle industry is the main anchorage of the packer. So far this year a deficiency of about 13 per cent in cattle supply and 20 per cent in beef tonnage has been recorded, compared with the corresponding period of 1919, which was a period of heavy production, but all the signs discernible, both at the market and in feed lots and pastures, herald increasing scarcity.

Cattle were cleaned up at the lowest prices of the week . In the case of plain, heavy bullocks depreciation compared with the high spot of Monday was 75c to $1 per cwt., while light steers and yearling cattle did not lose to exceed 25c. The week's run carried a large proportion of weighty Illinois and Iowa cattle that had been held back for a favorable spot. The advance of the two previous weeks exerted a magnetic influence, filled killers up with heavy beef and congested outlet channels. The recent advance necessitated marking wholesale beef values up $1 to $2 per cwt which had the effect of restricting consumption and aggravating the situation.

Light Hogs Strong

Although hog growers are protesting that the process of converting corn into pork is unprofitable they are faring far better than cattle feeders. Under fairly heavy receipts the market has acted well, light hogs reacting last week to the high point of the year. Light hogs have become rarities, as the crop has grown into weight and the country is now cashing the tail end of the winter feeding.

Live mutton trade is less robust than recent. Colorado lambs are moving freely, pelts are slow sale and packers are protesting that a break of $6 per cwt. in dressed lamb has caused heavy loss. Heavy importations of New Zealand and Canadian frozen lambs have aggravated the situation. Thirty days hence Colorado stuff will be practically all in, insuring a period of scarcity until Southern stuff begins moving in June. The 1920 lambs crop promises to be 25 per cent less than that of last year.

GRADES OF HAY AND STRAW

Established by National Hay Association
(Revised July 25, 1917.)

HAY

No. 1 Timothy Hay—Shall be timothy, with not more than one-eighth mixed with clover or other tame grasses, may contain some brown blades, properly cured, good color, sound and well baled.

Standard Timothy Hay—Shall be timothy, with not more than one-eighth clover or other tame grasses, may contain brown heads and blades, otherwise good color, sound and well baled.

No. 2 Timothy Hay—Shall be timothy not good enough for Standard, not over one-fourth mixed with clover or other tame grasses, fair color, sound and well baled.

No. 3 Timothy Hay—Shall include all timothy not good enough for other grades sound and reasonably well baled.

No. 1 Light Clover Mixed Hay—Shall be timothy mixed with clover. The clover mixture not over one-third, properly cured, sound, good color, and well baled.

No. 2 Light Clover Mixed—Shall be timothy and clover mixed, the clover mixture not over one-third, properly cured, fair color, sound and well baled.

No. 1 Mixed Hay—The same to contain at least fifty per cent timothy, and balance other tame grasses, not to exceed twenty per cent clover, properly cured, bright natural color, sound and well baled.

No. 1 Clover Mixed Hay—Shall be timothy and clover mixed, with at least one-healf timothy, good color, sound and well baled.

No. 2 Clover Mixed Hay—Shall be timothy and clover mixed, with at least one-fourth timothy, reasonably sound and well baled.

No. 1 Clover Hay—Shall be medium clover, containing not over fifteen per cent timothy and five per cent other tame grasses, properly cured, sound and well baled.

No. 2 Clover Hay—Shall be clover, sound and reasonably well baled, not good enough for No. 1.

Sample Hay—Shall be sound, reasonably well baled, mixed, grassy, threshed or, hay not covered by other grades.

No Grade Hay—Shall include all hay, musty, or in any way unsound.

ALFALFA

Choice Alfalfa—Shall be reasonbaly fine leafy alfalfa, of bright green color, properly cured, sound, sweet and well baled.

No. 1 Alfalfa—Shall be reasonably coarse alfalfa, of a bright green color, or reasonably fine leafy alfalfa of a good color and may contain 2 per cent of foreign grasses, 5 per cent of air-bleached hay on outside of bale allowed, but must be sound and well baled.

Standard Alfalfa—Bay be of green color, of coarse or medium texture, and may contain 5 per cent foreign matter; or it may be of green color, of coarse or medium texture, 20 per cent bleached and 2 per cent foreign matter; or it may be of greenish cast, of fine stem and clinging foliage, and may contain 5 per cent foreign matter. All to be sound, sweet and well baled.

No. 2 Alfalfa—Shall be any sound, sweet and well baled alfalfa, not good enough for Standard, and may contain 10 per cent of foreign matter.

No. 3 Alfalfa—May contain 25 per cent stack spotted hay, but must be dry and not contain more than 8 per cent of foreign matter; or it may be of green color and may contain 50 per centh of foreign matter; or it may be set alfalfa and may contain 5 per cent foreign matter. All to be reasonably well baled.

No Grade Alfalfa—Shall include all alfafa not good enough for No. 3.

STRAW

No. 1 Straight Rye Straw—Shall be in large bales, clean, bright, long rye straw pressed in bundles, sound and well baled.

No. 2 Straight Rye Straw—Shall be in large bales, long rye straw, pressed in bundles, sound and well baled, not good enough for No. 1.

No. 1 Tangled Rye Straw—Shall be reasonably clean, may be some stained, but not good enough for No. 1.

No. 1 Wheat Straw—Shall be reasonably clean wheat straw, sound and well baled.

No. 2 Wheat Straw—Shall be reasonably clean; may be some stained, but not good enough for No. 1.

No. 1 Oat Straw—Shall be reasonably clean oat straw, sound and well baled.

No. 2 Oat Straw—Shall be reasonably clean, may be some stained, but not good enough for No. 1.

Grades Adopted by the Government in Addition to N. H. A. Grades.

No. 1 Heavy Clover Mixed—Shall be clover containing 20 to 40 per cent timothy or 10 to 25 per cent tame grasses, bright, natural color, sound and well baled.

No. 1 Mixed Hay—Shall contain at least 50 per cent timothy, the balance other tame grasses, not to exceed 20 per cent clover, properly cured, bright natural color, sound and well baled.

PICTURES FOR PROFIT AND PLEASURE

DID YOU ever take a picture with a camera or kodak? If not, then you have missed a real pleasure. I know of no simple pleasure out of which I derive more real excitement than being able to "snap" my little nephew's picture when he is busy with his toys, and, all unaware of my designs, is in a perfectly natural pose. And in the years to come these pictures will prove more interesting to the family than any taken by the commercial photographer.

Then there are the family celebrations when, on some holiday we gather around the family board. You wouldn't think of hiring the local photographer to come and take a picture, but perhaps before another year has rolled around, some one of that group may be missing or too far away to be with you, and then how the value of that little snap shot will increase.

This is not a diversion for children alone—you will be just as interested as they once you take your first picture and then anxiously await its return from the developing tanks and printing frames.

And for those who will take the time and patience to make a study of it, so that your picture will be interesting—will have just the background to bring out the subject snapped; the business can be made profitable. Of course the field is limited, but there isn't a farm paper which won't buy a few snap shots if they are well taken ,of good farm buildings, thoroughbred stock, etc., and surely the country, with its woods, hills, lakes and streams furnishes the best background that can be found anywhere. Be sure if you are taking a person clothed in white, for instance, that there is a dark background. This may be accomplished by a group of shrubs, or others in the same picture who have darker clothing.

Never let the sun shine directly into your kodak or you will not get a good picture. Be sure the kodak is level and, properly focused as to distance and unless you can hold it perfectly steady, you might better use a tripod or stand, fence or stump —anything to steady it, while you take the "snap shot," while of course no one ever attempts a time exposure without the kodak is on a solid foundation. Inside pictures and pictures taken out of doors after five o'clock should always be "time exposure" pictures.

The less expensive kodaks are better for the beginner, as they are not so intricate to operate. After you have mastered this machine, if you find that your interest will warrant it, then it is plenty of time to invest in a more expensive outfit. The small size, box size and shape, can be bought for as little as five dollars and will last for years.

Aside from pictures of special costumes taken at parties, etc., the best idea is to keep away from the unusual garb—the natural subject in its proper environment will last longer and be more interesting to both you and your friends and if you want to market it, you will find that there will be a more ready sale.

THE SECRET'S OUT

WE HAD A suspicion that men had just as big a bump of curiosity as women, but they denied it, and how were we to prove it? Well, the question has been answered at last. And I'll tell you how I know it. They have been curious to know just what it was that interested the women folks so in M. B. F., and so in order to find out they were obliged to read the paper from cover to cover, including the Women's page. How do I know this?

Because they are sending in pictures of their children and their homes to be printed on our page—

These wonderful trees which form a windbreek in winter and cool shade in the summer keep us from getting a real good view of the comfortable farm home of Mrs. Paul Monroe, of Hudson, Mich., but we are glad to give it space in this week's issue. It is one of the pictures which was awarded a prize in the contest for pictures of farm home scenes.

in fact are entering the contest for prizes, but gracious knows what they expect to do with the prizes which we are awarding. For listen ! The prize consists of one of those rubberized gingham aprons that are so handy to use when a woman washes either clothes or dishes. However as this is strictly a woman's contest, if they enter they must be content to at least let their wives have the prize, so I am sending to each man who sends in a picture for entry in this contest where the picture is judged good enough to print, one of these useful prizes, knowing that he will have to either give it to friend wife or else wash the dishes.

And now my bump of curiosity leads me to wonder which he will do with it.

* * *

And that's not all !—one of our subscribers—yes, a man, wrote me the other day, stating that as his wife had used the Personal Service Shopping Bureau with so much satisfaction, he wondered why our shopper wouldn't buy a special kind of fishing tackle which he wished to use. Of course we bought it. That's what we have the bureau for—the greatest service to the greatest number of people—are you using the Bureau?

WOMEN IN POLITICS

HAVE YOU ever attended a political mass meeting? If not, then you have a surprise in store for you. At least you have if your idea of such a meeting and mine agree—that is the idea I had prior to last night.

Ever since I have been old enough to think I have heard people speak of politics as being "rotten," and so in my mind's eye I had pictured a oplitical mass meeting as being a mob of excited men who sat in a room filled with smoke and with the air so foul that you could scarcely breathe. Nevertheless, believing this, I felt that now I was going to be able to vote for a president this year for the first time in my life, I wanted to personally hear a certain candidate who was scheduled to speak—I wanted to know what his ideas and ideals of Americanism consisted of —and so feeling that in numbers there was safety, I inquired until I found a few women who were willing to go with me to this mass meeting. We went early to avoid getting in a "howling mob," but as we approached the meeting place, we saw others going just as they might go to church or to a concert, in groups or couples, all quietly discussing their affairs or the coming meeting. But there was strangely different crowd than I had expected. These people who sat on either side were just the kind of people who lived in the flat next to mine. Armed with the evening paper to while away the time until the speaking should commence, they quietly found seats, and read or visited as they preferred.

After a little time a band began to play—national and popular airs followed each other and in the enjoyment of this concert the time quickly passed.

The speaker laid stress upon the statement that the woman's new found right to vote was not only a privilege but an obligation and he cited the fact that in little Belgium there was a penalty imposed upon those who did not take advantage of their opportunity to use the ballot.

Perhaps you did not have enough interest in the last election to register—or perhaps you were unable to do so. If so, be sure that you register for the presidential primary election April 5, 1920. And if you are a mother and since the last election a daughter has come of voting age, be sure that that daughter registers, or else she will lose the right to vote at the coming election which is undoubtedly the most important presidential election which has come in your life time or may ever occur again.

For the information of those not thoroughly posted on the subject, a few questions are given and answered which may assist you.

1.—Am I registered?

If you have voted in your home town since the Presidential election in November, 1916, you are registered.

2.—Have I invalidated my registration by moving?

If you have moved to a different town since you last voted, your old registration is no longer valid. You must register again in the town nearest your residence.

3.—Who may register?

Any citizen of the United States who is or may be 21 years of age on or before April 5th; and who will have lived in Michigan six months and in the county and township in which you are registered twenty days on or before April 5th.

4.—Who is a citizen?

Any person born in the United States. Any person born abroad of alien parents, whose father became naturalized prior to such person reaching the age of 21 years. Any person who has been fully naturalized.

5.—Under what name shall married women register?

A married woman should register under her own name. That is, the wife of John Doe should register as Mary Doe, not as Mrs. John Doe.

6.—Must a woman state her exact age?

No, she is only required to state that she is 21 years of age or upwards.

The Seed Catalogue

By C. Shirley Dillenback

True harbinger of spring it comes about this time of year—
Just as we're counting every sun and wishing spring were here.
It slips in on the rural mail—with all its splendid hints,
Concerning things that you should plant—and um—such florid tints,
Each one is best—there's not a flaw in anything that's shown—
They're all the earliest by test, of any ever grown.
And land, such pumpkins and such squash, they're likes was never seen
Such cabbages and 'matoes too—and here's a wonder bean—
Why—one's enough to make a meal—I guess it must be so
They wouldn't dare to print a lie—for my pa ought to know,
Then daddy gets his glasses out and mother gets her pen—
The wintertime is put to rout, we plan our garden then.
And mother talks of posie beds and father talks of corn—
There ain't a thing the whole world out to make me feel forlorn—
There's all our favorites on the list, for ma and I and dad
And I've my garden spot picked out—the best 'twas ever had.
Law, how that stuff comes popping up—enough for all our needs,
Those catalogues are just the stuff, they never mention weeds.

OUR READERS OWN COLUMN

THE QUESTIONS relative to the ingredients contained in patent medicines and their value or harmfulness are of such a nature that it takes longer for us to secure the desired information than any others asked. However, we believe that investigation on this subject is well worth while and we are glad to announce in this column, answers to several asked some time ago. The analysis of these so-called medicines was made by a state chemist in the employ of the Food and Drug Department, so we are sure that in giving you his findings and recommendations we are giving to you authorative information.

Mabel Clare Ladd, Editor Women's Department, M. B. F.

I appreciate your offer to find out if patent medicines are harmful or not. I should like to know if Dr. Miles remedies, Nervine blood medicine and other preparations are injurious or not. Do they act as a stimulant only, or give permanent relief? Thanking you for the favor of finding out for me, I am, Mrs. M. H.—

"The Dr. Miles' Nervine is a preparation containing glycerine, sugar and bromides in the form of potassium sodium and ammonium salts. It also contains traces of benzoiac acid. This remedy contains bromides in sufficient quantity to be harmful, if too frequent doses are taken."

Dear Miss Ladd: I saw in your paper an offer to find out for us what is contained in certain patent medicines which we might think helpful and I should very much like to know what is in Shoop's Restorative. The label on the bottle states that it contains 12 per cent alcohol but does not mention any of the other ingredients.—D. K.

"In reply to your inquiry relative to 'Shoop's Restorative,' would advise that it contains benzoiac acid in quantities insufficient to be of therapeautic or curative value. It contains also berberin hydrastin which are used in small doses as simple bitters. There is also some sugar. We judge that the remedy is of little value and harmful effects might easily be produced if large doses were taken."

has known for years and that is that nature has provided a remedy for almost every ill—and that what we most often need is not medicine which is usually so strong if it does any good that our stomachs are all upset through taking it, as it is a corrective treatment. For instance, there is more nervous prostration in cities and villages than in the country—because of the method of living, and the first remedy recommended by the highly paid nerve specialist is plenty of exercise in the open air and complete rest from the usual line of activities and they usually recommend that the patient go to a sanitorium—not because they need medicine but because most clever doctors have found that a patient will not rest from his present worries and work at home. But that rest does not mean inactivity for almost all nerve specialists insist on plenty of exercise—but that exercise must be in the open—when the quantity of fresh air breathed and the work given the muscles will tire the body to the extent that sleep—the best remedy in the world for tired nerves—will come unassisted by sedatives.

There are times when, undoubtedly nature has been abused until she needs assistance in righting herself but when we have reached that stage, we surely are not in a position to prescribe for ourselves through the reading of circulars promising a cure for all ailments and it is the safest course to consult a reliable physician.

"HEARTS OF THREE"

(*Continued from page* 15)

bethrothed to you; to remember that all I had known of you was straightness and man-likeness and courage such as never stabs from behind the shield of the dark. I regret. I am sorry. And I am proud once again to welcome you into my family as the husband-to-be of my Leoncia."

And while this whole hearted restoration of Henry Morgan into the Solano family went on, Leoncia was irritated because her father in Latin-American fashion, must use so many fine words and phrases, when a single phrase, a hand grip, and a square look in the eyes were all that was called for and was certainly all that either Henry or Francis would have vouchsafed had the situation been reversed. Why, why, she asked herself, must her Spanish stock, in such extravagance of diction, seem to emulate the similar extavagance of the Jamaica negro?

While this reiteration of the betrothal of Henry and Leoncia was taking place, Francis, striving to appear uninterested, could not help taking note of the pale-yellow sailor called Juan, conferring for'ard with others of the crew, shrugging his shoulders significantly, gesticulating passionately with his hands.

(*To be continued*)

NO PLACE FOR THE DEACON

Unobserved, and unannounced, the president of a church society entered the composing room of a newspaper just in time to hear these words issue from the mouth of the boss printer:

"Billy, go to the devil and tell him to finish that 'murder' he began this morning. Then 'kill'." William J. Bryan's youngest grandchild, and dump the 'Sweet Angel of Mercy' into the hell-box. Then make up that 'Naughty Parisian Actress' and lock up 'The Lady in Her Boudoir.'"

Horrified, the good woman fled, and now her children wonder why they are not allowed to play with the printer's youngsters.

For Two Stems of Clover

Lime the land for clover.

A ton of lim oen wheat in the fall will make two stems of clover grow where one grew before.

The Children's Hour

DEAR CHILDREN: "Beauty," the prize horse drawn by Hazel Ball and reproduced in this issue, looks so real and lifelike that we are sure Hazel has great possibilities. Our artist who judged the drawings submitted, stated that the detail work was perfectly splendid. Now let others try—it takes care and pains—but if you have talent we will help you through our paper what we can to develop it.

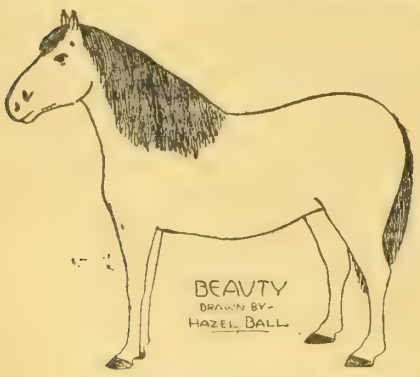
Last week I was attending a meeting in a building in which the Boy Scouts were also holding a meeting and on my way past the door of their room I glanced in and was attracted by a large blackboard on which the word "Service" was written in a very unusual way. On making inquiry I was informed that "Service" was their slogan—their watchword—and that the definition was as follows:

S—mile
E—arnestness
R—eliability
V—oice
I—nitiative
C—ourtesy
E—nergy.

And it was such a good slogan for both boys and girls, and the Scouts have made it stand for so many excellent things in this definition that I felt sure my boys and girls would all be glad to adopt it as their own and learn the definition.

A prize was awarded this week to Loretta Moore, of Levering, Ro. No. 1, who sent in the first answer to the puzzle, giving the girls' names correctly. Affectionately yours—*Laddie.*

THIS WEEK'S PRIZE DRAWING



OUR BOYS AND GIRLS

Dear Laddie:—I am a boy 10 years of age. I have three brothers, Donald, Kenneth and Julius. I am sending the girls' name puzzle. I live on an 80-acre farm. Well, I must close.—Ellis E. Bazzett, Bradley, Mich.

Dear Laddie:—This is the first time I have written to you. I am sending the answer to the puzzle. The first name is Harriet; second, Bernice; third, Madeline, and fourth, Kaffe.—Loretta Moore, Levering, Mich.

Dear Laddie:—I am a little girl of 7 years. I have brown hair and brown eyes. I live on a farm. We have five horses, seven cows and some cattle. Our cats are wild and I cannot catch them. I like the stories that are continued best—Margaret Ridley, Capac, Mich.

Dear Laddie:—I have been looking at M. B. F. and like the children's page especially. I am 10 years old. I have two brothers, one 14 and one 15. There are 24 in my school. Our teacher is Mrs. Emma Bennett. I hope to see my letter in the paper.—Agnes Smith, Webberville.

Dear Laddie:—I am a girl 10 years old the 6th day of May. I am in the 7th grade at school and my teacher is Mrs. Hurford. I have never written to you before so thought I'd write now. I send an answer to the puzzle. I will close hoping to see my letter in print.—Dorothy Dean, Milford, Mich.

Dear Laddie:—I am a little boy 7 years old. I began school last fall and have gone through the primer and the first reader. I am nearly halfway thru the second reader now. I live on a farm and like it. I have a little brother. I would like to see my letter in your paper. Mama reads the letters to me.—Leon Nilb, Niles, Mich.

Dear Laddie:—I thought I would write you another letter. I am a boy 11 years old. I will be 12 the last of March. One of my schoolmate's birthday is on the same day only she is a year older. You wanted us to tell which we liked best, a continued story or a complete story every week. I like a complete story every week. I like Walter Wellman's picture puzzle very much and hope you will have one in the paper every week. I guess I will close hoping to see my letter in print.—Raymond Solgat, Caro, Mich.

Dear Laddie:—This is the second time I am writing to you as I did not see my other letter in print. I have four brothers older than myself and one sister younger. I am 13 years old and in the 7th grade at school. My teacher is Sister Achatia. I will close now and hope t see my letter in print.—Verena J. Martin, Westphalia, Mich.

Dear Laddie:—I have just finished reading the "Children's Hour," and I enjoy it so much. I have tried my luck at guessing the puzzle. I think they are, Harriett, Bernice, Drusilla and Katy. My father takes the M. B. F. and has taken it for the past two years and likes it very much. Well I must close hoping to see my letter in print.—Rebecca Hayes Bailey, Mich.

Dear Laddie:—This is my first letter to you. We take the M. B. F. and I like to read the children's page. I am 12 years old and go to school as much as I can. I am in the 6th grade. My teacher is Miss Alice Goodsell. I like her very much. I have two sisters, Pauline, 11 years and Ruth, 8. I will close hoping to see my letter in the paper.—Eleanor Mae Criger, Columbiaville, Mich.

The Windy Month

LONG ago when there were but ten months in the calendar year March had the distinction of being the first month, and it was not until 713 B. C., when the Emperor Numa added January and February to the calendar that March took the position which is now occupies. The month was named in honor of Mars, the god of war, but by the old Anglo-Saxons it was called Lencten monath, which means "length month," and was so terms to signify the lengthening of the day at this time of the year.

This month like all others has many superstitions connected with it. It was thought that anyone born between the first and the twenty-first of the month would have a very poetic temperament, would be very thoughtful, studious, faithful to duty and conscientious, kind but stubborn and obstinate in holding to opinions and above all very economical. If your birthday comes after the 21st of the month it is thought that in addition to all these characteristics, you will be very active and magnetic; you will think deeply and all things connected with culture will interest you; you will want to be surrounded by beautiful and costly things and you will have a love for the luxurious things of life. You will fight hard to have things your own way; you will have executive ability and you will be very fond of good music.

The bloodstone which stands for courage and wisdom is the March stone. The verse which explains its powers reads:

"Who in this world of ours their eyes
In March first open, shall be wise.
In days of peril firm and brave
And wear a bloodstone to their grave."

The flower for March is the violet. The blue violet stands for faithfulness and modesty; the while violet stands for candor and wisdom.

There are also a few superstitions connected with the weather in March Here are two of them:

"So many frosts in March, so many in May."

"March in Janiveer, Janiveer in March I fear."

March seems to have been a popular month for musicians and painters. Among the many whose birthday falls in March are:

Saint Gaudens, the sculptor; Michael Angelo, the painter; Edwin Landseer, the painter; Dudley Buck, the composer; Albani, the singer; Sarasate, the violinist; Guilmant, the composer; Johann Strauss, the composer; John Sebastian Bach, the composer; Malibran, the singer; John MacWhirter, the artist; Raphael, the painter; Tamburni, the singer; Joseph Hayden, the composer; William M. Hunt and John LaFarge, painters.

Dear Laddie:—I live on a 96-acre farm. We have 13 head of cattle, four horses, 27 pigs and 13 rabbits. I have three sisters and two brothers. My sisters' names are, Marion, Beatrice and Hilda. My brothers' names are Ronald and Arthur. My letter is getting long so I will close, hoping to see it in print.—Herman A Motz, St. Johns, Mich.

Dear Laddie:—This is the first time I have written to you but hope it won't be the last. I am 11 years old and am in the 6th grade. My parents have taken the M. B. F. for a long time. I have two sisters and three brothers. My teacher is Miss Alice Goodell. I will close hoping to see my letter in print.—Camilla L. Cody, Columbiaville, Mich.

Dear Laddie:—This is the first time I have written to you. I am a girl 10 years old and in the 6th grade at school. My teacher is Mrs. Foster. My father takes the M. B. F. and likes it very much. I have one sister, 8 years old and a baby brother, five months old. We live on an 109-acre farm. We have two horses, one colt, three cows, two yearlings, a calf a hog and about 55 white Wyandotte chickens, also three white Peki ducks. For pets I have a dog, Rex, and two cats, Blackie and Tiger. I will close hoping to see my letter in print.—Ruth Gray, Millington, Mich.

A FARM CUT-UP

BY WALTER WELLMAN

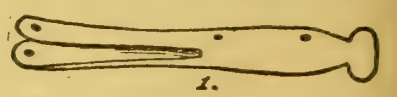
Dear Laddie:—I have written to you before. I hope this letter will escape the wastepaper basket. I am a girl 12 years old and in the 6th grade. My teacher is Miss Ruth Hood. We have three cows, two pigs, four horses, about 45 chickens and four ducks. We live on a small farm. I will close for this time. Below is a small verse.—Merien Wiley, Adrian

A Lullaby

When little children say Good Night,
And climb in downy beds,
The baby angels come and sing
Above their drowsy heads,
And sleeping lips curl up in smiles,
And childish hearts are light.
As soother by tender lullabies,
They pass the long dark night.

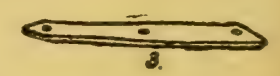
A NOVEL TOY

LOTS OF fun may be had with two round clothes pins, which mother will give you from her wash day supplies, or which you can buy at any store. Pierce each of the clothes pins with holes as shown in the first figure, making four holes in each pin; the first about three quarters of an inch below the top, the second through the center of the pin directly above the legs and the third and fourth through each leg near the bottom. An awl or screw driver can be used to make these small holes. Then cut off the legs close to the place where they join the pin and have left a piece such as you see in the second figure. The next thing to do is to get two thin pieces of wood, three inches in length and drill



1.

2



3.

three holes into each; one at each end and one in the middle as in the third figure. Then take some very fine wire and join the slips of wood that you have just pierced to the top of the clothes pin, putting one piece on each side for arms. Bend the wire at each end in the form of a loop so the arms will not slip, but give the arms enough freedom to move easily. Cut off the left over wire.

Attach the legs in the same way to the lower holes in the body of the pin. Take a long piece of black thread and tie one end of it to a pin, pass the string through the holes in the center of the arms and tie it about two feet from the pin. Then pin the little performers to the carpet or tie to the lower run of a chair. Take hold of the free end of the thread and hold it so the dolls just touch the floor. Pull the thread and the little men will wrestle with each other.

If you work this novel toy in a semi-darkened room and hold the end of the thread behind you as you jerk it, any on-looker will be much mystified and wonder what is making the queer little clothes pin wrestlers perform so strangely.

BOYS' AND GIRLS'
PIG CLUBS

Pure Bred Registered Pig Clubs offer every one of you kids a chance to start raising pure bred hogs, choice of several breeds, without borrowing a penny of any one, or running any risk. Write for particulars.

Grand Ledge, Michigan.

The Non-Partisan League Refuses to Join The Third Party Movement

Declares Itself Independent of Affiliation With All Political Parties, Preferring to Maintain Non-Partisan Principles

THERE IS A wide-spread belief that the Non-Partisan League is an independent political party, and have been frequently taken to task for our opposition to the formation of a new political party "along the lines of the Non-Partisan League." The facts are that the Non-Partisan League is non-partisan and supports men for office on both the leading tickets. The Non-Partisan League is doing the very thing we have advocated in these columns, namely, supporting men instead of parties. In the absence of a non-partisan organization in Michigan we hope our readers will exercise a non-partisan spirit and vote for the men they believe best qualified for the job, regardless of their party politics.

The following letter and newspaper clipping states the position of the League clearly:

"My attention has been called to an editorial which appeared in your paper under the heading "FarmerLabor Fusion on National Politics Continues," which says:

"Those who thought that the proposed 'hitching up' of the farmers' Non-partisan League with organized labor was nothing more than an idle dream have another guess coming. Last week Gov. Lynn J. Frasier, of North Dakota, met with John Fitzpatrick, president of the Chicago Federation of Labor, and Duncan McDonald, president-elect of the Illinois Federation of Labor, and these three worthies laid the foundation of what is fondly hoped to become a national political party that will supersede all the parties."

The rest of the editorial is comment based on the statement made in this opening paragraph. The facts are that Governor Frazier, while invited to participate in the Chicago convention for the organization of a labor party, is not taking part in any third party declined, as the Non-partisan League movement. Conservative labor in Minnesota and in other states, which is co-operating with the Non-partisan League in a nonpartisan way, to get enacted a joint program of reforms wanted by both labor unions and farmer organizations, also refused to participate in the labor party organized by Mr. Fitzpatrick and others.

Enclosed find a copy of the *Non-Partisan Leader*, official paper of the League, which makes the position of the League plain on this point.

I may add that the *Non-Partisan Leader* has approved editorially the suggestion of Samuel Gompers for non-partisan participation of labor in politics. Mr. Gompers opposes the third party idea of the radicals in labor.

While not attempting to influence your editorial policy, I think that you will not object to my pointing out inaccuracies as to the facts, and I trust you will be willing to correct the matter referred to.—*Oliver S. Morris, Editor the Non-Partisan Leader.*

False reports concerning an alleged amalgamation of the Non-partisan League into a new national labor party formed at Chicago have been spread over the country by the press. While invited to do so, the Non-partisan League did not participate as an organization at the Chicago Labor party convention. The League's views regarding a third party and co-operation with labor in politics were given on the convention floor through friendly labor delegates. Governor Frazier of North Dakota, was not a delegate to the convention and did not attend it, despite various reports in the papers to that effect. The governor was in Chicago to attend the national conference of the National Public Ownership League, which met a few days prior to the labor convention. He was there only a day or so, as he had to hurry back to North Dakota on account of the coal strike.

It was explained to the labor convention that the Non-partisan League is just what its name, "Non-partisan" indicates—that the League will not amalgamate or affiliate with any political party. The League everywhere, except in a few instances where circumstances have prohibited it, has worked, and will continue to work, through all the parties, and not as a third party. It recommends for nomination, or indorses, after they are nominated, candidates in different parties who are progressive and believe in the League program, and seeks the election of these men on the party tickets with which they are affiliated, whether they are Republicans, Democrats or Labor party men.

Where the Labor party has a candidate filling the League requirements, and when his indorsement seems the proper thing to do to win victory for the farmers, the League would not hesitate to indorse him, just as it would indorse a Republican or Democrat, under similar circumstances. It may be, if the Labor party is successfully organized, that some League candidates in various states will be on that ticket. But there is and can be no amalgamation or affiliation with the Labor party, any more than with any other party, under the principles on which the League is organized. The League has working political agreements with organized labor in several states, under which labor, like the League, exerts its political strength in combination with the League in the non-partisan way above described.

Furnishings for Governor's Office Come High

ALBERT E. SLEEPER had his private office and reception in the reception parlor in the capitol redecorated and furnished last summer, and the bills are beginning to come in. The Board of State Auditors is paying them out of the state emergency fund.

Bills already received total $13,127. Of these the board has paid $11,047 out of the emergency fund. There are several bills yet to come, which are expected to run the total to about $15,000.

The windows in the governor's offices have been dressed up to the tune of $2,006. There are five of these windows in the two rooms making the drapery bill $401 a window. There are also two pairs of portieres which cost $358.

Fan in Art Mounting

A bronze desk lamp at $27.75 has been provided and an electric fan in an art mounting has been established on an imposing andd ornate pillar. The bills of this fan and pillar have not been rendered.

The governor's private washroom cost to paint $211. A mirror was provided, at the cost of $85. To shut this from the public view, there is an art leather screen billed at $75.

As the governor sits at his work when in Lansing, he occupies a $150 chair, has his feet upon a $1,300 carpet, leans upon a $470 desk, takes a letter from a $14 Gothic tray and dips his pen into a $25 ink well. His waste basket is a $10 affair. A little bookcase, two feet wide and five high, costs $175.

Pillows Cost $109.50

There is a davenport that cost $280, and is equipped with half a dozen pillows, costing $109.50. For the governor's stick and hat, there is a $30 costumer. Four chairs for guests in the inner office cost $372.

The fireplace, which burns gas, is decorated with a pair of gilt andirons costing $93 and a fire set billed at $53. The fireplace, built when the capitol was new and furnaces unreliable, has been furnished with an imported marble facing hearth and curb at a cost of $40.

Two davenports in the governor's parlor cost $500; two cathedral chairs $325; two special tables, $475; six common chairs, $730. One of the largest items is $3,795 for decorating the walls and ceilings of the offices. This, however, includes work on the outer office as well as on the governor's private office and parlor.

Say Expenses are not Unreasonable

Although the expenditures seem large, the state officers contend that they are not unreasonable. O. B. Fuller, auditor-general, points out that the governor's office had not been refurnished in 40 years. The carpets which were worn threadbare in most places and were full of holes, had not been off the floor even for cleaning, during four administrations,, it is said.

The Board of Auditors points out that payment of the furniture and decorating bills out of the emergency fund is made necessary by the action of the Legislature in abolishing the general fund. The work on the governor's office was authorized last April, the members say, when the general fund was still in existence. The bills are late in arriving and in the meantime the general fund has ceased to exist.

Plant Beans Among Small Fruits

WE PLANT navy beans between the rows of our small fruit, and find that it not only supplies us with a table necessity bought by many farmers, when they had as well produce it at practically no cost but also it is beneficial to the fruit vines.

We use the lister to lay off the bean-rows, having only one horse hitched to it, on account of the limited room. The lister is set to run rather shallow—only four or five inches deep. It is a good plan to work the soil with a five-shovel cultivator just before listing, to head off weed-growth.

The beans are drilled in somewhat shallow, as they are down where the soil is moist, and the sub-soiler has been allowed to run deep, to form a well-pulverized seed-bed. An inch of covering should be the limit. One seed in a place, six to eight inches apart, is about the right way to plant.

Cultivation is very simple and easy, the fine, moist soil being drawn from the ridges down into the furrow, around the plants. This is done as soon as the plants come through the ground, and continued till they are laid by. Thus the crop is kept well-cultivated, and the fruit-vines are kept free of seeds.—*M. Coverdell, Worth County, Missouri.*

How To Avoid Delays in Shipments This Spring

Few box cars and few locomotives have been supplied to the railroads during the past two years. Yet American industries want to do an abnormally large amount of shipping in 1920.

The result is railroad congestion—and frequent delays.

Delays in shipments of Solvay Products may have a serious effect on your plans, unless you protect yourself by sending in your order now.

We are doing our best to insure timely deliveries. Your goods will be shipped sooner if your order is placed on our file now.

Ordering three or four weeks before you will actually need the products will give us ample time to trace your shipment, if it goes astray; and to replace it, if lost.

Don't Delay. Sit down and write us your order NOW—and you will be sure of having your Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia, and "U.S." Potash when you need them.

LICE ON POULTRY

My poultry have lice. How can I get rid of them?—Subscriber.

There is no time in the year but that lice and mites may infect poultry. Poultry raisers and poultrymen in general are very familiar with the pest. But many farmers do not know of the presence of these pests in their houses and on their hens till the house seems alive with them and the hens begin to droop and die from them. Mites work at night. They secrete themselves in cracks, nailholes and under the roosts through the day. They aree blood suckers. Hens lessen the egg production. To get rid of them, roosts should be taken down and all unnecessary boards and boxes should be removed. Spray thoroughly with crude petrolium 1 part, kerosene 4 parts. Crude oil is about right. Pour kerosene on top of roosts. A few days of this treatment will rid hens of lice. There seems to be more than two dozen kinds of lice that infest poultry. A good dip is made by using from 3-4 to 1 oz. of Sodium Floride to 1 gal. water. Dip the hen thoroughly except her head. Dip the fowls in this solution on a bright, warm day in July, August or the fore part of September and on a day that is free from wind. This method is very effectual. During the other months of the year the Sodium Floride can be dusted among the feathers of the fowls. A pinch of dust should be distributed about as follows: 1 pinch on the head, one pinch deposited among feathers near the skin on the following parts of the body—neck, breast, thighs, on spread wing (underside) tail and back.

Another good remedy for lice is the Blue Ointment method, as follows: Rub well on to the skin three pieces of ointment, each as large as a small pea. One of these pieces should be rubbed on just under the vent, the other two under the wings. The ointment should never be daubed on and left for it is poison and the bird will get it.—*C. H. Burgess, Professor of Poultry Husbandry, M. A. C.*

WHO PAYS FOR ABSTRACT

A sells a farm to B on a Land Contract. A later sells the farm to C and gives warranty deed for same and the contract passes on with the deed and terms to C, the new purchaser; but no mention is made in the deed of the existing contract. Afterwards C sells the farm to D and gives a warranty deed the same as A gave to C with no mention of the contract, in the deed. B finally makes his last payment and asks for deed from D, the last owner by deed. It is discovered when the deed is given to B by D that the land contract given by A to B called for an abstract; but it seems no abstract was given by any of the parties; the grantors claiming that they supposed that an abstract came along with the deed; but the attorney who drew up the deeds (the same one drew both deeds) overlooked the abstract. The contractor B did not make claim for abstract at the time the deed was given him by D. The question is, who is legally bound to pay for this abstract, if one must be be furnished under the terms. Suppose also that there had been found that a defect—such as mortgage, or any flaw in title, who would be holding to make the title good? If D would be holding, could he go back on A and C who gave warranty deeds?—A Subscriber, Hartford, Mich.

"B" has contract relations only with "A" and will have to look to "A" for the abstract. If "A" did not protect himself in his dealings with "C" and "D" he must stand the loss. Any defect in title would have to be made good by any of the warrantors. The one who makes good may look to any who precede him.—*W. E. Brown, legal editor.*

CLEARING LAND

We are contemplating the breaking up of a section of second growth timber land in the northeastern part of this state some time in March or April, and would like to inquire what is the most practical way for clearing brush and timber of this nature. The trees consist of poplar brush, none being over five inches in diameter. Have you ever heard of caterpillar tractors being used for breaking down brush and trees of this size?—Hesse Bros., Detroit.

Your inquiries referred to a well-known lumberman in northern Michigan who has cleared thousands of acres of such lands. His reply is as follows: Our way has been to go in and cut down small timber leaving a stump of 3 or 5 feet high. As soon as the brush from the large cut timber is dry enough, burn it over, and then pile the unburnt pieces in piles and burn. Most of the small stumps can then be pulled with a team, and by leaving the stmp high as we said you can get a good purchase to tip your stump over.—*H. Dunden.*

FARMERS SERVICE BUREAU

(Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for a reply.)

BAD ROADS; RURAL CARRIERS

The road is open up to and beyond my place, for one-quarter of a mile from there on there is some drifts. Can the rural carrier stop coming as far as our place? There are six houses on the road. Is he within his right when he turns off this road and goes around? He would have to retrace nearly a mile in making the six miles but most of the time he could get through. He claims it would make him so late getting home if he had to retrace. —L. B. D., Lawrence, Mich.

I would be of the opinion that the carrier would be obliged to make only a reasonable effort to cover the route and that the keeping open of the road is up to the residents of the district. However I think you will find that the acts of the carrier are very largely under the direction and control of the postmaster. You should consult him. I believe they are willing to require a carrier to make his route if the roads are kept in reasonable shape for him to get through.—*W. E. Brown, legal editor.*

FULL VALUE ON LAND FOR HIGHWAY

One of my neighbors desires to have a road between his land and mine. If they should decide to put a road thru have I the right to charge the full value of the land (that is the price I paid for it three years ago plus tax and interest to date and the cost of clearing) or does the township board decide the price to be paid for it? As far as I am concerned I do not need the road. I have heard it said that if the land owner signs the petition for the road he loses the right to charge anything for the land. Is this true?—J. M., Falmouth, Mich.

One is entitled to full value for the land taken for a highway regardless of what he paid for it. The payment of taxes upon land does not enhance its value but improvements placed thereon does enhance its value. However, the value should be determined as of the day of the condemnation proceedings. Land may be worth very much more today than it was worth three years ago. Some pieces have increased a very large amount and it should be the price on the day of condemnation. If the owner signs a petition for a highway that waives damages for the opening; then he would not be entitled to any damages, but if there is no such clause in the petition he does not waive his right to damages for the opening.—*W. E. Brown, legal editor.*

TREATING SEED TO KEEP AWAY CROWS

My attention has been called to Mr. Carl E. Schmidt's use of Diamond Dyes for the purpose of preventing injury by crows to recently planted corn. As you know, dyes are very largely coal tar products and would have the same effect, at greater cost, as the coal tar treatment. By the coal tar method the corn is shelled and moistened with warm water, drained, and about 2 tablespoons of coal tar is mixed thoroughly through a bushel of seed corn.

In experiments along this line we have found this coal tar method as effective as any of the patented preventatives on the market, and found also that this method does not retard germination as several of the commercial products do. We have not tried the mixture of tincture of aloe and waste dye.—*J. F. Cox, Professor of Farm Crops, M. A. C.*

INSURANCE FOR LOSS OF EYE

A takes a lumbering job from B and I hired out to A. While working a chip flew and destroyed the sight of one eye. Now B had his men in the mill insured but not the men working for A. Would I be able to collect anything from B for my eye, and if so how much A is a poor man so could not collect from him.—A. J., Tustin, Mich.

From the brief statement I would be of the opinion that "B" would not be liable to you. However, I would suggest that you write the full statement of facts to the INDUSTRIAL ACCIDENT BOARD, Lansing, Mich., for their interpretation.—*W. E. Brown legal editor.*

POSITION OF SILO IN BARN

What would be your advice on putting up a silo in the barn? I have a 12-ft. feed alley and my barn is high enough only it would take up part of my room in the feed alley and be a little unhandy in feeding a few of the stock. The barn is 40x60; no basement. One side of the driveway is for the granary and feed; the other I have the horses and cows with heads together and the 12-ft. feed alley between them. My silo is a cement stave 10x30 but have heard so much of silo inside nowadays on account of freezing that I am undecided what to do, whether to use part of my feed alley for silo or put it outside.—M. H. Stanton.

It is hardly nesessary to put a silo inside the barn in order to avoid freezing. Barn space is usually too valuable to make use of it in this way. If silage is properly taken out of the silo, there is very little trouble experienctd from freezing. I would recommend that the silo be placed on the south or east side of the barn where I think, you will have very little trouble from freezing of the ensilage.—*O. E. Robey, Acting Head Department of Farm Mechanics, M. A. C.*

A LAWFUL FENCE

A rented a piece of land from B with the understanding that B reserve and fence off a small garden spot, and orchard, which they failed to do. A put up a good fence around the garden to protect B's garden from A's stock. B immediately constructed an inside fence, ordering A to remove her fence, which she did. B's fence proved worthless, permitting A's stock to get thru and under into B's garden, and thru it over into A's crop. Now who is compelled to keep up that fence, A or B? Also will you please print Michigan law in regard to the fencing of sheep, as A understands from neighboring farmers that owners of sheep must take care of their own sheep and adjoining land. Are they not responsible for their half of the fence?—A Woman Farmer, Capac, Mich.

If "B" agreed to fence the garden and orchard reserved then "B" would be obliged to construct and maintain a "lawful fence" only and if such fence was constructed and "B's" stock broke it down "B" would be liable. If it was not a lawful fence then "B" would not be liable. One must construct a "lawful" fence between occupied and cultivated or improved farms. If the fence is a lawful fence and any animal breaks through the owner is liable for the damage done by his beasts. One must fence against sheep as much as cattle but he builds a "lawful" fence in either case. If sheep get through or over a "lawful" fence the owner would be as liable for their breach as for any other animal.—*W. E. Brown, legal editor.*

SHORT WEIGHT

If a grocery dealer sells buckwheat flour that does not hold out with weight on sack can he be made to stand good for it? The sack is marked 10 pounds but only weighs nine pounds. He charges $1 a sack for it and in trying to crawl out of it he says that he bought it of a farmer and got beat, but sacks are stamped manufactured by Swalter and Stutz, Saranac, Mich.—R. M., Lake Odessa, Mich.

If one sells a sack of flour marked "Ten Pounds" and upon weighing it is found to be nine pounds he is liable for the difference. I would suggest that if the price of articles do not suit you that you buy elsewhere or go without until you teach the seller that only a fair price will be tolerated. Peoples' willingness to pay extortionate prices is the strongest inducement for one to ask such prices.—*W. E. Brown, legal editor.*

REMOVING IMPROVEMENTS MADE AFTER MORTGAGE

I have 80 acres with a mortgage on it due Dec. 1st, 1920. I have in the past bought and paid for and built a silo. Have I a right to sell silo or move it off the farm; I have a deed of the place.—G. P., Williamsburg, Mich.

You would have a right to remove the silo if it did not endanger the security of the mortgage. If by removing the silo the property would not be worth enough to pay the mortgage, taxes, interest and expenses of foreclosure, then you would not have a right to sell it and you might be prevented by injunction or be liable to an auction for lessening the value of the property.—*W. E. Brown, legal editor.*

FROZEN ENSILAGE

Is silage as good after being frozen as before?—Subscriber.

"When frozen ensilage is completely thawed before feeding, the freezing has practically no effect on the value of the silage."—*A. C. Anderson, Professor of Dairy Husbandry, M. A. C.*

Uncle Rube Spinach Says:

PLAIN FACTS

THIS LETTER'S goin' to be short but she's goin' to be snappy an' as near to the truth as I'm capable of writin' it, an' it's in answer to a letter from a friend of M. B. F., who lives near Carson City, Mich. Among other things this friend sez: "I am in favor of a farmer governor (Campbell) but what is the use?. I am afraid they will all turn out like Fordney on the bean question."

Now, b'gosh! I want to say right here that I'm tootin' no horn for Fordney—neved did either—an' I ain't doin' any tootin' for no other man 'less I know somethin' to toot about, an' I jest want to say to the aforesaid friend from Carson City an' to any others that may be kinda straddle of the fence an' don't seem to know jest which way to jump, that if we take the time to look up Mr. Campbell's record jes as far back as we care to go, we'll find he's no slacker when it comes to doin' things; yes an' we'll find he has never in all his public career shown the white feather nor taken a back seat when there was a fight on; that he has always stood firm for what he believed to be the right thing.

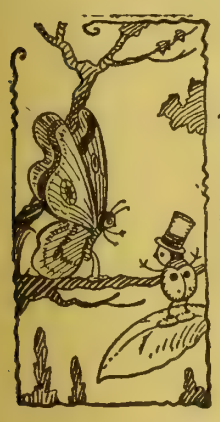
Milo D. Campbell gets most of his income, his bread an' butter so to speak, from his farmin' interests. He is now an' always has been a good friend to the farmer and the laborin' man. There is nothin' in his past political career for which he nor his friends an' supporters need make any excuses; he has always been on the square, played his cards above the table; (any gambler will tell you what this means; 'course you know Milo don't play cards, that's only a figger of speech as it were); well, anyway he has always been faithful to his duties an' darned if I can think of any kind of reason why he wouldn't be jest as honest an' jest as faithful as governor as he has been in all his past public life.

Now you see when you elect a man to office on a certain platform, have his word that he will work for certain things an' you have confidence in the man an' believe he will do as he says he'll do; then if he fails to do that you have a right to be disappointed in him an' to bail him out good an' proper at various an' divers times an' places an' to let him know you are thoroughly disgusted with 'im.

Now I'd ruther work for a man an' vote for a man who had promised to do certain things; I'd ruther see such a man elected guv'ner, even if I had to meet with disappointment in the end an' lose confidence in 'im, than to see some feller elected who had made no promises, an' would make none till he knew what the political ringston wanted him to do, a man from whom the farmers an' the laborin' men could expect nothin' an' by gosh!! they wouldn't stand no chance to be disappointed 'cause they would git nothin', jest what they expected.

An' so I'm askin' our friend from Carson City an' all other readers of M. B. F., if they ain't ferred to buckle down to business, git together an' work for Milo D. Campbell; an' he will be true—we have no reason to think otherwise—even his political enemies can find nothing to criticize; an' you know if there wuz anything, them birds would find it. Let's git together then an' rush things through with a whoop; don't let the big interests nor the political wire pullers side track us from the main issue; an' remember the crooks an' the sharpers an' the big proteers, that kind of fish don't want Mr. Campbell for governor 'cause they can't pull the wool over his eyes and thehy know it darn well, an' they'll line up agin' him an' that's jest the reason the farmers of this great but tax-burdened, commission-ruled, old state, need Milo D. Campbell for their next governor. Cordially yours—*Uncle Rube.*

Sense and Nonsense



THE ETERNAL FEMININE

Miss Butterfly (Just out): Kind sir, can you tell me if I am wearing the season's newest colors?

Mighty Funny

The portly gentlemtn strolled up to one of the seats in the park and having seated himself comfortably, was soon absorbed in his newspaper. After a while he was annoyed by a small boy yho persisted in steadily staring at him, and at last he could bear it no longer.

"What are you looking at, little boy?" he inquired." Is there anything funny about me?"

"Not yet," replied the youngster, "but there's going to be when you get up. Them seats have just been painted."

Uncomfortable Ease

"I don't care much for these 'ere progressive farmers," said the hired man. "I'd lots rather work for one of the old-fashioned kind."

"Why?" asked the hired man from the adjoining farm.

"Aw, a rail fence is a heap more comf'able to set on than barb wire."

Where Did He Go?

She: "I'll never go anywhere again with you as long as I live."

He: "Wh-why?"

She: "You asked Mrs. Smith how her husband was standing the heat; and he's been dead two months."

Not Just the Same

"Do you find married life the grand sweet song you expected?"

"Well, it is at least a grand refrain."

Refrain?"

"Yes; I'm called upon to refrain from smoking, refrain from cards, refrain from going to the lodge, and when there isn't anything in particular to refrain from, just refrain."

He's Sure Shiftless

"Gabe Giggery don't amount to much does he?" asked a citizen of Sandy Mush, Ark.

"Amount to much?" returned the neighbor addressed. "He don't amount to nuth'n. Why, he's so dadburned shuckless that he won't even keep his wife's ax sharp !"

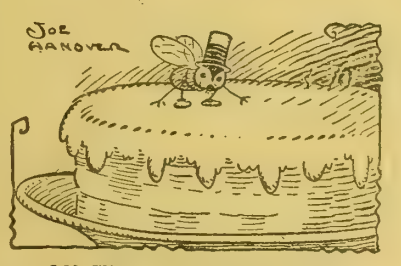
Not a "Close" One

It was at Saturday morning inspection. The commanding officer spotted a private who was unshaven. "Why didn't you shave this morning?" he demanded.

The private became nervous. "You see, sir," he stammered, "there were eight of us shaving by the aid of a single mirror, and I guess I must have shaved somebody else."

"What is the proper length of a girl's dress."

"A little over two feet."



ON THE FROSTED CAKE

Prof. Fly—My this glacier or whatever it is, has a sweet taste.

A Single Stroke

—and that tough old stump or boulder you have been wishing was some place else is shattered into easily handled pieces.

The Giant Farm Hand **DU PONT** Red Cross Dynamite

will clear your land of stumps and boulders for less money and in a shorter time than any other method known.

Put the Du Pont Giant Farm Hand to work converting your waste land into a profit making field. A willing worker, safe, always ready and cheap.

If your project warrants, we will send a demonstrator to show you the easiest and cheapest way to do your work.

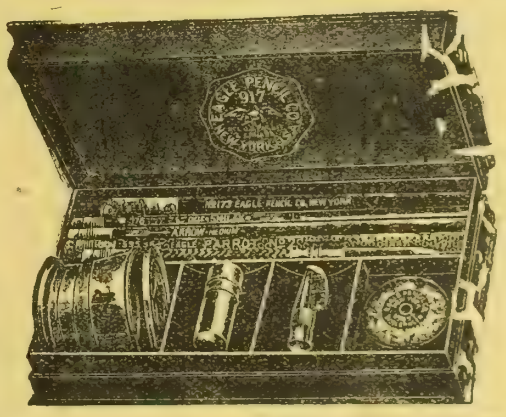
Boys! Girls! This School Outfit YOURS for a LITTLE Extra Work



During the past 30 days more than 50 "LIVE WIRE" boys and girls have secured this dandy outfit which consists of 3 pencils, 1 pen holder, 1 combination pen and pencil, 12 pen points and holder, 1 pencil sharpener, 1 ink and pencil eraser and 1 aluminum collapsible drinking cup, all packed in a beautiful box, without it costing a penny.

HOW THEY DID IT

They simply called on two of their friends who were not taking Michigan Business Farming, had them look over one or two recent copies and explained just what this weekly has done and is doing for the farmers of Michigan and convinced them that they ought to be taking M. B. F. if they expected to keep abreast of the times and derive the same benefit over 70,000 farmers are now enjoying. Then they explained that they were working for a school outfiit. That settled it, their friends subscribed and now the School Outfit is theirs.

HERE'S YOUR CHANCE

All you have to do to win this outfit is to call on two of your friends who are not now taking M. B. F. and ask them to help you win the outfit by giving you their subscription to M. B. F. for one year at $1.00 each. Send us the $2.00 with their names and address plainly written and the outfit will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

on great political issues. Send 25c for "What Michigan Women Should Know About Voting," by Judson Grenell, to Waterford Publishing Company, 308 Thompson, St., Ann Arbor, Mich.

County Crop Reports

MIDLAND—Prices offered at Midland: Wheat, fall, $2.25; spring, $2.30; corn, $1.45; oats, 89c; rye, $1.50; buckwheat, $2.85; beans (C. H. P.) $5.75; barley, $3; peas, $4.25.—O. B. G. C.

VAN BUREN (E)—The roads have been fierce for some time, not good wheeling or sleighing, but both used some. The recent thaw has improved things, but still the roads are heavy. Not much produce being marketed. Help continues to be scarce and work is behind. Lots of road improvement being planned for the season.—V. G. Prices at Mattawan: Corn, $1.40; oats, $1; hay, light mixed, $36; potatoes, $2.25; onions, $5; butter, 50c; eggs, 50c; veal calves, 23.

GRAND TRAVERSE—Are having nice weather at present, snow is going fast. Quite a few farmers are selling potatoes and some corn. Roads will soon be in bad shape. Auction sales are coming fast. Do not know what city folke will do for something to eat if the farmers keep on leaving the farms.—C. L. B. Prices at Traverse City: wheat, $2.35; corn, $1.50; oats, 90; rye, $1.45; hay, No. 1 timothy, $36; beans (C. H. P.) $5.50; potatoes, $4.25 cwt; cabbage, 12c; butter, 45; butterfat, 70; eggs, 45.

SANILAC (S. E.)—The farmers of this locality are still busy organizing for the farm bureau. It is a bright outlook for the county around about Croswell. They went after the beet situation and are now going after the W. R. Roach Canning Co. for better prices in the growing of peas. Not much hay on the move, but some grain. Horses and cattle are on fair prices, but not many on the move on account of the poor rail road service, also the highways are in poor condition. Had some rain in this locality.—W. J. V. Prices offered at Croswell: Wheat, red, $2.30; oats, 86c; rye, $1.51; hay, No. 1 timothy, $25! No. 1 light mixed, $23@$25; beans, $6; barley, $2.75; hens, 20@25c; butter, 64c; butterfat, 64c; eggs, 46c; hogs on foot, $15; dressed beef, $16; pork, $17; veal calves, alive, $16.

MASON—Recent thaws left the roads in bad condition. Typical March weather. Potatoes move to market whenever roads and weather permit. There are a few still in the producers hands. Coal is scarce and hard to get these days. Pure bred cattle are gaining in favor in this county. Shorthorns and Holsteins were accepted as standard types for the county, a few years ago, but lately the Guernseys have become more prominent and bid fair to hustle the other breeds in popularity. There are also many pure-bred hogs thruout the county. Durocs and Berkshires are favorites, though other breeds are also respected.—B. M. Prices offered at Scottville are: Wheat, $2.15; rye, $1.40; beans (C. H. P. Pea) $5.50; red kidney, $12.00; potatoes, $4; poultry—hens, 25@28; butter, 55; butterfat, 67; eggs, 50; hogs, 18; veal calves, 18@20.

MANISTEE—There is not much doing in these parts except buying a little hay for spring work, and a few cornstalks, when they can find them. We have had our first thaw this winter. March 3rd it rained all day and then turned cold and snowed and blowed. Today it is coming down. Another farmer sold out and is moving. There is some corn for sale in in these parts. There is some sickness in for pork and beef is better; the butchers are looking for it but it is getting scarce in these parts. There is some sickness in this corner of the county, flu is the cause of the most of it.—C. H. S. Prices at the local market: Wheat, $2; corn, $1.50; oats, $1.10; rye, $1.30; buckwheat, $2.50 cwt; beans (C. H. P.) $5.25 cwt; hay, $32@$35; potatoes, $3.25 cwt; hens, 25c; butter, 50c; butterfat, 64c; eggs, 45c; beef steers, 8c (alive); beef cows, 5c (alive); veal calves (alive) 10@13c; hogs, (alive) 13 1-2c, dressed, 17 1-2c.

SANILAC (C)—March came in rather winter like. At this writing the weather is rather cold. Had quite a rain on Thursday the 11th, turning to a snow before Friday morning and drifted considerable; it still keeps cold. Have some cases of the flu, but no deaths; some cases of the measles and some cases of the mumps, but as a general thing most are very well. Some farmers are drawing sawlogs and some are still getting up wood. There are a few carloads of cattle brought in for sale to furnish milk for the condensery at Sandusky. Milk in January brought $3.89 for 4.1 test and $3.65 for 3.5 test, which is the standard, then 4c a point below or above that test. Coal is rather scarce yet, hardly can get enough for domestic use.—A. B. Prices offered at Sandusky: wheat, red or white, $22.50; oats, 83c; rye, $1.56; hay, No. 1 timothy, $25; No 1 light mixed $20@$25; beans (C. H. P) $6; butterfat, 64c; eggs, 45c; dressed hogs, 18c; dressed beef, 15@18c.

GENESSEE—Farmers are working up wood, trimming trees, hauling manure and attending auction sales. The weather has been warmer and we have had some rain during the last few days, but it is freezing up again today. The fields are bare and the roads are in bad shape for traveling. Farmers are selling wood, potatoes, hay and livestock and are buying cloverseed fertilizer and feeds. Auction sales are still as plentiful as ever, but prices received are not averaging as good as earlier in the season, with the exception of good horses, which are working higher. M. P. Cook is selling his herd of registered Shorthorn cattle at public auction at his farm six miles south of Flint. Several farms are being sold this spring. Quite a number of tenant farmers are moving this week. No sugar beets will be put in this year, unless the sugar manufacturers come to the growers' terms.—C. W. S. Prices at Flint: Wheat, $2.35; corn, $1.55; oats, 95c; rye, $1.55; buckwheat, $3 cwt; beans (C. H. P.) $6; red kidney, $11; hay, $25@$30; straw, $10@$15; potatoes, $2.75@$3; onions, $6.50; cabbage, $8 bbl; cucumbers, $2.50 doz; hens, 32@34; springers, 32@34; ducks, 32@35; geese, 30@35; turkeys, 40@42; creamery butter, 60@63; butterfat, 72; eggs, 48@50; apples, $2.50@$3; beef steers, $10.50@$11; beef cows, $7.50@$8.50; veal calves, $18@$20; sheep, $11@$12; lambs, $17@$18.50; hogs, $14.50@$15.

WEXFORD (S. E.)—The weather prophet hit it very close yesterday and today; rained yesterday and a cold wave today. Snow has drifted bad and trains will be hung up now. Of course you can't expect it different after they have gone back into the owners' hands.—S. H. S. Prices offered at Cadillac: Wheat, $2.09@$2.15; corn, shelled, $1.40, ear, 72 lbs, $1.20; oats, 90; rye, $1.30; buckwheat, $2.50; beans, (C. H. P.) $5.50; red kidney, $8; hay, $32; potatoes, $3.60 cwt; hens, 23@25; springers, 23@25; ducks, 22@25; geese, 20@23; butterfat, 66; eggs, 45; veal calves, 16@22; hogs, 16@18.

SAGINAW (S. W.)—We are having good winter weather yet. It rained the 4th, the first rain or thaw to make any water since last November. The farmers are hauling some oats and hay to market. Stock of all kinds are looking good, with plenty of rough feed and hay until grass comes. The flu is leaving a number of homes badly broken up throughout this section. Prices offered at St. Charles: Wheat, $2.25; corn, ear, 70c; oats, 85c; hay, No. 1 timothy, $26; No. 1 light mixed, $22; benas (C. H. P.) $6 cwt; potatoes, $2.50; hens, 25c; butter, 55c; butterfat, 60c; eggs, 47c; hogs, $14; beef steers, 8@10c; beef cows, 5@7c; veal calves, 18@20.

MANISTEE (N.E.)—The farmers are cutting wood, hauling hay and feeds and other jobs around farm. The weather has been cold and snowy, but today changed for a short time and rained quite hard, but soon changed again to snow. Begins to look like spring coming for another time (1920). Soil is mostly covered with snow, but it was lowered considerable today by the rain. You could see bare ground. The farmers are now beginning to sell potatoes around the country, as beans are mostly sold here. Most of farmers' crops are not sold. I am confident, possibly some potatoes. I do not know as farmers are building or buying much hay and fencing.—H. A. Prices offered at Bear Lake: Potatoes, $3.75 cwt; white beans, $5.25 cwt; rye, $1.30 bu; wheat $2 bu; butter, 50c; eggs, 45c; butterfat, 64c; hogs, 13@13 1-2 on foot, 16 1-2@ 17 1-2 dressed; beef 5@8c alive, 8@13c dressed; veal, 10@13c alive, 18@22c dressed; live chickens, 25c; hides, 18c.

PRESQUE ISLE (W)—March 4th we had our first rain of the season. It rained all day from the E. S-E. and in the evning the wind shifted into the N-W and Thursday night and Friday we were handed out one of the wildest and severest snow storms of the season. Farmers are all through harvesting ice. Some hay for sale, but not moving yet. Holding for higher prices. The hay that is being sold goes mostly through the elevators who are having it shipped in from other parts of Michigan where stock raising isn't quite so extensive as it is here. More snow. The main highways are in pretty bad shape with drifts, but the log roads are good as they are used most. There are but few cases of flu around here although in Onaway there is reported 12 hundred cases of sickness, mostly the flu and scarlet fever. In the individual case the flu don't seem to attack the patient as severely this winter as it did last, as there don't seem to be so many deaths, although it may be that people are taking better care of themselves now than formerly.—J. S. Prices offered at Millersburg: Butter, 60c; butterfat, 64c; eggs, 60c.

INGHAM (JC)—Looks like spring will be here soon for three days it has thawed very fast. Some are tapping sugar bushes getting ready to make sugar. Snow all gone, freezes nights. Quite a call for hay and fodder which is scarce and high-priced. Not much going to market. Stock coming through winter looking quite good as a rule. The auctions are still in full swing, farmers are quitting, tired of the hard work and short help at five to seven dollars a day.—C. J. M. The following prices were offered at Dansville: Wheat $2.20@2.30; corn, $1.45; oats, 78c; rye, $1.50; No. 1 timothy, $25 baled; No. 1 light mixed, $23; straw, rye, $9; wheat-oat, $10; beans (C. H. P. Pea) $5.50; potatoes, $2.60; hens, 24c; springers, 24c; ducks, 20c; butterfat, 65c; eggs, 40c; sheep 8c; lambs, 15c; hogs 15c; beef steers, 10@13c; veal calves 19c.

ST. CLAIR (S)—Farmers all getting ready for spring work. The weather is quite changeable but that is usual at this time of the year. The snow is nearly all gone, and the surplus water has drained off nicely, leaving the wheat and rye looking nicely at this writing. Lots of sales every week and a great many people leaving their farms. The help question is getting more serious all the time. Farmers not selling much at present, not much hay left in farmers' hands. A few tractors are being sold around here. The Farm Bureau has organized at this place with 90 members.—I. J. The following prices were offered at Smiths Creek on March 15: Wheat $1.25@1.30; corn, $1.50; oats, 90c; rye, $1.50; No. 1 timothy, $30@31; No 1 light mixed, $30; Rye straw, $14; wheat-oat, $14; beans, (C. H. P. Pea) $6.50; potatoes, $3; hens, 25@30c; springers, 30c; butter, 50@55c; butterfat, 58c; eggs, 45@50; lambs, 14@16c; hogs, 13; beef steers, 9@10; beef cows, 6@8; veal calves, 20@24.

If All the Money Were Divided

(*Continued from page 9*)

in the United States Steel Corporation. There are stockholders in the Pennsylvania railroad. These men and women have put their savings in these industries to form its capital. And their savings are at work for all of us, not merely for those who accumulated them.

People seem inclined to blame the big corporations, "big business," the "trusts," or somebody in that category for the rising costs of living. But the price tables show that the prices of manufactured good increased by lower percentages than the cost of the labor and the raw materials that entered into them.

Raw materials, foodstuffs, and labor, are the factors making for higher prices. Machinery, new capital, improved methods and management are the influences tending to hold prices down.

But it is said that some of the great corporations make too much money. Their profits are cited as proof that they either charge too much for their product or do not pay labor enough. If any business makes exceptional profits in ordinary times it must be because it is able, by superior methods, or advantages of of some kind, to produce its goods below the ordinary level of costs. In other words, its large profits are due to improved methods which it introduces before its competitors do.

Any man, or any organization, that uses improved methods before other people, or firms, introduce them, is going to benefit by his foresight, and energy. But we share in the benefit. For the improved methods, which they devise, soon become public property.

A striking example of this fact is to be found in Andrew Carnegie's career. He had a genius for business, particularly in the selection of aids, and drew about him a very enterprising and capable organization. The profits which Mr. Carnegie made in the steel business he put back into the development of the industry, and by reducing costs and prices he greatly increased the use of steel. He made his fortune by reducing prices instead of by increasing them, and in so doing cheapened machinery, implements, and industrial equipment of every kind, to the great benefit of the public.

The most advantageous position the wage earner can occupy is that where he has only to hold wages steady while their purchasing power remain the same, but will buy twice as much, is better off than one whose wages have doubled but will buy even less. To increase wages, and at the same time to lower production and increase costs, accomplishes nothing.

Employers are constantly seeking to increase production by the use of additional capital, by improving machinery, methods and management. If indivdual workers, whether brain workers or hand workers co-operate in this effort, we shall be on the only road to a genuine improvement in conditions.

It may be said that if the wage earners had higher pay they would be able to save and thus contribute capital to the advancement of industry. This is true; although it is evident that if costs are going up constantly, higher wages will not enable them to save more than in the past. But as improvements are made in industry, cheapening production, relieving workmen of the exhausting kinds of labor, and increasing real wages, the workers naturally will have a growing desire and ability to participate in ownership and management, and the employers always welcome such an inclination. Such a development is a matter of growth, and the way to hasten it is by increasing production.

The history of industry shows that every branch of it has been developed chiefly by means of the profits made in it. The fortunes so made will be found as a rule to be in the form of buildings, equipment, and facilities for supplying some public service; and year after year the profits go back for enlarging them. This conversion of profits into capital creates a direct and permanent demand for more labor. The workingman is an indispensible element in the employment of capital. The latter cannot dig a ditch, or lay a walk, or turn a furrow, without labor; they must be used together; and when two factors must be used together and are mutually dependent, the one of which the supply increases more slowly comes inevitably into a stronger position.

This is eminently the position of labor in the United States. In the ten years, 1899-1909, the last ten years for which we have census figures ,the population of this country has increased 21 per cent, the amount of capital employed in manufacturing increased 105 per cent, and the amount of power used in manufacturing establishments increased 85 per cent. Under these conditions it is evident that the demand for labor is increasing faster than the supply, and that the natural tendency of wages must be steadily upward.

Moreover, the products of industry must be distributed, which means that they must be sold back for the most part to the very people who produced them. Unless consumption keeps up with production, industry will choke down. With all this new capital in the form of new and improved equipment going into use, there is bound to be a constant increase in the production of goods per head of the population, and there must be such a continual readjustment of wages as will enable the people to buy them.

These are the natural laws which distribution, just as the vital processes of life go on unnoticed. By means of these, all of the progress of the past has been accomplished and the position of the workingman in this country made what it is, in comparison with that of the worker in China. If these laws were understood, this turmoil in industry would largely disappear and the production and distribution of all the comforts of life would rise to a proportion above our most sanguine hopes.

If all the forces that are making for discontent, disorganizing and embarrassing production and retarding industrial progress, could be turned into constructive influences, informing the population upon the gains to be had by increasing the output, and by the practice of personal thrift, not only would living conditions rapidly improve but the wage earners would soon have a large share in the ownership and control of the country's industries.

Make Clover Seed Count

Clover seed is expensive.

Do not waste it on poorly prepared land.

Drill or harrow it in so as to make it all count.

WE APPRECIATE THE KIND WORDS

I am sending my renewal for M. B. F., the only paper I know of whose efforts are all for the farmer. I have now sent you in all 14 subscribers. I shall continue to boost for our paper when opportunity presents, but will have little time that I can afford to devote to the work exclusively. We are awaiting with much interest the investigation of the beet sugar industry. —*H. L. Laycock, Gratiot County.*

You bet we want to keep M. B. F. coming. It is the paper for all that are interested in the prices whether you are a producer or a consumer. It is right the public should know who gets the money. M. B. F. gives us facts we do not get in other papers. Yours for success.—*C. W. A., Oakland County.*

Let the good work go on for a "square deal." I'm with you.—*E. A. W., Clinton County.*

Don't Forget Clover

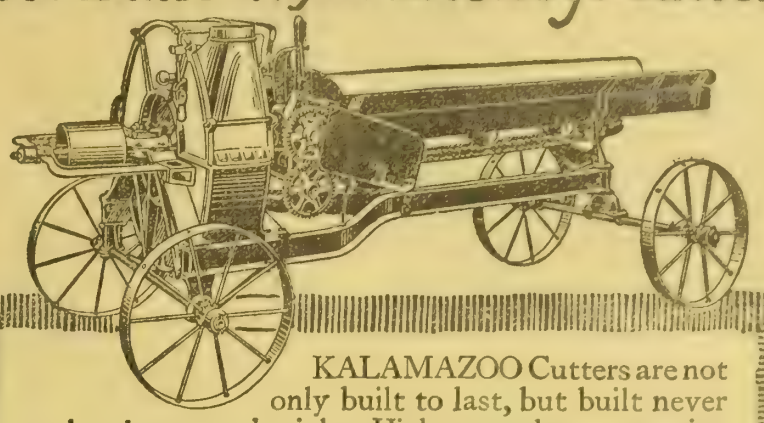
Corn, wheat and clover.

That is the most important rotation in America.

Where clover is no longer grown, yields are beginning to decline.

Kalamazoo

The Built Right Ensilage Cutter



KALAMAZOO Cutters are not only built to last, but built never to lay down on the job. Highest grade construction gives them this great reliability and length of service. Over 67,000 American farmers will verify this. When you buy a KALAMAZOO you have America's largest Silo and Ensilage Cutter manufacturer's guarantee for fair dealing, and a money-back assurance of good service from any KALAMAZOO line.

Send for Big, FREE Catalog

Be sure to send for Big Catalog explaining every detail of KALAMAZOO construction, including the Center-Shear Cut, most practical power and fuel saver ever invented. Also nine other important features that provide for greatest efficiency in strength, speed and safety,

Soy Beans and Corn for Hogging Down

TO PUT soy beans and corn in for hogging off at a profit is a question with some. However, I am convinced that the fellow that does so for a period of five or 10 years will be ahead in fertility of the one that cuts his corn and feeds dry thru the barn and possibly leave the manure in piles around the barn yard till they are quite materially wasted, before he hauls them out. Of course, that is for anyone to decide himself.

In putting out corn and beans you should plow good depth but not turn up more than one-fourth in. of new clay or subsoil. Then get your ground in the very best of condition, as that is one-half or nearly so of the battle of tending them. We use a combination corn, soy bean and fertilizer planter (C. B. & Q put out by International Harvester Co.) one you can set to plant from 28 in. to 44 in. or 48 in. wide I am not certain which. The soy bean box is just inside the corn box. It is small, about four or five inches in diameter and the corn is put just outside of it and in corn box. Each has separate plates so you can adjust it most anyway you want to. For planting to hog off we plant 40 inches wide (or in fact all our corn we put that width) and want corn 10 to 14 inches in row and about two or three beans between each stalk. A bushel of beans at that rate will plant from six to eight acres owing to size of beans.

We use disc furrow openers and when crop has been planed three or four days I go in with three section spike tooth harrow and give a little slope to the teeth and give it the once-over. I cannot estimate how much good is being done, as it stops the very small weeds. When corn and beans have leafed out go in again with same harrow and do the same thing over. It looks like you were ruining the crop but if you cannot stand to do it get the hired man to drive the team and you do something else. The tending of the crop closely when small is the essential thing. This has the furrows neatly filled up and a couple or three good plowings and you are ahead of weeds. After beans get in blossom don't cultivate when dew is on or when wet fro mrain as it cuts their production by getting dirt into the blossoms. If you use the same as I do, the Ito San Soys, they will be ripe and you can turn hogs in a week or two before corn is fit and they will eat the beans. If they don't get on to riding corn down turn in an old sow or two for few days and they soon learn it. That is the way we want to do it and generally do. A few beans should be pulled and fed in the pen before being turned in as some hogs wouldn't eat them till accustomed to them.

If you do not have a combination planter just plant your beans first using a rather small plate and then take you mortar off and go over again in same tracks with corn in hoppers. This doubles up the work but can be done on a small scale. However if you were putting out 40 acres of corn and beans as we will this year, you would not like that way. You cannot get the crop tended as well as generally there are a few variations of planters. Don't be too afraid of covering up the soys but plow closely the first and second plowings. If the weeds and grass get a start you cannot get rid of them very well.

For seed put in 28 in. rows and harrow a couple of times and plow each row once and maybe twice and you have the crop tended. Beans for seed should take about one-half bu. to acre of seed. The Ito San can be planted in June and be ripe before first as it about last week in May or first week takes about 90 days to ripen.

Be sure to inoculate as it is essential to the gathering of nitrogen by the beans. You can get the inoculation at the M. A. C. at a small price per bu. Just follow instructions on wrapper and you will have it all O. K.

Some time during the summer I will give an article on the best ways and means of handling the crop at harvest time.

I am sold out of seed beans for this spring, and have been returning checks all this week, so your paper brings results. However, we are going to put out ten acres for seed this year. —*G. P. Phillips Bellevue, Mich.*

Don't Wear a Truss

BROOKS' APPLIANCE, the modern scientific invention, the wonderful new discovery that relieves rupture will be sent on trial. No obnoxious springs or pads. Has automatic Air Cushions. How to Prevent Garlic Flavor in Milk

DAIRYMEN and creamerymen in many states are troubled every spring by garlic or onion flavor in the milk. This is due to the cows feeding on garlic or wild onion, one of the first plants to start in the pasture in the spring. The trouble from garlic is not likely to last very long, as this week is soon cropped off and the grass becomes plentiful enough for the cattle to feed on it in preference to the onion.

Garlic flavor in milk can be removed by heating the milk to 145 degrees F. and forcing air through it at this temperature for 30 to 60 minutes, according to Farmers' Bulletin 608 of the United States Department of Agriculture. As this method requires a certain amount of equipment, it is much more satisfactory for the average dairyman to keep this odor out of milk by a few simple precautions in herd management.

There are two ways of protecting the milk from garlic flavor. First, prevent the cows from obtaining garlic; and second, manage the herd on garlic pasture, so that there will be the least possible chance of getting the flavor in the milk.

Often the garlic is found only in one patch in the pasture, and this can be temporarily fenced off and pastured with other animals not producing milk.

Where garlic is scattered all over the field it will be impossible to keep the cows away from it, but by removing them to some other field three or four hours before each milking the flavor will be reduced to a minimum. The odor in milk is strongest from cows which have just eaten garlic, and the odor is reduced as the time between the eating of garlic and milking is increased.

In case no garlic-free pasture is available, it would be advisable to drive the cattle to the barnyard three or four hours before milking and feed them on hay and silage. As the season for garlic trouble is short, this should not cause much inconvenience.

The best plan for avoiding trouble from this weed on the dairy farm is to kill it out completely. This can be done with little trouble, and those interested can obtain information on the subject by writing to the United States Department of Agriculture for Farmers' Bulletin 610, "Wild Onion Method of Eradication."

DIVIDED ON PRESIDENT

I am a non-voter at present, but am so intensely interested in politics that I had my voting brother and mother make out these coupons. There is a house divided against itself here. My brother says either Hoover or Goethals suits him, while mother and I think Bryan is the man for the job and I guess we are all right. But I don't see what you put Borah and Johnson on the list for (unless for ridicule.) There is not a farmer in this part of the country who had not had the advanced symptoms of softening of the chanium who would want to give a vote to either polecat. Henry Ford is a wonderful man we all admire greatly, but he would not be a successful president. Wish you successful endeavor for a farmer candidate for governor. Milo Campbell suits us.—*H. H. F., Fife Lake, Mich.*

In the Cow Barn

The faet that Holsteins are such prolific milk-producing cows and that Jerseys are producers of rich milk, causes considerable argument among the fanciers of these respective breeds. At a recent county fair two men were arguing. The Jersey breeder said: "I wouldn't give a Holstein stable room. I had one once and her milk was so thin that after you milked a pailful, you could put a silver dollar in the pail and see it on the bottom."

"Huh," sniffed the Holstein fancier. "You couldn't make that test with your Jerseys, because you couldn't get enough milk out of one of them critters to cover the dollar."

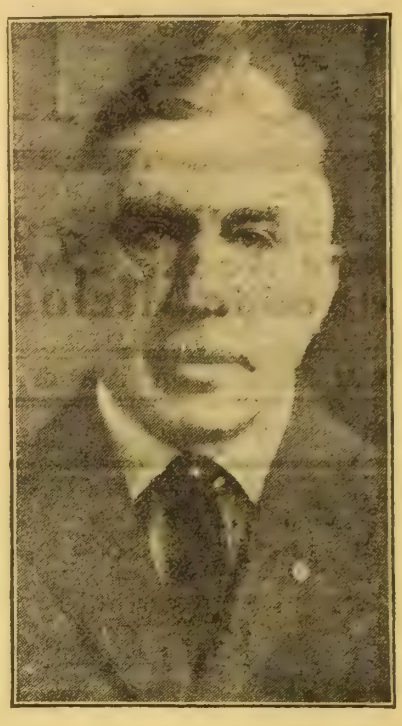
The Michigan
BUSINESS FARMER

An Independent Farmer's Weekly Owned and Edited in Michigan

Vol. VII, No. 29 | MT. CLEMENS, MICHIGAN, SATURDAY, MARCH 27, 1920 | $1 PER YEAR



LEONARD WOOD

The Problem of the farmer is complex; he needs roads, schools, fairer taxation, longer credit, better living and working conditions, a chance to deal with the consumer direct, the right to join with his neighbors to buy and sell more economically—a cure for the farm tenancy evil.

The Solution is a friendly co-operating Department of Agriculture headed by a farmer who really knows farming, whose interests are the farmers' interests and who will not be afraid to put his shoulder to the wheel and help the farmer out of the rut.

The Solver must be a president who will not turn a deaf ear to the farmers' pleas, who will have good judgment in his choice of an agricultural head, and having chosen him will give him unbounded latitude so long as the farmers' interests are being best served.

Leonard Wood has pledged himself to choose such a man to inaugurate constructive legislation for the benefit of the farmer to see that he is dealt with fairly, to see that the nation's debt to the farmer is paid.

For your own sake; for your children's future; for the nation's welfare—VOTE FOR HIM—April 5th.

This advertisement paid for by Leonard Wood League of Mich. F. M. Alger, Pres.; W. C. Piper, Vice-Pres.; C. A. Weissert, Sec. and Treas.

Detroit Milk Situation is Under U. S. Scrutiny

Federal Fair Price Board Seeks Testimony on Reasons for Present Cost of Milk in State's Metropolis

THE SCRUTINIZING eye of the United States Department of Justice has focused itself upon the Detroit milk situation, and the Federal Fair Price Board for Michigan has called a hearing for March 29th to secure testimony on the reasons for the present cost of milk in that city. Although it is contended that the investigation means no harm to the producers of milk, it must be frankly admitted that the present method of establishing the milk price for the Detroit area stands in grave danger of utter annihilation, in which case the producer of milk in that area will be forced back into the helpless position of former years.

Why Sixteen-Cent Milk?

"What we intend to find out," said Hon. Wm. F. Connolly, chairman of the board to a representative of the **Business Farmer,** "is why fresh milk stays up to sixteen cents a quart when condensed milk has gone down in price and there is a large surplus of fresh milk being produced. It's time the price to the Detroit consumer came down. We also want to find out who is making the profits out of the milk business. The grocery store pays 15 cents per quart for milk which they retail at 16 cents. They surely aren't profiteering. Who gets the difference between what the farmer receives and what the grocery store or the consumer pays. That's what we would like to know."

We suggested to Mr. Connolly that one reason for the high cost of milk was the excessive cost of distribution within the city, to which he agreed. "We are advised," he said, "that under the price agreement of the Milk Commission the creamery companies are paying exorbitant wages to milk drivers and other employes. We are told that one driver gets $62 a week for working from 4 to 7:30 a. m."

Fair Price Board Not Representative

The Fair Price Board is composed of six men and one woman. Appointments to the board were recommended by District Attorney John B. Kinnane of Bay City, and approved by the U. S. Department of Justice. A survey of the personnel of the board as it now stands reveals a weakness which has been typical of the majority of investigating boards of the past few years,—it includes no one whose business interests are related to production or distribution of milk, and hence in position to have first-hand information on these related industries. No one would question the desire of the board to be impartial, but its ability to be impartial unless in complete possession of all facts which can only be brought out by a series of questions and answers by all parties concerned as in a suit at law, is very doubtful. Fortunately the chairman of the board, Hon. Wm. F. Connolly, Democratic leader and formerly judge of the recorder's court, has a well-earned reputation for fairness and we have no reason to believe that he will not exercise his usual impartiality in considering the judicial ability of certain other members of the board, principal of whom is W. J. Cusick, president of the Retail Grocers' Ass'n., and of the Superior Grocery Co., a wholesale concern composed of Detroit grocers, upon whose advice the board passed the motion ordering the milk price investigation. The other members of the board are: C. A. Clark, of the J. L. Hudson Co.; Fred H. Diehl, general purchasing agent of the Ford Motor Company; A. E. Sarvis, director of industrial relations for the Buick Motor Co.; Wm. Brogan, of the Brogan-Dancer Co., of Lansing; Mrs. Frances E. Burns, of St. Louis, Mich.

Attend This Hearing

THE FIRST hearing to be conducted in the Federal Fair Price Board's investigation into the Detroit milk situation will be held Monday evening, March 29th at 7:15 o'clock, on the third floor of the postoffice building, Detroit. Milk producers living near Detroit should by all means attend this hearing, listen to the testimony and be prepared to testify in their own behalf. This is important.

Farmer Should be on Board

W. J. Cusick was a member of the Wayne County Fair Price committee before which a representative of the **Business Farmer** appeared several months ago to defend the farmers against the false allegations made by a member of the board. Cusick was the only man on the committee who seemed to have a pre-conceived notion that the average farmer is a profiteer and a knave and needed no defense from anyone. What he had to say on that occasion showed him densely ignorant of the farmers' position, the manner in which farm products are distributed and the portion of the consumers' dollar which the farmers receive. His ignorance makes him unreasonably prejudiced against the farmer, and in the humble opinion of the writer wholly unfit to sit on a "fair" price board. Of the other members of this committee we know but little, except that for the most part they represent industries which have profiteered largely in the past and should be the first to come under public scrutiny. It is unexplainable why the representation on an investigating board should be open to representatives of the retail grocery and mercantile trade and automobile manufacturing industry and closed to representatives of other industries.

In the hopes of making the Fair Price Board more representative we wired the Department of Justice as follows:

"We protest against appointment of W. J. Cusick, Detroit wholesaler to Federal Fair Price Board. Reason: His utterances show complete ignorance of farmers' economic problems and pronounced prejudice against agricultural producers. Inasmuch as this board is to summon farmers to its hearings we earnestly petition the appointment of at least one man to board who is affiliated or in sympathy with agricultural interest." (Signed) *Forrest Lord, editor* THE MICHIGAN BUSINESS FARMER.

This same request was referred personally to Judge Connolly, who stated his belief that the committee would be fair in its decision, but that he had no power to make appointments. He advised that such matters be taken up with District Attorney Kinnane, which will be done at once.

Dairy Farmers to be Summoned

Representatives of both farmers and creamery companies will be summoned to appear before the board, the board having the power to subpoena under the Lever Law. The results of the investigation, if they show excessive profiteering on the part of anyone, will be turned over to the district attorney who has power to prosecute. The contention has frequently been made by representatives of the Detroit consumers that the present method of fixing milk prices for Detroit is illegal and virtually constitutes a monopoly in restraint of trade. It is held that while ths method amply protects the producer and the distributor of milk it does not protect the consumer. It is pointed out that the Milk Commission is obliged to accept the cost and profit figures submitted by the creamery companies and the farmers, and has no legal power to examine the books of the companies to verify the figures.

No one, of course, can foretell what will come out of this investigation. It has long been the conviction of those who have given the matter any thought that the distributing companies of Detroit have been making large profits at the expense of both the farmer and the consumer. The Milk Commission has helped to secure the farmer prices somewhere near the cost of production plus a reasonable profit. The creamery companies have disclaimed profiteering, and in the absence of any proof to the contrary, the farmer and the consumer have been obliged to accept their figures. If the creamery companies are profiteering, it must be admitted that both the farmer and consumer suffer as a result thereof. The consumer suffers because he cannot afford to pay the high prices charged for milk, and the farmer

(*Continued on page* 23)

The Farmer and the Consumer

THERE IS a prevailing notion in the cities that the farmers of the country have no regard for the interests of the consumer. As a result, the producer of milk has often been held up as a hard-hearted monster when the increasing price of milk has deprived the children of many poor families of this necessary food product. We can say emphatically to our city cousins that there is no more compassionate class of people in the world than the people of the farms. Most of them have at some time of their life known what poverty and hardship are. They ARE concerned in the welfare of the consumer. They DO feel for the poor of the cities when in their unavoidable price wars with milk distributing monopolies, the supply of milk has been curtailed or the price become excessive. When the New York Dairymen's League went on "strike" as their only means of protection from the organized distributing agencies of that great metropolis, they established milk stations in the poorer sections of the city in order that the people who could not afford to pay fancy prices for milk brought in from a great distance might have ample for their children. And in all cases that have come to our attention when dairymen were forced in a position to curtail their milk production or increase the price, the welfare of the consumer has always been a subject of grave discussion. The distributing companies have frequently taken advantage of this fact and have resorted to pleas in behalf of the consumer when they themselves held the key to the situation, and not the farmers.

Dairymen are being taught to reduce waste in the production of milk, to weed out the low producer and to lower production costs. A great deal has been done along this line, and the farmers rightly feel that the problem of cheaper milk to the consumer lies with the consumer who should insist that waste and inefficiency be eliminated from the present extravagant method of distributing milk.—Editor.

How Michigan's State Tax Dollar is Spent

Dennis E. Alward, Secretary of Michigan Senate Explains Division of State Taxes

HOW Michigan's tax dollar is spent is the theme of an interesting story given by Dennis E. Alward, secretary of the senate, for years a student of matters of taxation.

Mr. Alward takes for example the city of St. Johns and the township of Greenbush, Clinton county, to make practical illustrations as to the application of state taxes in Clinton county. Mr. Alward shows that out of every dollar of direct taxes collected by the state, 66.4 cents are spent for four purposes: Educational, care of insane, penal and highways. The remaining 33.4 cents of the tax dollar, he shows, goes to charitable institutions, pay of judges and expenses of the legal department, public health, military and war purposes and for all state departments, boards, commissions, the legislature and miscellaneous expenses.

Mr. Alward's discussion is not a defense of condemnation of taxes. He expressly states that he knows nothing of the merits or demerits of any appropriation. He presents, however, many interesting facts in regard to taxation showing how the money collected from the people is expended and pointing out the relation to each other of state, county, city and school taxes. A chart is used to illustrate his presentation of the subject. Mr. Alward refers to the increase in all kinds of taxes this year as one of the effects of the campaign of old H. C. of L. The high cost of coal and clothing and food has hit state institutions as well as private households.

Three-fourths of the increase in the state budget this year over last is due in large measure to the increased cost to the state institutions of the three items named, and to the extension of the services of the public health department in the fighting of infectious and dangerous diseases among the people.

The new office building, the added activities of the department of animal industry and all other items put together, account for the other one-fourth of the increase.

Taxation in St. Johns

In St Johns on a valuation of $1,000, each taxpayer this year contributes $4.26 in state taxes, distributed as follows:

Educational	$1.16
Insane	.81
Penal	.64
Highways	.22
Charitable	.18
Office building	.15
Legal	.12
Public Health	.10
War loan	.06
Military	.05
Agricultural	.05
State departments, etc	.72
	$4.26

Mr. Alward points out that, contrary to the popular thought when the subject of taxation is under consideration, state taxes are by no means all the taxes that the people pay.

Combining this winter's state tax paid in the city of St. Johns with the city taxes paid last summer, the taxpayer paid for the whole year on each $1,000 of valuation, $40.48 ,as follows:

State	$4.26	10½%
County:		
General	$2.83	
Co. road	3.00	
Drain at large	.21	
Hay extension	.02	
	6.06	15 %
School	13.16	32½%
City	17.00	42 %
Total taxes	$40.48	100 %

Thus it appears that nearly 90 per cent of all the direct tax is for local purposes (county, city, school) and has nothing whatever to do with the State tax.

Clinton county this year pays in direct state taxes $139,447.17. Last year Clinton county received from the state its share of the primary school interest fund amounting to $45,107.97, which by just so much reduced the amount necessary to be raised for school purposes in the county. Ten thousand, three hundred and fifty dollars(also, was paid by the state to Clniton county last year as reward for roads, and to that extent the country road tax was reduced. The primary school fund and road reward figures for the ensuing year are of course not yet available, but it is thought certain that the amounts to be paid Clinton county will be fully as large as last year. If so, the county will receive as its share of specific taxes and state reward for roads about one-half as much as it pays in direct state taxes.

The sections shown in the chart embrace appropriations made for the following purposes:

Educational—Agricultural College, Central Normal School, College of Mines. Library Commission, Normal College, Northern Normal School, State Library, Superintendent Public Instruction, University, Vocational Education, Western Normal School.

Care of the Insane—Farm Colony for Epileptics, Home and Training School, Ionia State Hospital, Kalamazoo State Hospital, Newberry State Hospital, Pontiac State Hospital, Psychoptic Hospital, Traverse City State Hospital.

Penal—Industrial School for Boys Industrial School for Girls. Jackson Prison, Marquette Prison, Pardon Board, Ionia Reformatory, Training School for Women.

Highways—Highway Department

Charitable—Board of Corrections and Charities, Employment Institution for Blind, School for the Blind School for the Deaf, Soldiers' Home State Public School at Coldwater.

Legal—Attorney General's Department, Circuit Judges, Presiding Judge, Supreme Court.

Public Health—State Board of Health, State Sanatorium.

Military—Military Establishment Naval Militia, Grand Haven and Muskegon armories.

Agriculture — Agricultural Fair Commission. Animal Industry Department, Apiary Inspection, Farm Bureau, Horticultural Society.

State Departments, Boards and Commissions and all other purposes—Boys' Working Reserve, Community Council Commission, Great Lakes Tide Water Commission. Industrial Relations Commission, Military Reservation Fresh Air Camps, Shiloh Monument, Soldiers' Bounties, Civil War, History 32nd Division, World War, Tax on Soldiers' Land. Wisconsin-Michigan Boundary Commission. The Legislature, Auditor General's Department, Banking Department Budget Commission, Board of State Auditors, Governor's Office, State Fire Marshall, State Fish Commission, Food and Drug Department, State Game Warden (forest fires). Geological Survey, Historical Commission, Industrial Accident Board, Insurance Department, Labor Department, Mackinac Island State Park Commission. State Oil Inspector, Public Domain Commission, State Purchasing Agent, Railroad (Public Utilities) Commission, Secretary of State's Department, Securities Commission, State Police, State Treasurer's Department, State Tax Commission, Uniform Accounting, Veterinary Board, and the following boards limited to fees: Accounting, Architects, Barbers, Dental Examiners, Law Examiners. Medicine. Nurses. Optometry, Osteopathy and Pharmacy.

Greenbush Township, 1919

This is how the matter would work out in Greenbush township and about the same in other townships:

State Tax on Valuation of $1,000

Educational	$1.14
Insane	.81
Penal	.63
Highways	.22
Charitable	.18
Office Building	.15
Legal Dept.	.11
Public Health	.10
War Loan	.06
Military	.05
Agricultural	.05
All Other	.72
	$4.22

All Taxes on $1,000 Valuation, 1919

State	$4.22	22¼%
County		
General	$2.81	
Co. Road	2.97	
Drain	.71	
	6.49	34¼%
Township		
General	$4.01	
Road Repaid	1.50	
	5.51	29 %
School	2.73	14½%
	$18.95	100 %

The difference between the city and township is because the city tax is higher than the township tax and the city school tax is higher than the township school tax.—*St. Johns Republican.*

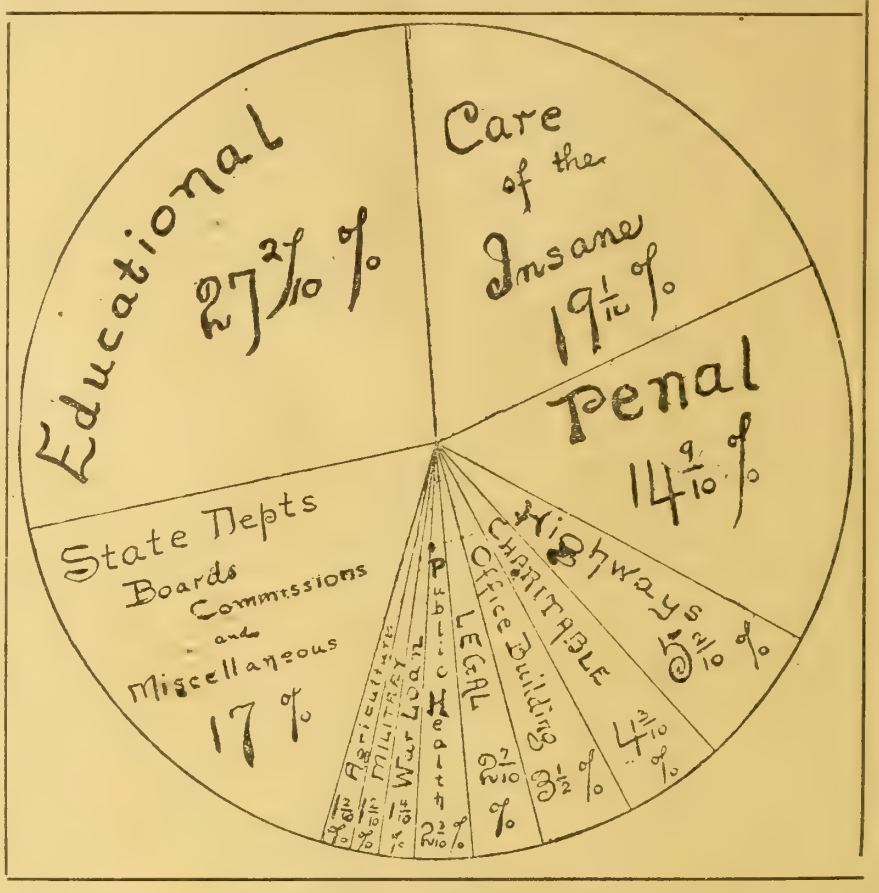

Chart showing how our state taxes are spent.

One of Many Causes for High State Taxes

By JAMES W. HELME

STATE TAXES are high. They have doubled, or nearly so in one year, and there is much grumbling thereat. Now, we must expect taxes to be higher—foodstuffs building material and clothing have nearly doubled. This means an increase in the cost of feeding and clothing all inmates of state institutions. It means that clerks and other minor employees of the state must have increased wages in proportion to the increased cost of living. The man who expects taxes to return to figures that prevailed previous to the war, is expecting too much. On the other hand, taxes have become a serious and heavy burden to the owners of real estate, and relief must be found from this burden, which is bound to increase in the future.

There are just two ways out: first, we must find other sources of revenue; second, we must cut down in every possible economical way the expenses of present institutions as far as we can.

A state income tax would give us more revenue. It is more just than real property taxation and it would reach a wealthy class of personal property owners that now contribute very little to the public treasury. This subject I may treat later in a special article.

But there are other methods of getting more revenue. Take our University. It is our largest and most expensive institution. In 1919 there was collected in taxes for the University of Michigan, the following:

Mill tax	$1,687,500
Special Appropriation	750,000
Psycopathic hospital	53,576
Total	$2,491,076

Or, in round figures, it takes two and one half million dollars to run the University a year. There are ten thousand students in attendance, showing the bare running expenses of the University of Michigan to be $250 per student. Of these 10,000 students, nearly one-half come from other states and countries. The state collects in tuition fees approximately $55 annually for students residing in the state, and $65 for students residing in other states and countries. These fees are much less than those charged in Universities of neighboring states, and as a result the attendance is rapidly increasing from the outside, necessitating additional buildings and instructors, all at the expense of Michigan taxpayers. We have placed education on the bargain counter when we allow non-resident students to get $250 worth of education for $65.

I do not believe in raising the fees to resident students but I do believe that non-resident students should pay somewhere near cost to the state. Higher fees would discourage foreign attendance and halt the necessity of increased buildings and equipment.

It is a splendid philanthropy to educate people from Ohio and other state, China, Japan and Timbuctoo at the expense of Michigan taxpayers, but how long can we stand it? Is it just to Michigan taxpayers to educate the whole world? Is it not just that non-resident students whose parents pay no taxes in Michigan should pay a greater proportion of the cost of their education?

There are several thousand studends from Ohio at Ann Arbor, yet their state has a fine university. They are attracted to Michigan by lower fees.

This is not an attack on our University. We glory in its record and reputation, but justice to Michigan taxpayers demands that they be not taxed to furnish cheap tuition to non-resident students. These students should at least pay as much as their home university would charge them. If they were compelled to, they would probably stay at home.

Many Solutions Offered to Hired Man Problem

H. H. Halladay, State Livestock Sanitary Commissioner and other Business Farmers Voice Their Opinions

. H. HALLADAY
te Livestock Sani-
ary Commissioner

IN attempting to discuss this question, the writer would like to emphasize the point that he is in sympathy with the hired man's point of view, and knows what physical labor and farm work mean from personal experience at hard work and long hours, never-ending details of stock

d crop management.

It was through this period of apenticeship, as you may call it, that financial start was secured and so the lessons learned, that have oved valuable in later farm exrience and the broader work of the ite as now performed, the writer ving lived fifty years upon the e farm on which he was born and w owns. So we would ask the red man to be patient and thorgh and watchful, and try to avoid stakes which spell the failure of ny young farmers, especially ose who try to hurry the perfecn state.

And let us warn the young farmnot to ape the owner's habits and e of those who have served long ars to earn their autos, their short urs, and comparative comfort. ese attainments must come gradly as experience and value inease; and, in the end, farmers, as other class, can take a real joy life and his associations.

We wish to state emphatically t no farmer can compete in the esent day high wages and short urs of factory work and other city ployments. It is absolutely imsible for a farmer to keep to that le without running a big deficit, t we hope to prove that life on a m and the clean healthful habits l surroundings are enough to balce the scale against city life.

Think for a moment of the monny, the strain on one particular nt of body or mind, to do hour er hour, day after day, through nths of employment, just the one rticular act or set of acts requirin most factories of each man emyed. This is the day of specialts, no less in labor than other prosions or business. A mechanic usly knows nothing of the construcn of the manufactured article, ext the part he is working upon. He s no information or broad view the product and the constructive cess; he is an automaton just as ch as any other machine and, like machines, will wear out quicker ause the strain or effort is all contrated on one point instead of begeneralized as it may be and is the farm. Doctors' fees, hospital is, and surgeons' charges all stand a testimony to the truth of this nt concerning laboring classes as npared to farm workers. His living ditions are often unsanitary, wded and difficult. His pleasures himself and family are disapnting and sometimes harmful, as l as expensive. If he is an Amcan, he shrinks at mingling largewith the foreign element. He comes one speck of humanity amid seething mass, and has little opportunity to develop his personality enlarge his powers of mind or ly. His net income at the end of sufficiently long period of trial inks to nothingness, and he is ally filled with unrest and disapntment.

On the farm, the satisfaction and of creating and completing some cess, be it a crop grown to har-t or stock raised to maturity, is small reward for labor. To see 's powers and efforts expand and ceed is a part of our real happis. Then the monetary reward is tainly equal in the long run.

Farm laborers cannot hold to an ht or ten-hour limit. From the y nature of the work, that is impossible, as farming is a seasonable occupation, and work rushes or goes slower according to weather conditions. Crops out and a storm coming means hustle, and hustle long enough to secure everything possible.

If the hired man is a grouch and trying to hold to pre-conceived notions of city laborers, he may as well drop his work or change his ways; for farming is in a class by itself, and no office rules of a big manufacturing concern can govern the work. Neither can the hired man expect picture shows, auto trips, and dances every few nights if he makes good at his job. This country is becoming jitneyized to death. Every man is coming to think he must have a car and run it every waking hour when not held in actual labor. He gets a car in some way, often a worn-out piece of liability, then buys gas as though it cost nothing, puts money into repairs, and loses time which should belong to his employer, and wears himself out so that he is really unfit for real labor.

I have seen this experiment tried many times, and always with the same result; a good capable man turned into a failure through indiscriminate use of an auto which he really could not afford.

I am not crying absence of pleasure for the hired man, but when he wastes his opportunities upon things absolutely a detriment to him, he should not blame his employer or his work for his downfall.

Another common fault of the young farmer particularly those who are renting or operating farms on shares, is the inability to stand prosperity. They think they must jump too fast. A good gain one year seems to turn their heads, and they think they have tapped an inexhaustible flow of wealth and they can sit back and see the money roll in. Personally, I have seen that happen to several men on my own farm. They get the wrong idea from success, and they do not learn that no lasting benefit comes other than by faithful consistent effort, as it often takes one year's profits to balance some deficit.

As the hired man, or young farmer, has many lessons to learn, just so do we have faith that he will learn them, and that the young men of our time will realize the pleasures and benefits of farm occupations and be drawn to the profession not only because it is the ideal life, but because it holds financial possibilities. He will not try to advocate strikes on the farm; he will see that they are un-American at any time or place. He will be willing to put in the necessary hours of labor to conduct the work properly. He will make his home and his surroundings a joy ,and spend his money wisely as he can see real needs or proper pleasures to be derived. He will not try to ape his employer in expenditure, but will remember that these privileges come only as they are earned and deserved. He will learn to accept prosperity as an incentive to future endeavor, not as an end to effort.

We, as employers, must be patient with the mistakes of the younger men, and lose no opportunity to encourage instead of discourage, to keep a constructive instead of a destructive attitude toward our young farmer.

Here's a Young Man Looking for a Job

My father sold out and I wish to get work on some big dairy farm where they keep Holstein cattle to learn the best ways of taking care of them. I do not know of any place near here and thought that you could give me the names of some. I am twenty-one and have lived on a farm all my life, so I think I can do it. Thanking you for past favors and wishing you success in the future, I remain—
(Name and address furnished to parties interested.)

FERTILIZER LENGTHENS YEARLY GROWING SEASON

Trees on left unfertilized. Those on right received complete fertilizer and lime. Treatment the same in all other respects. The crops on these plots in 1917 were 25 bushels per acre on the unfertilized; 762 bushels on those receiving fertilizer. The average difference in active working season on these plots is at least four weeks.

BE "HUMAN" TO HIRED MAN

I HAVE BEEN reading some of the articles on "The Farmer and His Hired Man," and as a few words of suggestion will state the following:

In order for a hired man to be a paying proposition there are several conditions that enter which must be met. First, you must be able to have work the year around that will count. That is, have lots of live stock in proportion to rest of work. Then on a bad day all that a hand should do is be busy with the stock with an hour or one and one-half hours to himself in morning and afternoon and he will appreciate it and will have done more than if he were working out in the rain and you sitting by the fire.

Second, keep a good grade of live stock, purebred if possible and then his work will mean the most when tending good stock. (Personally I have all registered stock but cattle and horses and I intend to put in small start of purebred Shorthorns this year as I did have them and sold clear out.) It costs less to feed a good well-bred animal than it does a scrub and it makes lots more gains.

Third, one should keep the manure hauled out in the winter and get all the good of it then; have it done instead of having it to do when good work days come. This does not seem very important but it is more so than is generally thought.

Fourth, don't just put out corn and beans as one fellow has written but put out a little of several crops fall and spring then the frost won't surely get them all. Or, if he had silos and live stock he could utilize that. Don't do like a fellow I know: be in on anything when he should be out and out when he should be in. Be in several lines and stay with it through thick and thin and nine out of ten you will win.

Fifth. Hands and their wives are human. Treat them so. Do not expect a hand to work more hours than you do, nor do not always have to go to town when there is a very hard piece of work to be done and expect him to have it done when you come back. He will appreciate it if you help him do the dirty work and then you go to town when everything is running normal.

Sixth, see that all your machinery and harness, etc., are all ready before you want to use them, thus not having to waste two or three days waiting for repairs. If your hand works an hour or so late to finish sowing oats or plant corn or harvest a crop don't forget it but give him a little time off to pay up and he'll appreciate it and do you good work in return.

Seventh. If the farm hand and the farmer could agree for a number of years it would save quite a lot of expense of moving and also getting used to the ways of the new boss. As a hired man who is used to a farmer's ways can do things exactly like he wants them done without asking him. The farmer could also get to depend on the hired man and would work good for both as he would be worth more and the farmer could afford to pay more for a man of that kind.

In conclusion I will say that I have had a few kinds and have observed quite a number and if both mean to get along and do the square thing there is generally satisfaction. I know one or two who have worked for the same man nine or ten years on that account. One hired man states that he is just as far ahead as when he started. I know some farmers that are in just the same place and some not quite that far so we can not judge the question from anyone's own personal testimony.—*G. P. Phillips, Eaton County.*

ADEQUATE RETURNS, SOLUTION OF HIRED MAN PROBLEM

YOU ASKED in the last week's issue, for the opinions of your readers in regard to the farmer's hired help problems. My opinion of the matter is this: The farmer has no hired help problem. What is known as the help problem with farmers is only one of the results of his failure to organize for protection against the many unions with whom he must deal. The real problem that confronts the farmer is that of how to unite for the common good of all. To secure favorable legislation both state and national. To buy in large quantities directly from manufacturers or to manufacture for themselves. To sell directly to the consumer or at least squeeze out many of the unnecessary middlemen. Thereby making a larger profit for himself.

This will solve the hired help problem and make other problems.

I do not blame the hired man for going to the city. I only wonder that more of the farmers do not go too. I have had some good hired men, loyal fellows who looked to my interests as faithfully as they could have done to their own. I never had any trouble with my men and except for the matter of wages could have kept them as long as they wished to work out anywhere. We worked together shoulder to shoulder, sharing the pleasant and unpleasant jobs together. They received twenty-five or thirty dollars per month and board and had sense enough to know that I was paying all I could afford. Those fellows are now working in Detroit at close to one dollar per hour. I could hire them back today for less money than they now receive. But half that rate continued for any length of time would spell ruin to me. They are working for men who know in advance just how much it is going to cost to produce an article and also just how much that article will sell for when completed.

I, as a farmer, am producing grain,

Congressman Fordney Says He Was Misquoted

That He Has Lessened His Efforts to Secure Tariff Protection for Michigan Beans

By THE EDITOR

THE CHARGE has been made that THE BUSINESS FARMER was unfair in accusing Congressman Fordney of "playing politics" and "passing the buck," when he was reported to have said that the reason he did not push the bean tariff bill was because the President would veto it.

We do not like to be charged with unfairness. It has been our constant aim to be fair and just in all our discussions, giving credit where credit was due, but never hesitating to criticize when criticism was merited. We have always believed in letting the "other fellow" tell his side of the "story," and the columns of this publication have always been open for that purpose, as our readers know. In the present case we shall present such "evidence" as we have to support our original statment regarding Mr. Fordney and the bean tariff, and let our readers sit in judgment and render the verdict.

The writer was one of the committee which went to Washington last fall to plead for a special tariff bill on beans. As we have previously and frequently stated Congressman Fordney took an active part in arranging the necessary hearing before the house ways and mans committee of which he is the chairman, and in otherwise assisting the bean representatives to present their facts. In the capacity of chairman of this committee, however, Mr. Fordney takes a leading role in all hearings having to do with tariff legislation, and it could not be expected that he would do less for his own constituents.

A couple weeks after the writer's return from Kashington he wrote Mr. Fordney as follows:

"October 31, 1919.

"Congressman Joseph W. Fordney,
"Washington, D. C.
"Dear Mr. Fordney:—

"As you can readily appreciate, Michigan bean growers are anxiously awaiting the outcome of their petition for an import duty on Japanese beans and we would greatly appreciate it if you would advise us at this time what the present status of this matter is.

"The bean market is slowly on the decline. It appears that Mr. Kimball and other speculators in Japanese beans are taking particular advantage at this time of the low import duty on the Japanese beans and are flooding the country with this product. I do not think it possible to overestimate the injury which may be caused to the domestic bean industry, unless this tariff is speedily passed. What is the best word we can give our readers on this subject?"

After a lapse of several days we received a reply to this letter from Mr. Fordney's secretary, to the effect that Mr. Fordney was out of the city but would give us the desired information upon his return. The reply, however, never came. At least upon two later occasions we wrote Mr. Fordney regarding the progress of the bill. To one of our letters we received a very brief and evasive reply; to the other none at all. Unfortunately these letters have disappeared from our files, but if Mr. Fordney will be kind enough to send us the duplicates we shall be glad to publish them.

Nearly four months had elapsed without any definite word as to the status of the bean tariff bill, and on Feb. 8th, an article appeared in the *Detroit Free Press*, the *Lansing State Journal*, and other daily papers quoting Mr. Fordney as saying that it was useless to push the bill because of the presidential veto. This news story furnished the basis for the article published in the Feb. 21st issue to which Mr. Fordney and his friends have taken exception.

On February 11th we wired Mr. Fordney asking him if he had been correctly quoted. Receiving no immediate reply to this telegram, we concluded that Mr. Fordney had been correctly quoted and accordingly published his reported statement. On February 19th, eight days after we wired Mr. Fordney, we received a letter from him in which he stated that he "must have been misquoted, as his attitude on protection had not changed." He furthermore stated that he was using "every opportunity" to push the bean tariff bill, but he did not state what had already been done along that line, or what was likely to be done.

We replied to Mr. Fordney as follows:

"February 21, 1920.

"Hon. J. W. Fordney,
"Washington, D. C.,
"Dear Mr. Fordney:—

"I greatly regret that my telegram of February 11th was not answered until February 13th, also that the answer was mailed to Mt. Pleasant instead of Mt. Clemens, and consequently did not reach my hands until February 19th.

"I enclose herewith a clipping of a news story that appeared in the Detroit Free Press, Lansing State Journal and other daily newspapers in the state of Michigan, all of the same tenor. The substance of the statements contained in these press reports I have used in the current week's issue of our publication. If it be true that you have been misquoted, and desire to say so over your signature, we shall be glad to make the proper correction."

On March 16th we received the following letter in reply to our letter of February 21st:

"March 11, 1920.

"Mr. Forrest Lord, Editor,
"Michigan Business Farming,
"Mount Clemens, Michigan.
"Dear Mr. Lord: —

"Your letter of the 21st ultimo was received March 5th. I regret that my former letter was misdirected to Mount Pleasant. There seems to have been much misunderstanding all around.

"The article in the Detroit Free Press of February 9, 1920, copy of which you enclose, did not quote me correctly. To claim or say what the article attributes to me would be altogether too assuming and would come far from indicating the real situation here. I assure you I did not say:

"'I could get a bill through Congress providing for this tariff but the president would veto it.'

"What I have said is that 'If I could get a bill through Congress of this kind, without Democratic support, the president would veto it.' I have also said that votes could not be obtained to pass a bill over the president's veto. However, many consider this an inopportune time to attempt tariff legislation and my efforts to have a bill reported have been without success. I enclose copy of letter from Congressman Osborne, the author of the bill in question, which explains the matter in a manner in which I have not explained it.

"The criticism in the Michigan papers has been disheartening, but I assure you I have not changed my position. I believe in protection and consider the present law wholly inadequate and shall continue my efforts to bring about what I consider to be much needed legislation."—J. M. Fordney.

Bean Bill Author Praises Fordney

Enclosed with this letter was a copy of a letter written to Mr. Fordney by Congressman Osborne, of California, who introduced the tariff bill. Congressman Osborne's letter was dated as the reader will note, March 6th:

"March 6, 1920.

"Hon. Joseph W Fordney,
"Chairman, Committee [illegible] Means
"House of Represen[illegible]
"My dear Mr. Chairman:

"Let me express my gratitude to you for your persistent efforts, in the fact of what I know to be the sentiment of the committee against present revision of some features of the tariff without consideration of the subject in toto, to bring up and have considered my bill H. R. 7737, to inrease the import duty on beans.

"I have observed with gratification and admiration your efforts in this behalf to attain the much needed protection of American beans, and realize the great difficulties which beset this legislation and the need of an educational campaign to apprize the people generally of the harm done this important industry by want of protective regulation against the foreign product produced by cheap labor and permitted to compete practically unrestricted with our better-conditioned and superior American labor.

"I feel that the comprehensive hearings, in which you have so ably assisted as presiding officer, have gone far to bring out the merits of the case, and sincerely hope that other members of the committee will soon show as friendly an attitude as yours, so that a measure may be enacted which will afford proper protection to American bean growers."—Henry Z. Osborne, M. C.

Information From Another Source

Because of Mr. Fordney's delay in acknowledging our letter of Feb. 21st we concluded that he had decided not to discuss the matter farther. But because of our extreme desire to secure information on the subject, we wrote to Congressman Garner, a Democratic member of the committee who was the only Democrat on the committee to make the admission that the facts seemed to show that the bean growers were entitled to some protection. Our letter to Congressman Garner follows:

"March 16, 1920.

"Congressman John M. Garner,
"Washington, D. C.
"Dear Mr. Garner:—

"The writer was one of the delegation that appeared before the Ways and Means Committee last October to plead for a tariff on beans. He remembers very well for the interest you took in the arguments presented by the delegation and by your very fair admission that you thought, in case the facts presented were correct, that the bean growers in the United States were entitled to some protection. It is for this reason that I am writing to you, asking a very great favor.

"It is this: Congressman Fordney, who promised the bean committee that he would do everything possible to speed the passage of a special bean tariff bill, has been very reticent as to what he has accomplished, or attempted to accomplish along this line, and letters that I have written to him have either received a belated reply or none at all, and I am uncertain to this day, as to what action, if any, our congressman has taken up in this matter. Several weeks ago the Detroit Press of the state quoted Congressman Fordney as saying that he would have difficulty in getting a special bill through Congress but that the president would veto it, and inasmuch as he could not muster enough Democratic votes to override the veto it would be useless to push the matter to a vote. Knowing Mr. Fordney to be exceptionally partisan in his views I took this statement as a deliberate attempt on his part to place the blame for inadequate protection on the shoulders of the Democratic party and the president and have taken the attitude that the bean growers of Michigan would suffer because of Mr. Fordney's political playing. Perhaps this is a little unjust to the congressman, but not as much as I have received no statement from him to the contrary. I can have no other opinion.

"Will you advise me by return mail the status of Congressman Osborne's bean tariff bill? What efforts if any has Mr. Fordney made to secure an affirmative vote of the committee on the measure, and what chance has the bill of being reported out favorably from the committee? In behalf of our publication and the bean growers of Michigan I would most cordially thank you for any information you can give us on the subject."

Congressman Garner's Reply

"March 19, 19[illegible]

"Mr. Forrest Lord,
"Editor Michigan Business Farming,
"Mt. Clemens, Michigan.

"My dear Mr. Lord:

"Your favor of the 16th received. The status of the Osborne bean tariff bill is just what it was when you appeared before the committee.

"My judgment is that none of these so-called "pop gun" tariff bills will be sent to the president for his signature. Senator Penrose, chairman of the finance committee, is in Florida, and up to date none of the bills we have sent over from the Senate have been passed by that body.

"I have not heard anything of the proposed bean tariff bill for weeks. I don't know what Mr. Fordney's intentions or purposes in this regard are. Of course you understand that the Republicans are in the majority on the committee and whatever policies they determine on will be carried out. These tariff questions usually resolve themselves into politics, and it is seldom that Democrats participate in framing legislation of [illegible]

HOUSE IGNORES BEAN GROWERS

Fordney Claims Farmers in Michigan Face Ruinous Competition.

Detroit Free Press Bureau,
404 Metropolitan Bldg.,
Washington, D. C.

Washington, (Feb. 8)— Bean growers of Michigan, the second bean-producing state in the union, will be subject to keen and possibly ruinous competition with the Orient, during this session of congress at least, according to Representative Joseph W. Fordney, chairman of the ways and means committee. Today he said that he could not secure enough Democratic votes to pass a bill providing for a protective tariff on beans.

"This is a matter of great seriousness to bean growers in Michigan and California," Representative Fordney stated, "and while beans are being shipped from the Orient, including Japan, and flooding the American market, the Democratic members of congress will not join with the Republicans to put a protective tariff on beans. I could get a bill passed through congress providing this tariff, but the president would veto it, and I can't rally enough Democratic votes to override his veto."

During the last 11 months up to November, 1919, heavy bean importations leaving the Orient amounted to 4,647,513 bushels at an average price of $3.46 a bushel.

Exports during the same period were 3,667,082 bushels at an average price of $5.30 The government bought up the American crop, according to Mr. Fordney, and sold it to Europe instead of putting American-grown beans on the American market. The beans from Japan were fed to millions of Americans. There was a great waste in going to the trouble to import beans for American consumption, while money used to transport beans to Europe could have been saved and the beans sold the American consumers. Congressman Fordney stated that this move of the democratic administration raised the cost of living instead of lowering it.

The bean-growers are asking a duty on beans of $2.40 a bushel in order to shut out foreign competition. In Japan a day's labor can be bought for 15 cents, while it cost around $5 in America. The aim of Representative Fordney is to save the consuming public the money that is used in transporting beans from Japan to America, by putting a tariff on beans, shutting out importations, and making American growers sell to Americans. He says: "Let Japan supply Europe, instead of the United States. We can take care of ourselves better without their aid."

The present tariff, framed by the Democrats, is 25 cents on a bushel beans.

FARM JOURNAL ROILS FORDNEY

Saginaw Representative Defends Attitude Toward Bean Tariff.

Detroit Free Press Bureau,
404 Metropolitan Bldg.,
Washington, D. C.

Washington, (March 6)—Representative J. W Fordney, of Saginaw, Michigan is feeling some indignation over a report which is being circulated in that state to the effect that he is not as zealous as he should be in the matter of securing protection for bean growers.

The story appears to have originated with a farm journal, which accused Fordney of backing down on the bean tariff and of saying that it was useless to introduce a measure at this session of congress for a higher duty because the president would be sure to veto it and it could not be carried over the executive disapproval. The contention was put forward that presidential opposition did not excuse congressional inactivity and that Fordney, as chairman of the ways and means committee, ought to have enough influence to pass such a bill through the house, if he wanted to do so.

"No one ought to be in doubt as to where I stand on protection," said Mr. Fordney, in discussing the matter. "I have said that there is no hope of getting a bill of this kind through without Democratic support in the house, but in the face of that knowledge I have done all I could to get the bill passed, and have not been able to bring it about."

In justice to the Michigan representative, it can be said that since the committee held its hearings on this bill last winter the chairman has three times brought it before the attention of the committee members and each time has been unable to get sufficient support to report it favorably.

He has met a solid Democratic opposition and enough Republican members decline to vote for it to represent a majority of the body. Without the approval of the ways and means committee the fate of the measure on the floor would be very doubtful. It might carry if it had the backing of the ways and means men, but lacking that opposition it would almost certainly be doomed to defeat. As for carrying it over a veto, which would require two-thirds of the house membership, such a project is obviously impracticable in these circumstances.

(Facsimile of news stories which have appeared in many newspapers throughout Michigan.)

Saving Grain by Feeding Corn Stover Silage

Experiments Show that Feeding Value of Corn Stover Compares Favorably with that of Ordinary Silage

By H. P. RUSK

Dept. of Animal Husbandry, University of Illinois, Urbana, Illinois.

THE STOVER silage idea is not a new one. In fact, it is as old as the idea of corn silage itself, for the underlying motive of siloing corn in the ordinary way is the preservation of the stover in the most palatable and nutritious form.

Many attempts have been made to silo the stover alone and thus reduce the cost of the silage and conserve the ears for other purposes. The earliest attempts were made with green stover, cut at approximately the stage of maturity most suitable for normal silage. The attempts were successful in so far as the resultant silage was concerned, but necessitated the utilization of the ears before they were mature enough to crib, which is impracticable on most farms.

The Illinois Experiment Station has been able to make fairly satisfactory use of the snapped ears by siloing them (husk, cob and grain) separately from the stover and using this rich silage with a nitrogenous concentrate for fattening calves. However, this method so limits the utilization of the grain as to greatly curtail any probable use of the method of storing the ears. These results do have one significant lesson, and that is the practicability of snapping and siloing the ears of corn that have been caught by frost, or are so late that they can not be reasonably expected to escape such a fate. There is no doubt in my mind that this is the most efficient method of utilizing frosted corn, where the owner is fortunate enough to have the equipment and can utilize the product.

From the standpoint of the man who is running a herd of beef breeding cows or stocker cattle, the silage problem is largely one of securing a cheap and efficient roughage as the basis for a ration designed merely to carry his cattle from one grazing season to another. When corn was worth only 50 cents or less per bushel, normal silage met these requirements, but when the market price of a bushel of corn climbed to two and three times this amount, the value of the grain in the silage made it an expensive feed for wintering purposes; hence the renewed interest during recent years in the stover silage idea.

Utilizing By-products of Corn Crop

After some preliminary studies had been made, it was decided to undertake a rather extensive series of experiments on this subject. These studies have been under way for the past three years and there are some deductions that can be made with a considerable degree of assurance.

While some work has been done each year on the preparation and utilization of green stover silage, the most emphasis has been placed on the study of silage made from the stover of shocked corn. (The purpose of this was twofold.) First, because it offered the possibility of a method which would not in any way curtail the utilization of the grain; and second, because studies made by Dr. Grindley and associates in the nutrition division showed that the largest supply of digestible nutrients in the entire corn plant occurred at the stage of maturity when the corn plant is just right to cut for shocking. It is also interesting and significant that these studies showed that even in a field of corn yielding over 100 bushels per acre, there was a slightly larger total quantity of nutrients in the stalk, leaves, and husk than in the grain. This does not mean, as some enthusiasts would have us believe that silage made from the stover of the plant should be as good as that made in the ordinary way. While the stover does contain as much total nutrients as the grain, it is not in as concentrated form and is not as available. As will be shown later, it requires approximately 50 per cent more silage made from the stover of shocked corn than normal silage to maintain breeding cows.

Putting Up Stover Silage

The method adopted at the University for putting up stover silage is to cut the corn with a corn binder at the proper stage for shocking and set it up in carefully constructed shocks. Probably as much care is taken in setting up these shocks as in any other phase of the operation, and results secured indicate that the extra precautions necessary to build a shock that will stand up and shed water are amply repaid by the better color and aroma of the silage. When the corn is sufficiently cured to crib, the shocks are hauled to the silo and run through a combined husker and silo filler, thus husking the corn and putting the stover in the silo at one operation. The machine used for this operation is constructed like the ordinary husking machine, except that it has a cutter head instead of a shredder head.

There was considerable importance attached to studies of the amount of water necessary to secure the best results. These investigations indicate that a good grade of silage may be secured with a rather wide variation in the amounts of water added. Weather conditions materially affect the moisture content of the stover so that it is impossible to lay down any definite rule. But satisfactory results have been secured in this series of experiments with the addition of amounts ranging from 80 pounds to 125 pounds of water per 100 pounds of stover. The method finally adopted was to pipe water up the outside of the silo and deliver it to the top of the distributor by the means of a hose. This gave a fairly good distribution of water throughout the stover, but even then some diculty was experienced in getting the silage next to the walls as moist as that in the center. This was corrected by taking the hose out of the top of the distributor about once an hour and directing the stream around the edge of the silo for a few minutes. We do not believe the plan followed by some of putting in as much water as they could through the blower and then running a large quantity of water on top after the silo is filled is satisfactory. Water added after the silo is full does not become well distributed through the mass of stover, but forms channels down through the stover and collects at the bottom of the silo.

Compacting Silage

Another difficulty experienced was in getting the mass sufficiently compact to exclude the air and insure good keeping qualities. Finely cut dry stover blown into the silo, even with large amounts of water, does not pack like normal silage, and considerable care must be taken by the man handling the distributor to prevent an accumulation of the husks and lighter particles around the outside. The settling in this type of silage is much greater than in normal silage and the spoilage on top is considerably deeper.

When properly prepared this material goes through a siloing process much like that occurring in normal silage. Of course, bacterial action is not so rapid as in green silage, and may also be retarded by low temperatures which are likely to prevail when this type of silage is made. however, the resultant product is surprisingly like normal silage in general appearance. Under favorable conditions, the green color seems to be partially restored.

One marked difference between the silage made from the stover of shocked corn and normal sila[illegible]s the smaller amount of acidity stover silage. Some have con[illegible]ed this an advantage, but it i[illegible]ably a disadvantage for the besides having some probab[illegible]ficial action on the coarser p[illegible] the silage, is known to prote[illegible] silage in some extent agai[illegible] growth of undesirable and, i[illegible] cases, dangerous bacteria. Th[illegible] sults of two season's work conducted in co-operation with the nutrition division indicate that the addition of one-half pound of blackstrap molasses to 100 pounds of stover increases the fermentation and yields a product with an acidity much more nearly comparable to that of normal silage. Theoretically, it would pay to add this small amount of molasses, but the practicability of such a method has not been fully established.

Feeding Stover Silage

The efficiency of this silage in maintenance rations has been fairly wel lestablished by comparisons with normal silage in actual feeding trials. A long series of investigations at the Illinois station has shown that about the smallest amount of normal silage that can be depended upon to winter an ordinary 1,100 pound grade breeding cow is 40 pounds per head per day. It is necessary to supplement this amount with some nitrogenous concentrate. At the Illinois station, either one pound of cottonseed meal or linseed oil meal has been used with this ration. This will not carry the cow through the winter in high condition, but is sufficient to carry her through in fair breeding condition. It was found in these trials that it required from 55 to 60 pounds of the silage from the stover of shock corn to replace 40 pounds of normal silage in the wintering ration.

The relative cost of these two rations is markedly in favor of the stover silage ration. A study of this phrase of the test showed that under the most efficient management the actual cost of the labor and machinery charge involved in the production of stover silage amounted to approximately $1.50 per ton. This is on the basis of deducting a reasonable husking charge from the total bill, as it was though that this item should be charged to the corn in the crib rather than to the stover in the silo. On the basis of a market value of $1.30 per bushel for corn, the normal silage cost approximately $10.90 per ton. On the basis of these prices and $60 per ton for cottonseed meal, the comparative feed costs for cattle wintered on these rations during the winter of 1917-18 were 24.8 cents per head per day for the normal silage ration, and 7.8 cents per head per day for the stover silage ration. When corn yields were not so high there was less to be deducted for husking, while the labor bill was, in some cases increased, due to operating corn binder over large areas for the same tonnage, thus materially increasing the cost of the silage. (The corn on which cost figures are based yielded approximately 100 bushels per acre.)

A few short trials have been conducted on the value of silage made from the stover of shocked corn for winter maintenance of stocker steers. The results of one lot are fairly representative of all of them. During the winter of 1917-1918, one lot of 640-pound stocker steers was carried for 110 days on an average daily ration of 43.27 pounds of stover silage and one pound of linseed oil meal. The average daily feed cost was 6.24 cents and the average daily gain was 43 pounds.

It should be observed that the only advantage claimed for stover silage is its comparative cheapness. Those connected with these experiments are not recommending stover silage for dairy cattle, or, in fact, for anything except the basis of maintenance rations for beef cattle. It is quite probable that the capacity of most cattle for this silage is limited to approximately a maintenance ration.

M. A. C. Conducting Corn Stover Experiments

WE HAVE received several inquiries from our readers regarding corn stover silage, which we referred to Mr. H. W. Norton, assistant director of the Experiment Station at the Michigan Agricultural College. Mr. Norton informed us that the college is conducting experiments in which corn stover silage is being compared with ordinary silage for feeding steers and hoped in the near future to have some data on this subject. He referred us to the Experiment Station of the University of Illinois, which had conducted some very successful experiments along this line. This article shows the results obtained.—Editor.

Be Sure to Vote Before the Primaries

THE presidential preferential primary will be held the first Monday in April and we are anxious to have the votes of our readers on their choice for president before that date. Please, therefore, clip the coupon below with your choice marked, and mail it in without further delay.

The presidential campaign in Michigan is getting warm. Four avowed candidates, three Republicans and one Democrat, are making a vigorous campaign to line up the voters for the primary. They are Hiram Johnson, Gov. Lowden, Gen. Wood and A. Mitchell Palmer. All four have appeared at a number of mass meetings in the state. The Republican sentiment seems to be fairly well divided. Wood and Lowden are getting the backing of the organized political groups of the state but Hiram Johnson is making a hit at the meetings he is attending. To date Johnson leads in the M. B. F. straw vote and each day increases his plurality. Cong. Crampton, the Johnson manager in Michigan, claims that if his candidate gets the rural support, he will be the choice of Michigan voters at the preferential.

The order of the candidates in the straw vote is substantially the same as announced last week. Johnson, first; Ford, second; Hoover, third; Wood, fourth; Bryan, fifth, and Lowden sixth. McAdoo, who is generally considered the strong man of the Democratic administration, because of the part he played in financing the war and in securing banking and rural credits legislation, does not appear to be running very strong, but this is believed to be of the general lack of information concerning his career.

CLIP THIS COUPON

My Choice for President

I AM interested in the character of the man who is to be the next president of the United States, and have indicated my choice below:

Wm. Jennings Bryan ☐	Hiram Johnson ☐	A. Mitchell Palmer ☐
Henry Ford ☐	Robert LaFollette ☐	Leonard Wood ☐
Herbert F. Hoover ☐	Frank Lowden ☐	Woodrow Wilson ☐
Warren G. Harding ☐	Wm. G. McAdoo ☐	

Do you favor the submission of the warehouse amendment? .....

If your candidate is not listed above write in name.

Some Things I Have Learned About Sheep Barns

Details of Construction of Practical Sheep Barns as Built in Central Michigan

By MYRON A. COBB
Professor of Agriculture, Central State Normal

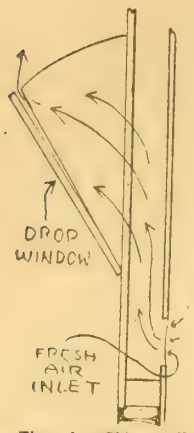

Fig. 1.—Side wall flue and drop window for fresh air.

THE planning of an ideal arrangement in a sheep barn is no easy task. There are so many factors peculiar to the animal to be considered as degree of warmth, ventilation, economy of space, arrangement and form of feeding racks and the handling of the roughtage so as to keep the wool clean.

Each sheep should have about 12 sq. feet of floor space for movement, for ventilation and to prevent the stable from becoming over warm. A shed 30 by 40 would accommodate 100 to 120 head, depending on the space used by the feeding racks as one sheep to 12 sq. ft. is net; allowance must be made for the feeding racks. Sheep are well protected by wool from the cold and will not do well in a poorly ventilated, warm and over crowded room. The basement of a barn is apt to be too warm unless well ventilated. While plenty of air is necessary, sheep must be protected from draft, every sheep barn should have a system of ventilation. The inlet for fresh air should be near the ceiling. Windows that drop back from the top are good as is also the special ventilating shafts that direct the fresh air upward. The foul air may be removed by other ventilating shafts opening near the floor and the shafts leading to the roof. The following figures, 1 and 2, make this clear. This system of ventilation is good for any stable.

Sheep should be allowed to run out in good weather, in fact the more they stay out the less they will be susceptible to disease. In case of cold winds, snow, or rain storms, they should be under cover. A sheep wet to the skin is a poor proposition regarding health and economy of feed, or production of young. The shelter provided need not be elaborate, just protection from the elements. The floors need not be of boards or cement, a good well-drained dirt floor is all that is necessary. Poorly drained floors of barn yards tend to produce foot rots.

The planning of the arrangement of the feeding racks needs special thought. With plenty of space the simplest arrangement is a long rack through the center. If this be wide, the feed can be distributed without stumbling over the sheep, spilling the grain and dropping fine chaff into the wool which will lower the value of the product. Five or six feet for the width of the rack will allow a fair space for walking and space for the hay and grain racks on each side. With plenty of space, the grain racks may be separated but this arrangement takes considerable room. A better plan is to combine the two as shown in Figure 6. The grain rack should be broad, flat and shallow so as to cause sheep to chew their feed better. The old type of V shape rack is poor. The combination grain and roughage rack should be about 3 ft. 6 inches high, 3 ft. wide; the trough 10 ft. wide and 4 ft. high.

The hay rack should be constructed so as to cause the sheep little effort to reach the hay. Otherwise there is apt to be a loss of wool on the neck and shoulders from rubbing. It is also desirable to keep the sheep from getting under the hay which will make the wool become chaffy or seedy as it is called. This is secured in Fig. 5; the center board is lowered while hay is being placed in the rack. Fig. 7 shows a wall type of rack, this method of feeding is undesirable as the hay must be carried over the backs of the animals.

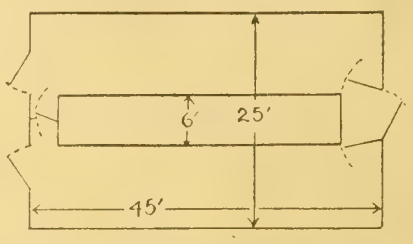

Fig. 3.—Sheep barn, feeding racks and alley in the center of the barn accommodates 50 head.

If space be limited the main feeding alley may have feeding racks running at right angles to it. These smaller be 10 to 15 feet within 3 feet of 15 inches should each sheep for feeding at the racks. This allows one to determine the number of animals that may be fed, when the length of the racks is known. The barn in Fig. 3 would accommodate 60 at the racks, while the floor capacity accommodates 90. In the barn 40 x 60 feet, shown in fig. 4 will accommodate 160 to 180 head. The efficiency of the latter plan is easily seen. In the latter plan gates may be placed at the ends of the racks, between the rack and side of the barn. This makes convenient divisions for keeping separate young sheep, bucks, lambing ewes, etc. The wide feeding alley, 5 x 8 feet, allows the distribution of feed easily. Feeding racks may be arranged on the sides of this wide alley, thus adding to the feeding capacity. The racks should be at least 3 feet wide, feeding from both sides and the combination type for greatest capacity. In these days of high cost of building plans must be made to house the greatest number advisable.

feeding racks may apart and run to the wall. About 15 inches should be allowed for each sheep for feeding at the racks. This allows one to determine the number of animals that may be fed, when the length of the racks is known. The barn in Fig. 3 would accommodate 60 at the racks, while the floor capacity accommodates 90. In the barn 40 x 60 feet, shown in fig. 4 will accommodate 160 to 180 head. The efficiency of the latter plan is easily seen. In the latter plan gates may be placed at the ends of the racks, between the rack and side of the barn. This makes convenient divisions for keeping separate young sheep, bucks, lambing ewes, etc. The wide feeding alley, 5 x 8 feet, allows the distribution of feed easily. Feeding racks may be arranged on the sides of this wide alley, thus adding to the feeding capacity. The racks should be at least 3 feet wide, feeding from both sides and the combination type for greatest capacity. In these days of high cost of building plans must be made to house the greatest number advisable.

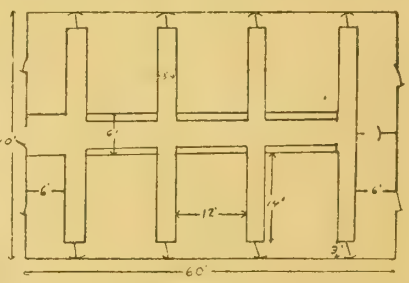

Figure 4.

If the sheep pen is separate from the other buildings, a loft should be constructed for storage of hay and grain and convenient chutes for distributing the material. The grain room may be placed on the ground floor if you have plenty of room. A common type of barn found in the sheep area of Michigan has an upright in the center and wings on either sides. The efficiency of this design is easily seen, giving storage and a large ground floor at minimum cost, see fig. 8.

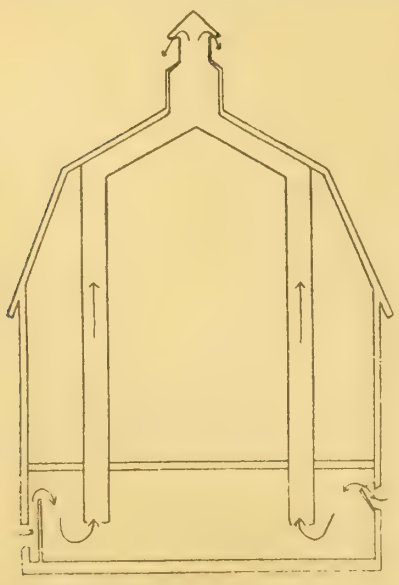

Fig. 2.—Fresh and foul air ventilating flues

Here are mathematical factors of value in figuring on housing sheep. Allow 12 sq. ft. of floor space per mature animal; 5 sq. ft. of floor space per lamb 15 inches for feeding at the racks; 1-20 of the floor space for window space; 8-10 sq. in. for foul air flue for each animal.

The above rule of 1 sq. ft. of window space for each 20 sq. feet of floor space is a fair allowance for light necessary for best results. In a shed 30 x 40 ft. there should be ten 3 x 2 windows. The windows should be high enough to throw the sunlight back into the shed. The windows should be arranged so they may be tilted back from the top for ventilation as explained, and to avoid a direct draft. Muslin curtains may be used for windows and providing ventilation. However, muslin does not afford sufficient protection for our Michigan winters.

Some arrangement should be made for furnishing water for the sheep. Halves of vinegar barrels placed in the corners of the barn and kept filled with water or shallow tanks connected with the windmill may be used. There is a notion that sheep do not need water, but this is a notion, for best results, water should be provided. One of the sheep men near Lake George Mich., found that his sheep drank water at the rate of 1-3 barrel per 100 head per day Supply plenty of good water, a snow ball is a poor substitute.

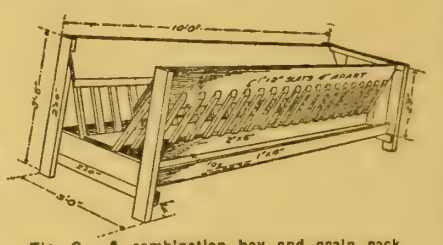

Fig. 6.—A combination hay and grain rack

WHY HAS THE AMERICAN GRAIN FARMER TURNED TO SHEEP?

ANSWERING the first question, there are several very good reasons why the American grain farmer is being forced to give sheep a place on his farm; first, because of his high priced land and the need of greater yields from it. England, with land valued much higher than ours, long ago had to sheep, and by producing forage and root crops along with other good feeds, they are able to keep their land fertilized and make their farms pay them a good dividend.

A few of the best American grain farmers have been marketing their grain through cattle and hogs, but a large majority are just grain farmers. The latter have been selling their produce from their farms and these farms are now feeling the strain of it. Another reason is high priced grain, and while some grain is required to finish and fatten sheep, they require less grain than do some other kinds of live stock. Others are realizing that they can keep a flock of sheep on their farm with scarcely any additional expense. No one, we are sure, will doubt or dispute the fact that sheep are a benefit to any farm.

Sheep are called the dual purpose animal, but they do much more than produce wool for clothing and mutton and lamb for food. They will clean up a dirty farm, turn a weedy pasture into blue grass and clover, crop down the wheat and rye in the winter and spring, causing it to stool out and produce a larger crop, fertilize the land, and because of their fine mastication, they do not scatter weed seed over the farm through their manure. They do a multitude of other valuable things towards building up a run down farm, or keeping a good farm good.

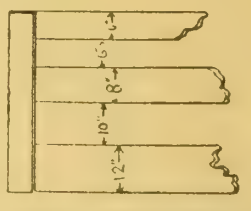

Fig. 5. Section of panel of feeding rack. The middle board may be lowered upon putting hay in the rack and avoid getting chaff in the wool.

There has been a disposition in the past to side step the second question,

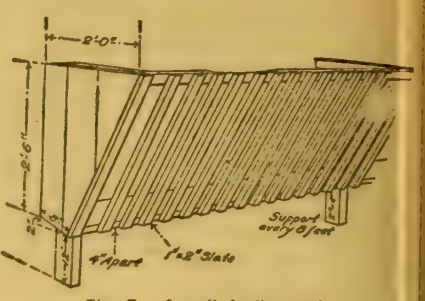

Fig. 7.—A wall feeding rack

"Why the American grain farmer has not been very successful with sheep." We are not dodging the issue, because we know that sheep are a benefit to any farm and that anyone can learn to handle them.

At the present time there are thousands of native sheep and lambs being dumped on the market and it is a common saying among the traders, "nothing but trash." The bulk of the stuff is uncastrated, and most of them are thin flesh, showing no care or breeding. It is pretty safe to say that two-thirds of the native crop of sheep and lambs come to market in the form of cull lambs, big, coarse, bucky lambs, and old, worn out, thin cull ewes. Now, is it any wonder that the consumer balks at such meat and refuses to eat it, thereby causing severe fluctuations in the market?

There is no reason why the American grain farmer should know how to handle sheep, since his business in the past has been producing grain, but there is a reason why he must first learn how to handle them if he wants them to produce for him.

Every year farmers come to market and take out these western feeding sheep and lambs. Most of them do not know that there is a rule to be followed in selecting feeders that are adaptable to the feed to be offered them.

There will be hundreds of thousands of fine quality western feeding sheep and lambs placed on the market this fall. These sheep as a whole are excellent feeders, are healthy and will get fat if properly handled, but it makes us shiver when we think of the abuses some of these sheep and lambs are subjected to and all because the farmer who takes them out does not take the trouble to study and familiarize himself with the proper methods to be employed.

Thousands of dollars worth of good sheep feed goes to waste every year, but in order to utilize this feed the farmer must know how to do it. Someone very often remarks, "What are such a big per cent of your customers good feeders, and how do they make their sheep and lambs so good?" There is no mystery about it, most of our subscribers have learned how to handle sheep and also that a half fat sheep or lamb is a failure.

We have found that the men who like sheep or would make a success with them, become discouraged when they find that there is something to be required of them and that sheep will not get fat on fresh air and scenery. Because there is such a crying need of practical information we have found it advisable to offer a book on sheep, sheep production, feeding and finishing for the market, market conditions and market demands. In this book every

Sugar Beet Growers' Strike is On in Earnest

Farmers Meet Manufacturers' Defiance of their Rights by Taking Stand for "No Beets" in 1920

THE "STRIKE" is on. Eight thousand beet growers have signed an agreement to grow no beets in 1920, unless the sugar companies grant them a conference. This means that the majority of Michigan sugar factories may stand idle this year and that Michigan's production of sugar will be cut 75 per cent in consequence thereof. This also means that thousands of acres heretofore devoted to sugar beets will be planted to beans and grain, which likewise means that the farmers of the sugar beet territory will work less, worry less about their help problem, but make more money this year than during the years they have grown sugar beets.

This "strike" will be different in many respects from the "strike" with which the public is best acquainted. Instead of a "strike" of labor, it will be a "strike" of capital. Instead of men refusing to work with their hands, it will be a case of men refusing to work with their land and money. There will be no attempt to coerce farmers who are not members of the beet growers' association from growing beets if they desire. There will be no "closed shop," so picketing, no threats. The farmers who grow the bulk of the beets and belong to the beet growers' association will simply fail to grow beets this year, but will use their land for other crops.

This action may arouse some criticism on the part of the public but when the public understands that the farmer is merely refusing to invest his money in an unprofitable venture, just as man of the city might do, he will be released from blame. If the consuming public really needs the sugar contained in the beets which the farmer grows, they can be shown that the sugar manufacturers have it within their power to secure all acreage their plants can handle, and if they fail to do so, the public can be made to understand the real reasons for this and subject the manufacturers to the criticism which they will deserve. But the press of the state that has taken any interest in the matter is inclined to be friendly, and readily understands and sympathizes with the farmers' claims. Take this, for instance, from the Grand Rapids Press:

"Eight thousand Michigan beet growers about two-thirds of all in the state, have agreed among themselves not to plant beets this year unless they get a price affording what they deem a reasonable profit. This is virtually a farmers' strike—the first one in the history of the state, at least.

Three years ago farmers of Kent county began to talk vaguely, but none the less surely, of limiting their food production to what they needed themselves. Thus far few, if any, have done so. But they have held that with the increasing shortage of labor they were actually losing money on what they raised for market. With the beet growers labor is the chief item of expense. So many men and boys are needed for the hand weeding that they have to drawn from the cities and consequently have to be paid city wages. Sugar is very high and the prices of beets to growers high, but not high enough apparently to pay this city labor and leave a satisfactory margin. Hence the strike of the beet growers.

The Press has several times called attention to the possibility of such an eventuation, not in exactly the way this has come about, but because the farmers are very dissatisfied with conditions. This first real strike of farmers is only a warning to the cities of the state and to America that something will have to be done to equalize conditions between city and country labor or serious consequences will follow."

The campaign of the State Association for members is nearing its end, and the membership in all sections where local organizations have been formed includes virtually every important beet grower. Meetings are still being held regularly in all beet sections, and farmers who attend and join are all bunt unanimous in their decision to grow no beets unless under contract approved by the Association. They feel that the matter of utmost importance not only for this year but all years to come in the recognition of their association by the sugar manufacturers, and a refusal to recognize this association will be taken as personal affront to every member of the association. The members feel that they have justice on their side and they will not retract a single step from the position they have taken. The State Association has sent out the following message to all locals, which sounds like business:

"The Michigan Sugar Beet Growers' Association has been incorporated and central offices will be opened at Durand, Mich., for business.

"I am instructed by the directors to get every local organization on the books and an account will be opened with every local organization. Every member of every local will be recorded on the books of the State association with his postoffice address with a statement showing his standing with the Association. You are requested to get a record book and record all of your members that belong to your local with their postoffice address and also showing whether or not they are paid up.

"Also have a page allotted to record all our members that refuse or neglect to return their contracts; also have a page to record all growers that will not join our Association.

"Do this now. Get all growers in your section to join your local or some other local organization. Call meeting of your members and see that all cancel their contracts.

"Get your money all collected in from your members and open a bank account in your town with your local bank.

"We will call for 50 cents a member from each local now very soon, and be prepared to have records kept so you can account for every cent both with the individual member and the Association. All business must be done through the Durand office, which is the head office of the Association.

"When we call any money into the State Association it must be sent in the shape of a check or draft made payable to the order of Robt. P. Reavey, Sec. & Treas. of the Michigan Sugar Beet Growers Association. Address all correspondence to the manager of the Association at Durand, Mich.

A strike has been voted if the manufacturers do not grant us a conference; so stand by and see that we all stick and we will win. Let every local help organize one more local and let every member get one more member to join even though he may not grow beets, as we farmers must now stick together.

"All we ask is for the right, and right wrongs no man." C. E. Ackerman, Mgr., Mich. Sugar Beet Growers' Association.

Scenes on the Big Ackerman Farm Near Durand

THE EFFORTS of those who are unfriendly to the beet growers to discredit the leaders of the organized movement have naturally brought forth some inquiries concerning the leaders. The question has been asked, "Who is Ackerman," the manager of the beet growers' association. We asked Mr. Ackerman to tell us something about his record as a farmer and this is what we have learned:

C. E. Ackerman was born on a farm four miles east of Pontiac, Dec. 29, 1879. With his parents he moved to a farm four miles northeast of Durand when he was but six years old and lived there continually until three years ago when he moved to Durand to secure better school facilities for his four daughters. He still owns and operates the farm of 250 acres. Last year he broke and drained 80 acres of new land, planted 70 to sugar beets and five to potatoes. Five acres failed, but from the balance he harvested 748 tons of sugar beets and 1,000 bushels of potatoes. Mr. Ackerman has two brothers, a Ford and I. H. C. 25 horse power Mogul. The tractor is shown here fitting the beet field. Each wheel is six feet wide and six feet high, with cement rollers between the wheels. The spread of the machine is 16 feet. The tractor pulls three double and is just the thing for beet ground.

The corn view shows Mr. Ackerman standing in his corn field on July 21st last. Beet field picture was taken the same day. From these facts and photographs, it can be seen that Mr. Ackerman is a fairly progressive farmer and certainly qualified to lead the beet growers' fight.

State Farm Bureau Gives Valuable Help

The funds and the publicity offered by the Michigan State Farm Bureau have been of material assistance to the beet growers. The state bureau has advised county bureau and members as follows:

"The sugar beet growers of Michigan are in a price struggle with the manufacturers that is bound to have a vital effect on the industry. Any assistance that any of the county farm bureaus or their individual members may give in helping cement the growing organization of beet growers is urged by the Michigan State Farm Bureau."

Western Manufacturers Have Made Concessions

News comes from the western beet states that the Great Western Sugar Company has announced a desire to meet with representatives of the beet growers and discuss the terms of the contract and other matters of mutual interest. Organization among the growers was the weapon that forced the Great Western Sugar Company to recognize the rights of the growers, and organization will do the same for Michigan. But it must be 100 per cent organization, backed by 100 per cent grit and loyalty.

Western Manufacturers Invite Growers into Confidence

ANNOUNCEMENT has been made by the Great Western Sugar Company, according to a dispatch in "Facts about Sugar", that it has voluntarily offered the western beet growers an increase in the price of beets. The most significant part of the report is that relating to conferences between growers and manufacturers. It says:

A conference of delegates of the growers and representatives of the company is also proposed to devise a basis of payment for beets by which the method of payment for the future MAY BE STABILIZED AND FURTHER CONTROVERSIES AVOIDED.

In explaining its proposal the company says that ITS SINCERE DESIRE AND ITS INTEREST IS TO GO AS FAR AS POSSIBLE IN MEETING THE VIEWS OF ITS GROWERS. The statement continues:

It appears that there is a growing sentiment in some territories in which we operate in favor of a sliding scale of beet prices based upon market prices for refined sugar.

Such basis of payment, in order to insure as high payment for beets as possible under any given set of conditions, must, in fairness, provide for a low sugar market as well as for a high one, and must, of necessity, be so drawn that the price to be paid for beets is in some measure correlated with the volume of beets handled.

Assured Beet Supply Necessary

In other words, the company can obviously undertake to pay the maximum price for beets only if it has reasonable assurance that the tonto be handled will enable factories to be run to approximate capacity, and that the volume handled will be fairly constant from year to year. WE SHOULD LIKE AT THIS TIME TO PROPOSE A CONFERENCE TO BE HELD BETWEEN THE TIME THIS YEAR'S CROP IS PLANTED AND THE FIRST OF NEXT YEAR, PREFERABLY DURING THE COMING SUMMER, THIS CONFERENCE TO BE PARTICIPATED IN BY DELEGATES REPRESENTING AS NEARLY AS POSSIBLE GROWERS IN ALL DISTRICTS IN WHICH WE OPERATE and by representatives of the company.

We shall undertake, if such conference can be arranged, to co-operate with growers in devising a basis of payment for beets embodying the sliding scale principle, if that is what is desired by a majority of the growers, and we have every confidence that IF SUCH CONFERENCE IS ENTERED INTO IN GOOD FAITH, A HARMONIOUS WORKING AGREEMENT CAN BE REACHED WHICH WILL AVOID THE UNFORTUNATE CONTROVERSIES THAT HAVE OCCURRED IN THE PAST FEW YEARS.

The Organized Farmer

FARM BUREAU—FARMERS' CLUBS—FARMERS' UNIONS—GLEANERS—GRANGE

IS MICHIGAN TO BECOME SEED MARKET OF THE NATION?

Is Michigan to become the seed market of the nation for cereals? Is this state to become known for its high quality of barley and oats as well as for its wheat and its rye? If Michigan farmers continue to grow the class of product which they have in the past, and if they realize the possibilities of the seed business efficiently to take advantage of it, it would seem that they are in a fair way to become the cereal seed merchants of the nation.

In fact, the demand has become so strong that J. W. Nicholson, newly appointed superintendent of the Farm Bureau's department for the buying and selling of seed, has not been able to keep pace. This is especially true in barley and oats. While Michigan producers are probably better off in general than those of other states, they are facing a slight shortage themselves and the number williing to part with their product is small.

Red Rock wheat and Rosen rye already have made names for themselves among other states. Carload after carload of these two varieties have gone across the Michigan boundary. That they are recognized as leaders was shown last November when they won the lion's share of prizes at the International Hay and Grain exposition at Chicago.

While the new seed department of the Farm Bureau without doubt eventually will assume a wide scope in its activities, up to the present demands from farmers have far outstripped the power of Mr. Nicolson to accommodate them. He is of the opinion that some system must be arranged whereby individual farmers will pool their product or their needs through a county organization, which in turn will deal with his department. Amounts of less than carload lots are hard to handle and this method would insure sufficient quantities.

He is also of the opinion that if his department is going to function up to the limit of its efficiency, it will need large sums of money to carry on the work, especially if farmers want the department to buy seed the fall before and hold it over to supply the spring demand.

Although the Farm Bureau probably will take over most of the commercial phases, the Michigan Crop Improvement association still expects to keep its organization intact for the purpose of stimulating production and maintaining the high standard of seed used. At a meeting held a few days ago in East Lansing, A. L. Robbins, assistant professor in farm crops at M. A. C., was elected to replace Mr. Nicolson as secretary and Mr. Nicolson was named sales representative of the association. The association thus will co-operate closely with Mr. Nicolson's department. R. G. Potts, vice-president of the Farm Bureau, has been invited to attend all meetings of the board of directors of the association.

With two strong organizations arriving at same goal, it would seem that the growth and use of high quality seed in Michigan is assured.—*F. W. Henshaw, Associate Editor M. B. F., M. A. C.*

GLEANERS SEEK A HUNDRED THOUSAND MEMBERS

Gleaners have opened a membership drive in Michigan, Illinois, Ohio, Indiana and other middle western states, with the objective of 100,000 new members for their agricultural organization. In Michigan, which already has 70,000 members, the campaign is in full swing. Important rallies and meetings are under way in many districts of the state, according to an announcement at the Gleaner Temple, in Detroit, the national headquarters of the Gleaners.

Illinois is preparing for a state rally to be held at Kankakee, April 15, followed by a house to house campaign of the important farm sections of the state. Ohio and Indiana will follow with big state meetings, to act as openers for membership invasions in those important territories. Other parts of the middle west will be canvassed later.

Mr. Charles Midgley, of Reed City, Michigan, has been put in charge of the "Flying Squadron," an organization of experienced Gleaner organizers who are scouring the counties of Michigan for new members and with great success. The squadron is armed with a battery of movies, showing the vast and varied activities of the Gleaners, who conduct lodge work, fraternal benefit insurance, legislative activities, and allied work, including a marketing organization which is lining up a hundred or more elevators and stations, including the Armour & Co. elevators in Michigan. A series of rallies is now in progress in Michigan. Bridgeport will hold an important get-together of several hundred farmers March 18. Other important rallies for the month include that at Bad Axe, Mar. 22; Cass City, March 23; Croswell, March 24. April 8 an especially important turnout will occur at Adrian.

Tractor demonstrations, movies showing the co-operative achievements of organized farmers, speeches by presidential and gubernatorial candidates and other men of the hour, picnics and elaborate programs will be features of coming get-togethers of the Gleaners and their friends. Thousands of persons are expected to attend many of the rallies.

Organization of co-operative elevators by the Gleaners will accompany many of the big meetings during the membership drive. With total capitalization of $1,500,000 to back the centralized business of the Gleaner chain, one or more groups of farmers petition for admission to the system nearly every day.

CO-OPERATE ELEVATORS TO FEDERATE

To federate the 75 odd co-operative farmers' elevator associations in the state, the Michigan State Farm Bureau has called a meeting of representatives of them in Saginaw, March 30, when ways and means of co-ordinating their general activities and avoiding disastrous competition may be discussed.

The farm bureau also has urged the sugar beet refiners to meet with the growers in the next week. The growers have issued an ultimatum to the effect that they will plant some crop other than sugar beets this spring unless refiners consent to a conference on a new price for beets. Eight thousand of the 12,000 growers in the state are pledged to stand by the ultimatum. The sugar beet industry in Michigan is valued at $30,000,000.

The membership of the State Farm Bureau passed 30,000 in the last week, when drives were completed in Wayne and Livingston counties and half completed in Lenawee. Monroe completed the week before, has announced more than 2,500 members, the record for the state so far. St. Clair with 2,150 members had been the record county. Berrien and Clinton counties are next on the campaign schedule.

ADRIAN COMMUNITY MARKET PAYS STOCK DIVIDEND

During the year ending January 1, 1920, the Adrian Community Market earned a net profit of $2,508.64 on a total paid up capital of $7,047.50. On the basis of this profit a dividend of 6 per cent on all paid up stock was authorized by the stockholders. The total business on which the profit was gained was estimated in the treasurer's report at $171,709.61.

J. G. Coe was named to fill the vacancy caused by the expiration of the term of office of Director F. C Ehinger, Walter Haley on the next ballot was elected to succeed L. H. Remus. Franklin J. Russell was unanimously elected to succeed himself on the board of directors.

After the election of the board of directors, W. G. Braden, the retiring manager of the market, gave a short talk summarizing accomplishments since the market started in business about two years ago. He also outlined the policy which he considered the market should follow in the coming years.

T. M. Joslin reviewed the benefits that have come to Adrian through the activities of the Community Market. Paul J. Miller, president of the market also spoke commending the work done by the retiring manager. A resolution was unanimously adopted thanking Mr. Braden for his work. Mr. Braden will go to Pontiac to take a position similar to that which he occupied at Adrian.

OHIO FARMERS' ELEVATORS

An increase in farmers' elevators in Ohio is reported by H. E. Erdman of the Department of Rural Economics, Ohio State University, who has been studying the farmers' elevator movement in Ohio during the past few years. At present there are probably more than 200 companies in operation in Ohio.

Some of these companies do a large business annually; a number of the companies have decreased their capitalization during the last year and many of the newer companies are starting out with a capitalization of from $40,000 to $60,000.

Illinois Agricultural Association Advocates State Rural Credits Law

THE agricultural committee of the Illinois constitutional convention, which has been all dressed up for six weeks or more, has at last found a suitable job. Representatives of the farmers of Illinois appeared before the committee in Springfield on February 26 and requested the committee to do two things:

(1) Make a careful analysis, from a farm standpoint, of all revenue and taxation proposals which come before the convention.

(2 Bring before the convention the desirability of putting a clause in the new constitution, which will allow the legislature to establish a state rural credit system.

D. O. Thompson, speaking for the Illinois Agricultural Association and its 60,000 members, appeared before the committee in support of these proposals. With him were S. H. Thompson of Adams county, J. W. Morgan and F. S. Haynes of Henry county, Frank I. Mann of Iroquois Co., J. W. Kirkton of Livingston county, Eugene A. Eckert of St. Clair county, Ralph Allen of Tazewell county, E. W. Burroughs of Madison county. These men represented the Illiinois Agricultural Association, the Illinois State Grange, and the Illinois Farmers' Institute.

"We are here not only as farmers but also as citizens of Illinois," said Thompson. "We are asking no special favors for farmers as a class, but we believe that this convention should be ever mindful of the fact that farming is the greatest industry in the state. Every feature of the new constitution which affects farmers should, therefore, be studied.

"With reference to the matter of taxation we request that this agricultural committee of the convention, made up largely of farmers, pay especial attention to revenue proposals. We believe that the new constitution should be just to all classes in its taxation clauses. We are not prepared to say at this time how these clauses should be written, but we may have something definite to say when all the proposals are in.

"This convention will not be playing fair with the young farmers of Illinois unless it makes possible the establishment of a state rural credits system. As land has been mounting higher and higher in price, it has been increasingly difficult for young men to acquire farms of their own. The result is that many of them must live all their lives on rented farms, while it drives the very best of our young farmers to regions of cheaper land where they have an opportunity to own the farms they work. This state of affairs has reached the condition where it challenges the attention of everyone who has the best interest of the state at heart. Our organization is of the opinion that more liberal credits for the purchase of farms will assist materially in solving this problem.

"The federal farm loan system is fine as far as it goes, but it has not been of material assistance in Illinois. A maximum loan of $10,000 or 50 per cent of the land value is too small to help in Illinois. The federal system cannot, apparently, be extended any farther just now, particularly the 50 per cent maximum, because land in other states is not as valuable nor as productive as Illinois land. The logical thing, therefore, is for the state to supplement this federal system by state loans. We believe that 80 per cent can safely be loaned on Illinois land on long-time paper to be paid back on the amortized plan."

Delegate H. M. Dunlap of Champaign county, chairman of the agricultural committee, warmly seconded Thompson's proposal of a state land bank. "The percentage of tenancy is growing in Illinois faster than most of us realize," he said. "Our state now

(*Continued on page* 23)

THE BIGGEST thing that the Illinois Agricultural Ass'n has done yet is to recommend the adoption of a state rural credits law. Nearly every problem of farm life is the result of inadequate capital or credit. The farmer who has sufficient cash capital to finance his operations at all seasons of the year has few other problems. But he is the exceptional and not the average farmer. The average farmer of Michigan, as well as all other states, is handicapped at certain seasons by lack of capital. Some times he can borrow at fair rates of interest. At other times he has difficulty in getting money when it is the most needed. There are two kinds of credit which the farmers need and which no system now in existence provides. One is long credit at low rates of interest, based both on actual security and personal integrity. The other is small, short-time loans based largely on personal integrity. The Federal Land Bank attempts to take care of the first mentioned need, but there are thousands of honest, worthy farmers whom it cannot help at all. A state rural credits law, administered by officers well acquainted with the agricultural problems peculiar to the state, would finance the operations of these farmers and not require so great a security as demanded by the federal system. The Business Farmer has long advocated a rural credits law for Michigan, and we repeat our belief that the adoption of such a law would be of material benefit to the entire state. We commend the action of the Illinois Agricultural Ass'n to the Michigan State Farm Bureau and suggest to the latter that here is a wonderful opportunity for them to take the lead in solving a tremendously acute agricultural problem.—Editor.

5 Things Worth Remembering about a MAXWELL Truck

1. It has a worm drive, which is the predominant feature of most worth while trucks.
2. It hauls 1½ tons; 75% of all loads carried by horse or motor are 1½ tons or less.
3. It uses less gas and oil hauling a peak load than many trucks use with no load.
4. It is very simple in design (more brains than metal have been used in its construction); it travels faster than a larger truck. 16,000 have supplied abundant evidence of its economic transportation.
5. A comparison with other 1½ ton trucks shows a saving of $300 to $400 in the original investment in a Maxwell.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELLS

GOVENRMENT LOANS MILLIONS TO FARMERS

During the month of February, 1920, an aggregate of $16,572,845 was loaned to 4,158 farmers of the United States by the Federal Land Banks on long-time first mortgages according to the monthly statements made to the Farm Loan Board. The Federal Land Bank of Omaha leads in the amount of loans closed, the same being $3,960,000, the Federal Land Bank of St. Paul following with $2,114,800. Th other banks closed loans in February as follows: Louisville, $1,765,600; Houston, $1,613,995; St. Louis, $1,417,200; Wichita, $1,211,100; New Orleans, $1,115,850; Spokane, $1,074,900; Columbia, $835,950; Berkeley, $521,600; Baltimore, $507,300; Springfield, $434,550.

During February 5,250 applications were received by the twelve banks asking for $19,988, 127, and during the same month 4,314 loans were approved by them amounting to $14,151,536.

On February 28, 1920, there were operating in the United States 3,977 Farm Loan associations, and the total mortgage loans made by the Federal Land Banks through these associations to 122,055 farmer borrowers as of that date, amounted to $335,018,076. Deducting from this amount the loans paid off in full by borrowers to wit: $8,835,900, the grand total of loans now in force is distributed within the Federal Land Bank Districts as follows:

St. Paul	$44,430,300
Omaha	42,674,440
Spokane	42,202,320
Houston	37,574,871
Wichita	27,216,800
St. Louis	25,196,880
Louisville	24,268,800
New Orleans	22,432,805
Coumbia	17,734,755
Berkeley	16,676,400
Baltimore	13,215,100
Springfield	12,558,795

Up to February 28, 1920, interest and amortization payments due by borrowers to the Federal Land Banks amounted to $20,143,630.13. Of this amount all but $266,649.83, or 1.3 per cent had been paid, and of this sum $127,749.24 represents delinquent instalments maturing during the month.

MICHIGAN STATE FAIR

With the approach of April 1, the closing date for entries in the annual Body Building Contest of the Michigan State Fair, G. W. Dickinson, Secretary-Manager of the Fair, announces the 1920 contest will be the largest ever staged.

Interest in athletics stimulated by the physical training the boys received in the concentration camps, enthusiasm aroused through the interest in the 1920 Olympic games and the general tendency of the public to give more attention to the welfare of the body, is responsible for the extraordinary number of entries of both men and women being received, according to the fair executive.

The period of training will extend over five months this year, the contest opening April 1 and closing September 1. Rules of the contest provide that each entrant shall file an entry blank not later than April 1st, showing their physical condition at that time. During the following five months each contestant follows a scientific course of physical training, and endeavors to make as much headway in physical development as possible.

On September 11th all entrants appear at the State Fair before an examining board of three of the greatest physical culture experts in America, headed by Bernarr McFadden of New York. Each contestant is given a thorough physical examination and prizes are awarded to the ones who make the most pronounced advancement.

"One does not need to be physically sound to enter this contest," Mr. Dickinson points out. "The prizes do not go to the contest in the best physical condition, but to the one making the greatest improvement in the five months."

WAGON VS. TRUCK

The Dixie Bee Line Company of Mortons Gap, Ky., which operates what is generally called a wagon coal mine necessitating a haulage of about a mile, made a net saving of $18.43 per car when they changed from wagon to truck haulage.

"We formerly loaded coal with wagons," wrote G. E. Henry, secretary of the company, "and in order to get a true basis of costs it would appear that the proper method would be to make a comparison between the wagon and truck haul. Considering that we load on an average of 50 tons per day on railroad cars, the wagon haul costs 60 cents per ton or a total of $30 per car."

Mr. P. T. Wiley, of Adrian, feeding his brood sow and her family of ten little ones. This sow has produced over $1,000 worth of pork, Mr. Wiley says.

The truck haul figures given were as follows: Driver, $4; gasoline and oil, $3; interest on investment, $.83; depreciation, $2.60; estimated repairs, $1—total $11.43 as against $30 for the wagon.

These records were made with a Federal two ton truck over an ordinary dirt road crowned in part with cinders and part with a mixture of cinders and dirt. The change was made while the war was on.

"The truck has been our salvation in the coal business," writes Mr. Henry in part, "for the reason that the fuel administration had ordered the railroads not to furnish cars for the wagon mines and as a consequence the wagon mines have been compelled to close down, but owing to the fact that we had the motor truck haul and were able to load promptly a car when it is placed for us, we got our cars along with the larger mines.

"We are delighted with the truck. The truck really costs us nothing, as we are paying for it at the rate of $225 per month and the difference between the truck haul and wagon haul easily takes care of this payment with a good margin to spare."

BRYAN TO TELL FARMERS WHERE HE STANDS

William Jennings Bryan has received the first copy of the questionnaire prepared by the committee of the National Board of Farm Organizations for presentation to all presidential candidates to place them on record on matters of interest to farmers.

In accepting the questionnaire, Mr. Bryan said he was a candidate, but he would study the inquiries and give the farm board his opinion on them.

Mr. Bryan declared himself as heartily in accord with the principle of requiring candidates to put themselves unequivocally on record before entering on their campaigns. He did not accept the questionnaire as a candidate, he told the delegation that presented it, because "I would not want to be placed in the position of being a candidate when I am not a candidate. But if I should be a candidate, you will know soon enough.

Elimination of the middleman, protection of the farmer in his right to organize, appointment of expert acceptable to organized agriculturists as secretary of agriculture and representation for farmers on all boards and commissions in the membership of which various interests are recognized, are the main planks in the farmers' platform outlined in the questionnaire, according to C. S. Barrett, president of the national board and chairman of the committee that drew up the document.

Other issues presented include the free and unquestioned right of collective buying, reduction of the farm tenancy evil, improvement of farm credit facilities, national conservation and the maintenance of "free speech, free press and free assembly."

METHODS OF AGRICULTURE ARE CHANGING

Ideal methods of agriculture are changing. The cotton states are giving more attention to human food and well they should. Many good farms in the cotton states have been ruined by perpetually planting cotton. Northern farmers also have a great problem before them. The automobiles in war and agriculture are knocking out the demand for horses while the lack of grazing wild lands and the methods of profiteers are making beef too high for use.

Are Farmers to Blame For Losing Boys?

"THE LITTLE red schoolhouse is the pride of the farmer's heart.

"Although educators point out the shortcoming of the rural schools and legislatures place laws on the books permitting them to consolidate with neighboring school districts and establish high schools and agricultural schools with an adequate curriculum and high grade teachers, the farmers are slow to make any changes, said Prof. Arbaugh, who is in charge of the recently organized union of the rural and city schools in Wayne country.

"While the city schools have been bending every energy to prepare pupils for some vocation that will enable them to make a living in the city, the rural schools seldom include agriculture in their prescribed course of study. Several years ago when I suggested a course in the Ypsilanti high school the idea was opposed by a farmer who declared that he did not want his son to be a farmer.

"The farmers complain that they cannot keep the boys on the farm and all the time the little red schoolhouse is educating the farmer boys for city jobs, and it is only lately that agriculture as a subject has been taken up to any extent in the rural schools.

"There is a law on the statute books of Michigan which permits adjoining district schools to consolidate and establish an agricultural school, but there has been no move on the part of the farmers to take advantage of this progressive bit of legislation.

"The sure way to make boys contented with farm life is to educate them for their work and interest them in agriculture, and if the rural schools bend their energies to the task with the vim exhibited by the city schools in turning out stenographers, bookkeepers and mechanics of all trades, there will not be so much complaint about the shortage of farm labor.

"The old time farmers had their doubts about the "book learned' farmer, and the poor returns from the farm led them to desire some other vocation for their sons, but rural conditions are vastly changed in these days and it is desirable to keep the boys on the farm, and to help bring this about the little one-room school must go and be replaced by consolidated schools of a dignity and character that will appeal to the boys."

SOIL SURVEY TO BE MADE IN MICHIGAN

Work on a state-wide soil survey will be carried on in Michigan on a large scale during the coming summer, according to announcement made recently by Dr. M. M. McCool, of the Soils Department at the Michigan Agricultural College. The survey will be of great value to the agricultural interests of the state, cataloging the soils and giving a definite check upon the farming possibilities of every section of Michigan.

Co-operation between the Soil Section of the Experiment Station at the agricultural college and the Bureau of Soils at Washington has made possible the work this summer. R. S. Shaw, director of the Experiment Station, will furnish two men for the survey, while C. F. Marbut, chief of Soil Survey, Bureau of Soils, will send one or more men to Michigan to work with the college specialists.

The survey plans for the coming summer will be a continuation of work started by Dr. McCool, who has already covered practically all of the south-eastern part of the state.

"The value of this survey to Michigan can scarcely be estimated," says Dr. McCool. "The farming possibilities of hundreds of thousands of acres of idle land will be ascertained, and a check will be gotten upon the soils of the whole state.

"The survey will aim to get at soil composition, classification, and present state of productivity. Notes will be made on erosion or washing, requirements for soil improvement, degree of utilization at present, and possibilities for development."

THE FIRST ANNUAL REPORT OF SHIPPERS UNION

The first annual meeting of the Coopersville Shippers Union has been held and they elected the following directors: Ben Seekman, Warren Jasper, Frank I. Stephens, Henry Laug, Ellis Pack, William Sietsma and Ernest Bush.

From May 24 to the present time, the Union has shipped twenty-two cars of stock, consisting of 430 calves, 637 hogs, 298 sheep and 146 cattle. The total number of pounds shipped is 346,547 for which the farmers received $43,729.02.

The farmers are asked to work together and strive to make this the banner year, as this organization has the honor of being the first farmers' organization started in Coopersville.

WARD ORCHARD PURCHASED AT $175,000 PRICE

One of the largest real estate deals to be consummated in Pontiac or vicinity so far this year was the sale by Mrs. Mary D. Ward of her well known apple orchard farm at Square Lake to the Leinbach-Humphrey Co. of Detroit. The consideration is said to have been approximately $175,000.

The Ward apple orchard is one of the largest in the state with its 12,000 apple trees 19 years old and from which 30,000 bushels of apples are said to have been taken last year. There are 175 acres in the tract purchased by the Detroit concern, including 20 acres under the water of Square Lake. Mrs. Ward reserved her home and the property immediately surrounding it.

PERRY CO-OP HAS FINE RECORD

Just one year ago, the Perry Co-operative Shipping Association was organized and during the past 12 months 65 cars of stock have been shipped and the farmers of this vicinity have been paid the big sum of $158,000.00. An average of over $3,000 a week. Some fine records for the local co-op of which George Boutell is manager. The farmers have greatly profited by this new stock shipping association and now they get all that is coming to them eliminating all middlemen't profits and getting the full market price of the big commission dealers in Detroit.

With The County Agent

FARMERS' SHORT COURSE

JL JAMIESON
icultural Agent,
oun County,
Mich.

BATTLE Creek held one of the most successful Farmers' Courses in history of Calhoun County, on Mar. 2, 3, and 4. The Community Club recently organized by the city people and the farmers assisted the Farm Bureau and the Extension Department of the International Harvester Company in making the meeting a success.

he farmers were honored with address by Major General Leon- A. Wood on Thursday afternoon. e greatest resource of this county ny county," declared the General, griculture. It is the principle ce of our original wealth. What take out of the ground you take n no one, and the money which es to you is money for something you produce, which you have ed to the world's wealth.

I am not a farmer, but one does have to be a shipbuilder to know when there is a hole in a ship ill sink. The wealth of our coun- will sink when we cannot produce igh food for our people and when cease to be a good exporting na- . We must repair the leak in our culture or the nation will suffer. n life must be made more at- tive. Farmers must have good ls, good schools, good telephones a better system of borrowing ey on good security. Then the on will prosper as never before.

Holden Speaks on "Better Rural Schools"

r. P. G. Holden, noted agricul- st—present director of the Ex- ion Department of the Interna- al Harvester Company, delivered essage to the farmers which will certain to bear much fruit thru- the entire community. He en- aged the people to look after the are of the farm children, to give n better schools and better home oundings. Dr. Holden said, nership of an interest in the n would be the best thing in the ld for farm boys and girls. No respects ownership until he has ed something himself. 'A Home Every American' should be the an of our nation."

r. R. R. Robertson and Mr. R. Blackford and Miss Zella Wigent n the International Harvester pany Extension Department, e a very interesting and instruct- talk on horticulture, farm crops, stock and home economics.

ne session was given over to the ussion of the "Farm Bureau." Robert Montieth, secretary of Allegan County Farm Bureau of the work of the National m Bureau Federation and the nigan State Farm Bureau. Mr. V. Nicolson, former secretary of Michigan Crop Improvement As- ation, now manager of the Seed artment of the Michigan State m Bureau, explained how his de- ment would make it easy for the ners of Michigan to secure pure is. Mr. R. V. Tanner, county nt of Barry county, told about organization work in his county explained how the Farm Bureau ld serve every member in every nship in his county.

he Battle Creek Community Club Calhoun County Farm Bureau was given a great boost by the prominent part which its members took in the management of the Short Course. —*Paul Jamieson, Calhoun County.*

THE MILK SURPLUS PROBLEM

FARMERS are not entirely pleased with the present solution of the surplus problem. Why? Because they are getting $3 per hundred for surplus milk while it is costing them $4.07 per hundred to produce that milk. In addition the fact that there is a surplus keeps the price for the normal supply below the cost of production. Yet the farmers cannot justly complain, nor blame the distributor for this condition, providing there is an actual surplus on the market for the farmer himself is causing the condition and he is the only one who can permanently solve this problem.

But, how is the farmer individually to solve the surplus problem? Follow this discussion through and try the solution offered.

To begin with, farmers are not working principally to produce an over supply. They are trying individually to increase their earnings or at least to make a living which some dairymen are finding difficult. Let us take a man who figures he should be worth $1,200 per year. What kind of cows should he keep to make that amount of money and not produce a surplus. We will say milk is selling at $4 per hundred. It is true a high producing cow will eat more and cost more to keep. The Wisconsin College of Agriculture from tabulations of her cow testing association records has found that it costs $138 to feed a 10,000 lb. cow, $110 to feed a 7,500 lb. cow, and $94 to feed a 5,000 lb. cow. But a high producing cow will also produce more manure and a calf which will sell for more money on the market. Professor Gamble of the Maryland State College from his study of cow testing associations records throughout the country while connected with the U. S. Department of Agriculture, has stated that the relative difference in upkeep, all costs considered, between two classes of cows, as follows:

Surplus Problem

Up-keep, 7,000 lb. cow $200
Up-keep, 5,000 lb. cow ...$175.

Now for illustration how many cows would we have to keep of each class to make $1,200?

5,000 lbs. of milk at .04 per lb. would be $200 income, less $175 upkeep, leaves $25 profit. $1,200 divided by $25 equal 40, cows necessary to earn profit of $1,200 per year; 7,000 lbs. milk at .04 per lb, equals $280 income, less $200 upkeep leaves $80 profit; $1,200 divided by $80 equal 15 cows necessary to earn same profit as 48 (5,000 lb.) producers.

To make $1,200 net profit we keep 48 cows producing 5,000 lbs. each or a total of 240,000 lbs., or 15 cows producing 7,00 lbs. each, or a total of 105,000 lbs. Now which class of cows is producing the surplus and which shall we keep, 5,000 lb. cows or 7,000 lb. cows?

Initial Investment

Many farmers hear what a high price a pure bred high producing individual animal costs and say, "I certainly would like to have them and will some time, but I cannot afford them now. I'll buy a scrub or low producing cow." Let us see which costs the most. What will a 5,000 lb. cow cost? Say, $150 or $200 for illustration. $200 times 48 (the number of cows necessary to make $1,200) equals $9,600. Supposing the 7,000 lb. cow costs twice as much though you can buy them

We Want News From and About the County Agent

THE COUNTY agent has come to Michigan to stay. His work is better understood today, and he is giving the farmers invaluable aid along co-operative lines. Today the county agent fills the dual ole of farm crop advisor and the farmers' business agent. He is helping to make business farmers. In order to more fully acquaint the eaders of the Business Farmer with the work of the county agent we ave inaugurated this department which will contain news items, contributed by or about county agents.

YOU KNOW THE MEN BACK OF THIS COMPANY

COLON C. LILLIE, President.

Mr. Lillie needs no introduction to the people of Michigan among whom he has lived all his life and for whose interests he has unselfishly worked for over 25 years. He has always lived on the farm in Ottawa County upon which he was born, and has made it one of the best farms in Michigan. He was a pioneer worker in Farmers' Institutes; was President of the State Dairymen's Association and re-elected three times; was President of the Co-operative Creamery Company of Coopersville; was the prime organizer, the first President and now Manager of the Michigan Mutual Creamery Fire Insurance Company; was a member of the State Constitutional Convention; was for several years President of the Coopersville State Bank, and is now a Director in several worthy Michigan enterprises. His administration of the Dairy and Food Department under Governor Warner, first as Deputy and then Commissioner, was characterized by his vigorous efforts to advance the welfare of the farmer.

No man in Michigan is more highly thought of by those who know him than Colon C. Lillie. Honest in all his dealings, a fearless and enthusiastic advocate of what he believes to be right, thoroughly sincere in his efforts to better the conditions of his fellow farmer, a success in all his undertakings. Mr. Lillie has been aptly called the "foremost farmer of Michigan" and his connection with this Company as President is sufficient guarantee that all its affairs will be conducted in an honest and business-like manner.

COMFORT A. TYLER, Vice-President.

Born in a log house on an obscure little farm in Michigan, Comfort Tyler has by his force of character placed himself in the front rank of successful men of this State. Few men are better known in Michigan and his name is a familiar one in live-stock circles of the world. In the prime of life, he is a man of sterling integrity, tremendous energy, great originality, progressive in thought and deed, keenly alive to financial conditions in Michigan and sincerely interested in any endeavor to improve those conditions.

During the past three years as Vice-President of one of Detroit's successful banks, Mr. Tyler had sole charge of the real estate loans made by that bank, handling some $2,500,000 in an entirely satisfactory manner. He is fully equipped to manage the Mortgage Loan Department of this Company and as a member of the Executive Committee his advice will be most valuable.

J. FLOYD IRISH, Secretary

Any Insurance Company to be successful must have as its Managing Underwriter one who is thoroughly familiar with all the many phases of the business, made so by years of practical experience.

It is difficult to secure such men because their services are in great demand. This Company has been most fortunate in securing such a man in the person of Mr. J. Floyd Irish. Mr. Irish has spent all his business life in the Fire Insurance field, starting as Local Agent and rapidly attaining to high, responsible positions requiring expert knowledge and great executive ability. He has always been a close student of the business, hard-working, conscientious and ambitious. He brings to this Company his years of practical experience with a determination to introduce safe, up-to-date methods.

The Big Michigan Company

A great deal of farm property never has been insured for what it ought to be. But now since the great advance in building material and labor, most farm buildings do not carry one-half of what they should.

Farmers' household goods is another class of property that is woefully under-insured. In case of total loss, these household goods could not be replaced for two or three times the insurance now carried.

It is not wise (and old saying) to put all your eggs in one basket. It is not bad business, therefore, to have insurance in more than one Company.

It is not necessary to disturb your present insurance. Keep that, but properly protect your property by taking out additional insurance in a good, big, safe, well-managed Company.

Remember, we do not insure all farm property at the same rate. The best risks have the lowest rate. We give the farmer credit for protective improvements.

You also need HAIL and WINDSTORM insurance on your growing crops.

The largest Insurance Company in the State of Michigan is at your service. We will protect you. We will give you service.

Ask our Agent or write us for rates, etc.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

FRANCIS MORGAN, son of a New York millionaire, who has just died, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker and a former colleague of young Morgan's father, plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis, to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. He is chased from the island by her father and brothers. Francis explores another island where a young man threatens his life and then saves it from savages who attack young Morgan. Francis and the young man discover they are related. The young man, whose name is Henry Morgan, is also hunting for the treasure. They form a partnership. Francis discovers that Henry is the lover of the girl on the island and that her name is Leoncia Solano. Francis returns to the first island to ask Leoncia to forgive Henry, which she does. He is captured by Torres and the Jefe Politico of San Antonio who proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang Francis when Henry appears and is thrown into prison. The Solanos and Francis release Henry after which they are pursued by Torres and the Jefe with his soldiers. They escape to the boat that Francis has chartered.

CHAPTER VII.

"AND now we've lost both the Gringo pigs," Alvarez Torres lamented on the beach as with a slight freshening of the breeze and with booms winged out to port and starboard, the Angelique passed out of range of their rifles.

"Almost would I give three bells to the cathedral," Mariano Vercara e Hijos proclaimed, "to have them within a hundred yards of this rifle. And if I had will of all Gringos they would depart so fast that the devil in hell would be compelled to study English."

Alvarez Torres beat the saddle pommel with his hand in sheer impotence of rage and disappointment.

"The Queen of my Dreams!" he almost wept. "She is gone and away, off with the two Morgans. I saw her climb up the side of the schooner. And there is the New York Regan. Once out of Chiriqui Lagoon, the schooner may sail directly to New York. And the Francis pig will not have been delayed a month, and the Senor Regan will remit no money."

"They will not get out of Chiriqui Lagoon," the Jefe said solemnly. "I am no animal without reason. I am a man. I know they will not get out. Have I not sworn eternal vengeance? The sun is setting, and the promise is for a night of little wind. The sky tells it to one with half an eye. Behold those trailing wisp of clouds. What wind may be, and little enough of that, will come from the northeast. It will be a head beat to the Chorrera Passage. They will not attempt it. That nigger captain knows the lagoon like a book. He will try to make the long tack and go out past Mocas del Tora, or thru the Cartago Passage. Even so, we will outwit him. I have brains, reason. Reason. Listen. It is a long ride. We will make it—straight down the coast to Las Palmas. Captain Rosaro is there with the Dolores.

"The second-hand old tug boat?—that cannot get out of her own way?" Torres queried.

"But this night of calm and morrow of calm she will capture the Angelique," the Jefe replied. "On comrades! We will ride! Captain Rosaro is my friend. Any favor is but mine to ask."

At daylight the worn out men, on beaten horses, straggled through the decaying village of Las Palmas and down to the decaying pier, where a very decayed looking tugboat, sadly in need of paint, welcomed their eyes. Smoke rising from the stack advertised that steam was up, and the Jefe was wearily elated.

"A happy morning, Senor Capitan Rosaro, and well met," he greeted the hard-bitten Spanish skipper, who was reclined on a coil of rope and who sipped black coffee from a mug that rattled against his teeth."

"It would be a happier morning if the cursed fever had not laid its chill upon me," Captain Rosaro grunted sourly, the hand that held the mug, the arm and all his body shivering so violently as to spill the hot liquid down his chin and into the black and gray thatch of hair that covered his half-exposed chest. "Take that, you animal of hell!" he cried, flinging mug and contents at a splinter of a half breed boy, evidently his servant who had been unable to repress his glee.

"But the sun will rise and the fever will work its will and shortly depart," said the Jefe, politely ignoring the display of spleen. "And you are finished here, and you are bound for Bocas del Toro, and we shall go with you, all of us, on a rare adventure. We will pick up the schooner Angelique, calm-bound all last night in the lagoon, and I shall make many arrests, and all Panama will so ring with your courage and ability, Capitan, that you will forget that the fever ever whispered in you."

"How much?" Capitan Rosaro demanded bluntly.

"Much?" the Jefe countered in surprise. "This is an affair of government, good friend. And it is right on your way to Bocas del Horo. It will not cost you an extra shovelful of coal."

"Muchacho! More coffee!" the tug skipper roared at the boy.

A pause fell, where in Torres and the Jefe and all the draggled following yearned for the piping hot coffee brought by the boy. Captain Rosaro played the rim of the mug against his teeth like the rattling of castanets, but managed to sip without spilling and so to burn his mouth.

A vacant-faced Swede, in filthy overalls, with a soiled cap on which appeared "Engineer," came up from below, lighted a pipe, and seemingly went into a trance as he sat on the tug's low rail.

"How much?" Captain Rosaro repeated.

"Let us get under way, dear friend," said the Jefe. "And then when the fever shock has departed, we will discuss the matter with reason, being reasonable creatures ourselves and not animals."

"How much?" Captain Rosaro repeated again. "I am never an animal. I always am a creature of reason, whether the sun is up or not up, or whether this thrice-accursed fever is upon me. How much?"

"Well, let us start, and for how much?" the Jefe conceded wearily.

"Fifty dollars gold," was the prompt answer.

"You are starting anyway, are you not Capitan?" Torres queried softly.

"Fifty——gold, as I have said."

The Jefe Politico threw up his hands with a hopeless gesture and turned on his heel to depart.

"Yet you swore eternal vengeance for the crime committed on your jail," Torres reminded him.

"But not if it costs fifty dollars," the Jefe snapped back, out of the corner of his eye watching the shivering captain for some sign of relenting.

"Fifty gold," said the Captain, as he finished draining the mug and with shaking fingers strove to roll a cigarette. He nodded his head in the direction of the Swede, and added, "and five gold extra for my engineer. It is our custom."

Torres stepped closer to the Jefe and whispered:

"I will pay for the tug myself and charge the Gringo Regan a hundred, and you and I will divide the difference. We lose nothing. We shall make. For this Regan pig instructed me well not to mind expenses."

As the sun slipped brazenly above the eastern horizon, one gendarme went back to Las Palmas with the jaded horses, the rest of the party descended to the deck of the tug, the Swede dived down into the engine-room and Captain Rosaro, shaking off his chill in the sun's beneficent rays, ordered the deck hands to cast off the lines, and put one of them at the wheel in the pilot house.

And the same day-dawn found the Angelique after a night of almost perfect calm, off the main land from which she had failed to get away, although she had made sufficient northing to be midway between San Antonio and the passages of Bocas del Toro and Cartago. These passages to the open sea lay twenty-five miles away and the schooner slept on the mirror surface of the lagoon. Too stuffy below for sleep in the steaming tropics, the deck was littered with the sleepers. On top the small house of the cabin, in solitary state, lay Leoncia. On the narrow runways of deck on either side lay her brothers and her father. Aft, between the cabin companionway and the wheel, side by side, Francis' arm across Henry's shoulder, as if still protecting him, were the two Morgans. On one side the wheel, sitting with arms on knees and head on arms, the negro-Indian skipper slept, and just as precisely postured, on the other side of the wheel, slept the helmsman, who was none other than Percival, the black Kingston negro. The waist of the schooner was strewn with the bodies of the mixed-breed seamen, while for'ard, on the tiny forecastle-head, prone, his face buried upon his folded arms, slept the lookout.

Leoncia, in her high place on the cabin top, awoke first. Propping her head on her hand, the elbow resting on a bit of the poncho on which she lay, she looked down past one side of the hood of the companionway upon the two young men. She yearned over them, who were so alike, and knew love for both of them, remembered the kisses of Henry on her mouth, thrilled till the blush of her own thoughts mantled her cheeks at memory of the kisses of Francis, and was puzzled and amazed that she should have it in her to love two men at the one time. As she had already learned of herself, she would follow Henry to the end of the world and Francis even farther. And she could not understand the wantonness of her inclination.

Fleeing from her own thoughts which frightened her, she stretched out her arm and dangled the end of her silken scarf to a tickling of Francis' nose, who, after restless movements, still in the heaviness of sleep, struck with his hand at what he must have thought to be a mosquito or a fly, and hit Henry on the chest. So it was Henry who was first awakened. He sat up with such abruptness as to awaken Francis.

"Good morning, merry kinsman," Francis greeted. "Why such violence?"

"Morning, morning, and the morning's morning, comrade," Henry muttered. "Such was the violence of your sleep that it was you who awakened me with a buffet on my breast. I thought it was the hangman, for this is the morning they planned to kink my neck." He yawned, stretched his arms, gazed out over the rail at the sleeping sea, and nudged Francis to observance of the sleeping skipper and helmsman.

They looked so bonny, the pair of Morgans, Leoncia thought; and at the same time wondered why the English word has arisen unsummoned in her mind rather than a Spanish equivalent. Was it because her heart went out so generously to the two Gringos that she must needs think of them in their language instead of her own?

To escape the perplexity of her thoughts she dangled the scarf again, was discovered, and laughingly confessed that it was she who had caused their violence of waking.

Three hours later, breakfast of coffee and fruit over, she found herself at the wheel taking her first lesson of steering and of the compass under Francis' tuition. The Angelique, under a crisp little breeze which had hauled around well to north'ard, was for the moment heeling it through the water at a six-knot clip. Henry, swaying on the weather side of the after deck and searching the sea through the binoculars, was striving to be all unconcerned at the lesson, although secretly he was mutinous with himself for not having first thought of himself introduc

ing her to the binnacle and the wheel. Yet he resolutely refrained from looking around or from even stealing a corner-of-the-eye glance at the other two.

But Captain Trefethen, with the keen cruelty of Indian curiosity and the impudence of a negro subject of King George, knew of no such delicacy. He stared openly and missed nothing of the chemic drawing together of his charterer and the pretty Spanish girl. When they leaned over the wheel to look into the binnacle, they leaned toward each other and Leoncia's hair touched Francis' cheek. And the three of them, themselves and the breed skipper, knew the thrill induced by such contact. But the man and woman knew immediately what the breed skipper did not know, and what they knew was embarrassment. Their eyes lifted to each other in a flash of mutual startlement, and drooped away and down guiltily. Francis talked very fast and loud enough for half the schooner to hear, as he explained the lubber's point of the compass. But Captain Trefethen grinned.

A rising puff of breeze made Francis put the wheel up. His hand to the spoke rested on her hand already upon it. Again they thrill, and again the skipper grinned.

Leoncia's eyes lifted to Francis' then dropped in confusion. She slipped her hand out from under and terminated the lesson by walking slowly away with a fine assumption of casualness, as if the wheel and the binnacle no longer interested her. But she had left Francis afire with what he knew was lawlessness and treason as he glanced at Henry's shoulder and profile and hoped he had not seen what had occurred. Leoncia, apparently gazing off across the lagoon to the jungle-clad shore, was seeing nothing as she thoughtfully turned her engagement ring around and around on her finger.

But Henry, turning to tell them of the smudge of smoke he had discovered on the horizon, had inadvertently seen. And the negro-Indian captain had seen him see. So the captain lurched close to him, the cruelty of the Indian dictating the impudence of the negro, as he said in a low voice:

"Ah, be not downcast, sir. The senorita is generously hearted. There is room for both you gallant gentlemen in her heart."

And the next fraction of a second he learned the inevitable and invariable lesson that white men must have their privacy of intimate things; for he lay on his back, the back of his head sore from contact with the deck, the front of his head, between the eyes, sore from contact with the knuckles of Henry Morgan's right hand.

But the Indian in the skipper was up and raging as he sprang to his feet, knife in hand. Juan, the pale-yellow mixed breed, leaped to the side of his skipper flourishing another knife, while several of the nearer sailors joined in forming a semi-circle of attack on Henry, who, with a quick step back and upward slap of his hand, under the pin-rail, caused an iron belaying pin to leap out and up into the air. Catching it in mid-flight he was prepared to defend himself. Francis, abandoning the wheel and drawing his automatic as he sprang, was through the circle and by the side of Henry.

"What did he say?" Francis demanded of his kinsman.

"I'll say what I said," the breed skipper threatened, the negro side of him dominant as he built for a compromise of blackmail. "I said——"

"Hold on, skipper!" Henry interrupted. "I'm sorry I struck you. Hold your hush. Put a stopper on your jaw. Saw wood. Forget. I'm sorry I struck you. I . . . " Henry Morgan could not help the pause in speech during which he swallowed his gorge rising at what he was about to say. And it was because of Leoncia, and because she was looking on and listening, that he said it. "I . . . I apologize, skipper."

"It is an injury," Captain Trefethen stated aggrievedly. "It is a physical damage. No man can perpetrate a physical damage on a subject of King George's, God bless him, without furnishing a money requittal."

At this crass statement of the terms of the blackmail, Henry was for forgetting himself and for leaping upon the creature. But, restrained by Francis' hand on his shoulder, he struggled to self-control, made a noise like hearty laughter, dipped into his pocket for two ten-dollar gold pieces, and, as if they stung him, thrust them into Captain Trefethen's palm.

"Cheap at the price," he could not help muttering aloud.

"It is a good price," the skipper averred. "Twenty gold is always a good price for a sore head. I am yours to command, sir. You are a sure-enough gentleman. You may hit me any time for the price."

"Me, sir, me!" the Kingston black named Percival volunteered with broad and prideless chucklings of subservience. "Take a swat at me, sir, for the same price, any time, now. And you may swat me as often as you please to pay . . . "

But the episode was destined to terminate at that instant, for at that instant a sailor called from amidships:

"Smoke! A steamer smoke, dead aft!"

The passage of an hour determined the nature and import of the smoke, for the Angelique, falling into a calm, was overhauled with such rapidity that the tugboat Dolores, at half a mile distance through the binoculars, was seen fairly to bristle with armed men crowded on her tiny for'ard deck. Both Henry and Francis could recognize the faces of the Jefe Politico and several of the gendarmes.

Old Enrico Solano's nostrils began to dilate, as, with his four sons who were aboard, he stationed them aft with him and prepared for the battle. Leoncia, divided between Henry and Francis, was secretely distracted, though outwardly she joined in laughter at the unkemptness of the little tug, and in glee at a flaw of wind that tilted the Angelique's port rail flush to the water and foamed her along at a nine-knot clip.

But weather and wind were erratic. The face of the lagoon was vexed with squalls and alternate streaks of calm.

"We cannot escape, sir, I regret to inform you," Captain Trefethen informed Francis. "If the wind would hold, sir, yes. But the wind baffles and breakes. We are crowded down upon the mainland. We are cornered sir, and as good as captured."

Henry who had been studying the near shore through the glasses, lowered them and looked at Francis.

"Shout!" cried the latter. "You have a scheme. It's sticking out all over you. Name it."

"Right there are the two Tigres islands," Henry elucidated. "They guard the narrow entrance to Juchitan Inlet, which is called El Tigre. Oh, it has the teeth of a tiger, believe me. On either side of them, between them and the shore, it is too shoal to float a whaleboat unless you know the winding channels, which I do know. But between them is deep water, though the El Tigre Passage is so pinched that there is no room to come about. A schooner can only run it with the wind abaft or abeam. Now, the wind favors. We will run in. Which is only half my scheme."

"And if the wind baffles or fails, sir—and the tide of the inlet runs out and in like a race, as I well know—my beautiful schooner will go on the rocks," Captain Trefethen protested.

"For which, if it happens, I will pay you full value," Francis assured him shortly and brushed him aside. "—And now, Henry, what's the other half of your scheme?"

"I'm ashamed to tell you," Henry laughed. "But it will be provocative of more Spanish swearing than has been heard in Chiriqui Lagoon since old Sir Henry sacked San Antonio and Bocas del Toro. You just watch."

Leoncia clapped her hands, as with sparkling eyes she cried:

"It must be good, Henry. I can see it by your face. You must tell me."

And, aside, his arm around her to steady her on the reeling deck, Henry whispered closely in her ear, while Francis, to hide his perturbation at the sight of them, made shift through the binoculars to study the faces on the pursuing tug. Captain Trefethen grinned maliciously and exchanged significant glances with the pale yellow sailor."

"Now, skipper," said Henry, returning. "We're just opposite El Tigre. Put up your helm and run for the passage. Also, and pronto, I want a coil of half inch, old, soft, manila rope, plenty of roye-yarns and sail twine, that case of beer from the lazarette, that five gallon kerosene can that was emptied last night, and the coffee pot from the galley."

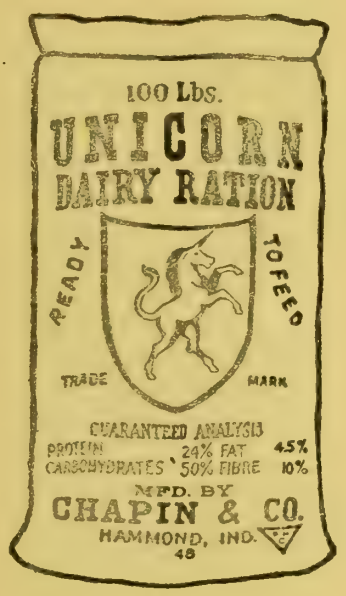
(*Continued on page 21*)

Mr. Spillane, of Flint, writes——

ELMCREST STOCK FARMS

PUREBRED HOLSTEIN-FRIESIANS

Flint, Mich., Jan. 24, 1920.



Mr. R. W. Chapin. Pres.,
Chapin & Co.,
Chicago, Ill.

Dear Sir:-

You understand that we use Unicorn, not because we do not feel capable of compounding a ration that will suit our cows as well, but for the reason that we realize that we cannot hope to secure materials of the same choice quality that you can obtain if you care to take the trouble.

We have not the facilities for mixing the feeds properly after we get them together and consequently would have to weigh out and mix for each cow; also experience has taught us to open each sack of Unicorn with just as much confidence as to what we will find therein, and what it will do, as we would feel if we had sacked it ourselves.

It is honest, it is dependable and it is absolutely uniform. You doubtless are aware of these things, but it may give you some satisfaction to know that others are aware of them too.

On some occasions when our local dealer has run out of stock, we have had to use some other feed. This is almost invariably followed by a drop in milk production of three or four pounds per day, which we get back as soon as we give them Unicorn again.

I am frequently called upon to help some beginner start his testing work, and in recommending feeds for his use always advise Unicorn if they can get it. I know that it is safe for them to use, much more so than a feed in which they had tried to mix materials like bran and oats with others like cottonseed and gluten, using a shovel.

We have six cows on yearly test and two more soon to start. All are eating Unicorn both in testing and getting ready for test. We will let you know later how they come out.

We trust you will feel at liberty to call on us at any time for any service we may be able to render your company. Our records are open to you and your representatives at all times, and if we are able to assist any other users of your feed, or if any claim that they are not getting the results that they should, we will be glad to show them how, if you will refer them to us.

Yours very truly,

G. L. SPILLANE & SON.
By H. G. Spillane.

That Soldier Land Grant Again.

CONGRESS, being pushed on one side by the economists howling for lower taxes and on the other side by the American Legion clamoring for a bonus, is in an extremely uncomfortable position, and knows not which way to turn. Obviously taxes must be reduced and inflation deflated. Just as obviously the soldier boys must be taken care of by a substantial bonus or something akin to a bonus. And there you are.

But leave it to Congress to find a way out the predicament. Congress will never face the music, so long as there's a fire escape near. So Congress re-proposes that the soldier boys,—God bless 'em,—yea, God bless them,—shall have not money but land, all the land their hearts desire, and a life out in the open under the canopy of heaven. "How's that, boys", says Congress, rubbing her hands in relief while a smile chases the little wrinkles of worry from her usually placid countenance. The boys are doubtful. They can't figure out whether congress is handing them a lemon, a gold brick, or a joke. You see, a good many of the returned soldiers never lived on the farm. They don't know whether you plant potatoes with a hoe or a pick-axe. Moreover, their friends and relatives live in Detroit or Chicago or New York, and not in Northern Michigan or Western Montana or Southern Utah. Land may be a fine thing to speculate on, but as something to live on and farm,—well, it doesn't exactly appeal to some of the boys. And who can blame them?

But there's another aspect to this proposed grant of public lands to the three million odd soldiers and sailors which must not be overlooked by land-owning farmers. What will happen if the government parcels out 120 or 150 million acres of land and sets them to work producing food. Oh, well, you know without our telling you. The soldier boys who don't want land will have a right to complain of being offered land as a settlement for services, and certainly every farmer in the United States will have a right to complain anyway.

If a money bonus or a government credit cannot be given to the soldiers to start them in a trade or profession for which they are fitted by taste and training, then give land to those who want land; a professional education to those who would become doctors, lawyers, dentists, teachers or preachers; grocery stores and garages to those who have served as clerks or mechanics. Play no favorites, gentlemen; treat 'em all alike.

The State is Upheld

THERE ARE few among us who will take delight in the thought that Truman H. Newberry and his political lieutenants who were convicted of conspiracy to violate the election laws will probably have to spend a year or more in prison. In fact, the natural inclination is to have compassion upon those who have thus come under the heavy arm of the law. The imagination is likely to build up impenetrable barriers of righteousness about the rich and the prominent and all those who enjoy the respect and confidence of their fellow-beings. Let a man who ranks low in the social scale be convicted of a crime and the consensus of opinion among those who have given the culprit any thought at all will be that "he got his just desserts." But when those who stand at the top of the social ladder, seemingly far above the sordid temptations which assail those farther down, step outside the pale of the law there is constant incredulity and sympathy. It is easy for the mind to follow the transition from a lowly hut to the bare confines of the prison, but a change from the velvet and silver and softness of the mansion to the cotton and pewter and harshness of the penitentiary seems cruel, indeed.

Yet, where is there a man of so tender a heart whose conscience does not confess that the conviction of Mr. Newberry was just and being just was also right and proper and in the best interests of the commonwealth? There could be no middle ground. An acquittal was unthinkable. It would have been taken the world over as an excuse if not an approval of Newberry methods. It would have closed the doors of offices to the poor man forever, and placed our elections upon the auction block. For if a man could spend $176,000 with impunity to secure an election there would be nothing to prevent him spending ten times that amount. The only verdict that was possible before the proof of the prosecution and the admissions of the defense was "guilty." The only sentence that was possible for the leading conspirators was imprisonment, for what would a paltry fine of a few thousand dollars mean to men backed by millions?

Probably the majority of American people would be willing to extend immunity to these men if they were not the only ones concerned. But they are but a handful in a mighty nation of a hundred and twenty-five million souls, the keystone of whose government is equality of right and opportunity. The welfare of the state is paramount to the welfare of the individual. What is best for the state should be the constant and highest aim of every citizen. The Newberry conviction upholds the state and strengthens the foundations of government. It ought, therefore, to have the approval of every right-thinking citizen.

Labor and Prohibition.

ONE OF the most interesting and significant polls of sentiment ever taken was that recently completed by the Literary Digest to determine the opinion of union labor officials on prohibition. Out of 526 labor leaders, 345 voted unequivocally for prohibition, 145 voted unequivocally against it, 31 were doubtful of its benefits, and 7 replied that it had not been given a fair trial.

This poll tells a somewhat different story than the average citizen has been led to be-concerning the attitude of labor toward prohibition. The result also affords a marked contrast to Mr. Gompers' oft-repeated statements that prohibition is a curse to the country and is accountable for the present unrest among the laboring people. If the poll is representative of labor sentiment, as we believe it is, we may lay our misinformation upon the subject to the wet propagandists who played first upon the sympathies of the farmers and then upon the laboring men to secure ammunition against prohibition. We may also excuse Mr. Gompers' heated opposition as a specious attempt to regain the good will of union labor which he largely lost during the war. But the Literary Digest poll should show to Mr. Gompers that he is barking up the wrong tree.

It will be a great relief to farmers and other classes of people who have been the most responsible for the abolishment of the saloon to learn that an apparent majority of the unionized working classes are with them, heart and soul. It is not pleasing to contemplate a vast army of people chafing under conditions which others have brought about, but when we read the statement of a New Jersey union official, that "outside the Declaration of Independence, the prohibition amendment is the best thing that has happened to this glorious country, we feel like shouting with our church brethre "Glory hallelujah". A Louisiana union of cial cries, "God bless our prohibition leade Prohibition is a blessing to the workingmen America", and this sentiment is echoed and r echoed by labor officials from Maine to Ca fornia. Put 'er there, brother workers in t vineyard of life!

Trade With Russia.

A BIG BUBBLE is about to burst. It the Great Propaganda against Bolshe Russia. It is about to burst because the vi interests who have been furnishing the soap make the bubbles are about to take the Bolsh vists unto their bosoms, or virtually so. And vast army of backsliding preachers and prof sional propagandists who have been blowi the bubbles will be thrown out of employme

The despised capitalists are soon to op trade negotiations with the despised Bolsh viks. The Communist government is supre in Russia after three years of bitter strugg against both internal and foreign enemi Commercial Europe and commercial Ameri have done their best to discredit and destr Bolshevism in Russia. Having failed to do s and perceiving that Russia affords a tempti opportunity for commercial cultivation, th have sheathed the sword and are ready smoke the pipe of peace. The only questi now is which country will be the first to get i mouth on the pipestem.

After all, it isn't any of America's busine what kind of government they have in Russi For many years we sat in council and ma treaties with a Czar who ruled Russia wi blood and iron and exiled political dissente to the bleak wastes of Siberia. If there h been massacre and persecution under the Bo shevik regime, let us remember that the we pons were borrowed from the Czars of Russi The people rule in Russia today under a for of government which we in the United Stat would not have because the conditions of o classes, of our social and political institutio are altogether different than what they are Russia. The Bolshevik government seems suit the great majority of Russian people. A it would be nothing short of economic foolis ness to refuse to trade with the people of Ru sia merely because we do not approve of the form of government. Reason has been gone long time hence, but she is homeward bound.

That Wet Plank.

IF WE hated the Democrats as bad as son of our Republican friends, the worst fa that we could wish for them would be the ado tion of Gov. Edwards' wet plank. Of cour it might not make any difference in the resu of the election anyway because everybody e cept the Democrats are agreed that the ne president will be a Republican, but with a w plank in the Democratic platform, we'd put mortgage on the house to place a bet on Repu lican success.

The American Farm Bureau Federation h said some nasty things about the Farmers' N tional Council. Well, we don't approve of all Mr. Hampton's theories ourselves, but believ that he and his colleagues are absolutely sin cere in their efforts to bring two great class of people into co-operative harmony, and th by add to human prosperity and happines The Farmers' National Council comprises se eral great farmers' organizations, so it's har to see how you can fight the Council witl out hurting some of our fellow farmers wh comprise its corporeal being. Live and let liv

'Tis an age of change (but not the kind yo jingle in your pocket). Governments ar changing, methods are changing, views ar changing. Would you believe it?—The Agr cultural College issued a statement the othe day that the only way to overcome the surplu production of milk and keep the farmers fro losing money, was to decrease productio Truth marches on!

What the Neighbors Say

U. S. AUTHORITY SAYS LIQUOR NOT FLU PREVENTIVE

Referring to your editorial on "Liquor," in your edition of February 21st, would like to have you publish answers to the following questions:

If the proper use of pure whiskey, for medicinal purposes, is not a life-saving remedy, why, apparently, is it that our government officials, in charge of large stores of confiscated liquors are passing out these liquors by the thousands of quarts, to be used as an aid in combating the terrible and death-dealing scourge; the epidemic of "flu" and pneumonia, that is creating such great havoc, and causing such great loss of life in our country at the present time.

Why, apparently, do some of our most eminent medical authorities and health officials not only condone but advise such course of action on the part of the above-mentioned government officials; unless good pure whiskey is actually a life-saving remedy, used in the treatment of above named diseases?

And why, if good pure whiskey, is the means of saving lives in the cities, should it not equally be the means of saving lives in the country? Is a life in the city worth more than a life in the country? Because a person, seriously ill with the "flu," or pneumonia, has the advantage of receiving treatment in a large city hospital, where good pure whiskey may be obtainable for use in his treatment, should he be given unfair advantage and a better chance in the fight for his life, than a farmer residing in the country, who under present existing conditions finds it utterly impossible to obtain good pure whiskey for medicinal purposes?

Is the giving out of liquor by government officials sanctioned by our government? Does their action come under the law? If there is a law that provides for this action is it not a discriminatory law? And who would is discriminate against if not the farmer and the resident of small cities throughout the country districts, where there does not happen to be a government storehouse for confiscated liquors?

My interest in this matter is not of a selfish nature. I am satisfied that there are thousands of people throughout the state, among your subscribers, who would be interested to have you send some light on this subject.—*A. E. Achard, Health Officer, Lake, Mich.*

Your inquiries were referred to the U. S. Bureau of Medicine and Surgery, and the following reply has been received:

In reply to your letter of March 2nd, we know of no evidence indicating that whiskey or other alcoholic liquors have any value as preventives of influenza and pneumonia.

Alcohol is unnecessary in the treatment of those diseases and may indeed do harm. Other remedies more satisfactory in their action are available to meet any indications which may arise except possibly in a case of pneumonia where the patient is on the verge of delirium tremens from previous use of alcohol.—W. C. Braisted, Surgeon General, U. S. Navy.

THE FUTURE FOOD SUPPLY

We hear much said these days regarding "the high cost of living," and there is, indeed, good reasons for the same, and the future supply of food is the very important problem to be solved. As a nation, we have become extravagant in many of our ways and some changes can be made and to our advantage.

As to the food supply, we know when the demand exceeds the supply, prices of same increase and a reverse of these conditions result in lowering prices for food products. The laboring man is demanding an increase of wages, that he may thereby be able to provide for himself and family, and, as we know, any increase of wages results in an increase of the cost of the product.

As all food products must come primarily from the soil, the matter of cheaper food resolves itself into the question—How may the soil be caused to produce food and at the lowest cost of production? The answer to this inquiry would seem to be found in the causing the soil to be cultivated with such care, and intelligence and to the limit, that an abundance of food products may thereby result.

But such result cannot be reached with the present limited supply of farm help and "stay on the farm" and "back to the farm" must be heeded or many of the people in our cities, will be compelled to be satisfied with a limited supply of food.

The farmer, and his family, work long hours and with faithfulness, yet the soil is not cultivated as it should be, and will be cultivated, provided adequate help with adequate pay is attainable by the farmers.

One of the following conditions is sure to result in the near future—a reasonable supply of farm help, or an under supply of food products, and you people living in our cities are the ones to determine this matter. The farmer and his family will be well supplied with food, because having it at "first hands," the surplus, only, being passed on to others.

There need be no need of an under supply of food, or for an unreasonable cost of same, as above stated, provided the proper course is pursued in "tickling the soil with the hoe and causing it to laugh with an abundant harvest." Will some of you men in our cities, come and help us farmers "tickle the soil." Come on! You're needed.—*J. T. Daniels, Shiawassee County.*

When the factories begin to lay off men and the pay check drops, the people of the cities may look farmward. Until then the farmer must "tickle" his own soil.—Editor.

THE PRESIDENT AND ANTI-H. C. OF L. CAMPAIGN

I would like to say just a word about President Wilson's administration. I would think he would be ashamed to look a farmer's wife or daughter in the face after they worked so hard in producing crops to win the war and many broke their health down working in the fields. Now he is hammering down the prices on what the farmer raises below the cost of production, and everything the farmer has to buy is going higher. I would like to ask the president why he does not hammer at the shoe manufacturers and clothing manufacturers and also the farm machinery companies and the farmer will be willing to take less for his crops. I have two head of 3 year old steers that I have been feeding this winter, that I will sell for the price of the feed for the last year with all my work thrown in.

Can the farmer go on producing at a loss without something happening. I predict someone is going hungry in the United States in less than three years if there is not a change. The farmers are not going to hire any help this summer, They say they cannot compete with the manufacturers on help at present prices of farm produce, so they are going to farm what they can and let the rest go wild until there comes a change.—*A. F. Judd, Shiawassee County.*

Your criticism is just, I believe. Possibly if the farmers raised as mighty a cry about the high cost of the things they buy as the consumer does about the high cost of food, we would get action all along the line.—Editor.

HOW MANY CHILDREN?

I am so out of sympathy with Mr. P. S.'s article on "Flu and Prohibition" that I can't resist writing the following:

I am a busy woman with two children, but I must stop in the midst and tell P. S. of Tuscola county, what I think of him.

What manner of man is he anyway? He seems to think that people with small families must necessarily be breakers of the sixth commandment. I never heard a more erroneous statement in my life. A great many people happen to be blessed with a combination of common sense and strong will power; others, not having and desiring it, cultivate it but Mr. P. S. evidently doesn't belong in either class.

It is my belief that people, if they so desire, can overcome the large family problem to a certain extent by having just such a combination and why shouldn't they? Can you tell me Mr. P. S., what anyone in poor or moderate circumstances, coupled with the present H. C. of L., wants with a large family? What is the sense in bringing more children into the world than you can properly feed, clothe and educate? Why not give the children a chance? Quality rather than quantity is what we are after.

So, Mr. P. S., if you will spend your time learning the ten commandments and abide by them, rather than use the Bible as a means of pointing out other people's faults, you won't have time to be imagining what the other fellow is doing. You will be very busy attending to P. S.—*Mrs. S. C. A., Van Buren County, Mich.*

You are touching upon a subject, madam, which would have scandalized our good grandmothers, but which, I predict here and now, will soon become our most social problem, and will command the attention of educators and parents alike.—Editor

The Week's Editorial

NOT THE AVERAGE FARMER

A large eastern publishing house has completed what it assumed to be an accurate survey of agricultural conditions in the United States, and reports that the farmers are more prosperous than they ever were before, and that tractors and other modern farm machinery designed to enable one man to accomplish heavy production are responsible for this condition.

This publishing house is so large that it thinks in millions of dollars and multiples thereof. Its chief and employees associate with men who think in similar channels. Naturally it cannot even see so insignificant a sum as $10,000. That is the amount that the average farm east of the Mississippi is worth. Not one in ten of them has a tractor—probably not one in a hundred. The average farmer has not the ready money to buy one. If he did have it he would be more than likely to choose to put it into a purchase of pure bred cows and let the tractor come later.

The tractor is only one item of the costly machinery the eastern publishing house visions on every farm. There are machines for digging potatoes for planting them and for spraying them; to load hay and to bale hay; elaborate litter carrying devices for barns; milking machines and engines to operate them; lighting plants and engines to operate them; irrigation systems and compression tanks to supply them; cultivators that can be operated with tractors; gang plow ditto; machines that are guaranteed to thresh wheat and oats as they are cut without wasting any; automobile trucks for drawing produce to market; tractor trailers to haul produce from the field! and so on to the exhaustion of the catalogue facilities of a reasonably large printshop.

A few farmers have milking machines, more have hay loaders, a few tractors and only the actually wealthy ones with large holdings the other machinery mentioned. Therefore if there really is much profit at present food prices to producers in the maintenance of such a heavy investment as all this machinery would call for, with use but a small part of the time, the ordinary farmer is not getting it. And it is the ordinary farmer who is feeding the nation.

All of which is of interest in itself, but the point is that even an investigation does not disclose the truth unless the investigators seek where the truth may be found.—*Grand Rapids Press.*

THE FARMER AND THE HIGH COST OF LIVING

Idleness and loafing on the job will never reduce the high cost of living. To start the prices of all commodities on the down grade the beginning must be made in manufactured products. Speed up the factories and get an excess of goods, then the raw material will come down with the manufactured product. Then there will be an oversupply of labor and the (back to the farm) movement will start and in a few years there will be an overproduction of farm products and down will go the prices.

But what are we doing today to reduce the H. C. of L.? Only making matters worse from day to day. The country is far behind on orders in all lines of manufacture and are working on an 8 hour basis where it should be 12 hours and every factory striving to get help, offering all kinds of inducements to get men and what is the consequence? They have taken all the men from the farms and the public is yelling at the top of their voice to the farmer to speed up and raise more and come down with his high prices. Some people seem to think that a farmer is a machine and can operate 24 hours a day and seven days a week. Now the farmer is only a human of the same flesh as all mankind and has but one life to live and he must make this life last as long as he can. He can and does work 15 hours a day and this should entitle him to an honest living and a square deal.

The story has been going the rounds that the farmers were going to join the labor unions and various other unions and start to shrink and cause an underproduction in order to hold up the price of their products. NOTHING DOING, the farmers will plant all they can with what help they have and strain every nerve in their bodies to make money enough to make both ends meet. The farmer feels this high cost just as much as anyone does. You never hear of

(*Continued on page 27*)

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

The commercial and industrial situations were practically featureless last week. It is plain that the frenzy of speculation which spread over the country a few months ago has died down, and investments are now being made in a more conservative manner. Everyone is talking economic "readjustment." Some believe that the country is due for a "panic", but on this point the National City Bank of New York makes the following sensible statement:

"It is highly important that the necessity for conserving credit shall be clearly understood not only among bankers but throughout the business community, but the idle talk of uninformed persons about "panic" is to be deprecated. The old-fashioned "panic," with "runs" on the banks to withdraw deposits, and suspension of cash payments, is an out-of-date performance. The Federal reserve system, with its practically unlimited power to issue currency, put an end to that but it is a mistake to confuse unlimited power to pay deposits with unimited power to make loans. The banks can do the former but they cannot do the latter."

The editor of the *Rosenbaum Review* believes that we have already started on the downward course. He says: "Commercial conditions are surely, inevitably, irrevocably, tending toward a period of depression. We have begun to slip, back a little here, down a little there, but back, back, back, and we shall gain momentum as we slip while the weeks go by."

The editor of THE BUSINESS FARMER was invited to talk to the Adcraft Club of Detroit on the subject "How will the farmer meet the economic readjustment that is on the way." The account of his remarks as published in *"The Detroiter"* is as follows:

"According to Forrest Lord, editor of "THE MICHIGAN BUSINESS FARMER," who addressed the Adcraft Club last Thursday, farmers are not making an organized effort to boost prices by reducing production. Contrary to the general impression, the farmer, instead of profiting by the existing high prices of food products, is confronted with a serious economic situation, and is not enjoying the wave of prosperity so generally attributed to him.

The city man and the farmer are as far apart as the poles because they do not understand the conditions under which the other works. The average city man thinks of the farmer as a veritable Croesus and blames him for the inflated prices of food products. As a matter of fact that farmer receives only a small percentage of the money which the consumer pays for staple articles. True, the farmer has a greater purchasing power today than he has had in the past, but he has earned it. He has his money because he practices thrift. The money that the city man spends for social activities and clothes during the course of the year would pay the farmer's car, and the money that is spent for theatre tickets would buy the farmer's phonograph. The whole family assists in the farm work and the daily toil begins in the early hours of the morning. If the farmer had to pay average wages for the work done by members of his family food prices would show a still larger increase, or the farmer would be obliged to give up his farm through inability to pay the wages demanded by farm hands.

"The farm pays the least dividend on the money invested of any other business and in comparison to other industries the farmer is the most poorly paid man in the world. I am not optimistic about farm production this year—not because the farmer intends to strike, but because he finds it next to impossible to secure the labor to work his farm. The large factories in the cities have claimed many thousands of the farmers' helpers. He is unable to compete with the wages paid in the cities and many farmers will be obliged to abandon their farms for more profitable endeavors, elsewhere. Still others will circumvent their labor troubles by purchasing more modern farm machinery and this demand, through necessity, will be greater during the next five years than it has ever been.

Mr. Lord quoted prices which the farmer receives for his products as compared to the ultimate price charged the consumer, pointing out the fact that the farmer receinves less than half the final purchasing price. He advocated the formation of co-operative farm associations to assist farmers with their distribution and marketing problems and urged the elimination of three of the average five groups through which farm produce passes on its way from the farmer to the consumer."

LAST MINUTE WIRES

DETROIT—Oats, wheat and rye firm and higher. Corn slumped 2c per bu. upon report that government would investigate alleged manipulation in Chicago grain pit.

CHICAGO—Lack of grain supplies makes for strong market this week. Car shortage holding up shipments. Hogs steady; cattle unsettled; sheep and lambs strong.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT IS STRONGER

WHEAT PRICES PER BU., MAR. 23, 1920

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.49	2.52½	2.75
No. 2 White	2.47	2.50½	
No. 2 Mixed	2.47	2.50½	

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.43	2.50	2.51
No. 2 White	2.41	2.47	2.48
No. 2 Mixed	2.41	2.47	2.48

The wheat market is showing signs of returning strength. Flour continues dull, but the approaching date for the removal of the government's guarantee is a factor for strength in the wheat market. News from the winter wheat sections show a rapid decline in conditions of the plant. Kansas and Oklahoma have needed rain for weeks and the damage to the crop in those states cannot be reckoned. On top of this damage should be added the loss caused by the Hessian fly which seems unusually active and prevalent this year. It would appear from present conditions that the abandoned wheat acreage will run between 4.000,000 and 5.000,000 acres.

The *Rosenbaum Review*, one of the most authentic grain trade papers in the country, which has been out of sympathy with the fixing of the price by the government, claiming that it has cost the farmers millions of dollars, has this to say in a recent issue concerning the guarantee:

"On June 1st the Government price wheat guarantee to producers will have expired. Some farmers will not be able to deliver their wheat by that time for various reasons. Let not your temper be troubled. It's worth more money than the guarantee if it's good wheat."

CORN FEELS EFFECT OF WHEAT STRENGTH

CORN PRICES PER BU., MAR. 23, 1920

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.66	1.84
No. 3 Yellow	1.68		
No. 4 Yellow	1.63		

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.79
No. 3 Yellow	1.65	1.59	1.78
No. 4 Yellow	1.62	1.54	1.76

Our readers will testify that the predictions made in these columns concerning the trend of the corn market have been fulfilled in every respect. Today's corn prices are the highest of the season and there is no sign of any weakening factors. The only thing, in our judgment, that can cause material declines in corn will be a general financial depression, which we do not expect to see. Supplies of corn at trading and consuming markets are wholly inadequate and have been for weeks to fill all demands. As a trade journal points out, the months of April and May usually see very little grain hauled to market because of the poor condition of the roads and the fact that the farmer is busy with spring work. Nor is this the only factor to be reckoned with this year. The farmers, as has been pointed out before, have some settled notions about what they ought to have for their corn this year and they are not marketing freely.

OATS MAINTAIN STRENGTH

OAT PRICES PER BU., MAR. 23, 1920

Grade	Detroit	Chicago	N. Y.
No. 2 White	.99	.68	
No. 3 White	.98	.66	
No. 4 White	.97		

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
Standard	.70	.68	.76
No. 3 White	.69½	.67	.75
No. 4 White	.68	.66	.73

Oats are in the same relatively strong position they have occupied for months, the cash No. 2 being quoted on the Detroit market at 99 cents. From all indications the acreage planted to oats this year will be large, probably a considerable part of the abandoned wheat acreage will be planted to oats. Michigan is a great oat state, the failure of her crop last year notwithstanding. We expect a slight increase in oat acreage this year, but we caution our readers against a too heavy acreage. As regards to yield, oats are safer than spring wheat, but as regards to demand and price, spring wheat ought to be a good crop this year.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer

WASHINGTON, D. C., Mar. 27, '20—Warm waves will reach Vancouver about March 30, April 6, 11, 16 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of March 31, April 7, 12, 17; plains sections April 1, 8, 13, 18; merndian 90, upper great lakes, lower Mississippi valleys, Ohio-Tennessee valleys, 2, 9, 14, 19; eastern sections 3, 10, 15, 20, reaching vicinity of Newfoundland about April 4, 11, 16, 21. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will dominate the weather of North America from near March 30 to April 21. Most severe storms and most precipitation are expected during the weeks centering on April 9 and 21. Some indications that about April 20 dangerous storms will occur. Locations and amount of precipitation will be about as for the past 30 days.

W. T. Foster

RYE UP BARLEY FIRM

Rye still continues in good demand and quoted at $1.78, an advance of 3c above last weeks price. Everything points to higher prices in this market.

There appears to be very little activity in the barley market and it remains firm at $3@$3.25 per cwt.

BEANS INACTIVE.

BEAN PRICES PER CWT., MAR. 23, 1920

Grade	Detroit	Chicago	N. Y.
C. H. P.	6.50	7.25	7.75
Red Kidneys		14.00	14.50

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N
C. H. P.	7.25	7.00	7.50
Prime	6.75	6.50	7.00
Red Kidneys	10.25	11.50	11.50

Well, well, four days have passed without any further drop in bean prices. Doesn't seem possible, does it? Reports from various sections of the country declare that there is a strong "undertone" to the market at this time, and higher prices are expected. Well, we're through predicting higher prices. As we have stated for months past we expect them to come before the remnants of the 1919 crop are marketed, but we can only wait patiently for the upward turn.

POTATOES MAKE BIG ADVANCE

SPUDS PER CWT., MAR. 23, 1920

	Sacked	Bulk
Detroit	6.00	5.83
Chicago	6.00	5.85
Pittsburg	5.50	5.43
New York	5.50	5.00

PRICES ONE YEAR AGO

Detroit	1.70	1.65
Chicago	1.75	1.60
Pittsburg	1.85	1.75
New York	2.00	2.00

After suffering a drop of 20c per 150 lbs., the early part of the past week, and in the face of the fact that spring is upon us, the potato market advanced 90c and $1 per 150 lbs., making them $3.50 and $3.60 a bushel on the Detroit market.

There has been very small receipts and large demands for potatoes all week but the main cause of this advance in price, it is reported, is a shortage of cars. There is a feeling abroad that the market will not remain at this price long as farmers are commencing to unpit their potatoes which they will place on the market immediately because of spring work coming on and may result in lower prices.

Two weeks ago we said if we had a thousand bushels of potatoes we would sell half of them at the then prevailing price. We might add that we would market the rest of our holdings at the present because it is our belief that the market is due to turn soon. We ask you to follow the market closely and use your own judgment.

The trend of the market for the next week or ten days will depend largely upon the condition of roads and weather. There are undoubtedly some supplies in storage which will come out upon the advent of warm weather. The drying up of the country roads will also be a factor in determining the immediate future of this market.

The high prices of potatoes have led to some talk of a boycott against them until prices drop. Maybe the consumer will eat beans instead.

SPUD MARKET NOT SO SNAPPY IN WESTERN N. Y.

There is not quite so much snap to the potato market, due to the prospect of more liberal offerings now and that the car situation is easing and country roads will soon open up so that growers can haul freely. There is considerable spread to prices with good round that has gone out to 10,000 beet growers that you may see how the situation stands.

"If there is nothing done in the next white stock. U. S. Grade No. 1,

sacked, moving at $4.75@$5, with the bulk of the business around $4.85, f. o. b. loading point.

Dealers are paying growers up to $2.50 a bushel, delivered a the car, although it is doubtful if dealers would contract ahead and at that price. In fact, the feeling is that $2.50 is too high and the belief is that prices will work lower. Dealers have paid up to $2.75 a bushel in a limited way within the last week.

Pittsburg	28.00@29	28.50@29	28.50@28

In the eastern markets there continued light receipts of timothy, with a strengthening of prices on that variety. In the South and Southeast receipts were rather heavy, generally of hay of good quality and said to be mostly from Indiana. Prices are slightly advanced. Of clover and clover mixed receipts in most markets are light, but the demand is nowhere reported as urgent for this quality. May prices, however, continue to be high. Prairie hay, on the other hand, is showing decided weakness everywhere, with a very limited demand.—*Price Current Grain Reporter.*

BOSTON WOOL MARKET

The Commercial Bulletin says: "Weather conditions have improved slightly, allowing a further moderate release of freights sufficient to justify a slightly better feeling in the market, although actual trading has been limited in volume and prices are without any material change, fine wools holding fairly firm, while medium to low grades are easy.

Michigan and New York fleeces—Fine unwashed, 70@73c; delaine unwashed, 95c; 1-2 blood, 83@85c.

Scoured basis: Texas—Fine, 12 months, $1.90@1.95; fine 8 months $1.60@1.70. California—northern, $1.90@1.95; middle county, $1.70@1.75; southern $1.50@1.60; Oregon eastern, No. 1 staple, $2@2.10; eastern clothing, $1.70@1.80; valley No. 1, $1.75@1.80; Territory—fine staple, $2.05@2.15; 1-2 blood combing, $1.85@1.95; 3-8 blood combing, $1.30; fine clothing $1.75@1.85; fine medium clothing, $1.65@1.75.

DETROIT PRODUCE MARKET

Scarcity of cars is affecting the produce market in nearly all lines and the general tone of firmness is credited to transportation. This effects potatoes and vegetables and in some lines much higher prices are quoted, especially potatoes which are in demand and very scarce. Buyers of poultry do not have their wants supplies. Receipts were small all past week and demand increased. Receipts of dressed calves light and demand active. The market firm for hogs and all offerings are taken. Demand for eggs is increasing. The east is a heavy purchaser and all receipts find buyers. In the butter deal there is an increase in firmness owing to light receipts and a small improvement in buying. Apples are steady and the movement is not large.

Apples—Western, boxes, $4@4.50; Baldwin, $3@3.50; Greening, $3.25@3.50; Steel's Red, $3.50@5 per bu.

Popcorn—Shelled, 9c per lb.

Honey—White comb, 32@35c per lb.

Cabbage—Home grown, $6@6.50 per cwt.

Onions—Indiana, $7@7.50 per 100-lb. sack.

Calves—(dressed) fancy, 27@28c per lb.

Dressed hogs—Best, 20@21c; heavy, 17@18c per lb.

Live Poultry—Spring chickens, large, 38@40c; leghorns, 34@37c; hens, 41@43c; small hens, 39@41c; roosters, 24@25c; geese, 30@35c; ducks, 40@35c; turkeys, 44@45c per lb.

Dressed poultry—Chickens, 37@38c; geese 28@30c; ducks, 40@42c per lb.

Eggs—fresh, 44 1-2@45 1-2c per dozen.

Hides—No. 1 cured calf, 55c; No. 1 green calf, 55c; No. 1 cured kid, 32c; No. 1 green kid, 28c; No. 1 cured hides, 25 to 45 lbs., 30c; 45 lbs. and up, 20c; No. 1 green hides, 35 to 45 lbs. 27c; 45 lbs. and up, 17c; No. 1 green bulls, 20c; No. 1 cured bulls, 15c; No. 1 horsehides, $9.50; No. 2 horsehides, $8.50. Tallow: No. 1 13c; No. 2. 11c; sheep pelts 50c@3.50; No. 2 hides 1c and No. 2 kid and calf, 1 1-2c off.

LIVESTOCK MARKETS

DETROIT—Cattle; Canners and bulls steady. all others 50 cents lower than last week; best heavy steers, $11.50@$12; best handy weight butcher steers, $10.50@11; mixed steers and heifers, $9@9.50; handy light butchers, $7.75@2; light butchers, $7@7.50; best cows, $8.50; butcher cows, $6.75@7.25; cutters, $5.50@6; canners, $4.50@5; best heavy bulls, $8.50@9; bologna bulls, $7.50@8; stock bulls; $7@7.50; feeders, $8.50@9.50; stockers, $7.50@8.25; milkers and sprinkers $65@150. Sheep and lambs; lambs are dull,; sheep steady; best lambs, $19; fair lambs, $17.50@18.25; light to common lambs, $12.50@15; fair to good sheep, $12@13.50; culls and common, $5@7. Hogs; market fairly active; pigs, $15.75; mixed, $16@16.10; heavy, $15@15.75.

WESTERN NEW YORK BEAN MARKET.

The bean business here has sunk to a nominal basis, with hardly enough business to warrant quotations. However, there is a firm undertone to the market probably due to the general belief that America is going to take a very active part in feeding Continental Europe until the next harvest and that in such an advent beans will be one of the substantial items for export. The holdings back are relatively small. It is estimated that there are not to exceed 70 cars in growers' and dealers' hands all told. This total is divided as follows: Red Kidneys, ten cars; Yellow Eye, nine cars; Marrow, ten cars; Pea 35 cars; Medium, six cars; no White Kidneys.

CONG. FORDNEY SAYS HE WAS MISQUOTED.

(*Continued from page* 6)

kind. We have not helped frame other bills passed by the committee and presume we will not be called on to consider this bill."—Jno. N. Garner.

The correspondence and the news stories published above are the only information we have received as to Congressman Fordney's efforts in behalf of a bean tariff. We would not ordinarily devote so much of our space to the telling of this story, but we desire to see all the facts presented for the benefit of bean growers of Michigan. The writer and several other gentlemen of the state spent their time and part of their money, the growers contributing the balance, to go to Washington on this matter, and have waited for months for some results of their efforts, confident that special tariff law would be enacted in time to be of some benefit to growers in marketing the balance of their 1919 crop. The news that we now receive after four months of waiting is unexpected and disheartening to say the least.

Those of our readers who consider that Mr. Fordney has done everything possible to bring about this legislation will feel grateful for his efforts even though they have come to naught. But those who believe that the congressman has taken the opportunity thus presented to censure the present administration and at the same time play into the hands of the Michigan sugar manufacturers who will need acreage mighty badly this year, will want further explanations from Mr. Fordney.

BEET GROWERS' APPEAL CASE TO "HIGHER-UPS"

In the absence of any inclination on the part of the sugar manufacturers to grant a conference to the beet growers, Manager Ackerman has called a "strike," and has placed the case of the growers before Congressman Fordney, Governor Sleeper and Attorney General Palmer. Below is a copy of his letter to Mr. Fordney, the others being along the same line:

"I wish to again call your attention to the fight the sugar been manufacturers are putting up with the growers in Michigan. This fight has been going on since the first week in December last and since that time the companies have five times refused a conference, and we now have 9,000 paid-in members who declare that they will grow no beets during 1920 if they cannot get a better contract than that offered by the companies.

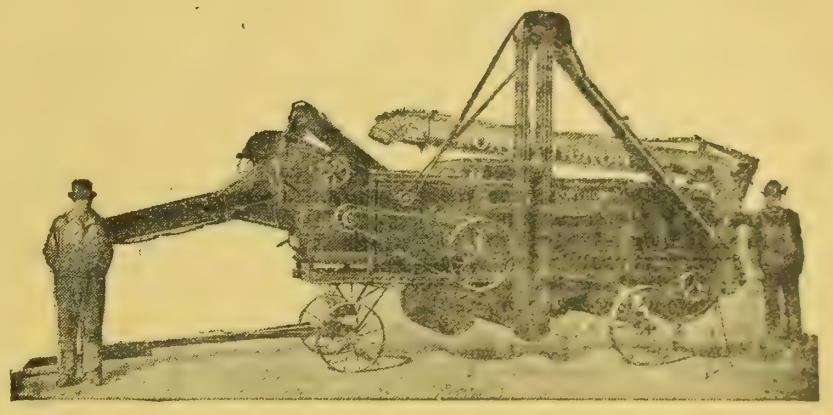
"At a convention held in Saginaw March 8th, 2,000 delegates from the hundreds of local organizations of the different beet sections of the state voted to a man that they would give the manufacturers until Mar. 20th to give them a conference and if they did not they would go out and demand what they asked, $12 per ton on 9c sugar with a sliding scale, or they would grow no beets during 1920. I am enclosing copy of circular letter that has gone out to 10,000 beet growers that you may see how the situation stands.

"If nothing is done in the next 20 days it will be too late this year as many farmers are already making arrangements to plant other crops that do not require so much labor. This will result perhaps in the closing of sixteen Michigan sugar factories and result in the loss of millions of dollars of business for the cities of the state of Michigan. Please let us hear at once if there is anything you can do to save the sugar beet industry for the state of Michigan. (Signed) *C. E. Ackerman, Manager Michigan Sugar Beet Growers' Ass'n.*

Plant Beans Instead of Beets

There's one crop that ought to be a safe one this year for the farmers who do not plant sugar beets. It is BEANS—both the white pea and the red kidney varieties. From all over the bean sections of the west and the Orient coms news of a large DECREASE in bean acreage, and it is asserted that New York will not plant more than one-half her usual acreage. This always happens following a season or two of low prices. Don't make the same mistake as these farmers in other states. Plant beans. Less labor, less investment, less risk. Red kidneys are selling today around $15 per cwt. They'll be a good crop for next year.

Thresh Your Own Grain



Here is a machine that will thresh your grain at a big saving in cost to you if you are the owner of a tractor of 9-18 H. P. or over.

We have on hand a few 20-34 Port Huron Tractor Special Threshers used as sample machines during 1919, which are as good as new, that we are going to close out at reduced prices.

Write us for descriptions, specifications and price. First come first served.

Port Huron Engine & Thresher Co.

Dept. "A" Port Huron, Michigan

FRANCO

POCKET ELECTRIC .....FLASH LIGHT FREE

For Two NEW Subscribers to M. B. F.

Every man, woman or child in the country ought to carry an electric flash-light at night and here is the handiest size of all. Flat, just-a-hand-full yet throws a powerful light, brighter than a clumsy lantern. We have secured a limited number of these lamps from one of the best makers in America. They are never sold at retail for less than $1.50. some dealers charge $2. but until our supply runs out we will send one complete flash-light, including nitrogen bulb and Franco battery for only two NEW subscribers to The Michigan Business Farmer at $1 each. Send $2, two new names and the lamp will come by prepaid parcel post. Address, Premium Manager, the Michigan Business Farmer, Mt. Clemens, Mich.

CONSOLIDATED SCHOOLS

WE HAVE heard something of this plan before, but here comes a plan from a community organizer which sounds feasible—using government trucks to transport children to and from schools in the sparsely settled communities so that the one school may be efficiently provided for. The article as it appeared in a recent daily newspaper is so interesting and sounds so altogether workable, that I have copied it in its entirety. When the question is brought up in your neighborhood you will be able to know what other communities in other states are doing and planning in connection with this vital question:

A proposal to utilize United States mail trucks for transporting children to and from school in the ruarl districts of the country and to put the postoffices and schools in these districts in the same building in order to affect a much needed consolidation of the education facilities of the rural districts will be introduced in this congress.

The plan, drawn up by Edward J. Ward, special community organizer of the bureau of education, is the outcome of several years of study and experiment, chiefly at the Mount Joy school, in Adams county, Pennsylvania. There, the community is already organized and by the reason of the co-operation of the farmers, in the district, the products of the farm are shipped directly to the Parkview school in Washington, where the community is organized in a like manner.

By elimiating the agencies between the producer and the consumer, the plan has effected a great reduction in the cost of living for the members of the two communities.

The proposal now advanced is the next step toward consolidating the community and would solve a wide range of problems now vital in the rural districts of the country. It is estimated that there are about 400,000 communities throughout the country which would be affected, and that by the proper organization it would be possible to centralize the educational facilities of these into 45,000.

If it is possible to meet the problem of transportation, the little red school house on the hill, replete with sentimental virtues, but sadly lacking in the educational facilities which it is designed to afford the children of the country, will go.

One Central School Instead

In its place will be a central school house with immeasurably better advantages—the dream of educators for many years. Instead of sending the children to a little school of about ten members taught by a teacher, often still in her teens who draws a salary of about $300 a year, they will go to the central school house on the mail truck every day.

There are many communities throughout the country where the automobile truck is being utilized for transporting children to and from school, but it is at considerable cost.

Congressman M. Clyde Kelly, of Pennsylvania, has been for a long time one of the leaders of the house in asking that government trucks be utilized in meeting the transportation problems of the rural communities. He has urged that by organizing the communities and utilizing the trucks for transportation great reductions can be effected in the cost of living as in the case in the co-operation of the Mount Joy and Parkview communities.

Now it is proposed that when the mail trucks go out in the morning to deliver the mail, that they pick up the children at the homes along the road and bring them into school on the return trip. And, in the same way, that they take them home in the afternoon when they go out to get the mail. Further developing the scheme, it will then be possible for the children attending a small school to come together in a larger school.

And the heads of school systems in our own Michigan are talking seriously of this project. A meeting was recently held in Wayne county to discuss this subject and the main feature which they brought to light which was not considered by the Pennsylvania people in the report of their meeting quoted above, is that of equalizing the taxation and providing efficient teachers for all the schools. We believe you will be interested in learning the points which favor the adoption of such a system in this state, so we are again this week devoting quite a little space to the subject. We quote from the discussion of the educators in Wayne county:

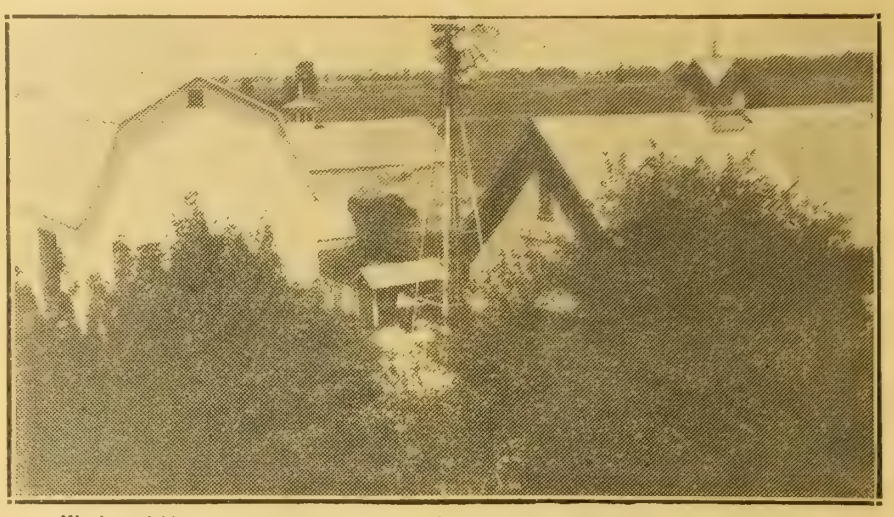
The plan was favored from the standpoints of equaliziation of school taxation and of obtaining unifom school facilities. According to Geo. N .Otwell. assistant state superintendent of public instruction, $57 annually is spent per year per pupil for instruction in village and city schools in Michigan, while only $31 is spent in rural schools. W. B. Arbaugh, director of the Wayne county association of superintendents, followed this up with a statement that in Wayne county the cost of education per capita last year ran from $22.82 in some districts to $85 in others.

Consolidation of schools in rural districts was urged by Mr. Otwell, who pointed out that it cost less per pupil per year to transport pupils to a centralized school than to maintain seven or eight one-room schools in as many districts.

"In Michigan there are more people going to the cities from farms than in any western state," said Mr. Otwell. "One reason is because of the high pay that industry offers. Another reason is that better schooling is obtainable in the largest cities. The only way to keep our farms populated is to consolidate school."

Fixing salaries of teachers according to living costs in the various communities, was urged by Fred F. Fisher, assistant county school commissioner, who predicted that owing to the great increase during the past six months in the cost of living, salaries next year would have to be greatly increased in most districts.

"The situation in the rural districts in Wayne county bids fair to be in a worse state than it has ever been before, due to the fact that Detroit has raised is minimum salary for teachers to $1,500, while last year the average wage for teachers in one-room buildings of the rural districts was $850. The highest wage paid in any district was $150 per month, and the lowest $60. Teachers cannot be hired for these sums next year, and we shall have hard sledding competing with Detroit salaries," said Mr. Fisher.



We have laid great stress on the subject of beautifying the home and grounds about the house but it remained for H. A. Hebblewhite, of Armada, Mich., to lead us a step further and show us how even the barnyard might be made beautiful while the same trees which screen the yard also afford ample shade for the animals. The large and modern barns testify that Mr. Hebblewhite is indeed a Business Farmer.

WEEKLY CHEER

When a bit of sunshine hits ye,
After passing of a cloud,
When a bit of laughter gits ye,
An' yer spine is feelin' proud,
Don't forget to up and fling it
At a soul that's feelin' blue—
Fer the minute that you sling it,
It's a boomerang to you.

TEACH CHILDREN TO LOVE PLANTS AND ANIMALS

By Dr. J. H. Francis

EVERY child should have something upon which to lavish his affections; otherwise they will weaken for affections, like other traits, must live and grow by exercise. Notice the little girl with her doll or the boy with his hobby horse. While inanimate objects represent life and hence hold the attention of children, living things are far more interesting to them and offer greater possibilities for teaching sane and wholesome lessons. A certain small boy who had several pet hens, gladly brought their little chickens into the house and cared for them by the open fire during an untimely spring snowstorm. Another small boy habitually spent his Saturday mornings caring for his guinea pigs, while his brothers and friends were playing. With the toy the child expresses what he already knows and is; but with the living thing he discovers himself and the life about him.

The ignorance of children, and adults, too, of the simplest, most ordinary facts of nature about them, is unnecessary and deplorable. We have been taught to memorize facts from books rather than to discover and appreciate them.

Give to the child some living thing that is his own to know, to love and to care for. Some will find greatest delight in animals, such as ponies, pigs, dogs, cats, chickens, rabbits, fish, etc. Plant life, however, will interest many children more than we suspect, if they are allowed to plant and cultivate their own gardens. The lessons to be learned from either plant or animal life as so varied and important that every parent should take advantage of the opportunity and give to each child some living thing to care for, study and love.

The Friends of Spring

When the world wakes up from slumber and the daffodills appear
And the sky gets blue above me, and I know the spring is here;
When the birds begin to chatter and there's something in the air
Which sets a man to thinking of the garden waiting there
It is then the plants and roses and each budding vine and tree
Seem just like good old neighbors that I've waited long to see.
Oh it's like the break of morning and there's someone that you know
Passes down the street and hails you, and you shout a glad "hello!"
Or it's like the friendly greeting that you give to people when
They've been away for weeks and weeks and just got home again,
Or at least that's how I view it, for it really seems to me
That I've got to give a welcome unto every bud I see.
I go into the garden and I watch each plant and vine
For the signs of their awakening, for they're all good friends of mine,
And I bend above the roses, and I greet them with a shout
Of delight there's no mistaking when I find them budding out,
Oh I'm so mighty glad to see them, and I want to let them know
And I think they understand it when they hear me call 'hello!"

(Copyright, 1920, by Edgar A. Guest.)

OUR READERS OWN COLUMN

Dear Miss Ladd: We read M. B. F. and like it so well I thought I would answer the subscriber who inquires how to keep hams through hot weather. We have tried many ways and find this the best, so I gladly pass it on to other readers:

Have your hams, shoulders and bacon all salted and smoked. We usually sugar cure our meat in pickle or dry sugar cure. Have ready a box large enough so that you can have a good layer of salt on the bottom. Now pack your meat in salt in this box, being sure that each piece is entirely covered and none exposed to flies, bugs or insects. Do not be afraid to use plenty of salt as they will never absorb any more salt. Now set the box in a dry place and the meat will keep perfectly. I should be glad to hear from the reader who made this inquiry after she has tried this method.—M. A. B., Clare, Mich.

Woman's Page, M. B. F., I presume that the lady who inquired as to the best method of keeping ham wanted to keep them uncooked, but if she has a ham which she will cook I have found that the best way is to cook it just the same as for serving and when it is well done, can it in its own juices. The fat and water in which it is cooked will form a jelly over the meat, which can be cut into chunks to fit into a large mason fruit jar or even larger and fit into a crock. I like this method as I always have some cold meat on hand if some one drops in for supper when we haven't anything prepared.—C. N., Hartford, Mich.

To the Editor of the Woman's Page, M. B. F.:

I have received so many helpful hints from this page that I would like to tell others just two or three little things which I do to save in these days when we must count the pennies and also to save time.

I improvised some coat hangers from some barrel staves. I wound them with strips of an old silk dress The heavy wire for the hanger was easily bent into shape.

And I found that an old bed quilt which had served its day made an excellent mop for washing painted floors.

Now is the time when the winter potatoes are beginning to sprout and are not quite so good just plain boiled, so I have them baked quite frequently and in order that they do not steam and get soggy, I wrap them in a towel as soon as I lift them from the oven and press each only slightly until it breaks. They are then nice and mealy.—O. B., St. Johns, Mich.

Mr. D'Annunzio has announced his intention to fly from Italy to the United States. The celebration will take place in Italy.—Detroit News.

LATEST STYLES and New York Patterns

2290. Child's Dress. Cut in 5 sizes: 2, 4, 6, 8 and 10 years. Size 6 requires 2 1-2 yards of 36 inch material.

A Direction Book is in package.

To match any material, have dealer show you *"Diamond Dye"* Color Card.

"HEARTS OF THREE"

(*Continued from page* 15)

"But I am distrained to remark to your attention that that rope is worth good money, sir," Captain Trefethen complained, as Henry set to work on the hetrogeneous gear.

"You will be paid," Francis hushed him.

"And the coffee pot—it is almost new."

"You will be paid."

The skipper sighed and surrendered, although he sighed again at Henry's next act, which was to uncork the bottles and begin emptying the beer out into the scuppers.

"Please, sir," begged Percival, "If you must empty the beer please empty it into me."

No further beer was wasted, and the crew swiftly laid the empty bottles beside Henry. At intervals of six feet he fastened the recorked bottles to the half-inch line. Also he cut off two-fathom lengths of the line and attached them like streamers between the beer bottles. The coffee-pot and two empty coffee tins were likewise added among the bottles. To one end of the main-line he made fast the kerosene can, to the other end the empty beer case, and looked up to Francis, who replied:

"Oh, I got you five minutes ago. El Tigre must be narrow or else the tug will go around that stuff."

"El Tigre is just that narrow," was the response. "There's one place where the channel isn't forty feet between the shoals. If the skipper misses our trap he'll go around aground. Say, they'll be able to wade ashore from the tug if that happens—Come on, now, we will get the stuff aft and ready to toss out. You take starboard and I'll take port, and when I give the word you shoot that beer case out to the side as far as you can."

Though the wind eased down, the Angelique square before it, managed to make five knots, while the Dolodes, doing six, slowly overhauled her. As the rifles began to speak from the Dolores, the skipper, under the direction of Henry and Francis, built up on the schooner's stern a low barricade of sacks of potatoes and onions, of old sails, and of hawser coil. Crouching low in the shelter of this the helmsman managed to steer. Leoncia refused to go below as the firing became more continuous, but compromised by lying down behind the cabin house. The rest of the sailors sought similar shelter in nooks and corners, while the Solano men, lying after, returned the fire of the tug.

(*To be continued*)

SOLVE MILK SURPLUS PROBLEM

(*Continued from page* 13)

cheaper, $400 times 15 (the number of cows necessary to make $1,200 equals $6,000. Now which are the high priced cows?

How to Make the Change

But there are only a limited number of high producing cows. The average farmer has 5,000 lb. cows or less. Here is a suggestion as how to make the change. After eight years of keeping records the Iowa Experiment Station has found that the first cows of a pure bred Holstein sire on a scrub will produce over 2,000 lbs. of milk more than her scrub mother.

Data From Agricultural Colleges

It is true that the basis of these calculations are figures presented by Agricultural Colleges. Many farmers by their practice question such data. If you perchance are in that class, keep records of your own, or join a cow testing association which conducts operations under your own observation, and try the thing out. If we as a class question the results of our colleges, it would be cheaper to convert them into kindling and recognize others that we can claim as our own that will tell us the truth and in which we will have confidence than to continue to ignore valuable facts about our business. The new awakening of farmers created by the Farm Bureau organization shall soon put to the test the efficiency of our agricultural colleges the farmers will claim the college for his own and he will see to it that the college is a well paid, efficient and willing servant.—*A. C. Anderson, former agricultural agent, Macomb county, but now gone back to the old farm in Oceana county.*

Let the Women Buy the Separator—

They Have to Clean it and in Many Cases Turn it Twice a Day

Women on many farms, operate and clean the cream separator, and the farm women will appreciate the many advantages in the Sharples Suction-feed that are most important to her.

The simple one-piece bowl is much easier to clean than 20 to 40 "discs," found in fixed-feed separators. (All other separators are fixed-feed.)

A woman can operate the Sharples Suction-feed slowly and still get all the butterfat. Sharples *skims clean at any speed.* No other separator does.

Sharples has an automatic oiling system. The Sharples knee-low supply tank eliminates lifting heavy milk cans. The Sharples Suction-feed saves the valuable butterfat that fixed-feed separators lose. Profits with Sharples, therefore, are larger than with any other cream separator.

Proof: There are more Sharples Separators in use today than any other make, American or foreign.

Write for illustrated booklet describing the advantages of the Sharples Suction-Feed. Address nearest office, Dept. 155

The Children's Hour

DEAR CHILDREN: Wonder what is the matter—didn't receive a single original drawing this week. I guess you thought it was only a contest for the one week, but such is not the case. Prizes will be given every week for every original drawing which is good enough to reproduce. So get busy again.

A prize of a trip around the world on postal cards has been awarded this week for the best original story to Mildred Fouell, of Blanchard, Mich.

Already we can feel the balmy air of spring and I expect the boys are making kites and playing marbles, but I wonder what the girls are doing. Write and tell me all your plans for spring and summer and what you most enjoy doing.

Affectionately yours, LADDIE.

Alexander Graham Bell

The Man Whose Invention Made Light of Distance

ONE WINDY March day a boy was born in Edinburgh, Scotland. This boy was destined to bring into close contact people who were far apart, and to make distances seem as nothing. The boy was Alexander Graham Bell, the inventor of the telephone. When he was twenty-three years old he came to Canada with his father and two years later moved to Boston where he taught in the Boston University. Mr. Bell, senior, devoted his life to teaching the deaf and dumb to talk, and young Bell soon decided to devote himself to helping his father in his good work.

While he worked with his father, he was studying out the means of long distance communication, and on February 14, 1876, he applied for a patent of the instrument which was to become known all over the world as the Bell Telephone. By a most curious co-incidence, on the morning of the same day a man by the name of Elisha Gray appeared at the same patent office and applied for a patent on a similar telephone. Neither man knew of the other and neither knew that a similar machine was being worked upon, yet each completed work upon the instrument at the same time and on the same day applied at the Washington patent office for a patent.

Bell's machine proved to be the better instrument, and it was he who made it possible for us to talk to our friends regardless of the distance that stretched between us. Thus while he taught the power of speech to the deaf and dumb, Bell was planning to show the world how to send their voices out into space by means of the telephone.

OUR BOYS AND GIRLS

Dear Laddie—I have read the letters in M. B. F. for some time so I will write a few lines. I have read the stories on the children's page. I like to have the stories that are complete. I got a thrift stamp for one story and would like to win a prize for whriting another. What may I write about. Will some of the boys and girls please write. I would love to hear from Walter Bremes and Viola Bambery and Dorris Bulten. Here is a story of "The Little Girl and Her Dog." Mildred Fovell, Blanchard, Mich.

The Little Girl and Her Dog.

There once liveed a very little girl with her mother and dog in the hills. The little girl had blue eyes and golden hair, and when she smiled she smiled so sweet. They called her Sunshine. One day Sunshine went out on the hill to play. When playing with her dog, her foot slipped and she began to fall, but the dog ran and caught her dress and held her until help came. So this is the way Sunshine was saved by her little dog "Buster"

Dear Laddie:—I received the postal cards of "The Trip Around the World." I have written two times, but I never saw my letters in print. I don't like continued stories. I'd rather have one that is complete each week. I have seen two letters from my friend, Mary Gross, in the paper. She is visiting me today. I have two little pet lambs; their names are Shake and Lee. I am going to raise some chickens this summer and will do all I can for the birds. Hope my letter will be in print. I will close—Henrietta Droster.

Dear Laddie:—I have written to you before. We have four cows and five horses. I have one brother and one sister. I go to school and am in the 5th grade. My teacher is Miss Erceldeane Hodge. I like her very much. We live on a farm of 20 acres. My father works 120 acres besides. He has 26 acres of wheat. We take the M. B. F. We have a mother pig and seven little ones. We have two calves, Spot and Rosy. I will close, hoping to see my letter in print.—Johnie Edward Ohls, Bancroft, Mich.

Dear Laddie:—This is the first time I have written and I hope to see my letter in print. I have one sister; her name is Laura May; she is 9 years old and in the 3rd and 4th grades. I am a little girl of 7 years and am in the 1st grade at school. My teacher is Mrs. Lena Hoopfer. I like her fine. My chums' name are Evelyn and Norma Overholt, Arlene Marshall and Ruby Mallony. We have lots of fun together. I am interested in the boys' and girls' letters and stories. I will close and let some other boy or girl have a little room.—Evelyn Frances Eyer, Levering, Mich.

Dear Laddie:—This the first time that I have written to you this year. My father takes the M. B. F. and I like to read the letters from the boys and girls. I also like the puzzles. I have two sisters and two brothers. We live on a 40-acre farm and have two horses, two cows, three calves and about 50 chickens. Mama is going to give me a hen to set. We have an incubator; it holds 160 eggs. They closed the school because the flu was so bad around here and the measles too. I received six valentines. I am 12 years old and in the 6th grade. I hope to see my letter in print. The answers to the puzzles are: Harriet, Bernice, Drencil and Katie.—Fern Cook, Wheeler Mich.

Dear Laddie:—This is the first time I have tried to write. I am a little girl, 9 years old and in the 4th grade at school. My teacher is Mr. J. A. King. There are about 40 in our school. We live on a farm of 52 acres and have two horses, four cows, three calves and 30 chickens. Our dog's name is Sport; he sure is some playfellow. I have five goldfish for pets and my brother, Emil, has two doves. He is 11 years old. Daddy takes the M. B. F. and we all like it very much. I like the children's letters best of all. Violet Grover, I saw your letter in the M. B. F. and answered it but it came back to me. They say there is no such place as Wiscronet. Was that a mistake. If you read this, Violet, write to me. I hope to see this letter in print. I wish some of the girls would write to me.—Violet Miller Munger, Mich.

Dear Laddie:—This is the first time I have written to the M. B. F. I like the Children's Hour fine. I am a boy 12 years old and in the 6th grade at school. My teacher is Mr. M. Florain. We live two and one-half miles from town. My father takes the M. B. F. and has subscribed for another year. He likes it very well. I have two brothers and one sister. My brothers' names are Edward, and Stephen and my sister's is Anna. For pets I have three cats, Ted, Nig and Snupe, and a dog, Bessie. My father owns an 80-acre farm and we live in a brick house. My father has four horses, nine head of cattle, 15 pigs and 100 hens. The horse we drive to school is named Goldie. I would like to have some of the boys write to me. As my letter is getting long I will close, hoping to see it in print.—Firmin B. F. Burns, Carson City, R2.

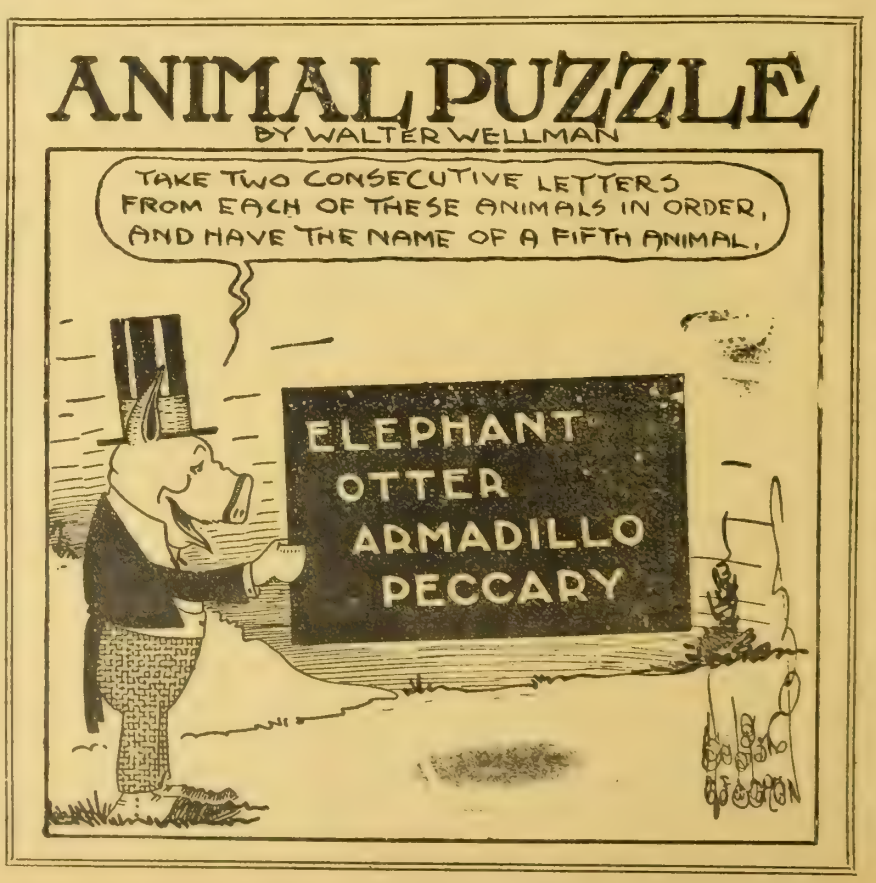
Dear Laddie—This is the first time I have written to you. I am a girl 12 years old and am in the 7th grade. My teacher's name is Miss Ruth Gray. Our school went to the Black Creek school last Wednesday and we had an arithmetic contest, and we won 2290 points ahead. I have a sister and a brother. We have 5 cows, 4 calves, 3 horses and about 80 hens. We live on an 80 acre farm. Have an Oakland car. Have an Amberola too. Am well interested in reading The Children's Hour. My mother has been dead six years. My father has a housekeeper. My father takes the Michigan Business Farmer and enjoys reading it. I am sending you a story about a brave dog. As my letter is getting long will have to quit, hoping to see my letter in print.—Stella E. Adolph. Yale, Mich.

A Brave Dog.

Once upon a time there was three little girls wanted a dog. Their Uncle Dick was going to Florida. He had a dog there and he did not want to take it along with him, so he gave him to the 3 children. One day baby May was out playing tag with them and they went a long way in the field, and baby May couldn't follow them, so she ran in the road and stood still. She saw her father with a team of run away horses, but never moved. Just about as the horses were to strike her their dog caught her by the dress and pulled her aside the road. The child was crying, and the dog seemed to say, "Don't cry, I'm here, no one shall harm you." In a little while her father came running after her and took her home. After that they called the dog Hero.

Dear Laddie—I am a girl 9 years old and in the 5th grade at school. I go to the Grub school. My teacher's name is Mrs. Marion Harford. I live on a 50 acre farm. There is 40 that we work and 10 of woods. We have two cows and three horses. We like the M. B. F. fine. I have four sisters and two brothers. Their names and ages are: Helen, 22, Ruth, 19, Grace, 7, Naomi, 5 months, John 20 and Earl 6. I will close, hoping to see my letter in print. Ethel Glancy, Milford, Mich.

Dear Laddie—I have never written to you before, so I thought I would try it for the first time. I am a girl 11 years old and am in the 7th grade at school. My teacher's name is Miss Ackerman, and I like her very much. My father takes the Michigan Business Farmer and likes it fine. I like to read the stories and the letters that the boys and girls are writing. I think that the page of The Children's Hour is very interesting. I have two sisters, Laura and Dorothy, and two brothers, Melvin and Carlton. I live in the country and have about three-fourths of a mile to go to school. I do not want to write a very long letter because I want to leave space for the other boys and girls. Will close for this time, hoping to see my letter in print.—Vera Curry, Sebawing, Mich., R. F. D. No. 2.



ANIMAL PUZZLE
BY WALTER WELLMAN
TAKE TWO CONSECUTIVE LETTERS FROM EACH OF THESE ANIMALS IN ORDER, AND HAVE THE NAME OF A FIFTH ANIMAL.
ELEPHANT
OTTER
ARMADILLO
PECCARY

Dear Laddie:—This is the first time I have written to you. My grandfather takes the M. B. F. I am a girl 11 years old and am in the 6th grade. My teacher is Miss Ruth Hood. I have one brother, Wayland. We live on an 140-acre farm, and have six horses, four cows, 51 sheep and one little lamb as well as 12 head of hogs. For my pets I have two cats, Barney and Kitty Cat. One is brown, the other, black and white. I will close, hoping to see my letter in print.—Donna Irene Kahle, Adrian, Mich.

Dear Laddie:—I have written to you before but did not see my letter in print. I am a girl 10 years old and am in the 5th grade. I go five and one-half miles to school every day. We live on a farm of 160 acres and keep five cows, seven steers and four horses. I have two brothers, John and Thomas and two sisters, Florence and Lucile. For pets I have a dog, Jack. I guess my letter is getting long so will close. I hope to remain your little friend.—Frances O'Connell, Carson City, Mich.

Dear Laddie—As I have never written to your department before, but have been interested in the letters others have written, I thought I would add one to the collection. I am a girl fourteen years old and a freshman in high school. I am not a very little girl, being five feet seven inches tall and weigh about one hundred and thirty-five pounds. I live on a farm of 60 acres, one-half mile from the village of Buckley. Papa also owns 40 acres two miles from our home. Our school is closed now on account of the flu. We have had a bad stormy winter. The snow is from 16 inches to two feet deep in the woods, though the weather has grown milder. Some of the crows have returned and we are waiting with what patience we can command for the return of the robbins. We have a piano and I am learning a new waltz entitled, 'Mosquito Waltz." I would be very glad to hear from girls about my own age. I will answer all letters received. Hoping to see my letter in print I will close. Pearl Srackangast, Buckley, Mich.

Dear Laddie—This is the first time I have written to you, but as I have seen a good many letters in the M. B. F. written by other boys, I though I too would try. I am a boy 10 years old. Am in the 4th grade. My teacher's name is Miss Saxton and we all like her fine. I live in a little town called Old Brockway. About all one can see in our town just at present is snow. I have a little dog, his name is Stub, and he and I are great friends. I also have three cats. The dog does not like the cats as well as I do, but we get along very well at that. I will close now hoping to see my letter in print. My Pa reads all the kiddies letters and he will be glad when he sees mine along with the rest. Yours very truly, Chester Allen Payfer, Yale, Mich., R. 3..

—Dear Laddie—This is my first time I have written to you. I am a girl 9 years old and in the 4th grade. I go to the Warren school. My teacher's name is Miss Evelyn Kinyon. I have a sister Goldie. We live with our grandpa Everson on a 80 acre farm. He takes the M. B. F. and likes it very much. For my pets I have two cats. Their names are Grey Face and Gilbert. My grandpa has three horses, eight cows, fifty chickens and a Ford to take us all over the country. Will conclude as my letter is getting long. Hoping to see this letter printed in the M. B. F. Your friend, Mildred Mae Patterson, Auburn, Mich., R2.

Dear Laddie—This is the second time I have written to you. The other letter you did not print. We have two cats. One is a tiger and one is a white Persian. We have one cow and about 72 chickens. I have a little sister, her name is Phyllis, she is two years old. I am eight years old. I am in the 2nd grade. My teacher's name is Miss Severence. She is real nice. My father has got 122 pigs and has 19 little ones. My father reads the M. B. F. and likes it very much. We have got 105 acres. I will close hoping to see my letter in print. I am yours truly, Virginia Dean Jewett, Mason, Mich.

Dear Laddie—This is the first time I have written to you. I am a little girl nine years of age. I go to school every day, am in the fourth grade. My teacher's name is Miss Walton. For pets I have a dog Rover about two years old, and a kitty named Fluffy, about one year old. I have a little sister seven years old, her name is Vivian. My father takes the M. B. F. He likes it very much. I live on an eighty acre farm. I enjoy reading the children's letters. As my letter is getting long I will close, hoping to see my letter in print.—Esther Baughman, Shepherd, Mich.

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. and likes it very much. I like to read the "Children's Hour." I am a girl 13 years old, and am in the 6th grade. My teacher's name is Mrs. Sahin. I have 30 rods to go to school. I live on an 80 acre farm. There is a creek running through our farm. Well I will close for this time as my letter is getting quite long. R. Dot Sharp, Custer, Mich.

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. and likes it very much. I go to school. I am 11 years old and in the 4th grade. My teacher is Mr. Edward Philo. We have 2 cows, 2 yearlings and 1 calf. I like the Doo Dads. I have a sister, Joyce, and 2 brothers, Lloyd and Clifford. We have 17 chickens and 2 pigs and 1 dog.

Illinois Ass'n Advocates Rural Credits Law

(*Continued from page* 10)

has the highest percentage of farm land handled by tenants of any state in the north. In 1890, about 29 per cent of the land was tenant-farmed, and this increased to 41 per cent in 1910. A recent survey in Champaign county indicates that the percentage of tenancy there is 80 per cent, and I believe that the 1920 census will show 60 per cent for the whole state.

Tenancy Increasing Too Fast

"Tenant farming has been increasing, and I believe our purpose should be to start the figures down again—not violently, but gradually. In my judgment, a state rural credits system would do this. South Dakota, Oklahoma and California have these state rural credit systems, all working successfully, I am informed. All that is necessary is for the state to lend its credit, so it would not cost the state anything except the cost of administration."

Frank Mann warmly supported the idea of encouraging the ownership of farms by the men who work them, but took issue with Dunlap and Thompson on the method of accomplishing it. "The state has three vested rights in farm land—the production of food, the maintenance of fertility to insure the food supply of the future, and the production of the best class of citizens," said Mann. "None of these is accomplished through tenant farming, nor can it ever be except isolated cases. Crop production almost invariably declines on rented farms, and soil fertility goes down likewise. The third factor—good citizens—go along with good crops and fertile soil. The man who farms his own place produces more food for society than the renter, conserves and improves the soil instead of impoverishing it, and his very stability and progress insure the highest type of citizenship.

"My idea is that while more credit is undoubtedly desirable, too much credit will only aggravate the situation by increasing the number of bidders for land, the price will go up, and we will be worse off than before. That is the way the federal loan system has worked out—at least officers of the St. Louis Federal Law Bank claim that the federal system has helped the price of land to go up.

A Graduated Tax

"The way to tackle the question is to institute a graduated tax upon farm land, dividing it into three classes for taxation. The first and normal rate of taxation should be levied upon land farmed by its owner. There should be no limit placed upon the amount of land one man may farm; the large farms of 320 to 640 acres and even larger are more efficiently and economically handled than the smaller ones, in general. From this tax should be deducted a proper allowance for all phosphate and limestone applied and clover plowed under; it would be no more difficult for the assessor to determine these items than to locate the dogs for taxation.

"The second class of land should include farms operated by sons of retired farmers, or by other near relatives, and farms owned by men who have moved to towns to educate their children, and for similar reasons. It should pay considerably higher taxes than land farmed by its owners. This would encourage retired farmers to sell their land to their sons, and let them put their money into government bonds or other safe securities.

Heavy Tax on Non-Residents

"The third class should include all land held by non-residents, no matter how much they hold. By non-residents I mean all those not included in the second class. Their land should pay the highest rate of tax—at least twice as much per acre as land farmed by its owner, perhaps more. This would soon break up speculation in land, which is the cause of a large nomically wrong, and investment in land, which is the cause of a large part of our tenancy. Let the man who wants to show off his pride in land ownership pay for the privilege. Let the banker or doctor who wants to own a farm either pay an excessive tax or put their money into something else."

These talks provoked a prolonged discussion which lasted over three hours, and the committee was so interested that it forgot to adjourn until everybody's supper was cold. In general, the sentiment was favorable to the idea of the state rural credits system, and not altogether hostile to the idea of classifying lands for taxation. No action was taken, however, but was deferred until later.

Nckert, Allen and Haynes also addressed the committee, and endorsed in general the I. A. A. proposals.

Chairman Dove of the initiative and referendum committee, has invited Secretary Thompson and other representatives of the Illinois Agricultural Association to appear before the convention to tell why the farmers approve the I. & R. The offer was accepted, and the hearing will be held as soon as convenient to all parties.

There are over 200 proposals before the convention now, many of which will never get out of committee. No more proposals can be brought in except through committees. The convention will soon be getting down to real business, though it will be many months before the last word is written in the new constitution.

Detroit Milk Situation Under U. S. Scrutiny

(*Continued from page* 3)

suffers because of the resulting decrease in consumption.

The Fair Price Board will discover, however, that milk prices in Detroit have advanced less than most other commodities and are no higher than in the average industrial city of a half million population and over. They will discover, if they go deep enough into the matter, that the dairy farmer is facing a most perplexing problem in producing milk at a fair profit during all months of the year, and that an apparently excessive price during one period of the year is necessary to protect the farmer from losses sustained at other periods of the year. We have no fear that the Fair Price Board will discover any profiteering among the farmers but we are much concerned as to what substitute the board may offer, or will have to be provided, in case the present arrangement for stabilizing the milk price and insuring a steady supply of fresh milk is done away with.

One thing is clear to us, however, and that is that the farmers will discover before this investigation is over that the one and only way of marketing their milk is to own or control the machinery of distribution and ke themselves independent of all ot agencies. If the experiences of other farmer-owned cooperative distributing systems count for anything they show that the farmer can distribute his own milk at more profit to himself and less cost to the consumer than under the old system. Again, we urge the Michigan Milk Producers' Ass'n to make an immediate study of the possibilities of co-operative milk distribution and take such action as will protect the farmers of the Detroit area, and indirectly the farmers of the entire state, from the losses that must come if the Detroit milk supply is put back upon the uncertain basis of former years.

THE FARMER FEEDS THEM ALL

The politician talks and talks,
The actor plays his part,
The soldier glitters on parade,
The goldsmith plies his art;
The scientist pursues his germs
O'er his terrestial ball,
The sailor navigates his ship,
But the farmer feeds them all.
The preacher pounds the pulpit desk,
The broker reads the tape;
The tailor cuts and sews his cloth
To fit the human shape.
The dame of fashion, dressed in silk,
Goes forth to dine or call,
Or drive, or dance, or promenade,
But the farmer feeds them all.
The workman wields his shining tools
The merchant shows his wares;
The aeronaut above the clouds
A dizzy journey dares.
But art and science soon would fade
And commerce dead would fall,
If the farmer ceased to reap and sow,
For the farmer feeds them all.

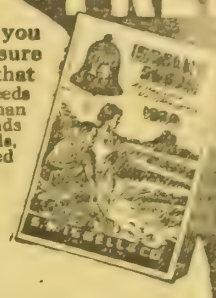
Record Yields with ISBELL'S SEEDS

1920 CATALOG FREE

Save Money

You can save more money and make more money if you plant Isbell seeds. It means sure crops, big crops of the kind that bring the most cash. Isbell's Seeds have that reputation among more than 200,000 users. Whatever your demands may be, Isbell seeds will meet your needs,—the best seeds you can buy. That's a proved fact because they are

NORTHERN MICHIGAN GROWN



Isbell's Seeds
"As They Grow Their Fame Grows"
TRADE MARK

Michigan is acknowledged the best seed growing state in the Union and Isbell's grow their own seeds. You buy direct and are thus assured of quality, hardy, early maturing, pure, rugged seeds of the best that 41 years of experimenting, developing and study can produce. This makes sure crops,—big sure yields and satisfaction.

Free Farm Seed Samples—Free Catalog

Just send the coupon or post card. Tell us which samples you prefer. We will send them Free, without obligation, with the new 1920 Isbell catalog. The more you know about seeds, the better you will appreciate Isbell quality and this wonderful buying guide. Write today.

A Newly Invented SAW RIG

WILL saw your winter's wood in a few hours and then you can make money sawing for others. Many users say they make upwards of $11.00 a day cutting wood for neighbors. Expensive cumbersome rigs used in the past are made unnecessary by the Ottawa Saw Rig. Does all practical work any other saw rig can. For a small part of the cost of one of these high-priced and obsolete rigs you can now own the

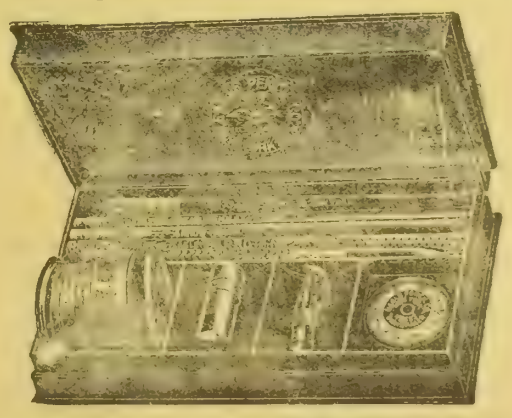
LOW INTRODUCTORY OFFER

OTTAWA SAW RIG

Strictly a one man outfit. Easy to operate, light to move, simple to handle. Powerful 4-cycle motor that drives any belt machinery when not sawing. It will pay for itself in cash in two weeks, just cutting wood for neighbors. 30 Days' Trial; 10 Year Guarantee. Let the Ottawa work a month for you to prove our claims. Write for FREE BOOK TODAY.

OTTAWA MANUFACTURING COMPANY 349 Main Street OTTAWA, KANSAS

Boys! Girls! This School Outfit YOURS for a LITTLE Extra Work



During the past 60 days more than 100 "LIVE WIRE" boys and girls have secured this dandy outfit which consists of 3 pencils, 1 pen holder, 1 combination pen and pencil, 12 pen points and holder, 1 pencil cap, 1 ink and pencil eraser and 1 drinking cup, all packed in a beautiful box, without it costing a penny.

HOW THEY DID IT

They simply called on two of their friends who were not taking The Michigan Business Farmer had them look over one or two recent copies and explained just what this weekly has done and is doing for the farmers of Michigan and convinced them that they ought to be taking M. B. F. if they expected to keep abreast of the times and derive the same benefit over 70,000 farmers are now enjoying. Then they explained that they were working for a school outfit. That settled it, their friends subscribed and now the School Outfit is theirs.

HERE'S YOUR CHANCE

All you have to do to win this outfit is to call on two of your friends who are not now taking M. B. F. and ask them to help you win the outfit by giving you their subscription to M. B. F. for one year at $1.00 each. Send us the $2.00 with their names and address plainly written and the outfit will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

Sick Baby Chicks?

There is only one way to deal with baby chicks and that is to keep them well. Doctoring a hundred or more chicks is mighty discouraging work.

It's pure carelessness to lose more than 10 per cent of chicks, from hatching to full growth. Many lose 40 per cent to 60 per cent, and even more. No profit in that.

Our book, "Care of Baby Chicks" (free) and a package of Germozone is the best chick insurance. WITH BABY CHICKS YOU MUST PREVENT SICKNESS—NOT ATTEMPT TO CURE. "I never had a sick chick all last season"—C. O. Petrain, Moline, Ill. "Not a case of white diarrhoea in three years"—Ralph Wurst, Erie, Pa. "Have 800 chicks now 5 weeks old and not a single case of bowel trouble"—Mrs. Wm. Christiana, Olive Ridge, New York. "Two weeks after we started last spring we were a mighty discouraged pair. Every day from three to six chicks dead. A neighbor put us next to Germozone and we are now sure if we had had it at the start we would not have lost a single chick"—Wm. E. Shepherd, Scranton, Pa.

GERMOZONE is a wonder worker for chicks, chickens, pigeons, cats, dogs, rabbits or other pet or domestic stock. It is preventive as well as curative, which is ten times better. It is used most extensively for roup, bowel trouble, snuffles, gleet, canker, swelled head, sore head, sores, wounds, loss of fur or feathers. 35c, 75c, $1.50 pkgs. at dealers or postpaid.

(Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for a reply.)

FORECLOSING MORTGAGE

In September, 1910, I purchased an 85 acre tract of timber land on contract for $2,000 $100 was to be paid by Nov. 20, 1910, $100 Sept. 20 1911, $100 Sept. 20, 1912, $100 Sept. 20, 1913, $100 Sept. 20 1914, $100 Sept. 20, 1915, and $200 on the 20th of September of each year thereafter with privilege of making all payments on or before date of payment. At present the interest and taxes are paid and about $250 on principal of contract. I have built a house and barn, also wood house; have built 500 rods of fence, have had about 22 acres in crops. Expect to put 25 acres in this season; we have 13 acres fall plowed. In June, last year, the party of whom I purchased this land borrowed $1,250 and gave as security this 80 and another 80 which he owns in another township. This money was to pay for the land of which I hold contract. I signed this mortgage. Would like to know under what conditions he could foreclose my contract, and if he should foreclose how much time would I have to redeem it. Do you think it was really necessary for me to sign this mortgage, and could the party of whom I purchased this land in any way hinder me from selling it, provided I paid up on contract, etc.—W. L. F., Missaukee county.

It was not necessary for you to sign the mortgage. However, if the man who sold to you on contract demanded the back payments that, from your statement, appear to be long past due, he might declare your contract forfeited and then you would have to pay all that was past due. This may be done now unless you have secured an extension of time for payments. Should the mortgagee foreclose the mortgage you will have to redeem from the whole mortgage and have one year from the sale of the premises if the foreclosure was by advertisement only. If the foreclosure was in chancery a different time of redemption would result, but it usually takes about the same time. The man who sold to you could not prevent your making a sale of your interest in the premises. Your payment of the contract might leave you still liable on the mortgage. It would be best for you to consult a good attorney to examine your contract and mortgage liability to tell you what you better do to avoid loss and annoyance.—*W. E. Brown, legal editor.*

SUDAN GRASS

I would like some advice in regard to growing sudan grass for hay. Would it be a good plan to raise sudan grass on fairly good sand and gravel soil well drained, or can you suggest any other crop that would be good to raise in place of hay this spring.—L. B., Ottawa County.

Sudan grass is a very promising forage plant for parts of Michigan but like other plants of this nature it requires a considerable amount of nitrogen for maximum growth. If the soil is poor and no manure at hand it is advisable, if this crop is to be grown, to apply about 75 lbs. of sodium nitrate or ammonium sulphate per acre. It is advisable also that the soil receives 200 lbs. of a 16 per cent. acid phosphate. The phosphate should be applied just previous to the preparation of the seed bed for the crop and sodium nitrate applied as a top dressing following the seeding.

I would suggest that you grow a small acreage, at least, of soy beans inasmuch as this is a soil building crop and is far more valuable feed when all conditions are considered than sudan grass.

If the soil is somewhat thin it should receive a light dressing of manure and if practicable, in addition about 150 lbs. of 16 per cent. acid phosphate. If soy beans are to be grown it should be inoculated before seeding. This material, I understand, may be obtained from the Bacteriological Department of the Michigan Agricultural College.—*M. M. McCool, Professor of Soils, M. A. C.*

SECOND HUSBAND'S SHARE OF FIRST HUSBAND'S PROPERTY

A died leaving an estate, 35 years ago, leaving widow and children. Property consisting of 40 acres of land has never been probated. Widow re-married. Upon death of widow can her husband have any legal claim upon the above 40 acres as an heir at law?—A Subscriber, Gratiot Co., Mich.

In 1883 the law provided that a man's real estate in case there was no will descended to his children. The widow had a dower. However, if any of the children have died since the death of the father it might change the mother's interest. If she inherited any part of the "40" she might dispose of it at will. If she left no will and some of her children survived her then the second husband would have no claim as an "heir at law".—*W. E. Brown, legal editor.*

DAMAGE TO FENCE BY RENTER

My farm, at the time renter moved on in November, was fenced with good woven wire fence with barb at top. He is the owner of a horse which has practically ruined the fence in a 32-acre field. I have repeatedly asked him in a quiet way not to turn her out, but he says nothing and continues to do so. I would like to know if there is any thing that can be done about it and how should I go about it?—L. M. B., Gaines, Mich.

A tenant is liable for any damage done by unruly beasts upon rented premises. Upon the expiration of the lease the tenant should be required to restore the property or pay what it will cost to restore the fences, and, if he refuses to repair or pay, then sue him and collect the judgment, if he is collectable. If he is not collectable nothing else can be done.—*W. E. Brown, legal editor.*

UNITED DOCTORS

We caution our readers against patronizing the United Doctors, who advertise in local country weeklies, and offer to give consultation "free of charge." A number of our subscribers have been stung by these medical quacks, and we understand they are now under investigation by the United States postoffice department. We have had some very interesting correspondence with this firm which will be made public some day. In the meantime, if you feel the need of medical advice, for the sake of your health and pocket book consult your local resident physician. He may not be able to perform "bloodless" operations, cure cancer or leprosy, or bring the dead to life, but you will find him a pretty safe counselor in the majority of cases.—*Editor.*

BUYER PAYS TAXES

I bought a farm on November 15th, 1919, paying cash, and taking a warranty deed. Nothing was said about 1919 taxes. Would I have to pay this 1919 tax?—D. W., Evart, Mich.

The purchase of and payment for a farm before the first of December, conveyed by warranty deed, does not require the seller to pay taxes for the then current year as the tax lien does not become fixed until December 1st. His warranty does not cover a lien that does not exist until after the deed is executed. It covers all taxes that have become a lien at the date of the delivery of the deed.—*W. E. Brown, legal editor.*

NOT EXEMPT FROM TAXATION

"I have a forty acre farm near the village of F——, and would like to know how many cows and horses I may keep without taxes. I have three Jersey cows and a span of horses.—Reader, Oakland County.

Section 4003, of C. L. 1915, subdivisions 11 and 12, provide that the property enumerated therein is exempt from taxation as follows: "Eleventh, All mules, horses and cattle not over one year old, all sheep and swine not over six months old, and all domesticated birds; Twelfth, Personal property owned and used by any householder in connection with his business of the value of $200". It would thus appear that cows and a team would not be exempt.—*W. E. Brown, legal editor.*

WIDENING CUTTERS AND SLEDS

Will you please advise us through your colums what you know concerning the widening out of cutters and sleds?—C. F. L., Van Buren County.

Act 73 of the Public Acts of 1919 provide that the standard guage for all vehicles used upon the highways of this state shall be 56 inches from center to center of the tread on and after January 1, 1921, and makes it unlawful to use any other except those used for extraordinary purposes and names the vehicles, the use of which shall be conclusively considered extraordinary. It provides that it shall not be unlawful to use or sell any vehicle owned in the state when the act goes into effect.—*W. E. Brown, legal editor.*

QUIT CLAIM DEED

I bought a piece of land with quit claim deed. Was told it was all right, would never be bothered. I paid taxes for eight years, and have receipts for sixteen years back. How am I to get a clear deed, an easy way. I would like to sell, as I am not able to do the work, but no one seems to want it.—S. G., Tawas City, Mich.

A quit claim deed may be just as good as a title as a warranty, and if there is a defect in the title to your farm it must be from some other cause. It would be impossible for me to tell you how to get clear title until I knew what was the matter with the title. This is usually determined by an examination of the abstract. If you can tell me what is the matter with your title I may be able to tell you what to do.—*W. E. Brown, legal editor.*

HOGGING DOWN SOYBEANS

The practice of sowing soybeans with corn for hogging off is one that is increasing in favor among the farmers of southern Michigan. Best results are secured when the soybeans are sown by a special soybean attachment on the corn planter. This consists of a special hopper and drill and insures an even stand of beans and corn. When a small acreage is to be sown the corn and beans may be mixed together in the planter box, but since the beans are smooth and round, they tend to work to the bottom of the hopper and unless very frequently remixed an uneven stand is secured. Only a variety that forms seed should be used. Suggest the Ito San, Early Brown, Black Eyebrow or Manchu. These varieties gave high yields of both forage and seed the past season here at the Experiment Station. Seed may be obtained from reliable seed houses.—*C. R. Megee, Ass't Prof. of Farm Crops.*

DEALINGS WITH FUR COMPANY

What can be done with a mail order fur dealer in Chicago to whom I shipped a bunch of furs worth near $50, asking at the same time to hold these furs seven days and puote me prices? They sent me a check which I did not want to accept. I sent it back and demanded more money or to send the furs back. They returned the same check and said they could not send the furs back, that they paid all the furs were worth. Have we trappers got to stand for this kind of business? What can I do? I did not sell these furs to them yet. We were doing business through the mails. Cannot the government take this matter up with them —A. H., Penfield, Mich.

Give us the name of the dealer and we will take the matter up with him. If you are sure there was no expressed or implied permission in your letters for the dealer to accept and dispose of the furs, we think we will have no trouble in getting a satisfactory settlement.—*Editor.*

1918 PERSONAL TAXES

If the treasurer fails to collect 1918 taxes on personal property can he compel a man to pay 1918 and 1919 taxes on that personal property in 1920?—E. H., McMillan, Mich.

One is liable for the 1918 taxes on personal property even though not collected in 1918 but may be collected at any time later.—*W. E. Brown, legal editor.*

RENEWING UNPAID NOTE

A borrowed $200 from C. In order to make a joint note B signs the note with A. Note runs for one year. At end of year A can't pay the note, and makes a new note to run another year. B refuses to sign the new note. C takes the new note of A but also keeps the old note. At the end of year A is still unable to pay the note. A makes another note and gives a chattle mortgage on a crop of rye. Interest was added to the new note. In years can C still hold B for the first note?—B. W.

From your statement of facts I would be of the opinion that the payee had extended the time to the principal debtor without consent of the surety and thereby released the surety and that he would be obliged to look to the principal for his pay. If the surety consented to the extension then the surety would not be released until payment or until it outlaws.—*W. E. Brown, legal editor.*

Uncle Rube Spinach Says:

THE UNREASONABLE GUYS

OF ALL THE obstinate an' unreas'nable guys, seems to me the farmer's the limit. Gosh, its just awful the way they do act! Here they be now findin' fault 'cause us fellers in the city wants 8 hour days! They don't seem to realize what a lot of things us fellers has to do. We can't work every minit, geewhitticer! When would you get a chance to play rum, pool or poker, if we had to put in ten or twelve hours every day workin'? We've got to have some recreation, ain't we? An' when we goin' to git it if we have to work all the time? Course the factories are hirein' farm boys—all they can git of 'em—they make good hands, are steady an' on the job reg'lar, an' they like the shorter days, too, an' in a little while mebbe only have to work 8 hours. That seems to be the cry—less hours and more pay, and in the meantime the farmers can't git help enough to put in his crops—can't git any help at all, cause they claim they can't work on the 8 hour plan, can't pay the high wages the factories—which sets their own price on the products they put out—pay, an' so the factories are gittin' the help an' the farmers are goin' without.

An' now these unreasonable farmers are gittin' their dander up, an' they say "if the factories want all our young men an' all the rest of the men in the country, jest let the factories provide some way for feedin' of 'em." "We'll try", they say, "to raise enough for ourselves an' the other feller'll have to git along best way he can," an' then the farmer men sez, "if they ain't enough eatables to go 'round and the city fellers wants more, jest let 'em come out an' help raise the stuff". "We've got the land", sez these unreasonable guys, "an' the teams an' the tools, but we don't propose to work 12 to 16 hours a day an' sell our suff at half what we ort to git to feed a lot of fellers that will only work 8 hours an' are all the time howlin' about the high cost of livin,' an' they are the very ones to blame for this same ol' high cost 'gosh!"

Well, there may be a good lot of sense in what the farmers say at that. I know, an' everybody else knows, that the farm help is a minus quantity—there ain't no such birds runin' around now. Why, in one township, one of the best in this county, only two men have been hired for this season's work, an' there don't seem to be no more in sight. Without help the farmers are sure up agin' n hard proposition. They are only human an' can do only so much at best. They are workin' long hours at a thankless job—the job of tryin' to feed a hungry world. They are receivin' less for their labor than any other class of workers in the country. Their products go through the hands of half a dozen profiteers before they get to the consumer, an' yet the farmer is credited with chargin' or receivin' the whole price that the consumer has to pay.

Well, mebbe I wuz hasty in callin' the farmer fellers unreasonable guys. Mebbe he has got reasons for bein' peeved.Go into any factory an' see the number of farm boys workin'—see the men who are only willin' to work 8 hours an' would rather work 6. See these same men any afternoon after 3:30 in the pool rooms playin' cards or pool an' havin' a good time, or out automobilin' or fishin', havin' a darn good time anyway, an' then ask ourselves if the farmers are so unreasonable as we would like to think, for not takin' kindly to the ideas of doin' their work alone, an' of bein' underpaid, an' blamed for everything from the "flu" to article 10 in the league of nations. As a general thing we must all admit that farmers are honest, that they are human and are entitled to just as good treatment, an' jest as many privileges as any class of people on earth, and when it is recognized that we must all depend on the farmers for our food an' clothin', mebbe some of us will be willin' to put in longer days an' so help increase production an' release some of the boys that ought to be back on the farm. Mebbe we will be willin' to do this even if it does interfere with our card business an' pool an' such. The fact is there must be a change of some kind purty durn soon or a hull lot of us will wake up some mornin' an' find we ain't got nothin' for breakfast, an' that there ain't any chance of gettin' anyhin' either, cause it won't be there to git.

If the young men could only see that they can ave more money on the farm than in the city. Why I have talks daily with farm boys now workin' in the factories an' the general cry is "I am in debt all the time, can't seem to make things come out even, an' I might better of staid on the farm with Dad." I hear this very often an' I am convinced that the city is no place for the country boy—not if he wants to save and get ahead. It can't be did, not once in a hundred times. Cordially yours—*Uncle Rube.*

Sense and Nonsense

SCRAPS OF FACTS

There are more than fifty-six thousand postoffices in the United States.

Brazil has about 1,300,000,000 coffee trees, covering some 4,500,-00 acres of ground.

The first woman to be honored with the freedom of the city of London was the celebrated philanthropist Baroness Burdette-Coutts.

Among the natives of Great Britain the Scotch are rated the tallest, the Irish are next, the English take third place, while the Welsh rank fourth.

It is now one hundred years since the first steamship crossed the Atlantic. This vessel was the "Savanna," built in New York with funds provided by the merchants and other business men of Savanna, Ga.

At a festival held in Los Angeles, Calif., a woman seventy-six years old appeared in a dress and hat which she bought of Abraham Lincoln when he managed a country store.

Truistic

One touch of rumor makes the whole world chin.

About this time of the year the coal man should be brought to see the errors of his weighs.

A professor has all those things tacked on to his name just to show that he got there by degrees.

Love is said to be blind. Well, it certainly makes spectacles of some people.—*Cartoons.*

If Things Continue

Will a storm be allowed to brew?

Will the moone be allowed to get full?

Will a ship be allowed to anchor over a bar?

Will a captain be allowed to put in some port?

Will cock-tails be allowed on the farmers roosters?

Will it be allowed to name children Tom and Jerry?

Will a man be punished for getting half shot in battle?

Will "hops" be allowed in dance halls?

Will mourners be allowed to pass the bier at a funeral?

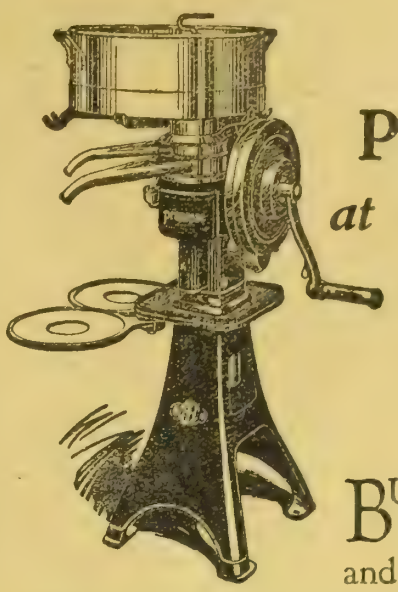
Will a person be allowed to become intoxicated with joy?

Will doctors be allowed to prescribe for sham pain?

(Fortunately "pop concerts" will be allowed to continue.)—*Cartoons.*

George's Handicap

A certain senator, deploring the dishonest methods of one type of business man, once said, with a smile: "It all brings back to me a dialogue I once heard in a southern school. 'Children,' said the teacher, 'be diligent and steadfast, and you will succees. Take the case of George Washington, whose birthday we are soon to celebrate. Do you remember my telling you of the great difficulty George Washington had to contend with?' 'Yes, ma'am,' said a little boy. 'He couldn't tell a lie.'" —*San Francisco Argonaut.*



The 1920
PRIMROSE
at the 1918 Price

BUTTER and baby shoes, underwear and eggs, coal and automobiles—prices of these things and other things have climbed and climbed since Armistice Day. Has the price of anything on earth stayed down?

Yes! Primrose!

Primrose Cream Separators are selling for the price of 1918—selling for slightly more than the good old price of 1914—before-the-war days. Primrose popularity has grown so rapidly that the big production permits the maintenance of the low price.

Such an opportunity is rare today. Make the most of it. Order a Primrose without delay. Primrose will then go on for years saving cream and money for you. Write the address below for full details.

INTERNATIONAL HARVESTER COMPANY
CHICAGO OF AMERICA (INCORPORATED) U S A.

Auction Sale
43 High Grade Holstein Cows
Flint, Michigan
April 8th 1920. Sale Starts 1.00 P. M.

Having sold our farm, and being forced to vacate the premises we will sell 43 very high brade Holstein cows to the highest bidder.

This is the oldest and most prominent herd in this section of the state, having been built up, by using pure bred sires for a great many years. These cows are in various stages of lactation, nearly one-half having freshened recently. They have been selected with great care and dairymen wishing to buy heavy producing fine individuals, with very large, well-balanced udders, will make a mistake if they do not attend this sale.

The sale includes the present herd sire, Johan Pauline Lad, No. 127548, who has a 30 lb. own sister. This bull is sired by Johan Hengerveld Lad, one of the most popular bulls of the breed. Dam, Edgelake Pauline De Kol, 26.90 lbs. butter in 7 days at 8 years. Some of these cows are sired by the above bull and nearly all are bred to him.

Also several young sons of the above sire and out of registered cows, will be sold.

Our farm is situated 3 miles west of Flint on River Road. Free transportation from end of Glenwood car line or phone 1005 W 1. Terms of sale, 10 months' time on approved bankable notes.

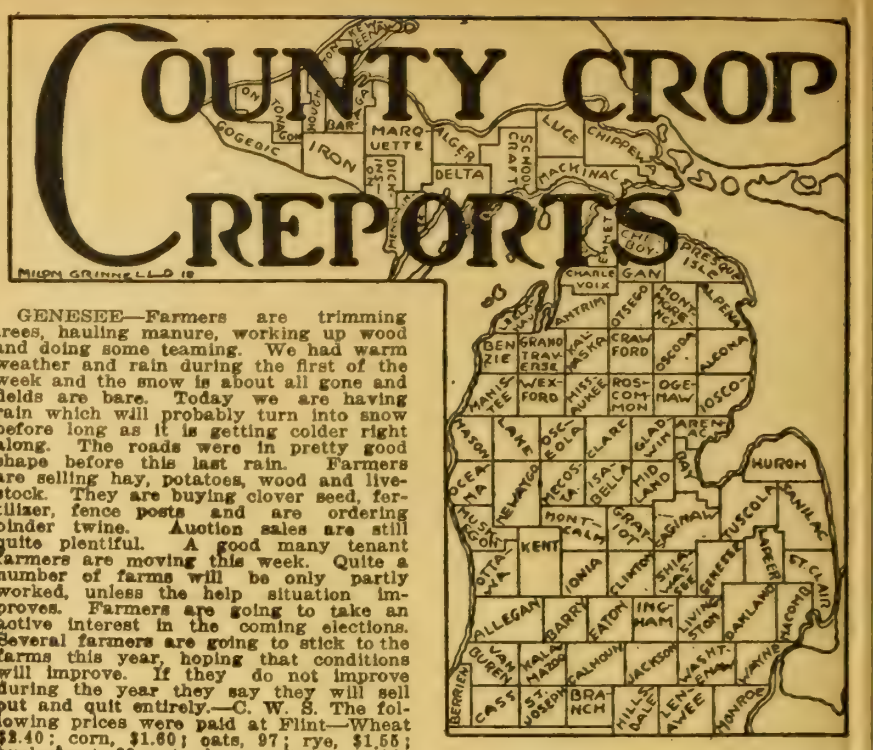
COUNTY CROP REPORTS



GENESEE—Farmers are trimming trees, hauling manure, working up wood and doing some teaming. We had warm weather and rain during the first of the week and the snow is about all gone and fields are bare. Today we are having rain which will probably turn into snow before long as it is getting colder right along. The roads were in pretty good shape before this last rain. Farmers are selling hay, potatoes, wood and livestock. They are buying clover seed, fertilizer, fence posts and are ordering binder twine. Auction sales are still quite plentiful. A good many tenant farmers are moving this week. Quite a number of farms will be only partly worked, unless the help situation improves. Farmers are going to take an active interest in the coming elections. Several farmers are going to stick to the farms this year, hoping that conditions will improve. If they do not improve during the year they say they will sell out and quit entirely.—C. W. S. The following prices were paid at Flint—Wheat $2.40; corn, $1.60; oats, 97; rye, $1.55; buckwheat, $3 cwt.; beans: C. H. P., $6; red kidney, $11; hay, $25@30; rye wheat and oat-straw, $10@15; potatoes, $3@$3.25; onions, $7; cabbage, $7 bbl.; cucumbers, $3 doz.; hens, 35; springers, 35 ducks, 32@34; geese, 32@35; turkeys, 40@42; butter: dairy, 58@63; creamery, 68@70; butterfat, 72; eggs, 48@50; apples, $2.50@$3; beef steers, $10@11; beef cows, $7@8; veal calves, $18@20; sheep, $11.50@12.50; lambs, $17.50@19; hogs, $14.25@14.75.

ANTRIM—Snow is fast leaving us and we are glad to see the ground again. Hay is selling at $38.00 per ton. Ground feed, $3.40; bran for $2.75; butter sells for 50c per pound; cream about 70 to 71c; potatoes, $2.40 per bu., although potatoes are nearly all in the buyers' hands. The farmers association has been doing a good business this year. I understand they own two of the three warehouses at Alden, purchased from local parties. There has been some auction sales near here this spring. Cattle sells well. Cows are selling for from $60.00 to $185.00 per head. Good milch cows sell for $100.00 Roads poor, but the heavy rains are improving them. Many report that the hard winter has killed their peach trees. Every indication of a bountiful fruit crop this year. Some wheat fields look hard. Farmers much encouraged by the jump in rye. Farmers who invested in western cattle to feed their surplus grain and fodder claim they will lose heavily in the deal this year. The centralized school question of centralized schools is before the people in this township and will be decided April 15th by a vote of the district. The voters seem about evenly divided in opinion.—G. F., Hanover.

MONROE, (N. E.)—All signs of spring. Farmers are beginning to rake up. Lots of auction sales; most everythings in line of farm tools selling better than some time ago; fodder and hay selling very high. Horses are moving at much better prices. About half of the farmers around here have joined the Farm Bureau. Some farmers are drawing manure, others getting fencing ready and some finishing up the woodwork for the season. There is not much left to market; mostly sold out; not much or no building going to be done, just necessary repairs. There will be some land left idle around here the coming season.—G. L. S. The following prices were paid at Newport:—Wheat, $2@2.25; corn, $1.95; oats, 90; hay, $30@35; wheat-oat, $10.50; potatoes, $8 per 150 lbs.; hens, 30@34; springers, 33@35 live prices; ducks, 27; geese, 24; turkeys, 35@40; butter, 60; sheep, 7@10 lambs, 12@15; hogs, 12@15; beef steers, 7@9; beef cows, 6; veal calves, 16@18; apples, 9@12 retail.

WEXFORD—Yesterday was a fine day, the snow melted and went down 4 or 6 inches. Last night was mild and a little mist and continued until morning, and so far it is foggy with the probability of the snow going. Trains on the Ann Arbor have been hung up for a week. Some took the train last week for Cadillac and had to walk back. It looks as though that corporation control isn't as good as government control. Quite a number of farmers are buying hay; the winter being so long their supply of feed didn't seem to last. A few days like this will fix the roads so it will be impossible to tra[illegible] them.—S. H. S. Prices offered at Cadillac: Wheat, $2.22@$2.25; corn shelled, $1.40; oats, 90; rye, $1.45; buckwheat, $2.50 cwt; beans, $5.50 cwt.; red kidneys, $8 cwt.; hay $32; potatoes, $4 cwt; cabbage, 5; hens, 23@25; springers, 23@25; ducks, 22@25; geese, 20@23; butterfat, 64; eggs, 40; apples, $3.50 cwt; veal calves, 16@22; hogs, 16@18

MANISTEE—There is not much doing except chores and wood-cutting, as the roads are so bad we cannot do anything just at present. We had another rain March 11th, but the snow is deep in the woods yet, although the fields are bare. Snow will soon go if it stays warm. Potatoes are in good demand, but we can't move them. Beef and pork are scarce and on the raise. The weather is fine overhead, but bad under foot. Another neighbor gone, found dead in his chair. Lots of sick horses and some cattle dying. Feed is getting scarcer all the time.—C. H. S. Bear Lake. Prices offered at shipping points in county. Wheat, $2; corn, $1.50; oats, $1; rye, $1.30; beans (C. H. P.) $5.25; hay, $35@38; potatoes, $4 cwt; hens, 25; butter, 50; butterfat, 66; eggs, 40; beef steers, $8@$13; beef cows, $5@$11; veal calves, alive, $10@$13, dressed, $18@22; hogs, alive, $13@13 1-2; dressed, $18.

JACKSON (N.E.)—Since the last report of a week ago, this locality has had every variety of weather. The last two days saw a heavy fog with slush and mud, winding up with rain last night and today the wind changed to northwest. The temperature dropped from 52 at 7 A. M. to 24 degrees at 6 P. M. tonight. Can't say what damage has been done the winter grain, but it had greened up slightly yesterday and as the ground was too soft was unable to determine its condition. Farmers are not very busy except for chores and odd jobs. A few auctions are billed. Some rye going to market on the rise in price. Roads are very heavy, except the 'Good Roads", and the plowing off of the snow helped them. Better weather is needed.—W.

MONTCALM, (N. W.)—The farmers are cutting wood, making syrup and hauling logs to the saw mill. A number of farmers have bought tractors to farm with. Most of the farmers in this vicinity are going to drive wide sleighs hereafter. Sales are still going on. Cows, chickens and feed are the most important. Hens go for $2.15 a piece. Common cows are worth $186 and hay $4 a ton.—G. B. W. The following prices were paid at Lakeview—Wheat, $2.60; corn, $1.68; oats, $1; rye, $1.60; hay: No. 1 timothy $25; No. 1 light mixed, $25; straw-rye, $15; wheat-oat, $12; beans: Pea, $6; red kidney, $10; potatoes, $4.50; onions, $6; hens, 25; ducks, 22; geese, 18; turkeys, 24; butter, 65; butterfat, 70; eggs, 36; sheep, 6; lambs, 10; hogs, 14 1-2; beef steers, 7; beef cows, 4; veal calves, 19.

COOK COUNTY, Ill.—From 1,000 to 1,200 members joined the Cook Co. Farm Bureau and the Illinois Agricultural Association for three years as the result of a recent two days' campaign. We are having much loose weather which is severe on winter wheat. Rye looks good. Cabbage and tomato plants which were planted in hot beds in early February are 1 inch to two inches high already. There still is quite a little wood to saw. Milk scarce.—D. F. T. The following prices were paid at Arlington Heights.—Wheat, $2.35; corn, $1.45; oats, 90; rye, $1.50; Hay: No. 1 timothy, $33; No. 1 light mixed, $27; straw-rye, $12; wheat-oat, $12; potatoes, $2.25 bu.; hens, 35; springers, 60; ducks, 42; geese, 40; butter, 75; eggs, 45; hogs, $14 hundred; veal calves, 20; wool, 55; apples, $2.50.

MASON—Roads and weather do not permit much to be done. Weather is variable. A few potatoes are moving to market. Price has been going up. Eggs have dropped but butterfat has raised. Auction sales are numerous. Quite a number of farms are changing hands. Most of the new comers are from the states west of us; some have been tenant farmers and some are from the larger cities. K. B. Bennis has been appointed county agent.—B. M. The following prices were paid at Scottville and Custer—Wheat, $2.15; rye, $1.60; hay, $25; potatoes, $4.16 2-3 cwt.; butter, 58; butterfat, 68; eggs, 40.

ARENAC (E)—Spring is surely near. Snow all gone and creeks risen, etc. Roads begin to get bad and everything points to an early spring. Farmers look for a scarcity of farm help as young men are going to the cities. Lots of farms changing hands and at good prices. Prices of farm produce dropping. Sugar beets instead of beans by the looks of things.—M. P. R. Prices offered at Twining: Oats, 80; hay, No. 1 timothy, $20@$24; No. 1 light mixed, $20@$; beans (C.H.P.), $5.50; potatoes, $1.80; hens, heavy, 25; springers, 20@25; butter, 45; butterfat, 66; eggs, 35; wool, no price.

GRAND TRAVERSE (N. E.)—We are having nice weather again. The snow will soon be gone. Farmers are getting wood and attending auction sales. Not much is being sold now as the roads are in bad condition. Lots of farmers are leaving this spring.—C. L. B. The following prices were paid at Traverse City—Wheat, $2.35; corn, $1.50; [illegible]; rye, $1.50; hay, $34; beans, [illegible]; potatoes, $4; butter, 50; butterfat, 71; eggs, 42.

What the Neighbors Say

(*Continued from page* 17)

anyone handing a farmer anything unless they get two prices for it. You never hear of farmers buying $10 shirts and $15 shoes or a suit of clothes for $100. This outfit costs the farmer about $10. Neither has he a million dollar appetite on a hundred dollar salary. He doesn't buy luxuries but simply the necessities of life. If all the people would live as simple and saving as the farmers there would be no cry about the H. C. of L.

Regarding the price of sugar the farmer receives less than 4 1-2c per lb. the manufacturer 9 1-2c and the retailer 4c, thereby costing the public 18c per lb. Who is the profiteer? And it is just so in everything the farmer sells. Someone else is getting the lion's share.

There is no doubt but what the gap between the producer and the consumer is too great and in many instances the consumer could buy direct from the producer thereby saving at least 1-3.

You can rest assured that just as long as this foreign demand for foodstuff keeps up just so long the price will stay high and if the output is smaller than the demand, that the price will go still higher.

There has been investigations of all kinds and the more they investigated the higher the price goes. Give the farmers the right kind of weather and send back to them the million more men that you have taken into the cities then the food problem will solve itself.

The public is anxiously waiting for the guaranteed price of wheat to expire expecting to get cheaper flour. This price was placed at $2.26 but at that wheat sold on the market as high as $3. The bulls and the bears will take hold of the wheat market after June 1st, then look out for even higher prices on wheat. The acreage sown last fall will not exceed 75 per cent of what was sown in 1918 and may not produce 450 million bushels so there will be a shortage of wheat right here at home.

And unless the beet situation clears up between now and the middle of May there will be a great shortage of sugar beet sugar. This sugar question is a peculiar situation. The greatest farming country on earth that cannot supply her own sugar, millions of acres that could be planted to beets and millions of dollars to build factories, we have both the land and the money and need the sugar. The great drawback is between the farmer and manufacturer. The farmer has raised beets all these years for 35 per cent of what the consumer has paid for the sugar, he has been going it blind but a new day has dawned and he has come into the light and sees with his own eyes just what he has been doing for years, namely, making other people rich at his expense. The farmer has never had a square deal in this sugar business. He has always taken what the factory handed him. He has never had a voice in the matter or even consulted regarding what he should pay for labor or seed or what remuneration he should have for his beets. The factory has always been dictator. Now come along and make it 50-50, meet the farmers half way, encourage them and they can raise enough sugar to supply the U. S. again if the factories think that the farmers are making such a great amount of money from sugar beets, let the factories rent the land and then pay the farmer for his work. Then the factory will have the beets at actual cost and the farmer will have the rent from the land and be paid for his labor. We can no longer depend on Cuba for sugar for the eyes of the whole world are looking to Cuba for sugar and the price of that sugar has jumped 400 per cent while the price of beet sugar has advanced about 250 per cent.—*J. F. B., Bay Co.*

I think you are right about the wheat and sugar beet proposition. Up until recently I have felt that the removal of the government's guarantee would weaken the market, but the developments of the past two weeks have changed my views.—Editor.

FARMER LEGISLATOR IS ALL RIGHT, BUT—

Am reading your farm paper and hope you will keep right on and not get "cold feet." We farmers need a paper that will stay by us.

The idea of getting a farmer into the legislature is all very well, provided he is the right kind of a man. Over in Berrien county they have a "farmer" who said before he was elected, "If you put me in I will get a law protecting sheep." Now what was the first bill he introduced? A bill to raise the salary of the probate clerk. So much and no more for the sheep industry. Will you look into the matter of North Dakota's tax? *The Country Gentleman* of Feb. 7, in an editorial, says that the League raised the tax 169 per cent. Now there must be an explanation to that, I think, the buying by the state of elevators, ec. Is there anything wrong with the Non-Partisan League? It surely breaks up the old party rings. Now I admire your stand on free speech, Keep up the good work, not let this country be run by "one man."

The farmers in this part of VanBuren county are cutting down their work as much as they can as to hire is almost an impossibility and the price of hogs do not warrant a profit. The fruit men are in it and will pay almost any price when fruit is ripe. There have been more auctions than for many years. Feed is selling high. Cattle are selling fairly well; hogs not as well and horses low.

The people around here are for Government control of railroads and are against compulsory military training. —*Walter N. Sommer, N. W. VanBuren County, Mich.*

Yes, I have observed that some of our "farmer" legislators are as good promise-makers and promise-breakers as some of the representatives from the cities. The Non-Partisan League has, I believe, made some statement in reply to the Country Gentleman article. I will secure a copy and publish it.—Editor.

M. B. F. GETS MONEY FOR SUBSCRIBER

I received a check from —— ——— yesterday for $26.10. You certainly stirred them up in great shape. I wrote them four times and they wouldn't answer me. I thank you very much for giving it your attention. Let me know what your charge is for collecting and I will pay you.—*James R. Rice.*

There is no charge for our services. We are glad to be of help to our readers. We have omitted the name of the firm in this case for the reason that our investigation did not show that they were attempting to defraud our subscriber. Their plea was 'hard times," and we all know what that means.—Editor.

ADEQUATE RETURNS, SOLUTION OF HIRED MAN PROBLEM

(*Continued from page* 5)

meat, butterfat, eggs and hay and I know absolutely nothing about what the cost of any of these articles will be next season and less about what they will sell for..

I have a 120 acre farm of good improved land, and am doing what I can at it alone. I haven't the nerve to offer a man the rate of wages that I can afford to pay, and I hope I have too much sense to offer him a higher rate.

I believe that the day is near when a committee of farmers will set the prices of farm products. It is only because I believe this that I stay on the farm instead of going to the city for some of these big wages and short hours. When that time comes the farmer's hired help problem will be solved, for he will be able to bid against others for labor.

This will also settle many other problems such as "keeping the boys on the farm". Better rural schools, better rural churches, the cities housing conditions, etc.

I should like to ask "Hired Man" from Genessee or whatever county it was, one question. It is this: Did the farmer who paid his men the $500 bonus have no other business? Or was farming, with him, simply a hobby on which he lost money that was made in some other way.—*Albert Yager, Minden City, Mich.*

Father—How many people work in your office?

Son (government employe)—Oh, about half!—Bystander.

Penny Wise—Pound Foolish Separator Buying

Many buyers of cream separators are tempted to save $10 or $15 in first cost by buying some "cheaper" machine than a De Laval.

In practically every case such buyers lose from 10 to 50 cents a day through the use of an inferior separator.

That means from $36.50 to $182.50 a year—and not only for the first year but for every year the separator continues in use.

Twice a Day—Every Day in the Year

It should always be remembered that the cream separator saves or wastes in quantity and quality of product, and in time and labor, twice-a-day every day in the year.

Moreover, a De Laval Separator lasts twice as long on the average as other separators. There are De Laval farm separators now 28 years in use.

The best may not be cheapest in everything but it surely is in cream separators.

THE DE LAVAL SEPARATOR CO.

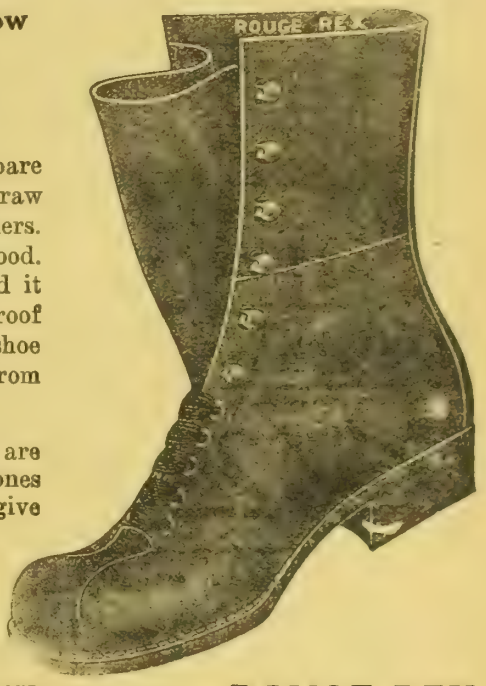
Few Manufacturers know as Hirth-Krause does the wearing quality of their shoes



Hirth-Krause tan and prepare their own leather, buying the raw hides from Michigan farmers. They know the leather is good. They have scientifically treated it so that it is acid and water proof and will give long wear. This shoe is made by them complete "from hide to shoe."

Because Hirth-Krause shoes are made to fit perfectly the 26 bones of the foot, they not only give greater comfort than ordinary shoes, but also out last them and keep their shape.

"For the man who works" this is the shoe, looks like an aristocrat, and wears like iron.

FRANK O. LOWDEN

A Business Farmer

—for—

PRESIDENT

Born and reared on a farm. Educated himself through his own efforts. Sent to Congress for three terms. Elected Governor of Illinois. Reduced taxes in Illinois from 90c to 60c in two years on each $100.00 valuation, and saved the state $8,000,000.00. Passed the finest legislation for Agriculture of any state in the Nation.

Lowden is the Farmer's Great Opportunity

Primary April 5, 1920.

Does not winter-kill. Succeeds on all kinds of soil. Better than red clover as a soil builder. Prepares the land for alfalfa and other clovers. Equal to alfalfa as feed value. We do not handle Southern seed, but offer choice selections of Michigan grown; 99.5% pure; high germination, scarified, best in the world. Selling at about half the price of red clover seed, every farmer should investigate it. A Special Bulletin explaining cultivation and uses of this most valuable legume, sample of seed and our 1920 Seed Book free, on request. We are headquarters for Michigan Clover, Alsike, Vetch, Peas, Northwestern Alfalfa, etc.

THE C. E. DELOY CO., Pontiac, Michigan

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the real facts.

——it tells you when and where to get the best prices for what you raise.

——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!

——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all! (ONE YEAR.....$1) (THREE YEARS...$2) (FIVE YEARS.....$3) No Premiums, No free-list, but worth more than we ask.

MICHIGAN BUSINESS FARMING, Mt. Clemens, Mich.

Another Breeders' View of the Hog Situation

IN THE MICHIGAN BUSINESS FARMER of March 13, I read an article signed S. E. Welch, in which he takes exception to the article by G. I. Christie. I, for one, am very glad to see such articles appear in print for the inspection of the farmer, so we may be acquainted with the exact situation.

I quite agree that the prices of hogs will be at a figure, that will look good to the farmer. As evidence for this statement, I might say, being a breeder of the Big Type Poland China hogs, I am very much interested in the welfare of production of pork, when it arrives at the market. In my rounds among the Poland China sales in Iowa, South Dakota and Minnesota, this winter, I came in contact with many breeders and farmers, and to my surprise I found that the western states were very much more shy of hogs than had been reported. This is the reason for the small shipments into the markets, and not that the farmers are generally holding, as we have seen in print. I also learned that feeders were eagerly sought, as early as last January, even as far north as North Dakota, by parties from Missouri and other states, where feeding is carried on extensively in the corn belt. They could not be had near home. Also in Iowa, farmers who were in the habit of having up to 75 brood sows to farrow litters for market feeders, it was difficult to find a few who had more than 10 sows this winter that would farrow. Many and many a farm is without a hog.

Another condition that exists among farmers and breeders alike. It has been difficult for some reason or other to get the sow settled so she is safe with pig and a great many have lost their litters. This is a condition that not only exists in Michigan, but in the west as well. The public would be surprised to know how many sows that were listed in the catalogs to sell, that had to be substituted, because they were not settled and came in a heat the second and third time. This, Mr. Farmer has a great deal to do with the amount of pigs that will be weaned and go into the feed lots.

In Michigan, farmers are complaining that so many sows are dying. A veterinary told me the other day, that he had lost 12 cases in one day. This doctor covers only a small territory, if the condition is the same all over the state, it means a great amount of pigs that will be missing on the market this fall. These are conditions as I actually know them to exist.

We also know that on Sept. 1, 1919, there were about 2,500,000 less hogs in the states than the previous year. Together with the above existing conditions, I absolutely see no reason why the shortage of hogs will not be very noticeable If supply and demand has anything to do with the price the situation looks favorable for the farmer who has a few in the feed lot, and a good Poland China sow or two to farrow in April or May, or some other breed for that matter, but be sure they are pure bloods. At the present time it looks to me, that the price should pass that of last year.

It would be an investment for every farmer worth while to subscribe to several swine papers, in order to keep abreast with the situation. The American Swineherd, the Swine World, both Chicago, Ill., or the Poland China Journal, Kansas City, Mo., are all good. Write for a sample copy. When you have studied these papers as well as others, you will at once notice that Mr. Christie is a student of the exact situation as it really exists. What we most need is, co-operation between producer and consumer. This will hit "High Cost of Living." The farmer will get what he is entitled to and the consumer will pay less.—*C. A. B., Isabella County.*

A GREAT JERSEY RECORD

The world's Jersey championship for butterfat production has just been won by Plain Mary 268,206, owned by Mr. F. W. Ayer of Bangor, Maine. Plain Mary finished her year's authenticated record Feb. 27 with 15,255.9 lbs. of milk, and 1,040.07 lbs. of butterfat, equivalent to 1,223.53 lbs. of 85 per cent butter to her credit. Her average butterfat test for the year was 6.82 per cent. At the beginning of the test she was owned on a plain dairy farm some sixty miles north of Bangor where she remained until test was finished. She made her record in a plain every day barn, was milked but three times a day. While in case of many of the large records they are milked four times a day. She also had the adverse influence of a very severe winter to contend with, the thermometer registering as low as 45 degrees below zero. Another evidence that the Jersey is hardy and has the ability to adapt herself to unfavorable conditions. To avoid any possible error or fraud in the test of Plain Mary there were twenty-two supervisors of the tests, each for two days by testers from the agricultural colleges of Maine, New Hampshire, Vermont, Massachusetts and Connecticut.

SOME THINGS I LEARNED ABOUT SHEEP BARNS

(*Continued from page 8*)

phase of the sheep business is covered as it concerns the overage American grain farmer. The name of this book is "Practical Sheep Husbandry," and as its name implies it deals with all the various sheep problems in a practical way. We do not guarantee that everyone who reads this book will make a success of handling sheep, but we claim that if he follows the rules and suggestions in it, that he can not help but succeed. The price of this book is $1 but anyone interested needs only to drop us a line and the book will be sent to him on approval.

Our object in offering this book to our subscribers is to help them to solve their problems, also to produce better wool and mutton. If you are interested in sheep, would like to feed them, or are now handling them you will get information out of this book that will be of great value to you. Remember, that if you do not wish to keep the book, your money will be cheerfully returned.

A Michigan Jersey, Majesty Iris, who is one of the ten highest producing cows of the Jersey breed. She was bred, raised and is owned by Mr. Edwin S. George, of Pontiac, Mich.

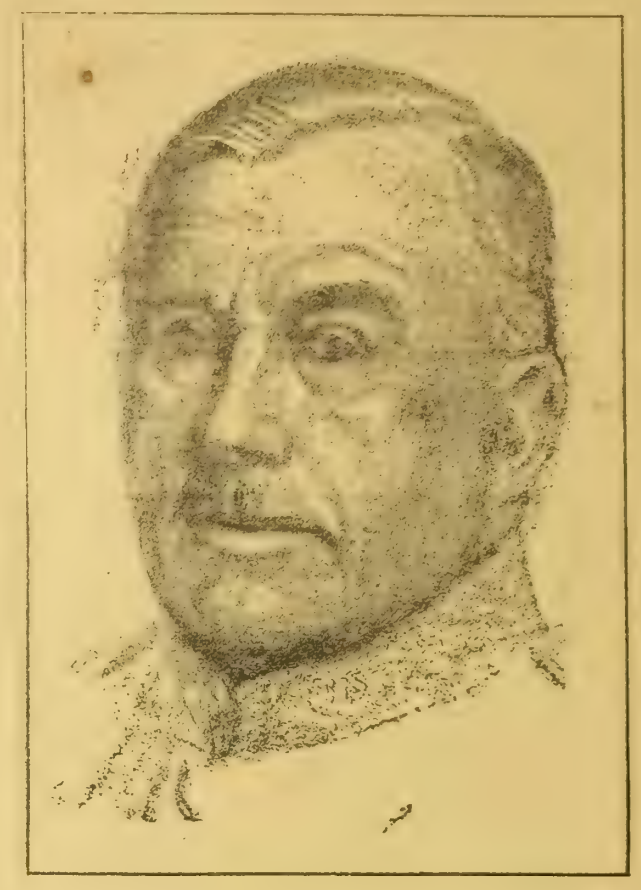
Farmer's Weekly Owned and
Edited in Michigan

Vol. VII, No. 30 MT. CLEMENS, SATURDAY, APRIL 3, 1920 $1 PER YEAR

"Wonder how many mamma will let us color for Easter?"

In This Issue: Beet Growers, Stand by Your Guns—Fair Price Board Hears Dairymen's Troubles—The Farmers' Outlook as Seen by a Farmer—Composition of Commercial Fertilizers—King Wheat Mounts Throne in Canada

LEONARD WOOD in asking your support makes a FRANK STATEMENT of where he stands on ALL of the vital issues of the day, not merely on one or two. Read over these twenty-four points in his virile, All-American platform and see whether YOU agree with him on the great majority of them.



WOOD'S PLATFORM

1. National economy at Washington. A budget system.
2. The federal government behind expansion of honest business at home and abroad.
3. Federal suppression of all dishonest business.
4. More friendship and a square deal between capital and labor; capital to pay well, labor to work well; each to be fair toward the other.
5. Removal of the excess-profit tax that is strangling business.
6. More producing, less spending; a saner cost of living.
7. A longer term of years to pay the war debt.
8. America to have a bigger hand in the trade of the world. A powerful merchant marine.
9. More careful sifting of immigrants at Ellis Island and on the other side.
10. Deportation of all the anarchistic Reds.
11. Better housing conditions, to make better family life.
12. Abolishment of child labor.
13. Political equality of women with men.
14. A short term of universal training of youths for national service—not to make America a country of soldiers, but a country of finer citizens.
15. A higher standard of physical morality in men, for happier American homes and healthier children.
16. Fairer pay for school teachers.
17. A national department of public health, at its head a medical man who shall be a member of the cabinet.
18. A national department of agriculture, administered for the farmers by men who really know farming from the furrow to the crop.
19. Fewer tenant farms, more owned farms.
20. The protection of the American government behind an American wherever he may be.
21. A diplomatic service which shall command confidence at home, demand it abroad.
22. Law and order supreme; security of the rights of property; no class legislation.
23. A League of Nations covenant with reservations which will preserve to America the right to exercise in any crisis which may arise the voice of the American people.
24. For ourselves and toward the world: One Flag, one language, one loyalty.

A Vote for Leonard Wood is a vote for a candidate who does not evade any issue. It is a vote for a man whose backers will continue to support him at the National Convention as long as he remains a candidate. Don't waste your ballot on a complimentary vote for a candidate whose support will be switched to some other candidate now unknown to you—One candidate whose name is not on the ballot in Michigar, and about whom you consquently will have no opportunity to express an opinion is acknowledged by Republican Leaders to be the strongest opponent Leonard Wood will encounter at Chicago.

This advertisement is paid for by the Leonard Wood League of Michigan. Fred'k M. Alger, Pres.; Walter C. Piper, V. Pres.; C. A. Weissert, Sec. & Treas.

Fair Price Board Hears Dairymen's Trials

Federal H. C. L. Investigating Committee Hears Testimony but Takes no Action in Detroit Milk Situation

ATTRACTED by the story in the last week's issue of THE BUSINESS FARMER, a score or more dairy farmers living in the vicinity of Detroit attended the session of the Federal Fair Price Board Monday evening and sat in amused silence while W. J. Kennedy, general manager of Towar's Wayne County Creamery, told of the fancy wages they were paying the drivers of their milk wagons, and recited some of the evils that exist in the distributing of Detroit's milk supply. Loss of bottles, duplication of milk routes, high wages and high cost of pasteurizing and other equipment to conform to the ordinance requirements were given by Mr. Kennedy as the principal items in the high cost of milk distribution in Detroit.

The farmers' case was ably presented by Mr. R. G. Potts, of Washington, vice president of the Michigan State Farm Bureau, and a successful dairyman, and by Mr. E. C. Lockwood, of Washington, also a prominent dairy farmer. Mr. Potts related the manner in which the price to the farmer and the consumer was regulated by the Milk Commission, and described the method employed by the Agricultural College to determine cost of production on farms. Asked as to whether the average for the month of March, viz., $3.89 per cwt., was enough for the farmer, Mr. Potts replied, "No. The farmers in the Detroit area ought to have $4.50 per cwt. to pay them cost of production."

Mr. Lockwood testified that he was a dairy farmer, but had engaged in general farming, pure bred sheep and hog farming, and other branches of agriculture which made him thoroughly familiar with the agricultural problems, and it was apparent that the board was impressed with his testimony as coming from a man who knew whereof he spoke.

Defends Farmers' Position

Regarding the labor situation, Mr. Lockwood said:

"Last year we could get some labor at around $50 per month, but this year I doubt if $70 and $80 a month will get the men we need on our dairy farms. Oh, of course, some of the 'farmers' pay more than that, some of these professional farmers who make their money in Detroit and come out in our neighborhood and buy farms. They don't care how much they pay as long as they get the work done, and they make it that much harder for us fellows who make our living from the farm to get help.

"Our situation is serious," continued Mr. Lockwood, "and I don't aim to stretch it any either. I don't know where the high cost of labor is going to land us. And another thing the labor we get isn't dependable. It's a far inferior grade to what you get in the cities. I tell you, gentlemen, unless the farmers can get more help and a fair price for their products there's going to be weeping and wailing. There are only a few old men and women left on the farms nowadays. The farmers are leaving the country and coming to the city, even those who you might call well-to-do farmers. They think they can do better in town, but what they think after they've been in the city a while is another matter. But it just shows that they aren't satisfied to do the hard work and take the small pay that the farm affords, so they're coming to the city. And you've got our children, too. Of course, they come out to see us on a Sunday, and keep us chasing chickens for them to eat, but they don't stay. The city has got them and they'll never come back to the old farm."

Mr. Lockwood's testimony had a vein of humor to it which highly amused Judge Connolly and his colleagues and they laughed heartily when Mr. Lockwood said earnestly, "There's one nice thing about our business, Judge, no one is trying to take it away from us."

Mr. Lockwood brought out the fact that the D. U. R. had recently announced a freight increase on milk taking effect April 1st, which advances the rate from Washington to Detroit from 18 to 24 cents and 15 to 22 1-2c from Ypsilanti to Detroit. An intimation was made by a member of the board that this matter would be referred to the Railroad Commission.

Distributor Pleads for Farmers

The testimony of Mr. Kennedy was, of course, in defense of the distributors and for the most part fair to the producers . Mr. Kennedy has made a thorough study of the milk situation and gave many valuable facts as to the need of paying the farmers a remunerative price for this product.

"We must be fair to the farmer in these investigations," said Mr. Kennedy: "The outlook at present is serious. I have never seen the milk situation in so chaotic a condition. The stoppage of exports and the increase in dairy cows and in production, stimulated by the war has caused a large surplus of dairy products. Condensaries all over the country are either shutting down and dropping their price to the farmer. I was over in Chicago the other day and found condensaries offering farmers but $1.81 per cwt. for milk. And there is talk that the price for whole milk for city consumption in Chicago is soon to drop to $2.50. We might as well face the fact, gentlemen, that farmers cannot produce milk at these figures. What the farmers are going to do, the Lord only knows; I don't. Wages are going up and up and the farmer cannot take a much lower price and pay his help. We are getting calls from all over the condensed milk territory to come in and buy. Farmers have their cows and they must sell their product until they can reduce their herds . It's a bad situation all around.

"The farmer cannot produce milk in the Detroit area for less than $3.50 per cwt., and I think it is to the advantage of the people of this city to see that the price does not drop below that figure. Even at that price farmers are going to cut down production, and lessened production eventually means higher prices again.

Comparison in Cost Increases

It was established at the hearing that the price paid the farmer for whole milk had increased about 100 per cent in the last ten years; the price paid to creamery company employes had increased 125 per cent and other administration expenses had similarly increased.

W. J. Cusick, a member of the Board, showed by his talk that he was there as an emissary of the retail grocers of Detroit and he made quite a point of the fact that whereas everybody else's margin in the production and distribution of milk had doubled the retail grocer was still receiving 1 cent per quart as in days of yore. Mr. Kennedy came back at this charge by saying that the people of Detroit would be much better off and that milk could be sold at a lower price of the grocery stores would cease selling milk altogether.

Losses and High Wages in Milk Business

Mr. Kennedy claimed that the biggest loss which the creamery companies had to suffer was that of the un-returned bottles. He stated that during the past three months his company alone had lost 247,000 bottles. He touched briefly upon the duplication of milk routes, claiming that four or five companies could handle the milk business in Detroit with more satisfaction and at less cost than the 50 odd companies are now handling it.

Consolidation of milk routes have taken place in other cities with the result that there are but three companies operating in Philadelphia .and two in St Louis. In the latter city the survivor eliminated 70 of the 90 wagons purchased from his competitor. And yet they say the farmer is to blame for the high cost of milk !

Regarding wages, drivers are now receiving from $45 to $54 per week. They receive $10 per week plus 10 per cent of their sales, with a guarantee of $42 per week. They are given a week's vacation each year at full pay ,and a bonus according to their length of service. The perquisites brings the average wage up to $50 per week. In the winter months these men go to work at 6 o'clock in the morning and are through by 1 and 2 o'clock in the afternoon. In the summer months they go to work at 1 and 2 o'clock in the morning and finish their work at 9 and 10 a. m.

Board Takes No Action

No intimation was given by the Fair Price Board what further action if any it would take in the milk situation. Apparently the members of the board thought they would have no difficulty in putting their finger on "the nigger in the woodpile," but the testimony showed that instead of a possibility of reduction in the price to the consumer there was need for higher prices in order to pay the farmer what he ought to have. It is not probable that the board will rest the case, however, upon the testimony of last Monday evening. Another session is to be held Tuesday evening, April 6th, when the matter will undoubtedly be again taken up.

The whole contention that the price of milk in Detroit is higher than it ought to be is based upon the known fact that the condensaries of the state are getting milk at thirty to fifty per cent less than what Detroit concerns are paying, but there are a number of essential factors involved which those who make this comparison overlook. In the first place it is not feasible to ship whole milk into Detroit the year around from a much greater distance than 70 miles. Consumers of Detroit and other large cities must depend upon the farmers within a certain limited area for their milk supply and it is to their advantage to foster the dairy industry within that area. In the second place whole milk intended for immediate consumption must conform to certain requirements of sanitation, temperature ,tests, etc., which do not apply to milk sold to condensaries. Hence, it is worth considerably more. In the third place, farmers living in the vicinity of large cities have a much higher cost of production because of the uncertainty and the high price of the labor. These are facts which were presented to the board Monday evening and showed the members the Detroit situation was not so productive of profiteering as supposed.

Prof. Anderson Resigns

ANNOUNCEMENT is made that Prof. A. C. Anderson has resigned his position with the M. A. C., and accepted the managership of the Freeman Creamery Company at Flint. It is not yet known who will take Prof. Anderson's place, but it is rumored that the job will go to W. H. Norton, Jr., his able assistant.

Prof. Anderson has been associated with Michigan dairying for many years and has rendered invaluable services to the farmers, both in the fields of production and marketing. His investigations into the cost of producing milk have meant many thousands of dollars to uniformed dairymen and shown them the way to better business methods and profits. The dairy industry can ill afford to lose Prof. Anderson.

How John Gibson Would Keep Men on Farms

THERE is no single panacea for the present abnormal desire of farmers to leave the farms for the excitement and so-called pleasures of urban life according to John I. Gibson, secretary of the Western Michigan Development Bureau.

There are 10 remedies for this condition and everyone must be brought into use, says Gibson. They are:

Farming must be made economically attractive.

Farmers must be helped to better their transportation and marketing facilities to speed up and encourage food production.

Farmers should be encouraged to improve their homes and make them more attractive to their boys.

Michigan should back the "Great Lakes to the Sea" waterway project.

The state should provide adequate forest fire protection to communities thus endangered each year.

A land classification and soil survey should be made under state supervision.

America should inaugurate a selective immigration plan to secure men desirable as farmers.

Farmers should adopt a systematic plan of cultivation which eventually will put every acre of land in Michigan at that at which it is best adapted.

Establish an efficient state immigration and land settlement department, at least as efficient as that of Wisconsin.

The state should conduct a thorough investigation to find out why so many Michigan farms are being deserted or seeded down and the country districts depopulated. The state should be prepared to work in conjunction with other states to do something to remedy these conditions as quickly as possible.

The Farmers' Outlook as Seen by a Farmer

Gratiot County Granger Discusses Problems Confronting Farmers Which May be Met by Organization

By A. REDMOND

THE accompanying article was prepared and read at a meeting of the Gratiot County Pomona Grange, by Mr. A. Redmond of Ithaca. It is upon the request of the secretary of that Grange that we are pleased to give the article space in our columns. We have many offerings from professional writers upon the social and economic aspects of farming, but we much prefer to hear from the man who is living close to the soil and can speak from actual experience.

TODAY our old earth is topsy-turvy—practically in every country of the world business conditions are upset. Society is going through an upheaval such as has never been known before. The world war has unloaded such an enormous debt upon each participating nation, that the people are fairly staggering under the burden.

Almost weekly we read of strikes somewhere in our country. The object being shorted days and bigger pay. In many cases the foreign element in the unions being able to outvote the law-abiding members of the order. This was aptly shown in the big steel strike recently in Pittsburg, where the Americans of the order said they were satisfied with the conditions as they then existed. The writer believes he voices the sentiments of his brother farmers when we say we have no quarrel with labor and we believe it is entitled to a just recompense for its services, but we do believe there is reason in all things.

Imagine, if you please, what for two years, were every farmer in the U. S. to refuse to work more than 48 hours each week and to also demand that his products should leave his farm at such prices as to insure him $6 to $8 per day for his labor, together with reasonable profit on his investment and something additional for overhead expense such as taxes, fire and tornado insurance, keeping up repairs etc., it does not require much of a prophet to foresee that our whole country would be brought face to face with the greatest calamity this nation has ever known. All who could not find remunerative employment such as widows, orphans, disabled and old men, would either be subjects of public charity or compelled to starve. Living costs in the cities would mount by leaps and bounds, strikes among workmen would become far more common than today and of course the manufacturers would increase their prices in order to play even and the farmers, were they thoroughly organized, would be compelled to keep adding to the selling prices of their farm products in order to meet their added expenses.

God grant such a day may never come! We are optimistic enough to believe the solution of the vexatious problems confronting our nation will be settled and settled rightly, in the near future. How shall they be settled is now the perplexing problem and what part shall the farmer take in the reconstruction. One thing is certain if we get what rightfully belongs to us, we must be properly represented in the congress and in our state legislatures. We can rest assured the men representing other interests can not be depended upon to fight the battles of the agriculturists only in so far as their own interests are concerned. To secure this proper recognition in our law-making bodies, we must be thoroughly organized, constantly on the job backing up the efforts of our own representatives, while the lawmakers are in session. Never before in the history of our country has there been greater need of cool, level-headed shrewd business farmers in our halls of legislature than now. Uncle Sam may be able to hold the throttle of his train of state with his present crew and guide it to safety, but to some of us on the side-lines, it sometimes looks as though he needs a few good business farmers to act as a governor before his engine runs wild and jumps the track. His law makers have evidently forgotten there is such a word in the English language as ECONOMY. They now talk millions when formerly they talked hundred thousands in the appropriations. Thousands of government clerks are drawing large salaries and if we can believe the reports, their services are no longer needed since the close of the war and we very much doubt if half of them were actually needed at the time.

The slogan in congress and our state legislature should be economy and efficiency. There are hundreds of ways in which the people's money can be saved and still reach the desired results. The American farmer must see to it that he is given fair play, when the tariff is finally adjusted upon all products which he raises. There is a strong sentiment among the city dwellers to allow food products from foreign countries to enter our ports free of duty. Were such laws enacted the result would speedily spell ruin to our business. We postively cannot compete with the cheap Coolie labor of the east. Nor can we raise live stock and compete with the vast stock rankers of millions of acres of virgin soil of the South American countries without a protective duty. We have too many non-producers. Labor is dissatisfied and demands increased pay. The employer either has to meet the demand or close shop. He raised the pay, but adds to his manufactured product enough to make himself safe and finally the consumer pays the bill, and so it goes from one line of industry to another. Labor, constantly demanding bigger pay and shorter hours, while the manufacturer is often adding to his prices, while the poor unorganized farmer becomes the scape goat. He is constantly being asker to pay more for everything he uses upon his farm, his labor what remains, costs more, while his own product commands a low price compared to the upward trend in prices of everything else.

The labor problem must soon be adjusted, but how, is a serious problem. We believe that under present conditions it will take less than ten years time to bring our country face to face with a famine of food products. The result is already seen in many abandoned farms and thousands of acres of land not properly tilled. The producers now number only about one-third of the population and the cities are rapidly growing at the expense of the rural population, unless soon checked, the producers will not long be able to feed themselves and the people of our cities.

It may be that when the drift of population to the city shall have reached such a stage that the city dweller becomes hungry and living costs become so high that the average man cannot stand the pressure, that then and only then, he may receive his second sight and realize there still exists something about the country that money cannot buy. As aid to their reformation may be mentioned the beautifying of the country homes and the necessary accessories to its convenience. Also re-establishing the rural church and improving our schools. This return from city to country may possibly be brought about by a money panic such as we had during the Cleveland administration, when a larger part of our factories were closed and labor thrown out of employment. Who knows? This very thing may bring about the means to the desired end. Do not misconstrue the writer's meaning. We do not wish to see a repetition of such times, when soup houses were a common sight in all cities and thousands of people were living on public charity.

During the past few years our people have been living fast lives. We as a nation are dancing to the

(*Continued on page* 23)

How Corn Production in Michigan May be Profitably Increased

By A. E. LINDQUIST

OFTEN we find it profitable to stop our hurried ways and ascertain where they are leading us; to note whether or not our work is bringing us profit, and if it bodes well for the future. So in view of the discussions on the subject of whether or not our yields per acre are increasing, the writer has consulted the U. S. Department of Agriculture's figures on corn yields for the past fifty years, and the following table tells the story, vital to Michigan agriculture and to every farmer.

These figures are the average yields per acre of corn in Michigan for each ten year period from 1866 to 1916, and from 1916 to 1919:

1866-1875	32.2
1876-1885	31.8
1886-1895	26.7
1896-1905	32.2
1906-1915	30.5
1916-1919	29.5

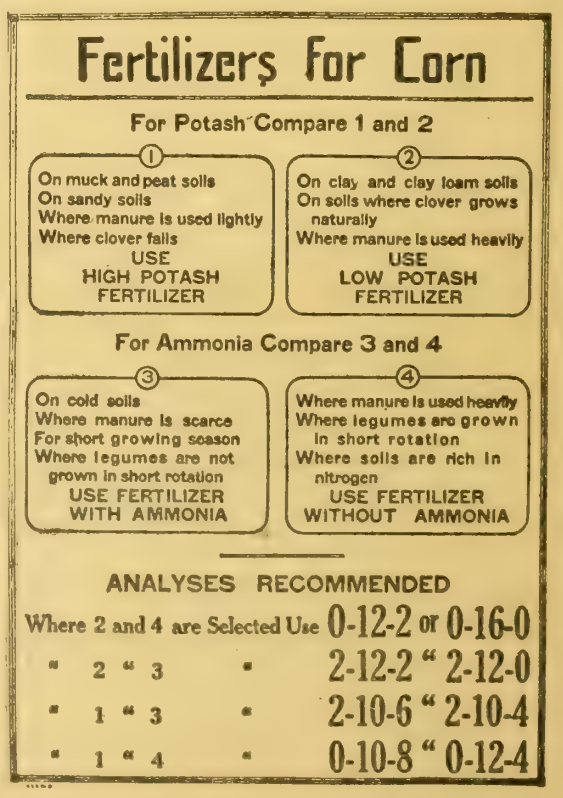
The last period, from 1916 to 1919 is only four years. It shows a decrease of almost three bushels per acre compared with the first ten year average, and this in spite of the fact that the average production per acre of corn in Michigan this past year was higher than usual and is included in this average.

Of course, many farmers produced more than the average, but likewise many produced less. The astonishing fact is evident that despite the varied and many improvements in farm methods in the last half century, there has been no increase in acre yields of corn. The figures show that with this greatest of American grains, the net effect of the wonderful agricultural development of the past half century has not enabled us to even hold our own. Our land planted to corn is less efficient than it was half a century ago.

During this fifty year period rotation systems have been developed, by means of which the yields of crops are increased. The place of legumes in farm practice, the need for legumes is too often overlooked. Methods of innoculating these legumes so that they may take nitrogen from the air have been effected.

During the same fifty year period, the manure spreader has come into being by means of which manure can be utilized most efficiently. During the same period and at the expense of a great amount of time and labor thru educational campaigns waged by state and national governments the methods of handling manure to prevent losses have been popularized. Manure storages have been built on farms. Waste of liquid manure has been prevented. Yes despite the fact that manure is usually applied to corn land, the corn crop shows no increase in yield.

The arts of the plant breeder have been called upon during this same period to produce better, heavier yielding varieties of corn, yet in spite of these many manifest improvements, the yield of corn has not been increased even a small fraction of a bushel per acre. The answer must be that these improved methods will not increase the yields unless attention is also paid to the conservation of fertility of the soil.



During the past 20 years of this half century period, the methods of testing the germination of the seed to prevent those losses which came from poor stands, have been widely popularized. Yet if we may judge by yield records, this method has also been ineffective insofar as it may aid in preventing decreases. About the only thing that has not been done during the past fifty years on any national scale has been to urge better fertility treatment of the corn crop. At least, in those cases where it has been attempted, it has been done in a more or less half-hearted manner, and sometimes the entire emphasis was placed on manure, legumes and rotations, with almost no mention of commercial fertilizers. Yet it is the commercial fertilizer which gives the highly bred seed its chance, and which makes more effective every pound of manure applied, and every clover sod turned under.

Corn is generally grown on soils comparatively poor in phosphoric acid. Using manure alone for corn aggravates this trouble rather than otherwise. On every field where corn is to be planted this season, a sufficient amount of this particular plant food should be applied. Corn is also a potash-using crop and an enormous amount of this plant food is stored up in stems and leaves. Soils vary, however, in their ability to furnish potash, and farming systems differ in the extent to which this plant food is conserved, therefore, fertilizers for corn should offer a wide range of selection in potash. The chart indicates how this works out in the practical problem of selection the fertilizer for use this year on any individual farm.

A supply of ammonia early in the season is most important. Particularly is this the case in Michigan, where at best we have difficulty in ripening the crop, and where there are delays at the beginning of the season, through lack of available plantfood, decreasing by just that much the chance of early maturity.

Composition and Use of Commercial Fertilizers

Elements Which Must be Applied to Depleted Soils to Restore Their Fertility

By M. M. McCOOL

By M. M. McCool, Professor of Soils, Michigan Agricultural College.

HE ADDITION of any material to the soil that results in greater crop yields may be termed "soil rtilization." The increased yields at result may be due to direct or itritional action, that is, the addi-on of plant food to the soil, or to direct action commonly spoken of "soil stimulation," or to both. As have stated many substances when dded to the soil result in available ant food and in improved struct-al conditions. Strictly speaking a -called soil stimulant is never a ant food, but conversely, many ant food containing substances act directly to increase crop produc-on.

Fertilizers purchased on the mar-t are called commercial fertilizers d may be complete or incomplete. complete fertilizer is one that con-ins each of the essential elements nitrogen, phosphorus and potassi-n . An incomplete fertilizer is one at carries one or two of these ele-ents.

The nitrogen, phosphorus and po-ssium that appear in fertilizers are ntained in widely different com-unds, and inasmuch as the avail-ility of these depends in a meas-e upon the form in which they oc-r, this is of prime importance in e selection of commercial fertiliz-s for different soils and crops.

Nitrogen carrying compounds may conveniently divided into (1) neral or inorganic, and (2) or-nic compounds which in turn may divided into animal and vegetable terials.

Nitrate of soda or Chili salt petre the leading nitrogen compound ap-ed to soils. It is obtained from ili where it occurs in beds rang-; in thickness from two to ten feet. is removed from the beds and ified, and, when placed on the rket contains approximately 15 cent nitrogen. Several hundred usand tons are sent to the Unit-States annually for agricultural poses. Sodium nitrate is soluble water and is readily made use of plants when applied to moist soils. rogen in this form moves quite ely in the soil mass and thus some it may be lost to the drainage ers if appiled to the soil some e before the plant is ready to ize it.

Nitrogen in the form of ammon-sulphate is extensively used. en placed as a by-product in the nufacture of coke from coal, and from coal, and bone black from es. It readly dissolves when ap-d to moist soils, but it leaches ewhat less readily from the soil n the above mineral compound. s transformed to the nitrate by micro-organisms before being nsively utilized by most crops is, therefore, somewhat less ly acting than the sodium ni-e. About one-quarter of a mil-tons are used in the United es annually.

alcium cyanide is manufactured everal places in Europe and also Niagara, New York. At Niagara oximately 64,000 tons are pro-d annually. The availability of substance approximates that of monium sulphate. It is trans-ed by the soil water and bac-into ammonia and carbonate of , and thence into nitrates. It is er high lime content (20 per), seems to be a point in its r when applied to soil deficient me. It is a light, fine dully gray lack powder carrying about 15 cent nitrogen.

ied blood, one of the organic s, is quite extensively used as a e of nitrogen but is usually d on the market in mixed s. There are two forms, the nd the black. The former con-more nitrogen, from 13 to 15 ent, but is less extensively used the latter. Black blood varies iciably in composition. The ni-n content ranges from 6 to 13 ent and it should be noted, also, it may contain from 1 to 3 per phosphorus. Dried blood de-oses rather rapidly in moist and is, therefore, quite readily able to plants but it is somewhat less readily utilized than the inorganic forms of nitrogen.

Tankage is composed of slaughter house refuse, such as bones, flesh, tendons, intestines, lungs, hides, hoofs and others. It, therefore, varies widely in composition. The nitrogen present may be less than 4 per cent, or more than 12 per cent, while phosphorus may be present in amounts ranging from 4 to 8 per cent of the mass. Tankage is looked upon as being most successful when applied to soils that are to be sown to crops of long growing period, inasmuch as it rather slowly available.

Another important source of nitrogen for agricultural purposes is dried fish, being used quite extensively near the sea coast. It contains 6 to 10 per cent nitrogen and small amounts of phosphorus. It decomposes rather rapidly in moist soils, and is, therefore, rather quickly acting.

Cotton seed and linseed meal are the chief vegetable nitrogen compounds placed on the market for fertilizer purposes. The former contains approximately 7 per cent nitrogen, and in addition, small amounts of phosphorus and potassium respectively, while the latter carries 5 to 6 per cent nitrogen and somewhat less of phosphorus and potassium. In the past enormous quantities of cotton seed meal were used in the southern states as a source of nitrogen. It is less extensively used than formerly, being fed to dairy cows, thus increasing the nitrogen content of the manure voided. On account of the rather slow rate of decay it furnishes nitrogen to the crop throughout the growing season.

The relative availability of nitrogenous compounds as determined by numerous investigators is in about this order: Sodium nitrate, sulphate of ammonia, dried blood, linseed meal, cotton seed meal, dried ground fish, stable manure, tankage.

Phosphatic Fertilizers

Phosphorus in the form of bone has long been used as a fertilizer. Its importance was noted by English agricultural writers as early as 1653, and it is further recorded that machines for grinding bone were used in England in 1778. Liebig called attention to the fact that the English removed bones from the battle fields of Waterloo, Leipzig and Crimea and used them for fertilizers. Enormous quantities of phosphorus are now used in agriculture.

Phosphorus is placed on the market as animal, mineral and manufactured phosphates.

Raw bone meal and steamed bone meal respectively are the chief animal phosphates used in this country. The former contain 9 to 11 per cent phosphorus, and in addition, 2 to 4 per cent nitrogen. Moreover, there are present appreciable amounts of fats and oils, which decrease its availabilty and desirability as as a fertilizer. Ground steamed bone is more extensively used than the raw bone and contains less nitrogen. There is usually present 9 to 12 per cent phosphorus. Importance of fineness of grinding is difficult to overestimate, inasmuch as this condition greatly affects its availability. The phosphorus is present in bone as tricalcium phosphote.

Rock phosphates are the chief source of mineral phosphorus, in fact, the most of the phosphorus applied to the soil is derived from them. They are sometimes strictly of mineral origin, sometimes a modified animal debris of bygone geological ages and sometimes simply leached guanos. In the United States there are three deposits that are being mined extensively, namely, South Carolina, Florida and Tennessee. There exist extensive deposits in Arkansas, Utah, Wyoming, Idaho and Montana, and smaller amounts are known to occur in several other states. About one-half of the world's production is of American and much of the remainder of North African origin.

When rock phosphate is ground to a very fine powder it is termed "floats," or raw phosphate. The phosphorus is present as tri-calcium phosphate, and varies in amount with different deposits, but the phosphates from South Carolina, Tennessee and Florida are, as a general rule, high grade. For example, South Carolina phosphates contain 51 to 62 per cent tri-calcium phosphate, Florida phosphates contain from 45 to 90 per cent tri-calcium phosphate, and the Tennessee phosphates contain from 45 to 70 per cent.

When bones, or raw rock phosphate, or other slowly available phosphates are treated with sulphuric acid, chemical changes take place, the result of which are available or soluble phosphates, usually spoken of as acid phosphate. Acid phosphate contains some mono-calcium phosphate, and di-calcium phosphate, and in addition calcium sulphate, or land plaster. Different grades are placed on the market containing from 12 to 18 or more per cent phosphoric acid. Acid phosphate is extensively used in the southern and eastern and central states and is the chief form of phosphorus present in mixed fertilizers.

Basic slag is a by-product of the manufacture of steel from iron phosphate. In this country this material generally carries 16 to 19 per cent phosphoric acid and about half of its weight is lime. It compares favorably in availability with bone meal.

Potash Fertilizers

The chief source of potassium has been the Stassfort Mines of Germany. These mines are said to contain sufficient potassium to last the world 500,000 years at the present rate of consumption. Under normal conditions several million tons are sent to the United States annually for agricultural purposes. During and since the war the domestic potash has been utilized in agriculture are potassium chloride, or muriate of potash, potassium sulphate, and kainit, respectively.

Potassium chloride is commonly spoken of as muriate of potash. It is a partially purified product of the crude deposits and contains 36 1-2 to 51 1-2 potassium, depending upon the grade of material. In addition there is usually present appreciable amounts of common salt.

Potassium sulphate is obtained by partially purifying the raw material taken from certain parts of the mine. It contains 47 to 50 per cent potash, together with sulphates and chlorides of calcium, magnesium, and sodium as impurities.

Kainit is the most extensively used crude potash salt. It contains at least 12 per cent potash in the form of the sulphate and chloride. On accuont of the high chloride content, as maintained by some, it should not be extensively used on potatoes, beets, or tobacco, unless applied to the soil the year before these crops are grown or when the soil contains lime.

Enormous quantities of mixed fertilizers are sold annually. They are usually complete, that is, they contain nitrogen, phosphorus, and potassium, yet large quantities of mixed goods have recently been used that do not contain potassium. The total amount, as well as the form in which these elements occur in the mixtures, differ greatly, and, therefore, their commercial and agricultural value are variable.

The composition of mixed fertilizers is commonly spoken of as 1-6-4, 2-8-2, 3-8-7, 2-12-0, 0-10-0, etc. The first figures stand for the number of units of ammonia, nitrogen the second for the number of units of available phosphoric acid, and the third, the number of units or potash. A unit of one per cent represents 20 lbs. of the above in a ton.

We have on the market both high and low grade mixtures. The high grade materials are those that contain a total of 14 per cent or more of these substances. Professor Patten states that for Michigan in 1917 the average cost of one unit in 10 per cent acid phosphate was $2.31, in 14 per cent, $1.83 and in 16 per cent $1.66. Professor Proulx states that more than one-half the fertilizer used in Indiana in 1918 was low analysis and figures that if the same amount of plant food had been purchased in high analysis fertilizer there would have been a saving of $800,000.

Commercial Fertilizers

YOU wouldn't buy a horse in the dark, so why should you buy high-priced fertilizers without knowing what they contain and how they will act upon your soil. The accompanying article by Prof. McCool covers the whole gamut of commercial fertilizers and their use. The farmer who is not using commercial fertilizer on old land is not getting maximum production. But no farmer ought to buy commercial fertilizer without knowing exactly what kind of a fertilizer his land needs, and the different kinds of fertilizers that are available. This information is given complete in this article by Prof. McCool.—Editor.

FERTILIZER INCREASES ORCHARD PROFITS.

The row of trees on the left received fertilizer and yielded 46 barrels of apples. The row of trees on the right did not receive fertilizer and yielded only 9 barrels of apples.

King Wheat Mounts His Throne in Canada

Farmer Government Endeavors to Convince the Dominion that Free Trade is the Panacea For All Economic Ills

By H. F. GADSBY
In Detroit Saturday Night

THIS farmers' movement, which has spread from one end of Canada to the other, differs from various farmers' movements in the avowed intention of the farmers to take government into their own hands. Hitherto they have been willing to let both the old political parties pander to them and to keep out of politics themselves, but lately they have embraced the idea that they are the ruling class and they are going to carry out their theories unless they are headed off.

As long as I can remember, wheat has been king because Canada is basically an agricultural country, and farming was for many years the chief industry. Farm products still out-top manufacturers but the growth of the cities has shifted the larger number of votes to the urban centers. Only by the eccentricities of our franchise act do the farmers occupy a strategic position by which one farmer's vote is practically worth two city men's. It was in this way the farmers won the Ontario election, although both the liberals and conservatives polled more ballots. Farmer government in Ontario is minority government—very much minority.

The franchise act is to be recast at the present session of the Dominion parliament, and the redistribution bill, based on the decennial census, which is to be taken next year, will probably redress the inequality which exists now between city and country. The electoral unit, figured on the population of Quebec, divided by the sixtyfive which is Quebec's permanent representation in parliament, will be about forty thousand, and this applied to urban and rural constituencies alike—the good old cure of rep-by-pop—will put farmer and townsman on a more equal footing. So long as the farmer had more votes than the city man it was a politician's trick to string the farmers' vote out as far as it would go and play directly for him.

This explains why the electoral unit was so manœuvered as to give the country twice the voting power of the city—an injustice which in its rankest form gives a rural riding like Halton with seventeen thousand population, one member in parliament, and a city like Toronto, with half a million, only five members. If Toronto had its rights it would have fourteen members of parliament and Halston would have to double up with some nearby riding with twenty-three thousand people, to send one man to Ottawa.

The new franchise act and the redistribution bill which follows it will take care of this, and so the farmer sees his last chance to boss the job, go glimmering—that is, if the present government, or any other government not of his particular making holds the fort at Ottawa. He realizes the city has now, and has had indeed for the last ten years—more votes than the country, and that if the politician sticks to his old habit of seeing the greatest good in the greatest number, he will play the city from now on and the country will get few favors. This is an unwarranted alarm, because no government would entertain a policy which did not look to rural development and a countryside well tilled and otherwise well filled with prosperous settlers. We must have more farmers to bring down the cost of living and more settlers to draw riches from our empty acres and help pay off the national debt.

But the farmer refuses to see it this way, and fearing or professing to fear loss of kindness from both the old parties, sets out to form a party of his own. This party takes the broad ground that manufacturers are a curse to the country, that the protective tariff is an abomination, that free trade is the panacea for economic ills, and that the farmer is the man to work the miracles. The farmers' party, if it has its own way, promises to abolish the governor general, the senate, the tariff and anything else that blocks the road to an unbridled democracy.

It is understood that the farmer must be top dog — that it is his farm at Ottawa — and that the old political parties, if they want to get a look in, must do homage and kiss King Wheat's hand. There is reason to believe that the liberal party has already done so, and that the clamor for an election this summer has a farmer-liberal victory in view, and a government in which Mr. T. A. Crerar, president of the Grain Growers' Company of Manitoba, will be premier, and the Hon. Mackenzie King, the liberal leader, will be second fiddle.

Following up our metaphor, it may be said that King Wheat, throwing off all disguise, puffing out his chest, slapping his pocketbook stuffed with the gains of the war and after-the-war seizes all the external trappings of the state, mounts the throne and claims royal honors from the populace. His object as king is to place taxes on everybody but himself, to hold what he has and to get as much more as he can. He feels that if he doesn't make the laws somebody will and that now or never is the to put himself over.

King Wheat is selfish—there is question of that—even perhaps a tle ignoble. For example, he much opposed to government hand of his golden product when the p bade fair to soar to four and five lars a bushel, but now that it thr ens to sag, under the three-do mark he would leave it to the gov ment to keep it "pegged." W means that while he preaches trade, he is quite willing to take the protection he can get. Not to too fine a point on it, King Wh wants it going and coming—such his lordly frame of mind.

King Wheat presses his advant The old parties are a little sick now—too much union governme tired feeling—overeating—dys —low spirits—generally run d with war excitement. King Whea the other hand, who did nothin the war except make money, is and strong. The Ontario elec which gave him a plurality over old parties, convinced him that had the whip hand, and he has intends to march on Ottawa meanwhile he has made treaties the Alberta, Saskatchewan and itoba governments by which he g finger in each on the threat tha will wreck things if he does not his share.

In British Columbia, where farmer's use for a farm is most to grow town lots, King Wheat does make much headway in his poli ambitions. In Quebec he has cr some stir, but the influence of ch and big business combine there t hold the established order. Be Quebec is rapidly becoming a m facturing province and King W has that to fight. The maritime inces are coldly critical of Wheat's efforts to get a strangle and I hardly think that he will firm footing with the Blue Noses, are wedded to their party politic

King Wheat, whose original do is the three prairie provinces, his strongest alliance with On and this is passing strange be

THOSE CANADIAN FARMERS

THE ORGANIZED farmers of Canada have declared war upon protective tariff, and as a result are involved in a beautiful battle with the Canadian Manufacturers' Ass'n. So bitter has become the controversy that the manufacturers of Canada are ostracizing from their advertising patronage all farm and newspapers advocating reduction of tariff or free trade. The Canadian Grain Growers' Guide of Winnipeg, Man., official organ of the United Grain Growers, which has been particularly persistent in its demands for lower tariff on manufactured articles, has lost thousands of dollars as a result of the cancellation of advertising contracts. The accompanying article upon the subject of farmers and free trade is by the same author who has frequently ridiculed the Canadian farmers in the Detroit Saturday Night, one H. F. Gadsby. If you want to keep posted on what the farmers of Canada are doing politically and hope to do economically, read Mr. Gadsby's articles.

What Happens to Retail Price of Meat When Live Stock Prices Drop?

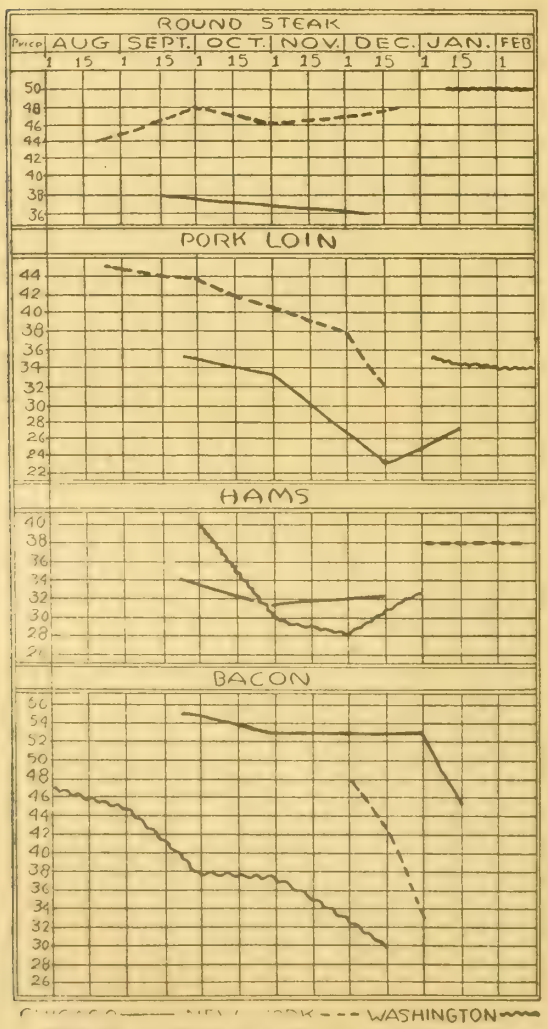

Chart No. 1.—Trend of retail price in principal cities as reported by Department of [illegible]

THE GREATEST argument that has been against the federal government's agitation against the high cost of living which has resulted in enormous losses to live stock producers has been that the farmer's loss has not been the consumer's gain. Even had the investigations been to the advantage of the consumer, it would hardly be just to cause one class of people to sacrifice in order that another class might gain. But the facts are that the government's campaign against the H. C. of L. has cost the farmers heavily, benefitted the consumer little or none at all, but added to the profits of those who finish or store the farmers' products.

The Department of Justice recently compiled especially for THE BUSINESS FARMER a set of charts showing the trend of retail meat prices from the middle of August to the first of the year in the principal cities of the country. From these charts we have made up the accompanying diagram, which, though somewhat fragmentary, will give the reader an idea of what happened in the retail markets when prices on live stock fluctuated.

The greatest drop in the shortest time of hog prices was from Aug. 15th to Nov. 1st when the Chicago prices on hogs slumped from $23.50 to $13.50, or 40 per cent. During the same period retail prices declined as follows:. In New York, pork loins dropped from 45 cents per lb. to 40 per cent, or a decrease of 11 per cent; hams declined from 39 to 30c or 25 per cent; bacon from 46 to 37c or 20 per cent. In Chicago, the price changes were as follows: Pork loans from 35 to 33c or 6 per cent; hams, 34 to 31c or 9 per cent; bacon, 55 to 53c, or 3 1-2 per cent. These declines of from 3 1-2 per cent to 25 per cent took place during the identical period that live stock values declined 40 per cent.

A close study of the charts will show that the retail markets are affected very little by changes in the live stock markets. Note on chart No. 2 the temporary advance from $13.50, Nov. 1st to $17 Nov. 22nd. Immediately following this advance there was a drop back to $14 which position the hog market maintained until early in January. During this period pork loins advanced in Chicago from 23 to 27c per pound; hams from 31 to 33c and bacon continued at a level, dropping later with the live hog market from 53 to 45c per pound. In Washington, during this same period, hams declined from 30 to 28c, but about December 1st, advanced to 33c.

When we discuss U. S. regulation of the packing industry, we should take these facts into consideration. How much or how little influence do the packers have over livestock and retail meat prices. To what extent do they manipulate the market, causing it to decline to levels that enable them to lay in huge stocks of low-priced meats, which the facts show are never so low to the consumer?

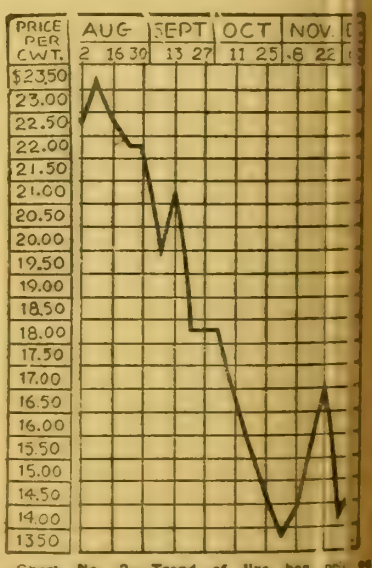

Chart No. 2—Trend of live hog prices on Chicago market, from August to December

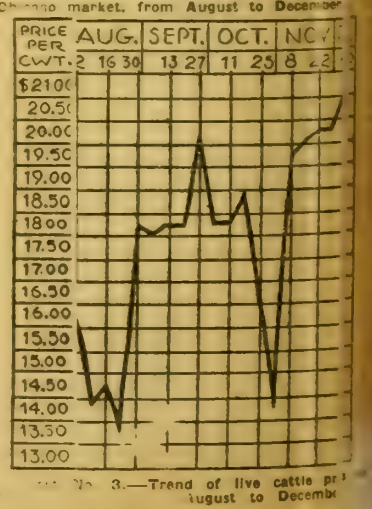

[illegible] No. 3.—Trend of live cattle prices from August to December

Sugar Men Take Issue With Farmers' Claims

W. H. Wallace, Michigan Sugar Company Head, Makes Weak Defense of Manufacturer's Position

THE SPHINX has spoken. For four months after the sugar beet growers of Michigan asked the sugar manufacturers for a conference the manufacturers have been as silent as the grave, but now with the planting season well nigh upon us, Mr. W. H. Wallace, who is the accepted spokesman for the sugar men, comes forth with an eleventh hour statement in which he makes a sweeping denial of the charges made by the sugar growers and attempts a weak defense of the manufacturers' position. This statement has been published in the county papers of the sugar beet territory, upon the "request" of the local factory managers.

Mr. Wallace introduces his statement with the following pregnant observation:

"Statements given out on the platform and by THE MICHIGAN BUSINESS FARMER are very much overdrawn and misleading and a long way from a true statement of actual conditions. There has been an advance in contract labor for beets. The price is dependent upon the width of the rows. The only widths of rows that have advanced $6 is the 24 and 28 inch. Eighty per cent of the beets grown in Michigan are planted from 18 to 22 inches apart and that price has advanced $4. It requires just as much labor to take care of 18-inch rows as it does 24-inch. THE MICHIGAN BUSINESS FARMER makes the general statement that the advance has been $6."

Ah, how did we make this terrible blunder! May the Saints forgive us! In the name of truth and veracity we hasten to correct our statement. It is true, Mr. Wallace says, that the farmers must pay an additional labor cost this year of $4.40 per acre instead of $6. But please explain, Mr. Wallace, how this weakens the farmer's case.

"Well, says Mr. Wallace, "in an attempt to secure labor for next year, it soon became apparent that even $28 per acre was not enough. It was decided to advance this price $2 per acre and the sugar companies assumed it themselves on account of having agreed with the farmer to endeavor to secure the labor for them at $28."

Now let's get this straight. The average increase per acre for 1920 will not be $4.40, but $6.40, of which the farmer is forced under the old contract to pay $4.40, and the manufacturer voluntarily agrees to pay $2. Ve-ry, ve-ry magnanimous. Your generosity, Mr. Wallace, shall never be forgotten.

Contract Binding on Farmers

"Some of the speakers make the statement," says Mr. Wallace, "that the companies carry the contracts around in their pockets or file in their office having in mind that if there is a change in the prospects for price of sugar or weather conditions, that the contracts will not be executed or returned to the grower. The Michigan Sugar Company since its organization has not refused more than one dozen contracts and hove refused none with reputable growers * * * The contracts are always returned about that time. Since sliding scale has been in effect it has been customary to return them with the bonus or with the extra price over the minimum price paid on the delivery of the beets. * * * As these contracts are written they are not binding upon the company until executed by an officer of the company, but they are binding upon the grower as soon as he signs them, and when executed by the company cannot be legally cancelled without the consent of both parties to the contract."

Thanks for the admission, Mr. Wallace. The fact remains, however, that regardless of what purpose you may have in mind in not immediately returning the contracts, you have the opportunity and the legal power to cancel these contracts at any time within two or three months after they are signed by the farmers if it suits your convenience and pocketbook to do so. At least you confess that they are not legally binding upon the company until signed by an officer of your corporation. Please tell us, how long before these contracts are returned to the farmers do you sign them. A month before or the day before? We know the answer. We also know why the Michigan Sugar Company has never cancelled a contract. It is because they have ALWAYS made the terms of that contract so low as to protect them in almost any contingency. There has never been any reason for your cancelling a contract. But if you are not bound by these contracts until you sign them, and you keep them two to three months before signing them, you or any other good business man would cancel such a contract if it suited your purpose to do so, now wouldn't you. And yet you attempt to tell the ten thousand beet growers of Michigan that this kind of a contract is equitable and just and you want them to stand by it and you hold their legal obligation over their head as a threat. We should think you'd be ashamed to stand sponsor for such a "contract" as this.

Ratio of Beet Cost to Sugar Cost

Mr. Wallace says that statements are made by the growers to the effect that "at the time of the last federal trade investigation and report, that the cost of beets was 72 per cent of the cost of manufacturing sugar, and that that item has "stood still." "This last report," says Mr. Wallace, "was made for the years 1917 and 1918. For that year we paid $8.17 per ton for beets. This year we have paid $12.50." Now, in the first place, Mr. Wallace, we do not believe that anyone connected with the growers made the statement that the cost of beets has "stood still" because they would know better. What they did say, was that the RATIO of the cost of the BEETS to the total cost of the SUGAR was CONSTANT or as you put it, has STOOD STILL during the past several years. Of course there have been increases in manufacturing costs. We all admit it. But what about the wholseale price of your sugar? Have you beet costs and operating costs increased in the SAME proportion as the price you are getting for your sugar? Our contention is that they have not, and for that reason you ought to pay more for beets and give the farmers a bigger share of the profits of the industry.

Have Increases Been Voluntary?

"They tell the growers," said Mr. Wallace, "that the price of beets has never been advanced except on account of the Growers' association, or threat of forming an association. This statement is absolutely untrue. As I have already stated the price has advanced from $4.00 to $12.50 per ton, and none of this advance is on account of the association. In fact, we never heard of the association until a few years ago.

"Just after the European war started, we had some discussion between a fixed price and a sliding scale. Governor Sleeper on his own initiative, called a meeting between the growers and the manufacturers and after some discussion and earnest solicitation on the part of the governor, predicting that the country would need all the sugar it could produce, the sliding scale was agreed to with an $8.00 guarantee based on $7.00 sugar. Between that time and the present year there has been no litigation and no talk of an association that I have heard of and the price has advanced from a guarantee of $6 to a guarantee of $10 per ton, and $12.50 actually paid this year, without the help or assistance of any kind of an association."

We fear that Mr. Wallace's memory is becoming defective. We much prefer to rely upon the printed word than upon Mr. Wallace's memory chest, and we repeat our former assertion that the printed newspaper record will show that the sugar manufacturers "have never increased the price of beets to the farmer without some suggestion, some threat or some forcing from the growers." Does it matter whether this suggestion came from a state-wide association or from one or more individuals? The fact remains that the producer has ALWAYS been obliged to take the initiative, and he always will be obliged to do so until the manufacturers learn to pay his business the respect to which it is due. Does any person think, and would Mr. Wallace have us believe, that the manufacturers would have in the past, or will in the future, voluntarily increase the price on beets when they could afford to do so? Certainly not. They never have been financially able to pay any more for beets, and yet somehow they always manage to find the money and have had remarkably good luck in keeping out of the poor house.

Future Sugar Supply

"For the company the present contract is a very great risk," says Mr. Wallace. "If sugar should decline to anything like normal price, this year's operation would prove unprofitable. It is not a question with us or what we would like to do, but it is what facts and figures tell us we must do, and our company cannot change or alter its contracts for the present year at that."

This all sounds very fine, but the facts do not bear out Mr. Wallace's statements. It is to show a vast ignorance of the world sugar situation an ignorance of which we would never accuse Mr. Wallace of possessing to claim that there is any chance of lower sugar prices for another year or two.

"The truth is that the world is living on a hand to mouth basis as to sugar," says *Facts About Sugar*, an organ of the sugar manufacturers. "Instead of supplies accumulating 'all over the world,' nowhere in the world are the stocks increasing and almost nowhere, except in the United States, are supplies even reasonably adequate. The world's sugar crop of 1919-20 is the smallest crop produced in ten years, while the world's demand is steadily and rapidly growing.

"Holding out expectation of a material reduction in the price of sugar at an early date is merely to raise hopes in the minds of consumers that are certain to be defeated. While there has been a natural decline from the prices that prevailed during the period of acute scarcity at the beginning of the year and while there may be a further seasonal decrease during late March and April, there is scarcely a possibility, short of an industrial cataclysm such as cannot now be foreseen, that sugar will sell at any low level during 1920. Lower prices must come from enlarged production, and the increase of production to a point that will satisfy the world's present requirements is bound to be a slow process—much slower than the majority of observers have anticipated."

Beet Growers, Stand by Your Guns!

IN THE last great war they discovered a new force,—a mightier force than all the gunpowder, bombs, machines guns and the most terrible instruments of war put together. It was the state of mind of the soldiers. They gave it a name. They called it "MORALE." And morale had more to do with the winning and losing of battles than all other things put together.

Destroy the morale of your enemy and you've got him licked. Or, vulgarly speaking, get your enemy's "goat," and you've won the victory before the scrap begins.

The sugar manufacturers of Michigan have been trying to destroy the morale of the organized growers, or get their "goat." When the growers had a right to expect that the manufacturers would meet with them, the manufacturers refused. When the growers asked them to put their cards on the table the manufacturers ignored them. When the growers expected the manufacturers to make a statement of their position, the manufacturers kept a discreet silence. The purpose was to worry the growers and make them think the manufacturer's were not troubled. The first break in the manufacturer's game of "goat getting" was when Mr. W. H. Wallace made a lengthy statement two weeks ago setting forth the manufacturer's position.

Let us suppose, however, that we had to choose today between growing no beets and acknowledging defeat of the principle for which we have stood. What would YOU do. I realize that this would be a grave question for the majority of beet growers to decide, but the time may come when the decision will have to be made. I hope every beet grower in Michigan can see now that there would only be one decision that would leave him his honor, his respect and his courage. That decision would be "no beets." Any other decision would be unthinkable. How could the beet growers of Michigan, after having cemented themselves into an organization and made certain FAIR and definite demands of the manufacturers, retract from their position, humbly take the contract the manufacturer has prepared and go forth defeated to chance the uncertainties of another season,—how could they do this,—without losing their self-respect and causing an everlasting injury to their cause.

You know as well as I, that if you grow beets under condition which you have forsworn, your cause is lost. Never again will your neighbors seek your assistance to protect them from the greed of the manufacturers. Never again will you be in a position to force the manufacturers to confer with you in the making of the contract. Today you have an organization, firmly welded together, with which as a weapon you can force the manufacturers to be FAIR. But you must use it. If you lay it away for a season its power will be gone, and for all time to come you and your children who grow sugar beets will have to take what the manufacturers want to offer you.

Stand by your guns! You have taken an honest, an honorable and a just position for which you have no apologies to make to anyone. Today is the day for you to settle for all time to come how the sugar beet contract shall be drawn and who shall have a hand in its making. Stand by your guns! Suppose you have to grow other crops this year. You can do it. There are other crops you can grow this year with greater profit than from sugar beets. You and those before you grew crops and made money out of them before sugar beets were ever heard of in Michigan. Anyway, what are the few dollars you might sacrifice for your beet crop this year compared to the advantages you will gain by standing steadfastly for your rights?

There is a big job here to be done. There is a mighty principle here involved. Once force the manufacturers to recognize that the farmer is the most important party to the contract and entitled to a voice in its making, and there will be no future controversies. Stand by your guns and never let it be said that with victory in sight the sugar beet growers lost their courage ard retreated to defeat.

Sweet Lord

U. S. Meat Exports Show No Material Decrease

Department of Commerce Shows January Exports Compare Favorably With Exports of 1918 and 1919

THERE HAVE been many conflicting statements made about the foreign demand for American meat products and its effect upon the immediate future of the nation's live stock situation. Some writers claim that farmers would do well to cut down production of swine and cattle, while others stoutly maintain that those who do so will live to regret it. Both quote apparently reliable statistics in support of their claims.

There is only one authentic and official source from which statistical information can be obtained upon these related matters. That is the U. S. Department of Agriculture. This department gives freely of such figures as it has compiled but leaves it entirely to the investigator to deduce what the figures actually show. In hopes of securing up-to-date and intelligent data THE BUSINESS FARMER has solicited the Department of Agriculture for all available information upon this subject. Replying in part to our request Mr. Frank Andrews, chief division of Crop Records, says:

"Your request for information concerning present needs of European countries for meat products is a most practical one, but one for which we have been able to get very little reliable data. This office receives reports from agricultural statistical departments throughout the world. We go through regularly the reports from the American consuls, and examine periodicals which come to us both from this country and foreign countries and which contain more or less agricultural information, but with all of these resources we are still unable to get satisfactory statistics on live stock production and consumption for many important countries."

Accompanying the letter were reports showing in a fragmentary way the supply of cattle, swine and sheep before and since the outbreak of the war, and a specially prepared report by the Bureau of Foreign and Domestic Commerce showing the quantity of meat and meat products exported from the United States by months for the years 1918-20. Portions of these reports are published herewith.

Cattle Increases

The reports show that from 1914 to 1920 the supply of cattle in twenty-five countries, including most of the principal countries INCREASED nearly 17,000,000 head. Russia is not included in this list. In 1914 European and Asiatic Russia reported a total of 50,000,000 head of cattle; recent figures from those countries are not available. It is probably safe to assume that Russia's supply of cattle has not materially increased during the war period, because of the unsettled condition of the country. Should the other nations see fit to recognize the soviet government and enter into trade relations with it, the Russian meat supply would undoubtedly become a factor.

Hogs Show Decrease

The reports show that the supply of hogs in 24 principal countries DECREASED over 20,000,000 head from 1914 to 1920, or from 155,906,000 to 135,510,000. This decrease was greatest in Germany and France. The supply increased from 58,933,000 to 75,587,000 in the United States, which country now produces nearly one-half of the total supply of the principal commercial countries from which statistics are available.

Sheep Show Decrease

The supply of sheep has decreased from 436,300,000 to 409,276,000 in the last six years, according to such statistics as are available. The decrease was greatest in France, Uruguay and Brazil. Countries which very nearly maintained or exceeded their normal supply during the war periods are United Kingdom, Germany, Argentina, Australia, New Zealand, India and the United States. A glance at the table on this page will show the reader which countries are the principal competitors of the United States in sheep production. It will also show countries no larger than the average size state producing twice as many sheep as the entire United States.

Slight Decline in Exports

The Department of Commerce's statement of January exports for 1920 do not entirely jibe with statements of the packers and others that exports have materially fallen off, thereby accounting for the slump in the live stock markets. In fact the exports of fresh beef for January exceeded the exports of every month in 1919, with one exception. There was a decline in th exports of canned and pickled beef, but the total of fresh, canned and pickled beef for the month of January, 1920, exceeded the total exports of these products for seven months of 1919. The January exportations of bacon exceeded those of six months in 1919 and seven months in 1918. The total of bacon, hams and shoulders exported during January, 1920, was greater than the total exported during January, 1920, was greater than the total exported during each of the months of September, October, November and December of 1919. Fresh pork exported in Jan. 1920 exceeded the amount exported during each of nine months in 1919 and each of ten months in 1918. With but one exception, the number of pounds of pickled pork exported in January, 1920, was greater than was exported during any single month of 1919. Only three months of 1919 exceeded the month of January, 1920, in the number of pounds of pickled pork exported. Canned pork exports showed a big decline in January, but inasmuch as the principal monthly exports were less than 1,000,000 pounds, the decline in these exports should have very little effect upon the livestock market.

If the reader will add the totals of exports of beef, pork and their products for the month of January, 1920, and compare with the exports of the two preceding years, it will be found that they compare very favorably and do not reveal any alarming decline in the European demand for our meat products.

We hope the figures and statements made herewith will be of some value to our readers in getting an intelligent grasp on live stock situation. For our part, we cannot see as they afford any reason for curtailing production of cattle, swine or sheep. No matter what we or other publications may say upon the subject there will be a considerable number of farmers particularly in the corn belt and western ranges who will cut down production but this ought to be all the more reason why farmers of Michigan should at least maintain their present herds and flocks, if not increase them. The decline of live stock values have been discouraging and have cost the producers millions of dollars, and will naturally act to decrease production. But we are inclined to agree with Mr. Christie that the livestock market will regain strength and while they may never again rise to the heights of last mid-summer, they will nevertheless reach a point where it will be desirable to produce the stock.

If the packers are not manipulating the live stock market and the export demand continues to be as strong as it seems to be in January of this year, the only thing that should stand in the way of higher markets and increased exports will be the high rate of exchange. The exchange situation has shown some improvement of late and a stronger feeling prevails that it will gradually right itself and expedite exports and trade.

HEAVY HOGS NOT WANTED

EXAMINATION of the export table below shows that the principal decrease of exports has been in lard. Heavy hogs have not been wanted for some months past, and the large number received at the yards has been a material factor in keeping down prices. Hogs weighing around 180 to 200 pounds will be in favor for some months to come. Farmers should bear this fact in mind. A Chicago news dispatch upon this subject says: "The present situation in live stock is more or less bewildering. Corn is going up day after day and cattle are going down week after week. Best cattle are $5 per 100 lbs. lower than a year ago. Hogs are struggling along trying to hold their own with the packers fighting every advance. This situation does not forecast anything but a scarcity of livestock later on."

SUPPLY OF CATTLE BEFORE AND SINCE OUTBREAK OF THE WAR

Country	Before the war	Recent estimate

"The use of Goodyear Cord Tires on our hog ranch is a source of all-round farming economy as well as of simple hauling economy. These tires save time and the handling of supplies and animals while reducing wear on truck, minimizing operating cost, saving hog shrinkage and sickness in transit and demonstrating other important advantages."—N. T. Shearman, Owner, Shearman Hog Ranch, P. O. Box 452, El Paso, Texas

AS in the instance cited above, a large number of farmers, planters, dairymen, and ranchers are reducing much of their general farming work, in addition to their actual hauling work, with pneumatic truck tires.

By freeing farm trucks of the handicaps imposed by solid tires, Goodyear Cord Tires relieve farmers of the necessity of hauling slowly and laboriously either with teams or solid-tired trucks and thus hindering other activities.

The full traction, cushioning and nimbleness of Goodyear Cord Tires primarily equip a motor truck to go anywhere on and off a farm with utmost protection to mechanism, load, driver and plowed ground or paved road.

Thus these athletic pneumatics save time and labor in the handling of supplies, crops and stock, and in the operation of power-driven farm machinery, enabling easier feeding, watering, fencing, threshing, wood-cutting and the like.

The rugged strength of Goodyear Cord construction, affording the foundation of the whole success of pneumatic truck tires, results both from Goodyear pioneering work and that extraordinary care in manufacturing which protects our good name.

The detailed reports of many farmers using pneumatic truck tires to improve the work connected with diversified crops, or such specialties as fruit, livestock and dairy products, can be obtained by writing to The Goodyear Tire & Rubber Company, at Akron, Ohio.

CORD TIRES

What a Farmer Who Borrows Money Ought to Know About Bankers

By ARTHUR M. SMITH, Farmer

"SOME farmers think," said a banking friend of mine lately, "that it pays to do business at more than one bank. A number of farmers around here have deposits both here and over at a competing bank in another town, and they do a little borrowing at both banks. As a rule their combined credit at both banks is less than their credit would be at our bank if they did all their business here. We occasionally stretch a point to help worthy farmers but we do not feel like going very far when they are doing business at other banks and may have hundreds of dollars in loans of which we know nothing. Just tell the readers of your paper that the average banker wants to help them, providing they are strictly frank and honest with him and tell him all about their financial affairs so he may form an honest opinion as to their risk. I like to have the farmers come in and talk with me. Our bank is not always able to give the amount of credit desired, but we are frequently able to give the would-be borrower some good advice which shows him the way to meet his financial problem."

This and other thoughts are brought out by A. M. Smith of Missaukee county, in the accompanying article. We'd like to hear YOUR experiences with the banks and bankers.—Editor.

THE FINANCIAL problem for many farmers in Michigan is most serious. Many of them have come to this part of the state because the lands are as yet comparatively cheap, seeking homes, with a small amount of cash. With but a few hundred dollars they make a first payment on a farm or a piece of cut-over lands, and begin the struggle to secure a home of their own.

Many of them are inexperienced in business matters and few realize that it takes really more capital to properly stock and equip a farm than the first cost of the land itself requires. But sooner or later the majority of such find that out, and many of them to their sorrow. Some buy their land on a contract and agree to pay seven per cent on deferred payments and a certain amount annually until they have their land paid for. A great many of such purchasers fail to keep up their payments, become discouraged after one or two crop failures and either sell out at a loss or are sold out or relinquish their contract. A few in spite of these handicaps make good by sticking a year when potatoes yield well and bring a good price. Others make a large payment on their land, give back a mortgage or obtain a loan at seven per cent. and go in debt as much as passible for stock and equipment. A few of these make good, but many after a year or two make an auction of all their personal property, pay up all their debts as far as possible, and sell out their holdings or relinquish them. Now there is a reason for so many failures, the causes of which it is the purpose of this paper to point out, and the remedy for which we believe is now somewhat in the hands of the settler. The greatest drawback to the west Michigan settler today is the high rate of interest which he pays The average farmer in many localities is paying seven per cent. and on a real estate loan when he takes it out, he pays a bonus of five per cent., or more, besides all expenses, including the mortgage tax. Many of these loans run for three years, and are extended on payment of a bonus to be paid annually.

If a farmer wants to borrow from the bank many bankers make the note for seven per cent. and then deduct the interest and "discount" the note for five per cent. and I have heard of some instances where a larger per cent. has been exacted. If security is given an extra charge is made for making out and registering papers.

Some farmers might struggle along and pay seven per cent. on his real estate loan for a while, but when he pays twelve per cent. on other money to stock and equip his farm and renews his papers every three months, as many do, how long can he last? It is obvious to any business farmer that a drain of twelve per cent. and more must eventually eat up the farmer's profits and put him out of business. One banker I know usually carries such farmers along until such time as the risk seems too great and then he advises an auction sale and a "clean up." Sometimes such a sale leaves the farmer a few dollars after the bank has been paid, the banker paid for clerking the sale, the auctioneer paid and the expenses of the sale met. Then the farmer starts in again, and borrows again at twelve per cent., or more, buys at other auction sales at exorbitant prices, cannot take advantage of discounts, and in a year or two more has another auction sale to make a "clean up", and generally on the second sale is "cleaned up".

Under such conditions it is not to be wondered at that the development of the farmers and the making of homes is a very slow process, and that the banks are waxing fat, while the farmer becomes, or remains, lean, and all lines of business depending on agriculture feels the handicap. We believe the remedy for such conditions cannot be obtained by antagonism of the banks under our present financial conditions.

But I believe my own experience in meeting this situation may be valuable to others. It may be only a partial remedy but this partial remedy is at hand, and within the reach of many farmers now annoyed by high real estate rates and inability to make annual payments and I will state how we applied it in Missaukee county.

When the law creating the Federal Farm Loan Banks went into effect I called a meeting of the farmers of this county, and explained to them the methods by which we might organize and secure funds with which to pay off our indebtedness. Several meetings of farmers were held, a local association was formed of which the writer acted as secretary until it got started, and in due time the organization was perfected. At this time the assistance of the county agent was obtained to help push the matter, an employe of one of the banks was induced to act as secretary for a small salary and the writer not wishing a loan retired from the organization. But had it been necessary for me to continue in the association to make it a success I was intending to take out a small loan, for I considered I could use the money in my business and make it pay, as it can be obtained for less than I can borrow money any place else, and the percentage payment of six or six and one-half per cent. pays the interest and reduces the principal and is the only payment required. Such loans run for thirty-six years and are proving a very acceptable boon to west Michigan farmers.

Of course many farmers cannot secure sufficient money this way, but many have been buying land and obtaining their money from the Federal Farm Loan Bank, all they could get, and have given a second mortgage to the man from whom they purchased their farm for the remaining balance due him. This method I believe wil help solve the financial problem of the farmer who has purchased good land. For the man on poor land there is not much hope at present, and my advice to such would be to get rid of the poor farm to the best advantage, and obtain good land, which has a value which will rapidly increase with improvement. I have already pointed out that a farmer needs more capital with which to equip and stock his farm than he needs to purchase his land. How can he arrange to get this at a legal rate of interest.

The first thing the borrower of money must learn is that he must be honest and fair with himself and with his banker, and also absolutely open and above board with him. When I wanted help from my banker I went to him and told him frankly how I was situated, what I owed and what my resources were, what I wanted to do with the money I wanted to borow and how I would like to borrow it. I also had previously opened a checking account at the bank and had been in the habit of depositing every cent I received and checking out to pay all my bills. Thus I had made my account of some value to the bank.

The trouble with a lot of farmers is that they want to carry their money around with them in their pockets, or if they have a hundred dollars ahead they will take a certificate so as to get the three or four per cent., and then the next spring when they have used up their reserve and need some money must pay what the banker asks.

Now when I had told my banker what I wanted he said "yes, I can let you have the money", and when I said "on what terms, he said "seven per cent. and discount". I said, "I will borrow this money and pay you just seven per cent., the legal rate, or I do not want it". I got the money from which the interest was deducted and used it. Later on when making a new loan I called for the full amount I wished to borrow and said that hereafter I would pay the interest when the money was due. My terms were accepted.

But let me add, that as a customer of the bank I always endeavored to make my business valuable to the bank and gave the one bank my business exclusively. The bank appreciated my frankness and my loyalty by giving me the best service, at the minimum cost for this part of the state.

The trouble with a lot of farmers in relation to their bank is that they do not realize that a real banker is a good adviser, and friend whose advice should be sought and respected. Not all of them are "just all right", but most of them will meet the industrious wide-awake "business farmer" more than half way, and if one wants the banker to handle one's business and help finance it, one should make an effort to have a business worthy of the banker's confidence. One of the stepping stones to prosperity in western Michigan is the door step to the dairy barn, and the west Michigan farmer who has a cream check to deposit every week in the year will find his banker a mighty observing and appreciated counsellor, who will be ready to help him to buy more good land on which to raise more pasture and cow feed, to feed more cows to get more cream and hogs and young cattle with which to get more money to buy more land, etc. Why not go in and talk your financial needs over with your banker and if you are a real earnest industrious farmer and there is a real banker in your community, I think you will be able to solve many of your financial problems.

Note—It is not the purpose of this article to more than suggest a remedy for many of the hard conditions which remedy is now within the reach of many who will read this article. My purpose has been to point out the method of its application. Legislation and other conditions may in the future remedy some of the present troubles, but for many the remedy is at hand and has been pointed out.

Every Business Farmer and His Wife Should Cast Their Vote April 5th

NEXT MONDAY, April 5th, the voters of Michigan will have a chance to express their choice for the next President of the United States. This will be in accordance with the Michigan presidential preferential primary law. The choice of the voters at the polls next Monday will probably be the choice of the Michigan delegates at the convention but not necessarily so.

The three Republican candidates, Johnson, Wood and Lowden have been conducting aggressive campaigns in this state in the belief that the preference of the voters will go a long way in determining Michigan's choice at the convention. Each of the candidates claims the state. The Democrats have left Michigan pretty much alone, realizing the hopelessness of securing Michigan support for their party. A. Mitchell Palmer has visited Detroit where he received a fairly warm reception from Detroit Democrats.

The direct charges of Sen. Borah and the indirect statements of Sen. Johnson that large corporate interests were backing the Wood and Lowden campaigns have injected unusual interest in the campaigns. Borah points to the dinner given to Wood at the inception of his candidacy by a group of influential New York capitalists, and to Lowden's connection by marriage to the Pullman family which ranks foremost among the nation's aristocrats and people of wealth. Both of these gentlemen have denied the charge of improper acceptance and use of money, claiming that it is merely a pre-election political move to influence the voters.

The interest has become very keen in THE BUSINESS FARMER'S straw vote, more votes having been received the past week than altogether during the previous three weeks. As straw votes go we consider it fairly indicative of Michigan rural sentiment the 800 votes received having come from every county in the lower peninsula and mostly from individual farmers. The result of this vote is given here in tabulated form.

Providing the primary vote is close we shall continue to publish our ballot, but in case either of the Republican candidates receive a large plurality, the straw vote will be discontinued. Beginning in an early issue however, we will publish a questionnaire upon important issues of the day which we feel the farmers ought to express themselves upon. Watch for this and give us your views.

The Six Leading Straw Vote Candidates

Total votes received	812
Hiram Johnson	230
Henry Ford	107
Herbert Hoover	93
Leonard Wood	87
Frank Lowden	78
William J. Bryan	66

Additional votes were received as follows: Robert LaFollette, 37; Wm. G. McAdoo, 13; Woodrow Wilson, 12; Warren G. Harding, 4; A. Mitchell Palmer, 2.

We also received 83 miscellaneous votes.

What the M. B. F. Folks Say

It is impossible to publish all the comments that have been received upon the various candidates, but below we print a number in the order in which they have been received:

(*Continued on page* 23)

Socialist Denies His Party Advocates Equal Distribution of Wealth

By ARTHUR GOULD

READING the third page of the March 6th issue of M. B. F., pertaining to an even division of the world's wealth per capita, regardless of who earned or created this wealth, the letter written by George E. Roberts, a New York banker, and republished by the misinformed editor of M. B. F. has aroused by patriotism to a boiling heat, therefore, please allow me to criticise and correct a serious mistake of yours. A mistake which is nothing less than implied slander toward all true reformers of this world's government, more especially the Socialists. Implying that Socialists believe what they do not believe. I know you did not mean it to be so, but it is so, and I should be neglecting my patriotic duty, if I did not rise up and make an effort to defend the truth against the enemies deceiving propaganda.

For more than a year I have been a devoted reader of M. B. F. which I value more than any other publication that comes to me, and I know that the editors are not creedbound, either in politics or religion, that they stand for the best interests of the whole people and public welfare in general as best they know how. But in my opinion the editor's greatest weakness is his ignorance and misunderstanding of the full knowledge of Socialism as set forth by its main leaders, and as a result of this ignorance and misunderstanding, the editor has devoted the whole or nearly all of the third page of the March 6th issue of M. B. F. to the interests of capitalistic and profiteering propaganda, which forcibly implies that all opponents of capitalism and profiteering are real believers in the unreasonable theories as set forth in the article above mentioned. It is a malicious deception and intrigue on the part of capitalists and profiteers to circulate deceiving propaganda for the purpose of misleading the public mind, by their lies and misrepresentation of their opponents belief.

Socialists do not believe what their enemies report or represent them to believe. We Socialists must suffer persecution and condemnation from capitalists and profiteers. We expect to. But now, Mr. Editor, if you are going to allow space in M. B. F. for profiteering propaganda, why not allow an equal space for Socialists to defend their rights against such propaganda and give us both sides. Is that unfair? The government's jug with handle all on one side does not balance good. Give us both sides or no side.

I am not qualified to defend the cause of Socialism, but if no one else comes to its rescue I will, and do the best I can. My position as a faithful reader of M. B. F. and a Socialist too, is to show the editor and readers of M. B. F. that the article above mentioned as written by George E. Roberts, a New York banker is profiteering propaganda and implies that Socialists believe in and stand for the unreasonable theories therein described which is a slanderous lie, the fact is, Socialists do not or never have believed or advocated the unreasonble theories as described in the above mentioned article. The chief one of which is the dividing up of the world's wealth. Among all the people so as to give an equal amount per capita. Nobody believes in that theory. It is profiteering propaganda. Show me one man who really believes it and I will show you a chicken with teeth. No individual believes it, but the capitalists has lied it on to the Socialists and the public has grown to believe that the Socialists do believe it.

The public in general has been misinformed and miseducated, not by Socialists but by capitalistic propaganda in regard to what Socialism really is and its objects and purposes and it will be a long and hard job to change that misinformed public opinion, but as soon as the public realizes that they have been deceived by the propaganda of the enemies they will make an honest investigation to learn what Socialists really believe and what they stand for. True Socialism is a higher form of society and a higher state of civilization than capitalism and has a corresponding higher system of government to offer.

Socialism is founded upon the golden rule "to others do, as you would have them do to you." Therefore, Socialism may truly be called the kingdom of righteousness on earth, and must be born not made, hence the true Socialist never fights capitalism, nor seeks to destroy either the capitalist or the government. He knows that capitalism will eventually die a natural death and that as fast as capitalism dies out of public sentiment, Socialism is born in to take its place, gradually, naturally and peacefully, regardless of party politics or political administration. The trick of the propagandist explains as follows. Socialists do believe in and advocate the public ownership of all public property and also, the Socialists do believe in and advocate private ownership of all private property.

Please notice that in all capitalistic propaganda, no mention is ever made of the Socialists views of "private property." so by cutting out one-half of the Socialists platform from the enemies propaganda, the other half looks very appalling indeed, and constitutes a slanderous misrepresentation of Socialists and Socialism. Hence the need of reading standard works on Socialism to correct the public misunderstanding of what Socialism really teaches.

Socialism would take nothing from the producer of wealth but would give to the producer the full value of all he created. Yes, of all he could produce in a lifetime, from the unmortgaged resources of the world's wealth. Explanation: "The unmortgaged resources," Socialists believe that God gave the earth to man with all its bountiful resources of wealth, unmortgaged, that, capitalism has allowed profiteering parasites to own and hold mortgages on all resources of the world's wealth and grow fat on the interest and revenues from those mortgages, this class of people never work, never produce any wealth. They are human para-

(*Continued on page* 28)

Understanding Socialism

THE editor has frequently been charged with ignorance of the principles of "true socialism". Well, possibly the charge is correct. We have read books on socialism galore, and while we think we have a faint conception of the goal the socialists would reach, we have never been able to figure out how they were going to get there. Even the socialists themselves disagree and argue over the "modus operandi". The writer of the accompanying article puts up a strong defense of socialism, with which you may or may not agree.—Editor.

ESSEX MOTORS DETROIT U.S.A.

Essex Almost Doubles Light Car Endurance

Essex Has Performance Like the Costliest Fine Cars—
Its World Endurance Record Has Never Been Rivaled

The most important thing Essex has proved is that weight and size are no longer necessary to finest car quality.

Its 3037 miles in 50 hours is a world endurance record. The test was official. Supervisors of the A.A.A. certified the Essex stock chasis in every detail.

Never before was a car driven at top speed for 50 hours. The grind was equal to years of road use. Yet the Essex showed no measurable wear.

What car, the Essex size and weight, can even attain a mile-a-minute speed, much less keep it up for 50 hours?

Such Endurance as You Want in Your Car

These decisive tests proved Essex not only the supreme performer of the light car field, but they showed that the moderate priced, economical Essex has such endurance and dependability as few large, high priced cars offer.

Greater size could add nothing to Essex. It has the qualities weight and size are built to give—riding comfort, solidness, distinction and smooth, quiet pace. But in addition it has fuel, oil and tire economy. And its great durability means freedom from repair costs and positive, dependable transportation.

Essex is easy to operate. Driving does not fatigue. Its quick response to the lightest touch and its smooth, restful comfort in motion, account for this.

That is why so many women are Essex owners. They appreciate its safety, too. Its controls are simple and instantaneous. It makes fast time, with security, even in difficult traffic.

Essex Wins on Quality Minus Useless Weight

Essex won recognition on the issue of finest quality without useless weight and size. That issue is uppermost today.

You will take pride in your Essex from the first. Its beauty, luxurious fittings and its performance give it distinction everywhere. And time will increase your respect for it. You will come to rely absolutely on its dependability. You will find it always ready for any demands you may make.

These are reasons why Essex set a world's sales record in its first year. And orders are now so far ahead it is certain even that unrivaled mark will be surpassed this year.

Thousands, realizing this, are placing their orders now. We advise that you do the same, to avoid disappointment.

Essex Motors, Detroit, U. S. A.

The Organized Farmer

FARM BUREAU—FARMERS' CLUBS—FARMERS' UNIONS—GLEANERS—GRANGE

RAISE FUNDS FOR TEMPLE OF AGRICULTURE

Seventeen states had participated in the campaign to raise funds for the Temple of Agriculture at Washington, D. C., on the completion of an audit February 18 by certified public accountants. This audit showed total receipts of $41,915.06, of which $4,000 was in the form of a loan, $131.29 a credit in adjustment of taxes on the property bought at 1731 Eye street for a temporary home, and $37,183.77 in gross contributions raised through the farm organizations.

Following is a list of the contributions by states as received up to the time of the audit:

Washington and northern Idaho, $20,039.16; Pennsylvania, $11,134.96; California, $1,696.90; Georgia, $926.00; Iowa, $718.50; Virginia, $678.40; Maryland, $558.00; South Dakota, $557.00; North Dakota, $530.00; Kentucky, $266.00; Tennessee, $229.00; Montana, $190.85; Michigan, $100; Wisconsin, $100; Colorado, $25; Idaho, $25; Louisiana, $9. Total, $37,783.77.

The Finance Committee is greatly encouraged by these returns as, at the time of the audit, intensive efforts to raise money had been begun in only three districts. These districts comprised Washington, northern Idaho, Pennsylvania and Virginia. The Virginia campaign was barely under way at the time of the audit.

Secretary Charles W. Holman of the Finance Committee in charge of the drive, has received advices that additional intensive campaigns will begin immediately in the states of Maryland, New York and Georgia. In Maryland, most of the farm organizations are federated for common work under the name of the Maryland Agricultural Society. This federation will actively canvass for funds. In New York state, the Dairymen's League, a powerful organization, will initiate the drive and will invite all other farm organizations in that state to co-operate in the attempt. In Georgia, the state division of the Farmers' Co-operative and Educational Union of America is in charge. Activities in the middle west will be started in midsummer.

The first stage of the Temple of Agriculture drive will have been completed when the funds received amount to enough to pay for the four story building now used as headquarters for the National Board of Farm Organizations. The original purchase price for this property was $57,200. Additional obligations have been incurred for improvements. As fast as money is received it is applied to the curtailment of the obligation for the property. Expenses of carrying on the campaign are cared for promptly and the books of the Finance Committee are open for inspection at any time by those who have a real interest in the movement.

The Riggs National Bank of Washington, D. C., is custodian of all funds received and John A. McSparran, master of the Pennsylvania State Grange, is the treasurer. All contributions should be addressed to Mr. McSparran in care of the bank. All communications in reference to the campaign should be addressed either to the state organization in charge, or to Charles W. Holman, secretary of Finance Committee, Temple of Agriculture Campaign Fund, 1731 Eye Street, Washington, D. C.

MILK PRICE FOR APRIL

Editor BUSINESS FARMER—I appreciate the kindness you have ever shown me in giving reports to our milk producers who are your patrons. In every one of these, since the first of January, the surplus proposition was as much a consideration as the Detroit price; but inasmuch as the surplus was not known until the end of the month, this figure could not be stated or dealt with until it was known, and in quoting on the $4.05 basis it meant, in each and every quotation, subject to the findings of the surplus committee. In the last findings of the surplus committee, for the month of March, it was determined that there was 17 1-2 per cent. surplus, of which the farmer was to stand 15 per cent., and this at $2.75 per hundred pounds at the shipping station. The April price will continue to be as the former price, $4.05 per hundred pounds, Detroit delivery, subject to the surplus findings in the latter part of the month.—*R. C. Reed, Sec'y Michigan Milk Producers' Association.*

DON'T SIGN SUGAR CONTRACTS

Mr. James Clemmens who, as director in the American Society of Equity, has been assigned to the beet sugar work asks us to advise all sugar beet growers to be in no hurry to sign contracts, as the department of justice is looking into the contracts and expects to have a new and uniform contract prepared that will be to the advantage of the growers.

Wisconsin last year had 2,000 acres in sugar beets which, yielding an average of eleven tons to the acre, produced a total of 242,000 tons of beets the Wisconsin farmers really furnished 72,600,000 pounds or 36,300 tons of sugar the past year. Not so bad is it? Our own farmers have grown enough sugar that they should at least have all they need when they want it.—*Organized Farmer.*

Co-Operatives Progress in Switzerland

THE SWISS Co-operative union has just completed a statistical return of the co-operativesocieties existing in Switzerland on Dec. 31 1918, in accordance with the registrar's office of commerce.

First of all we distinguish the societies composed of consumers. They number 822 societies for the sale of general articles of consumption, 415 for the supply of water, 345 for the provision of electricity and lighting, 19 for building and lodging, and 107 miscellaneous.

The Swiss agriculturists, who are in the great majority among the smaller proprietors who farm themselves—have formed amongst them 860 co-operative societies for the purchase of seeds, manures, fodder, implements, etc., 1,324 for cattle breeding, 196 for the purchase and the use in common of machines, 2,580 for cheese making and the sale of milk, 51 for the distillation of fruits, 146 for the utilization of other products, such as fruit, wine, honey, grain, etc., 57 for the improvement of the soil, and 64 for the working in common of pasture lands.

There are 750 co-operative societies for insurance, particularly of cattle; 213 for mutual credit after the Raiffesen system, 231 for savings and credit. Smaller artisans have founded 101 societies for various purposes.

Finally, 2,255 co-operative societies cannot be classified. The greater part of them, doubtless, are not truly co-operative, possessing no title to be co-operative other than etiquette.

This collection of statistics shows that the consumers have a good co-operative organization, but that the small cultivators above all have turned his form of organization to profitable account. It is certainly owing to the marvelous extension of these societies that the small cultivators owe their extraordinary upliftment during the last 20 to 25 years.

There were, therefore, on Dec. 31, 1918, a total of 10,586 co-operative societies in Switzerland, as against 6,841 at the end of 1910. The progress is considerable; and it is equally marked on the distributive side of co-operation as on the agricultural.

An examination of these statistics in regard to the consumers' societies affiliated with the Swiss Co-operative union shows that on Dec. 31, 1918, there were adherent societies to the number of 461, of which 433 sent in returns; and the membership of these societies was 341,826, whilst the number of employes was 6,114. The sales totalled 237,595,776 francs; 7,035,355 francs represented share deposits; and the reserve funds amounted to 17,171,800 francs. Th net surplus altogether was 13,189,099 francs, and there had been distributed as dividends 10,150,083 francs. The average sales by societies was 548,719 francs, and the average of purchases by the members stood at 695.08 francs. The above figures show a very great advance on those of 1917.

Urges Farm Bureau Own Packing Plants

I CERTAINLY appreciate those splendid topics that the M. B. F. are putting out, and so thoroughly discussed relating every possible item of interest to the Michigan farmer, to open the eyes that have so long been blinded by those great WHITE GLOVED men that they have been sending to our state and national congress and other inferior offices, receiving graft from those big "five" and other profiteers, paying them handsome "wads" to make laws to protect their gambling dens, and compel the poor old "hay seeds" as they called them, to bow to their slavery. The farmer now has certainly opened his eyes and sees just where he has been losing in the past. Now comes the Farm Bureau, offering him to become an independent man, not relying on the profiteer to sell his products to, and will soon be able to see a fair profit in his farm products, instead of the profiteer receiving the cream and the farmers the skimmed milk. We have a snappy live Farm Bureau in this township and county and are planning on establishing our own elevators, canneries, and buying and selling agency which appears to be one of the best established, the farmers of this section have ever made. Bangor has been chosen and appears to be the best town around here for the headquarters of the buying and selling agency. Therefore, I believe that if everything is handled properly, that it will be a bounding success.

I would say, cut out the "Big 5" and establish our own State Farm Bureau "packing houses," buying agency, grain elevators and flour mills, etc, making it centralized in the state, say at Grand Rapids and other branch places in the northern part of the state and possibly at Detroit. This method would not only be carried out by this state, but I am inclined to believe that all other states would immediately follow the plan and entirely eliminate the monopoly and profiteering business.

To establish this would not be as hard as the Farm Bureau itself. If those farmers who are not already members of the Farm Bureau, knew that such a thing were being put on for the 1921 Farm Bureau program, that the Farm Bureau membership would rapidly raise to a 99 per cent quota.

And to obtain the money for the immediate construction and carrying out of these plans, would be of little trouble on the part of the solicitors. Many farmers would be willing to give as high as 100 to 200 dollars to see the thing through.

Therefore I believe that if action could be taken as soon as the Farm Bureau is thoroughly organized, that the farmers of this country would see a much larger income from their farm products, plus a good dividend and interest on their money.—*Lewis Abbott, Geneva Twp., VanBuren Co.*

PLATFORM OF THE ORGANIZED FARMER

The campaign pledges desired from presidential candidates by the agriculturists making up the National Board and Farm Organization, are made known in a questionnaire which has just been sent to all active and receptive aspirants.

The questionnaire was prepared by a committee selected at a recent conference of the organization. It is designed to emphasize the view of the farm leaders that prosperity on the farm is the first condition of general prosperity, and that the decline of agriculture is now and always has been the central danger to civilization. It is contended that agriculture is declining in America, and that in the interest of the general welfare of the people the decrease of farm production compared with population and the impairment of the fertility of the soil must be stopped.

C. S. Barrett, of Union City, Georgia, president National Farmers' Union, is chairman of the committee.

The questions submitted to the presidential candidates follow:

(1) Will you do your best to bring about such direct healing between producer and consumer as will secure to the farmers a fair share of the wealth they create, reduce the cost of living to the consumer and limit or destroy the opportunity of the profiteer?

(2) Will you do all that in you lies to secure to all farmers and consumers the full, free and unquestionable right to organize and to purchase and sell co-operatively.

(3) Will you see that the farm people of America are represented on general boards and commissions in whose membership various interests are recognized, whether or not the work is directly concerned with agriculture?

(4) Will you appoint a secretary of agriculture who knows actual farm conditions, who is satisfactory to the farm organizations of America, and who will cause to be made comprehensive studies of farm production costs at home and abroad, and publish the uncensored facts?

(5) Will you take the action necessary to ascertain and make public all obtainable facts concerning the great and growing evil of farm tenancy, so that steps may be taken to check, reduce, or end it?

7) Will you earnestly endeavor to secure to co-operative organizations of farmers engaged in interstate commerce, service and supplies equal in all respects to those furnished private enterprises under like circumstances?

(8) Th railroads have been returned to their owners. If at the end of two years of further trial of private ownership the railroads fail to render reasonably satisfactory service to the people, will you then favor reopening the railroad question?

(9) Will you use your best efforts to secure the payment of the war debt chiefly through a highly graduated income tax or, otherwise, by those best abled to pay?

(10) Will you earnestly strive to uphold and enforce the national conservation policy and especially to stop forest devastation, which has already more than doubled the price of lumber and paper to the consumer?

(11) Will you do your best to secure and enforce effective national control over the packers and other great interstate combinations of capital engaged in the manufacture, transporation, or distribution of food and other farm products and farmers' supplies?

(12) Will you respect, and earnestly strive to maintain, the right of free speech, free press and free assembly?

N. Y. MILK PRICES LOWER

An average reduction from March prices of milk to the distributors of one and seven-tenths cents per quart for the month of April has been announced by the Dairymen's League of New York state.

The Farmer and His Hired Man

HY THE FARMER CANNOT PAY HIS HIRED HELP MORE

HOW CAN the farmer keep his hired help from going to the city?

If ninety-nine out of a hundred mers in the State of Michigan th of Grand Rapids would pay ir hired help the wages paid man in question the ninety-nine uld be the hired help and the hired n of today would own the farm. I 71 years of age, have farmed 40 rs, lived in the city seven years know what I write to be true.

he farmer is the poorest paid orer on earth. Large crops, low ce on everything produced, price d by the buyer.

Now if the farmer would set his ce the same as the buyer—a fair ce, not to profiteer, but a fair pro—on labor, stock, land, tools and es, then he could pay his hired help ng wages. I don't blame the hired n for wanting good wages, but I do me him for laying all to he farm-

The table below is a fair representation of an 80 acre farm north of nd Rapids:—

atoes, 10 a., 1,000 bu.	$ 500.00
, 10 a., 150 bu.	150.00
n, 10 a., 400 bu.	600.00
s, 10 a., 250 bu.	160.00
y, 20 a., 20 tons	400.00
terfat, 3 cows	300.00
Total	$2,110.00

Feed and Pasture Per Year

orses	$ 400.00

d 25 days	50.00
Total	$1,620.00

ving a total for all labor and deiation in soil, $490.00.

ow if this farmer would furnish hired man for one year with—

l	$ 80.00
ushels potatoes,	30.00
1 cow	100.00
g, 250 lbs.,	45.00
l for 30 chickens	75.00
od horse, $6 per week	312.00
of year bonus	500.00
d man would get,	$1,142.00

his services, while the farmer d get $4.90, making a difference vor of hired help of $652.

have placed a high estimate on the er's crop yield, also on the prices ould get for them. You can now why the farmer don't pay more es. You see if the farmer's outwas $1,620 and hired help $1,142 otal would be $2,760, while his re-s $2,110, leaving a deficit of $652.

R. Freeman, Newaygo Co., Mich.

A MONTH ON 40-COW FARM

WONDER if he powers hat be will me a little e. In almost v paper we up you see or more les about nen leaving farm. Now, about the who is tryo get on a . My husband has had years in ing and ral farm- yet we are own. Why? ly because armer who s a man r cannot ill not pay enough to take care of his family. For instance, we were offered $70, house and milk, on a 40-cow dairy farm. Fourteen cows of official test, no garden, no chickens, no fuel, no way to get to town. More of them are offering $60.00 with garden, house, and some offer all fuel, some part.

Now when I go to buy a house dress do I get it cheaper than the woman who lives in town? I'll say no. Neither do I get anythink else cheaper. I pay the same price that the one pays whose husband gets $5.00 and $6.00 a day. Why then because my husband is a good dairy man should he be asked to work for less than a common laborer can get. He puts in longer hours and part of his Sundays. In fact he is on the job 20 hours out of 24 and sometimes the full 24, when something goes wrong.

Now don't imagine from my letter that I'm knocking farming, for we would rather be on a farm than in town, but we cannot work for nothing aand board ourselves. So if you know of some farmer who will give a square deal we'd like to hear about him. I am beginning to think with Nancy of the News, "there ain't no such an animal". Am willing to be convinced.—*Mrs. J. D. C., Rochester, Mich.*

TWO SIDES TO THE QUESTION

I HAVE been reading the articles of your paper on the scarcity of farm help. I was born on a farm and have always worked out by the month or year. I have worked for men who have been white and others who were simply slave drivers, so I know whereof I speak.

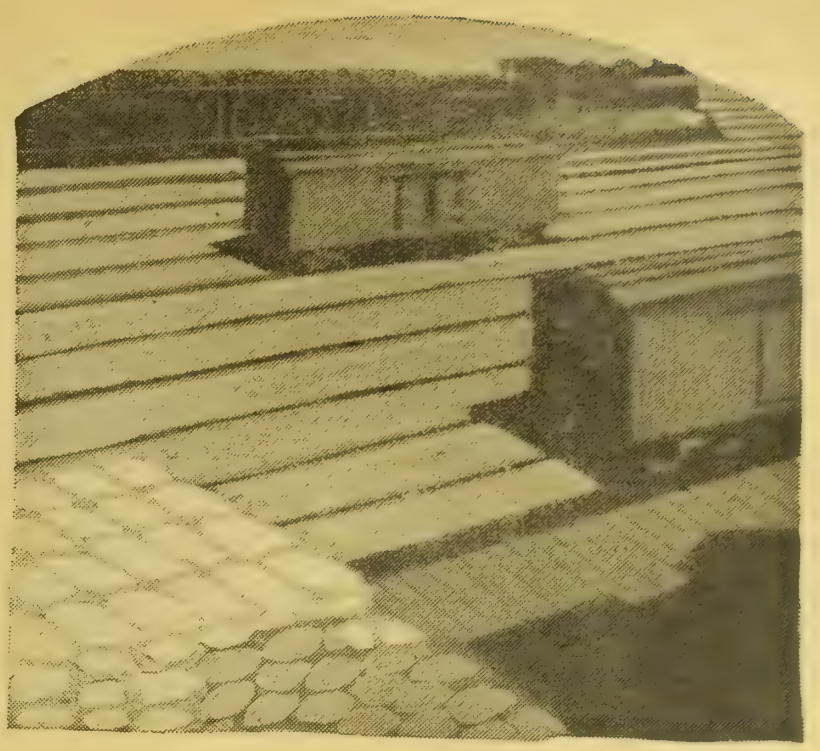
I think the farmers are largely to blame for the existing conditions. A great many have by greed and selfishness to become rich literally driven the boys and girls from the farm. I have in mind a man who had six sons. He boasted that he would give every son 250 acres at his death. The whole family were slaves. Never did you see him take a day off and he and the boys go fishing or to the fair. He would use a tool as long as it would hang together with wire. He was never a companion to his boys. What was the result? As soon as they could, each any every one of them sought companionship away from home and gradually wandered away. Did any of those six boys stay on the farm? No. Why would they when they had never seen anything but drudgery.

I believe if fathers and mothers would take more interest in their children, give them something to raise for their very own, things would be better. I have a son. I plan to go fishing with him several times during the year. I go for the express purpose of giving him a good time. The day off does me a lot of good and the boy goes whistling to the potato patch the next morning. How proudly will he square his shoulders and say, "This is my own calf or pig."

Friends, I know it pays. This same method will work with hired help. After an exceedingly busy time, take a day off, go to the lake or somewhere. How much fresher they will be the next morning. A little praise will some times ease a hard job.

I am of the opinion that it does more injury than good to be constantly airing our troubles. People get tired of hearing a hard luck story every time they see you. But if both employer and employee would work together they would solve to a large extent the scarcity of help on the farms today.—*Fair Play, Montcalm county, Mich.*

THESE LETTERS from the farmer and his hired man are of intense interest to us, and we believe, to our readers as well. 'Tis said that "confession is good for the soul." How many times has the farmer felt like saying to his hired man the things he has written here, and how many times has the hired man been tempted to unburden his troubles as he has unburdened them here? Yet, we'll wager that neither suspected the thoughts of the other. Consequently there has been misunderstanding and where misunderstanding exists, there you will also find unreasonableness and conflict. This interchange of reins between the farmer and his hired man ought to pave the way for a better understanding and greater co-operation between the two. The farmer should see that his hired man reads every one of these letters, and the hired man should bring them to the attention of his employer. These letters are not propaganda. They are from bonafide farmers and farm workers, whose problems and hopes are pretty much the same as yours.—Editor.



Fewer Freight Cars —More Shipping

During the last two years, few box cars and few locomotives have been purchased by the railroads.

The nation's industry is requiring more shipping this year than ever before—and the railroads are badly handicapped by the scarcity of rolling stock.

This Means Frequent Delays in Shipments

Late deliveries of Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia, and "U-S" Potash may have a serious effect on your plans.

Don't wait until the materials are actually needed on your farm—

Order Solvay Products Now

—a month in advance—two months in advance. Get your order in before the "rush season," and be sure to receive your shipment on time.

Ordering in advance gives us an opportunity to protect you against a late delivery by tracing your shipment, if it goes astray; or by replacing it, if lost.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, son of a New York millionaire, who has just died, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker and a former colleague of young Morgan's father, plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis, to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. He is chased from the island by her father and brothers. Francis explores another island where a young man threatens his life and then saves it from savages who attack young Morgan. Francis and the young man discover they are related. The young man, whose name is Henry Morgan, is also hunting for the treasure. They form a partnership. Francis discovers that Henry is the lover of the girl on the island and that her name is Leoncia Solano. Francis returns to the first island to ask Leoncia to forgive Henry which she does. He is captured by Torres and the Jefe Politice of San Antonio who proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang Francis when Henry appears and is thrown into prison. Leoncia finds she loves both men. The Solanos and Francis plan to release Henry, after which they are pursued by Torres and the Jefe with his soldiers. They escape to the boat that Francis has chartered. The Jefe secures a tug-boat and follows them.

HENRY and Francis, in their chosen positions and waiting until the narrowness of El Tigre was reached, took a hand in the free and easy battle.

"My congratulations, sir," Captain Trefethen said to Francis, the Indian of him compelling him to raise his head to peer across the trail, the negro of him flattening his body down until almost it seemed to bore into the deck. "That was Captain Rosaro himself that was steering, and the way he jumped and grabbed his hand would lead one to conclude that you had very accurately put a bullet through it. That Captain Rosaro is a very hot-tempered hombre, sir. I can almost hear him blaspheming now."

"Stand ready for the word, Francis," Henry said, laying down his rifle and carefully studying the low shores of the island of El Tigre on either side of them. "We're almost ready. Take your time when I give the word, and at 'three' let her go."

The tug was two hundred yards away and overtaking fast, when Henry gave the word. He and Francis stood up, and at "three" made their fling. To either side can and beer case flew, dragging behind them through the air the beaded rope of pots and cans and bottles and rope streamers.

In their interest, Henry and Francis remained standing in order to watch the maw of their trap as denoted by the spread of miscellaneous objects on the surface of their troubled wake. A fusillade of rifle shots from the tug made them drop back flat to the deck; but, peering over the rail, they saw the tug's forefoot press the floated rope down and under. A minute later they saw the tug slow down to a stop.

"Some mess wrapped around that propeller," Francis applaunded. "Henry, salute."

"Now, if the wind holds . . ." said Henry modestly.

The Angelique sailed on, leaving the motionless tug to grow smaller in the distance, but not so small that they could not see her drift helplessly onto the shoal, and see men going over the side and wading about.

"We just must sing our little song," Henry cried jubilantly, start-up the stave of "Back to Back Against the Mainmast."

"Which is all very nice, sir," Captain Trefethen interrupted at the conclusion of the first chorus, his eyes glistening and his shoulders still jiggling to the rhythm of the song. "But the wind has ceased, sir. We are becalmed. How are we to get out of Juchitan Inlet without wind? The Dolores is not wrecked. She is merely delayed. Some nigger will go down and clear her propeller, and then she has us right where she wants us."

"It's not so far to shore," Henry adjudged with a measuring eye as he turned to Enrico.

"What kind of a shore have they got ashore here, Senor Solano?" he queried. "Maya Indians and haciendados—which?"

"Haciendados and Mayas both," Enrico answered. "But I know the country well. If the schooner is not safe, we should be safe ashore. We can get horses and saddles and beef and corn. The Cordilleras are beyond. What more should we want?"

"But Leoncia?" Francis asked solicitously.

"Was born in the saddle, and in the saddle there are few Americanos she would not weary," came Enrico's answer. "It would be well, with your acquiescence, to swing out the long boat in case the Dolores appears upon us."

CHAPTER VIII.

IT'S ALL right skipper, it's all right," Henry assured the breed captain, who, standing on the beach with them, seemed loath to say farewell and pull back to the Angelique adrift half a mile away in the dead calm which had fallen on Juchitan Inlet.

"It is what we call a diversion," Francis explained. "That is a nice word—diversion. And it is even nicer when you see it work."

"But if it don't work," Captain Trefethen protested, "then will it spell a counfounded word, which I may name as catastrophe."

"That is what happened to the Dolores when we tangled her propeller," Henry laughed. "But we do not know the meaning of that word. We use diversion instead. The proof that it will work is that we are leaving Senor Solano's two sons with you. Alvarado and Martinez know the passages like a book. They will pilot you out with the first favoring breeze. The Jefe is not interested in you. He is after us, and when we take to the hills he'll be on our trail with every last man of his."

"Don't you see!" Francis broke in. "The Angelique is trapped. If we remain on board he will capture us and the Angelique as well. But we make the diversion of taking to the hills. He pursues us. The Angelique goes free. And of course he wont catch us."

"But suppose I do lose the schooner!" the swarthy skipper persisted. "If she goes on the rocks I will lose her, and the passages are very perilous."

"Then you will be paid for her as I've told you before," Francis said, with a show of rising irritation.

"Also there are my numerous expenses——"

Francis pulled out a pad and pencil, scribbled a note, and passed it over, saying:

"Present that to Senor Melchor Gonzales at Bocas del Toro. It is for a thousand gold. He is the banker; he is my agent, and he will pay it to you."

Captain Trefethen stared incredulously at the scrawled bit of paper.

"Oh, he's good for it," Henry said.

"Yes, sir, I know, sir, that Mr. Francis Morgan is a wealthy gentleman of renown. But how wealthy is he? Is he as wealthy as I modestly am? I own the Angelique free of all debt. I own two town lots, unimproved in Colon. And I own four water-front lots in Belen that will make me very wealthy when the Union Fruit Company begins the building of the warehouses——"

"How much, Francis, did your father leave you?" Henry quipped teasingly. "Or, rather, how many?"

Francis shrugged his shoulders as he answered vaguely: "More than I have fingers and toes."

"Dollars, sir?" queried the captain.

Henry shook his head sharply.

"Thousands, sir?"

Again Henry shook his head.

"Millions, sir?"

"Now you're taking," Henry answered. "Mr. Francis Morgan is rich enough to buy almost all of the Republic of Panama, with the canal cut out of the deal."

The negro-Indian mariner looked his unbelief to Enrico Solano, who replied:

"He is an honorable gentleman. I know. I have cashed his paper, drawn on Senor Melchor Gonzales at Bocas del Toro, for a thousand pesos. There it is in the bag there."

He nodded his head up the beach to where Leoncia, in the midst of the dunnage landed with them, was toying with trying to slip cartridges into a Winchester rifle. The bag, which the skipped had long since noted, lay at her feet in the sand.

"I do hate to travel strapped," Francis explained embarrassedly to the white men of the group. "One never knows when a dollar mayn't come in handy. I got caught with a broken machine at Smith River Corners, up New York way, one night, with nothing but a check book, and, d'you know, I couldn't get even a cigarette in the town."

"I trusted a white gentleman in Barbadoes, once, who chartered my boat to go fishing flying fish——" the captain began.

With his hands, he waved the tribesmen away, ceasing the ceremonial half-completed, and directed that the three captives be taken into the Long House.—(Chapter 17.)

"Well, so long, skipper," H... shut him off. "You'd better be... ting on board, because we're g... to hike."

And for Captain Trefethen, ... ing at the backs of his depa... passengers, remained naught b... obey. Helping to shove the boa... he climbed in, took the ste... sweep, and directed his cours... ward the Angelique. Glancing ... from time to time, he saw the ... on the beach shoulder the bag ... and disappear into the dense ... wall of vegetation.

They came out upon an inco... clearing, and saw gangs of poo... work chopping down and grub... out the roots of the virgin trops... est so that rubber trees for the ... ufacture of automobile tires mig... planted to replace it. Leoncia, ... side her father, walked in the ... Her brothers, Ricardo and Ale... dro, in the middle, were burd... with the dunnage, as were Fra... and Henry, who brought up ... rear. And this strange proce... was met by a slender, straight-b... ed, hidalgo-appearing, elderly ge... man, who leaped his horse a... tree trunks and stump holes in... der to gain to them.

He was off his horse, at sig... Enrico, sombrero in hand in re... nition of Leoncia, his hand ex... to Enrico in greeting of an... friendship, his lips wording w... and his eyes expressing admira... to Enrico's daughter.

The talk was in rapid-fire Spa... and the request for horses pref... and qualifiedly granted, ere the ... troduction of the two Morgans ... place. The haciendado's horse, ... the Latin fashion, was immedi... Leoncia's, and, without ado ... shortened the stirrups and place... astride in the saddle. A murra... explained, had swept his plant... of riding animals; but his chief ... seer still possessed a fair-condit... one which was Enrico's as soon ... could be procured.

His handshake to Henry and F... cis was hearty as well as digni... as he took full two minutes orn... to state that any friend of his ... friend Enrico was his friend. ... Enrico asked the haciendado a... the trails up toward the Cordil... and mentioned oil, Francis pri... up his ears.

"Don't tell me, Senor," he be... "that they have located oil in ... ama?"

"They have," the haciendado ... ded gravely. "We knew of th... ooze, and had known of it for ge... ations. But it was the Hermo... Company that sent its gringo ... gineers in secretly and then bo... up the land. They say it is a g... field. But I know nothing of oil ... self. They have many wells, ... have bored much, and so muc... have they that it is running ... over the landscape. They say ... cannot choke it entirely down. ... is the volume and pressure. ... they need is the pipe line to oc... carriage, which they have begu... build. In the meantime it f... away down the canyons, an utter ... of incredible proportion."

"Have they built any tan... Francis demanded, his mind run... eagerly on Tampico Petroleum ... which most of his own fortune ... pledged, and of which, despite ... rising stock market, he had h... nothing since his departure f... New York.

The haciendado shook his hea...

"Transportation," he expla... "The freight from tide-water to ... gushers by mule back has been ... hibitive. But they have impou... much of it. They have lakes of ... great reservoirs in the hollows of ... hills, earthen dammed, and still ... cannot choke down the flow and ... the precious substance flows d... the canyons."

"Have they roofed these re... voirs?" Frances inquired, remem... ing a disastrous fire in the early ... of Tampico Petroleum.

"No, Senor."

Francis shook his head disapp... ingly.

"They should be roofed," he s... "A match from the drunken or ... vengeful hand of any peon could ... the whole works off. It's poor ... iness, poor business."

"But I am not the Hermosi...," the haciendado said.

"For the Hermosillo Compan...

meant, Senor," Francis explained. "I am an oil man. I have paid through the nose to the tune of hundreds of thousands for similar accidents or crimes. One never knows just how they happen. What one does know is that they do happen——"

What more Francis might have said about the expediency of protecting oil reservoirs from stupid or wilful peons, was never to be known; for, at the moment, the chief overseer of the plantation, stick in hand, rode up, half his interest devoted to the newcomers, the other half to the squad of peons working close at hand.

"Senor Ramirez, will you favor me by dismounting," his employer, the haciendado, politely addressed him, at the same time introducing him to the strangers as soon as he had dismounted.

"The animal is yours, friend Enrico," the haciendado said. "If it dies, please return at your easy convenience the saddle and gear. And if your convenience be not easy, please do not remember that there is to be any return, save ever and always of your love for me. I regret that you and your party cannot now partake of my hospitality. But the Jefe is a bloodhound, I know. We shall do our best to send him astray."

With Leoncia and Enrico mounted and the gear made fast to the saddles by leather thongs, the cavalcade started, Alesandro and Ricardo clinging each to a stirrup of their father's saddle and trotting alongside. This was for making greater haste, and was emulated by Francis and Henry, who clung to Leoncia's stirrups. Fast to the pommel of her saddle was the bag of silver dollars.

"It is some mistake," the haciendado was explaining to his overseer. "Enrico Solano is an honorable man. Anything to which he pledges himself is honorable. He has pledged himself to this, whatever it may be and yet is Mariano Vercara e Hijos on their trail. We shall mislead him if he comes this way."

"And here he comes," the overseer remarked, "without luck so far in finding horses." Casually he turned on the laboring peons and with horrible threats urged them to do at least half a days' decent work in a day.

From the corner of his eye, the haciendado observed the fast-walking group of men, with Alvarez Torres in the lead; but, as if he had not noticed, he conferred with his overseer about the means of grubbing out the particular stump the peons were working on.

He returned the greeting of Torres pleasantly, and inquired politely, with a touch of deviltry, if he led the party of men on some oil prospecting adventure.

"No, Senor," Torres answered. "We are in search of Senor Enrico Solano, his daughter, his sons, and two tall Gringos with them. It is the Gringos we want. They have passed this way, Senor?"

"Yes, they have passed. I imagined they, too, were in some oil excitement, such was their haste that prevented them from courteously passing the time of day and stating their destination. Have they committed some offense? But I should not ask. Senor Enrico Solano is too honorable a man——"

"Which way did they go?" the Jefe demanded, thrusting himself breathlessly forward from the rear of his gendarmes with whom he had just caught up.

And while the haciendado and his overseer temporized and prevaricated and indicated an entirely different direction, Torres noted one of the peons, leaning on his spade, listen intently. And still while the Jefe was being misled and was giving orders to proceed on the false scene, Torres flashed a silver dollar privily to the listening peon. The peon nodded his head in the right direction, caught the coin unobserved, and applied himself to his digging at the root of the huge stump.

Torres countermanded the Jefe's order.

"We will go the other way," Torres said, with a wink to the Jefe. "A little bird has told me that our friend here is mistaken and that they have gone the other way."

As the posse departed on the hot trail, the haciendado and his overseer looked at each other in consternation and amazement. The overseer made a movement of his lips for silence, and looked swiftly at the group of laborers. The offendingg peon was working furiously and absorbedly, but another peon, with a barely perciptible nod of head, indicated him to the overseer.

"There's the little bird," the overseer cried, striding to the traitor, and shaking him violently.

Out of the peon's rags flew the silver dollar.

"Ah, ha," said the haciendado, grasping the situation. "He has become suddenly affluent. This is horrible, that my peons should be wealthy. Doubtless, he has murdered some one for all that sum. Beat him, and make him confess."

The creature, on his knees, the stick of the overseer raining blows on his head and back, made confession of what he had done to earn the dollar.

"Beat him, beat him some more, beat him to death, the beast who betrayed my dearest friends," the haciendado urged placidly. "But no—caution. Do not beat him to death, but nearly so. We are short of labor now and cannot afford to hurt him much, but that he shall be compelled to lay off work no more than a couple of days."

Of the immediately subsequent agonies, adventures, and misadventures of the peon, a volume might be written which would be the epic of his life. Besides, to be beaten nearly to death is not nice to contemplate or dwell upon. Let it suffice to tell that when he had received no more than part of his beating, he wrenched free, leaving half his rags in the overseer's grasp,and fled madly for the jungle, outfooting the overseer who was unused to rapid locomotion save when on a horse's back.

Such was the speed of the wretched creature's flight, spurred on by the pain of his lacerations and the fear of the overseer, that, plunging wildly on he overtook the Solano party and plunged out of the jungle and into them as they were crossing a shallow stream, and fell upon his knees, whimpering for mercy. He whimpered because of his betrayal of them. But this they did not know, and Francis seeing his pitiable condition, lingered behind long enough to unscrew the metal top from a jocket flask and revive him with a drink of half the contents. Then Francis hastened on, leaving the poor devil muttering inarticulate thanks ere he dived off into the sheltering jungle in a different direction. But, underfed, overworked, his body gave way, and he sank down in collapse in the green covert.

Next, Alvarez Torres in the lead and tracking like a hound, the gendarmes at his back, the Jefe panting in the rear from shortness of breath, the pursuit arrived at the stream The foot marks of the peon, still wet on the dry stones beyond the margin of the stream caught Torres' eye. In a trice, by what little was left of his garments, the peon was dragged out. On his knees, which portion of his anatomy he was destined to occupy much this day, he begged for mercy and received his interrogation. And he denied knowledge of the Solano party. He, who had betrayed and been beaten, but who had received only succor from those he had betrayed, felt stir in him some atom of gratitude and good. He denied

Genuine IHC Repairs

for Deering, McCormick, Milwaukee, Titan and Other International-made Machines

Are Better in Quality
Fit Better and Wear Longer

The Harvester Company makes good machines and stands back of them. We want them to make good. Is it fair then, to us, to the machines, or to yourself, to substitute an imitation for the genuine when repairs are needed? Repairs made by other concerns and marked "Made for" or "Will fit", are ***not*** genuine I H C parts. They often lack weight, are not always correct in shape, are imperfectly finished, do not fit properly, or are made of inferior material. Buy Genuine International Repairs for your International Farm Equipment.

Beware of Any Other Kind

The best dealer in every community sells the Full Line of I H C repairs, twine and machines.

Our Candidate for President

THE UTTERANCES of some of the leading candidates for the presidency of the United States fills us with a profound sense of disappointment. The most of them are using the petty political tools which have become popular in local and state campaigns, but which we hold are too mean for the future president of the United States to employ.

We do not expect the next president to be a paragon of virtue and wisdom. But our candidate must have principle and courage. He must have the principle which will defy the corroding influence of selfish power, whether it be exerted by organized wealth, labor or agriculture. He must be courageous enough to defend his principles even though it may mean alienating a considerable portion of his political strength. We have no use for the man who caters to any class of people because he is afraid of them or desires to curry their favor. If their cause is just, well and good, but if they seek special privilege, he who would give it to them can have none of our support.

Our candidate for president must be a man of peace. He must have some conception of America's international obligations, and he must pledge himself to work for the adoption of a covenant between nations that will lessen or entirely eliminate the chances of future warfare. No exponent of compulsory military training can, in our judgment, be a man of peace league advocate can in our judgment be the traditions and all the weapons of ancient and modern warfare and seek new methods for maintaining the peace of the world. No anti-peace league advocace can in our judgment be a man of peace. If he cannot offer a plan for an international court of arbitration to settle in peace controversies which have hitherto been settled by war, he is not a big enough man to be president of the United States.

Our candidate will be sparing of his promises to any class of people. Too many promises belie the sincerity of the promise-maker.

So far as politics are concerned our candidate for president may run on either the Republican or Democratic ticket. In common with a few million other voters, we have long since ceased to measure a candidate by the political yard stick. We have found that a rascal and a weakling can belong to either party. There are no rules against them. We have found that there are strong men in both parties. Neither has a monopoly on the men of ability and courage and principle.

So much for the qualifications of our candidate for president. Now, we shall be deeply obliged if someone will give him a name and place him in nomination.

Investigating Campaign Funds

GOV. SLEEPER quite properly makes the suggestion that the government, having convicted Truman Newberry, should now turn its attention to the Ford expenditures in the senatorial contest. If there is any evidence upon which to base a charge that Henry Ford conspired with others to spend an amount in excess of the legal limitations to secure the office of United States senator the federal government will not be doing full justice if it fails to make an investigation. Then, in keeping with the spirit of the times the attorney general for Michigan should start grand jury proceedings against every man suspected of exceeding the legal campaign expenditures in this state since the corrupt practice act was passed. It has not been so very long ago that stories were circulated about the many thousands of dollars that were spent in several gubernatorial and congressional campaigns. Let us not make fish of one and fowl of the other. It is surely just as bad to spend $50,000 to secure the governorship of Michigan or a seat in Congress as it is $176,000 to secure a seat in the United States Senate.

Of course, it has been repeatedly stated upon good authority that Henry Ford did not spend a nickel in his own behalf, and that he had no knowledge whatsoever of what was being done to further his campaign. It has been stated that he subscribed to the principle that the office should seek the man, and that he adhered rigidly to this principle throughout the campaign, even refusing to acknowledge letters that were addressed to him by friends in reference to the campaign. It has been stated that at no time during the campaign did he reply to a single criticism of himself or his son, although his friends conceded that had he desired he could have purchased all the newspaper space that was necessary to refute these criticisms and win the election. These statements may or may not be true. We repeat, however, that if there is a single scrap of evidence that Henry Ford spent any of his own money or directed or had knowledge of the spending of other people's money in an amount beyond what the law permitted to further his campaign, then the Ford campaign should be as rigidly investigated, and if facts are disclosed proving violation of the law, the violators should be as speedily prosecuted as in the Newberry case.

What Has Business to Fear?

THE AMERICAN Institute of Meat Packers has issued a statement in which it is claimed that the bill pending before Congress for the regulaton of the packing industry "sets a bad precedent," and is the entering wedge to federal control of all business. The packers have fooled a lot of people the past year or two with their propaganda, and the recent statement shows they are trying to fool the business interests of the country, but can they get away with it? True, the propagandists worked the business interests of the country beautifully into a panicky disapproval of continued government operation of the railroads. Nine-tenths of the business men of the country, from the corner grocer to the president of the trust, declared themselves "ag'in" government operation of the railroads because some railroad lobbyist or propaganda had convinced them that their business was the next on the government's program of "nationalization." But can the packers work the same game over again?

It is doubtful. In the files of the U. S. Department of Justice and the Federal Trade Commission are certain documents containing incontrovertible proof that the "Big Five" packers have through competition-throttling methods gained supremacy and monopoly of the business of packing meats and many kindred enterprises. It is upon these proofs that the justification for government regulation of the packing business rests. The packers have repeatedly denied the imputations of the Federal Trade Commission, and have made a great show of their piety and righteousness, but all who review the evidence taken from the book and the correspondence files of the packers are convinced that the Big Five have gained and abused control of some of the most essential food products, and that if left to pursue their own sweet will as in the past may become a national menace holding the key to the nation's food supply.

What has business to fear from government control of the packing industry? Legitimate business,—business that is conducted according to the rules of the game; which is content to live and let live,—has nothing to fear from government interference. On the contrary, the little business enterprises of the country which give life to thousands of communities ought to take on new courage, and competition a new lease of life as a result of the government's willingness to be the referee in the great game of commerce and industry.

Look to Your Health.

TALKING with one of the most prominent surgeons in Michigan the other day, I complimented his profession upon the great strides it had taken in recent years to counteract disease. "We have just begun", he replied soberly. "Until we can discover the true cause and effect a real cure of advanced cancer, I shall feel that we have only nibbled around the edges of medical and surgical science."

His words came back to me vividly today when I picked up the bulletin issued by the Bureau of Vital Statistics and discovered that two hundred and forty-seven persons died in Michigan during the month of December from cancer. Only one other disease, pneumonia, claimed more victims.

The message that "cancer is curable" contains no hope for the sufferer from its advanced stages. Experience has proven that when cancer reaches a certain point of development an effective cure is impossible. Operation after operation may remove the malignant growth temporarily and lengthen the days between the sufferer and the grave, but death is not far off.

A stitch in time saves nine, and the treatment of a cancer in its earliest stages by competent surgeons, will save life. The medics tell us that thousands of people have cancer and don't know it. There is a little if any pain with incipient cancer, yet its symptoms are sufficiently pronounced to show the person afflicted that something is wrong which needs medical attention. Quoting a medical authority, "a persistent sore, an unnatural lump, a constantly recurring pain, irregular bleeding may be symptoms of cancer and should have the attention of a physician." But that does not mean that these things are necessarily or even usually the symptoms of cancer. They are, however, symptoms that something is wrong with the human system, and if they persist medical advice should be sought. If people would give closer attention to the care of their bodies and the immediate treatment of the ills to which the body is subject, there would be far less misery disease and death in the world.

The Gentle Pressure

THE FARM Mortgage Banker's Ass'n of America, which has tried by every hook and crook to destroy the federal farm loan system, sends a letter to our "Advertising Manager" calling his attention to a proposed 10% tax on newspaper advertising to increase the federal revenues. This interesting letter says:

"You cannot remedy the evils by kicking about advertising tax. New forms of taxation will take its place if that is defeated. The only sure and permanent remedy is to make bonds (meaning farm loan bonds) subject to taxation.

"Many editors have been too busy with European questions to give time and study to taxation problems. Many agricultural editors have been misled by the assertion that the tax exemption of farm loan bonds causes great benefits to agriculture. A careful study of the question will prove the contrary to be the result. The advertising manager ought to be able to interest the editor!"

Do you see the pressure? The advertising manager, representing the business end of the publication ought to be able to interest (a better word would be influence) the editor! And the editor, the amount of whose salary and dividends depend upon the advertising patronage, ought to be able to see the wisdom of using his influence against the tax exemption clause of the farm loan law. Sure, the farmers would foot the bill. But what's that to the Farm Mortgage Bankers' Ass'n of America or to the farm paper publisher and editor whose principles are measured by the dollar

What the Neighbors Say

M. B. F. BOUND TO GET RESULTS

I am sending you check for $2 for three years' subscription. I think your paper the best farm paper I have ever seen. Your way of doing things is bound to get results. These are two things that if you would use your good office to help put through our legislature that would help the tax payers of Michigan, just a tax limit law. Second, a board of public accounting. It seems the valuation of property makes no difference in the levy of taxes. The number of mills levied makes the limit enough for all necessary expenses but cut out giving public money to private interests. The board of public accounting would find the Niss appropriated funds and see that it came back in the treasury from which it was taken. I think these two laws would greatly benefit tax payers of Michigan.—*P. E. Lee, Wexford County.*

I'll say we need a tax limit law or something. What we need most of all is good common horse sense and economy in state expenditures. The we need a state income tax that will reduce the property tax. The auditor general is supposed to constitute a sort of board of accounting, but what's the use of trying to save a penny here and a penny there when the legislature spends our money like a drunken sailor.—Editor.

DEFENDS U. S. WAR RECORD

I wish Mr. Bengal would be more explicit. He says we have been used as a tool to take the chestnuts out of the fire for dear old England, and that our 100 per cent Americans are trying to saddle militarism and autocracy on this country, also that most of those tales of Hun atrocities originated in English newspaper offices, and that our pro-English element have brought us into the war and spread those lies to help out the aforesaid dear old England, and to prolong the war for pecuniary gain. He also says if Germany was so land-hungry why did she not go to war with her small neighbors like Holland, Switzerland, Luzemburg and others?

I think if Mr. Bengal will brush up on history he will find that Germany has been nibbling quite freely on her neighbors, both large and small all her life and further, if some of the aforesaid small neighbors have not been actually gobbled up they were predigested. Where would the kaiser be if Holland had actually been a part of Germany, saying nothing of the food stuffs that passed through those neutral (?) countries?

About those chestnuts; I suppose he means Germany's possessions in Africa and other part of the world including the islands in the Pacific. Did we send an army to Africa or a fleet to the Pacific when American rights and interests were not involved? If England got any of those chestnuts she raked them out of the fire with her own army and navy, not ours. Was it the pro-English element that brought us into the war, or was it taking the lives of American citizens and destroying American commerce, to say nothing of the conduct of Bernstorf, Boy Ed and others of that class Our 100 per cent Americans, of whom Theodore was a worthy member, are not trying to saddle anything on America; neither did they try to prolong the war for gain, but a few of them think the war should have been prolonged just a little that they might lay their hands on a certain man that is sawing wood in Holland.

If conceited monarchs were made to answer for their crimes there would be no need of a League of Nations with its entangling alliances to put an end to war for conquest.

The people who tried to prolong the war for gain were enemy emissaries and disloyal citizens who blew up elevators incited strikes, yelled for shorter hours and more pay, and those dirty politicians who robbed the government at every turn.

I would to God those submarine atrocities where innocent women and children were drowned without any provision being made to save them were only newspaper tales, also the unspeakable crimes of the Turks under German officers.

The disloyal ones were not all of foreign birth, far from it. The great majority of foreigners are loyal to the country of their adoption. Being born in Michigan fifty years ago is no proof of loyalty. "By their fruits ye shall know them."

Our surroundings are largely responsible for what we are. If an American-born child is taken from an American school and taught the German language and German ideals, if ever so honest he can not be a true American. My advice to a foreigner coming to this country all puffed up with the grandeur of his native country is, forget it or stay where you are. But if you do come, remember that the United States government is the *best* government on earth and only when its laws are broken or perverted by disloyal people does it appear to be defective.—*H. L. Black.*

I am sorry, friends, that we can not bury all of our memories of the war with our dead in France. Of course, that can not be. To many the recollection of the little mounds in a foreign country will be like a living scar. Whatever our feelings may have been previous to and during the war, let us for the sake of our peace of minds and the friendly sentiments we of America ought to hold for all others of America, leave this subject alone. It is dangerous. The war is over; America's arms have triumphed; Germany has been properly punished, and we are struggling in the shifting sands of the reconstruction.—Editor.

THE FARMERS' AWAKENING

It has been a long time since last I wrote anything to the best farm paper ever published, but I have been a very interested reader of every item printed from the first issue to the last and hav found it all good. It has helped to set the farmers of Michigan thinking and their thinking is already beginning to bear fruit. They are not only thinking but they are doing things and are going to do bigger things in the next few years. The world is going to wake up some of these days to the fact that the farmer of this country is something more than a rube, that he can do something more than "slop his hogs." Those who have waxed fat off the farmers these many years have gone too far. They pushed the farmer too close to the wall, so close that he has looked up and seen what he was up against. I wonder if they thought when we saw that wall we would think ourselves fenced in so we couldn't get out and just hump to it a little harder and keep on throwing them the profits. Well if they did they have another think coming. For years the farmers have worked from sun up to sunset, day in and day out, year in and year out, thinking those who enjoyed the fruits of their labor would realize the importance of their efforts to feed the world and give them the privileges and importance they should enjoy as the greatest and most important industry in the world today. So you say we are largely to blame ourselves. Of course, sure thing, brother, if we had opened our eyes long ago to that fact we would be better off today but now we have awakened and got started just watch us travel. Come on brother farmers; get in the band wagon. Organize; organize; organize.—*B. E. S., Emmet County.*

Glad to hear from you again, old friend. Sure, the farmers are to blame for their condition. But you'll have to admit that they're making tracks now.—Editor.

HIRED MAN WANTS A JOB

The hired man is about right. I am working by the year and have been doing so for the past eight years and find that the farmer is more to blame than the farm laborer. One farmer will pay more for help than others; then other laborers will think they ought to get the same as the others. I have not hired out for the coming season but the man I'm working for does not want to pay a living wage and how can he expect to get help? This man owns 200 acres of land. He wants me very bad but says he can not afford to pay such prices as others. But figures show that he can pay more by giving his 10 per cent above production if he would not fool away so much feed on seven cows that are not paying for their feed. That is the trouble with farmers. I have an ad I wish you to publish. "Wanted, work on farm by the year by married man with family; 15 years' experience in all lines of farming." I think M. B. F. just fine for the farmer and farm laborer; also keep the good things going. —*Ralph Mead, Ionia County.*

There is no charge for the ad. Hope you "land" something to your satisfaction.—Editor.

The Week's Editorial

BEET GROWERS' ROUND-UP

More than two thousand enthusiastic sugar beet growers from the various parts of the beet growing sections of the state attended the round-up meeting of the Michigan Beet Growers' Association at Saginaw, Monday, March 8. The growers in attendance seemed determined to back up their leaders in the demand for a fair division of the profits in the raising of beets and their manufacture into sugar. It is not likely that any definite price demands will be made, although there is a strong sentiment among growers to refuse to grow any beets unless the manufacturers of sugar give consideration to the growers' ideas of fair prices. It is also apparent that the leaders, who have recently returned from Washington, feel confident that the government will step in and give the beet sugar industry a thorough investigation and endeavor to determine what constitutes a fair division of profits to both beet grower and manufacturer of sugar.

There appears to be a general feeling among the sugar beet growers of the entire country that there should be a feeling of mutual interest between all parties interested in the sugar industry if the business is to function properly, and to the interest of all parties concerned, from the beet grower to the consumer of sugar. And that all of these parties have an interest in the question and that their interests are mutual, and that instead of working in the dark that they must place their cards on the table and play the game in the open. The growers feel, and rightly, too, that they, first of all, should be insured of a fair price for their beets in order that they may keep up their land, equipment and labor supply from year to year, and to feel sure that they will be given a square deal in the matter of sharing in the profits of the business. With a fair price for beets as a basis there would be no trouble in maintaining arequate sugar beet production to meet the requirements of the consumers, and all interests concerned would share in the prosperity of the industry.

The sugar beet growers of the country and their leaders are agreed that the time has come when the growers must conduct their business for dividends, the same as the sugar manufacturers have been doing for years, rather than merely to keep the sugar consumers' bowl full. They believe the question of making sugar is one that affects two parties, and that the grower of the sugar beets is the first one to be considered in the matter of profits. They take the stand that if the sugar manufacturers of the country can say to the people that sugar is going to be such and such a price, they are entitled to put their feet under the same table and have something to say about what they shall receive for their beets. The Michigan sugar beet growers have demonstrated rather clearly that they are going to have something more to do with the sugar business than to sign their names on dotted lines. We believe that their claims are just, and are confident that with the press and other agencies working in hearty accord with their leaders that right will triumph.—*Michigan Farmer.*

SITE VALUE TAX AGAIN

Discussion of single tax will soon have to give place to more urgent farm duties and your paper is already overburdened by the discussion but permit my reply, if you please to Mr. Grenell of the Site Value Tax League.

Mr. Grenell's proof of the value of single tax is that it 'is working" in Canada, Australia and New Zealand. To prove that it is working well he states that 25,000 farmers from the U. S. entered Canada last year and took up land. This is the most convincing argument for single tax I have ever read and as misleading as the rest. Let us try to get the whole truth by turning to the first article in the March 6th issue of the County Gentleman. It is by E. V. Wilcox, concerning immigrants. He says:

"For example, during 1919 about 30,000 American citizens went to Canada, while 22,500 came back and with them 44,000 Canadian citizens."

It is well for a new country to encourage factories, railroads, etc. Single tax will do this. We accomplished the same result under our present system by special privileges and land grants but in a country now suffering from overproduction of manufactured articles it is right that they pay according to the "profit-showing" value of their holdings and an income tax if need be.

Recently before the Detroit Open Forum a single taxer stated definitely the method of determining values of land under a "site-value" or single tax system. It was: "Take the total valuation and subtract the value of the improvements." That is plain enough—too plain for people outside of Wayne Co. to hear. We know that the great bulk of "improvements" lie in the city. Remember that income taxes would be subtracted also.

Not belittling the efforts of our tax commission I am convinced that under our present system the growth of the automobile and other manufacturing profits should have taken care of the per-acre increase of farm taxes for the past ten years, at least. Valuations of property should be based on profits on incomes. Farm profits per acre are no greater than 10 or 20 years ago but valuations have soared. Increase in acreage tilled has added considerable to government income. Proper assessment based upon the profits or incomes of manufacturers and U. S. Grain Corporation officials might have taken care of the balance of the increase in governmental needs even under present conditions. It is useless to talk of using another system merely because the present system is not enforced. Make it a law that every man file an income and property report with a good penalty for failure or dishonesty, tax entirely according to income and compel enforcement and we will then have a speedy solution of our tax problem. It is our fault that conditions are not better. As Arthur Brisbane says: "People get just what they deserve."

Mr. Grenell says to tax the "unearned increment," social value or community value of land. Buildings also have social values added to them as our cities become larger and our country is more thickly settled. This increase of value on BOTH land and buildings is classed as income and must bear an income tax under the present laws if of sufficient amount.

The "unearned increment" of a city lot is an actual location value. Being near to a large body of people it has an extra earning value as a distributing center on residence location for dealer, manufacturer or speculator and should be taxed accordingly. Even the location of his residence has considerable to do with the profits of his business.

If the "unearned increment" or "Social value" of a farm is due to its location near a market it is an actual earning value but the valuation of a farm is usually a fake valuation which will not earn a profit. Good book-keeping would show that the

(Continued on page 27)

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

Has the long prophesied "economic readjustment" begun? Do the scarcely perceptible easing off of commodity prices the past week or so indicate that the levelling process has begun and that within another few months the extraordinary high prices shall have become ordinary and the pre-war average of conditions again be with us?

Economic readjustments began for the farmer last July and August when without warning, and many think, without reason, hogs and cattle began their memorable slump. Economic readjustments is taking place right now for the dairy farmers. As W. J. Kennedy, manager of Towar's Wayne County Creamery said before the Federal Fair Price Board, "I have never seen the milk situation in so chaotic a condition," and cited some of the instances of the ruinously low prices that condensaries were offering farmers for milk. Similar "readjustments" have been taking place in the bean market, the horse market, in butter and eggs, while every other known commodity has either been stationary or advancing in price. The farmer will not complain of his losses from lowering prices if the prices on the things he buys decline at the same ratio.

The last week or two has shown an easier trend to the lumber market, with slightly lower prices. This naturally encourages building, and in view of the urgent need for additional houses in the growing cities, should stimulate industry.

Urban prosperity is closely related to rural prosperity and should therefore be pleasing to the farmer. It would be as calamitous to the farmer as anyone else for the great factories to close and industry to slow down. Even the slight advantage that might be gained because of the increase in the labor supply and the lower wages would be more than offset by the inevitable decrease in prices on farm products.

Exchange conditions are very much improved particularly with regard to Great Britain and France. The German mark is not wanted, and right here we want to remind our readers of the little piece of advice we gave them several weeks ago, "not to buy options on German marks." Considerable discussion of this matter has appeared in other publications recently, and the consensus of the opinion of the editors is that German marks would be a "bum buy" for anyone.

The cereal markets are in a strong position today with nearly every grain higher than a week ago. Further advances in wheat, corn and rye are freely predicted. There is more confidence, too, in the cattle market and some say that cattle will touch the $20 mark again before the end of the current year.

LAST MINUTE WIRES

DETROIT—Wheat active and in demand for export. Other grains firm. Hay firm and in demand. Cattle dull; hogs active; sheep steady. Rye higher.

CHICAGO—Corn firm after last week's decline. Wheat, oats and rye wanted for export. Potatoes strong.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT STRONGER

WHEAT PRICES PER BU., MAR. 30, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.52	2.58	2.85
No. 2 White	2.50	2.50	
No. 2 Mixed	2.50	2.50	
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.45	2.50	2.51
No. 2 White	2.43	2.47	2.48
No. 2 Mixed	2.43	2.47	2.48

We consider the wheat market in the strongest position today that it has occupied at any time the past year. Add to the scarcity of this grain at nearly all markets the bullish reports of damage to the winter wheat crop and the persistent demands from overseas and you have a situation that means strength and higher prices. The grain has advanced 5c per bushel at Detroit since our last report and has been quoted higher on both the Chicago and New York market. Despite the high rate of exchange exporters are out after wheat and meeting with difficulty to secure enough for their requirements.

OATS IN SYMPATHY

OAT PRICES PER BU., MAR. 30, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	.99	.86¾	
No. 3 White	.98	.95½	
No. 4 White	.97		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.70	.68	.76
No. 3 White	.69½	.67	.75
No. 4 White	.68	.65	.73

While oats remained the first of the week at the same price levels as obtained last week, the market is firm, and the continued strength in the corn market is expected to boost oats to the dollar mark very shortly. Exports of oats have slumped a little lately, but even that fact has not influenced the market to any appreciable extent. We look for a large acreage to be planted this year to oats, in which case we may expect an easing up of prices. Oats will be wanted at prevailing prices or higher, however, well along into June, but the price thereafter will depend largely upon the acreage and condition of the crop.

CORN FIRM

CORN PRICES PER BU., MAR. 30, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.82¾
No. 3 Yellow	1.65	1.63	
No. 4 Yellow	1.60		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.78
No. 3 Yellow	1.65	1.59	1.78
No. 4 Yellow	1.62	1.54	1.76

After declining three cents per bushel from a week ago corn recovered its strength. Information regarding the trade at various markets has been scanty because of the damage done by Sunday's big storm to the telegraph lines. The decline in corn was thought to be due to the threat of the government to investigate the earlier advances, but nothing has come of the investigation and probably nothing will come of it, and with the bulls confident that the scarcity of supplies is apt to continue, higher prices are in prospect.

BEANS DITTO

BEAN PRICES PER CWT., MAR. 30, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	6.50	7.25	7.75
Red Kidneys		12.00	
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.90	7.00	7.25
Prime	7.00	6.50	7
Red Kidneys	10.25	11.50	11.00

If we were to attempt to tell you anything about beans, it would be "the same old story." They have moved a notch from the position they took several weeks back, and the invariable report from all principal markets is "steady and inactive." A report to the *Price Current Grain Reporter* by Frank B. Drees, secretary of the Michigan Bean Jobbers' Ass'n, says: "Deliveries on beans from the grower have been very light for several weeks past, owing probably to the fact that on the first of March it was estimated at not to exceed 15 per cent of the crop was still in growers' hands, also the fact that the prices which could be paid by elevators would not return to the grower cost of production."

Another report from Colorado says: "The Colorado bean growers are being urged to increase the acreage as statistics have proven that in the past five years there has been a decided shrinkage in the bean area of the five principal producing states. The figures for Colorado are 72 per cent, New Mexico, 10 per cent, Michigan 40 per cent, California and Idaho 33 per cent."

Old Michigan used to be the banner bean state of the union. Let's put her back there. It looks now as though the next congress would be in sympathy with the efforts of the bean growers to protect this industry, and while these efforts are temporarily delayed, sooner or later we shall have a protective tariff on beans. Don't decide to cut your acreage on this crop until the last day for planting has come. The life has not all departed from the bean market and if there are to be higher prices later on as we confidently believe we want our readers to profit from them.

RYE AND BARLEY

There has been considerable activity the past week in the rye market on account of renewed export buying. It is said that Europe is in urgent need of this grain. The market, at present, is reported to be dull and steady at $1.80 for No. 2.

Barley continues quiet at $3@$3.25 per cwt., for No. 3.

POTATOES FIRM

SPUDS PER CWT., MAR. 30, 1920		
	Sacked	Bulk
Detroit	5.83	
Chicago	6.00	6.10
Pittsburg	5.50	5.43
New York	5.50	5.00
PRICES ONE YEAR AGO		
Detroit	1.80	1.70
Chicago	1.80	1.70
Pittsburg	1.85	1.80
New York	2.10	2.00

Potatoes have reacted a bit from the high prices of last week, the Detroit market quoting $8.75 per 150 pounds as against $9 last week. Supplies are noticeably increasing, farmers not wishing apparently to chance the balance of their crop on the possibility of hot April weather. Shipments thus far have far exceeded those of a year ago, and there is confidence expressed on all sides that while prices may take a temporary slump, the market will continue at good prices for the balance of the season. In next week's issue we shall discuss the season's record of the potato situation.

HAY POSITION STRONG

Weather conditions in the west and southwest has delayed planting and injured pasturage and this section of the country which usually about this time cuts down its purchasers of hay and buying as heavily as ever.

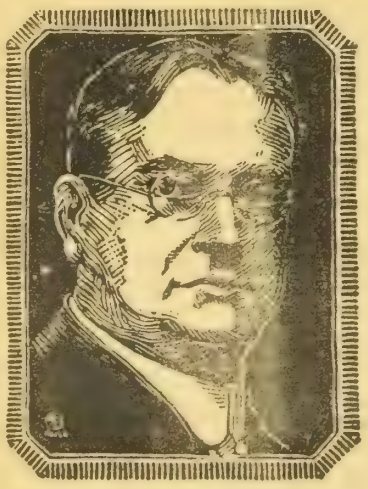
A subscriber writes to ask our opinion about the future of the hay

Hiram W. Johnson

"The Man of the Hour."

FOR

President



"Hiram Johnson is a fearless and relentless fighter for the right and is a big enough man to safely entrust with the destiny of the nation."—Theodore Roosevelt at the Chicago convention.

As governor, Johnson did more for the farmers of California than was accomplished in any other state. Among numerous other beneficial measures a public market commissioner was established. Public markets have been founded and various branches of the farming business have been highly organized resulting in the farmers receiving the highest possible prices for their products.

The farmers of California pay no state taxes. The state is supported solely by taxation of public service corporations, insurance companies, banks and franchises of corporations.

In these times America wants an absolutely fearless leader who has been tried—a true friend of the people—one who has never failed them.

Hiram W. Johnson is such a man. Vote for him at the Primary, April 5th.

market. Our reply to him would be that he ought to be able to market his hay at any time within the next thirty days at prices equal to or higher than today's prices. Thereafter, hay prices will depend entirely upon the movement of the supply held back in farmers' hands, and upon the condition of the pastures.

At present very little hay is going to market, reports stating that cars cannot be had. The central west seems to have had no difficulty in this respect, but it is certain that more Michigan hay would go to market if cars were more plentiful.

LIVE STOCK MARKETS

Detroit—Cattle: Bulls very dull and all others are steady. Best heavy steers at $11.25@11.75; handy weight butcher steers, $10.25 @10.75; mixed steers and heifers, $8.75@9.25; handy light butchers, $7.50@7.75; light butchers, $7@ 7.25; best cows, $8.25; butcher cows $6.75@7; cutters, $5.50@6; canners, $4.50@5; best heavy bulls, $8.50; bologna bulls, $7.50@8; stock bulls, $7@7.50; feeders, $8.50 @9.25; stockers, $7@8.25; milkers and springers, $65@150. Veal calves: dull; best, $20@21; others, $10 @15. Sheep and lambs: market steady; best lambs, $19@19.50; fair lambs, $17.50@18.50; light to common lambs, $15@16.50; fair to good sheep, $12.50@13; culls and common, $6@8. Hogs: market active; mixed hogs, $16.10@16.25; pigs, $15.60; heavy, $15.50.

Chicago—Hogs: 25c to 50c higher; bulk,$14.50@15.40; top, $16; heavy, $14.10@15.25; medium, $14.75@15.60; light, $15.25@15.65; light light, $15@ 15.50; heavy packing sows, smooth, $13.15@13.75; do rough, $12.60@13.15 pigs, $13.50@15.50. Cattle: Trade too erratic to warrant detailed quotations. Sheep: Mostly direct to packers; not enough sales to quote prices. On account of an embargo resulting from a strike of stockyard employes, no live stock is expected to arrive in Chicago tomorrow.

DETROIT PRODUCE MARKET

Activity in the produce market is centered in hens and eggs. Both are in active demand. Consumers want fat hens and high grade chickens and are willing to pay good prices, but the supply is so small that the needs of buyers are not filled. The egg-buying is active for the Easter season, but in this case offerings are quite large and the market has an easy tone. Butter is not in much dmand and receipt are quite sufficient. All vegetables are active and steady, but there is not much doing in th fruit market. Apples move slowly. Dressed calves are in ample supply and easy, but there is a firm market for dressed hogs.

Apples—Western, boxes, $4@4.50; Baldwin, $3@3.50; Greening, $3.25@ 3.50; Steel's Red, $3.50@4 per bu.

Calves (dressed) Dressed—Fancy, 25@26c per lb.

Dressed Hogs—Best, 20@21c; heavy 17@18c per lb.

Live Poultry — Spring chickens, large 38@40c; Leghorns, 36@37c; hens, 43@45c; small hens, 39@41c; roosters, 24@25c; geese, 30@35c; ducks, 40@45c; turkeys, 44@45c a lb.

Hides—No. 1 cured calf, 55c; No. 1 green calf, 55c; No. 1 cured kip, 32c; No. 1 green kip, 28c; No. 1 cured hides, 25 to 45 lbs. 30c; 45 lbs. and up, 17c; No. 1 green bulls, 20c; No. 1 cured bulls, 15c; No. 1 horsehides, $9.50; No 2 horsehides, $8.50. Tallow: No. 1 12c; No. 2, 11c. Sheep pelts, 50@$3.50 No. 2 hides, 1c and No. 2 kip and calf, 1 1-2c off.

WHAT ABOUT BEAN MARKET?

I am satisfied with the farmers' choice for governor for Michigan. You are doing more for the farmers than all other farm papers combined that I know of. You have always hit the markets pretty good so I would like to know what you think of the bean market. Do you think we will get more money for our beans and if so, how much do you think we dare hold for? I don't believe there are 10 per cent in farmers' hands in Kawkawlin. I am willing to take my chance on your advice, win or lose. I won out four years ago. In place of $5 per bushel I got $10.20 by taking your advice to hold. I have been a subscriber to M. B. F. from the start and as long as I have a dollar I will have the paper.—*F. O., Kawkawlin, Mich.*

There is nothing additional we can tell you about the bean market to what has already been said upon the subject. It is no exaggeration to say that everyone has been fooled on this market the last two years. The market has been at the mercy of a score or more influences which could not be foreseen or prepared against. Prices have advanced when it looked as though they were going to recede and have dropped when all signs pointed to higher levels. Two years ago the market was getting settled in nice shape and we told our readers we expected higher prices, when like a bolt out of a clear sky, Mr. Kimball broadcasted his pinto publicity, and you know what happened. A year ago last fall the market opened in a very encouraging manner and growers, jobbers and wholesale merchants anticipated high-priced beans. Then came the armistice, a stoppage of exports, and other unlooked for conditions which hampered the market all thru the season. Last fall foreign competition began to be felt, a tariff was sought, and in anticipation that such a tariff would be enacted by March 1st, we urged our readers not to sacrifice their profits by selling on a declining market. Now comes word from Mr. Fordney that our hopes are all in vain, and that there's no chance for a bean tariff at this session of Congress. The news naturally arouses ire against the Democratic administration which was apparently the purpose intended, but it doesn't help us to market our beans at a profit. So that's the situation as it stands today. The bean market is in a bad way right now, but if I had beans I wouldn't sell them at present prices. That's how I feel about it. But I want you to use your own judgment, and not be swayed too much by our opinion.—Editor.

POLITICAL ADVERTISEMENT POLITICAL ADVERTISEMENT

FOR MICHIGAN MEMBER

OF THE

National Republican Committee

FRED M. WARNER

At the election April fifth there will be a separate ballot containing the names of candidates for Michigan member of the Republican National Committee. On this ballot will appear the name of Ex-Governor Fred M. Warner. Mr. Warner has been in California for the past two months, taking the first real vacation he has ever had. Petitions for placing his name on the ballot were circulated and filed during Mr. Warner's absence from the state. No man in Michigan has a wider or more favorable acquaintance, nor a better knowledge of the state and its varied interests, than has Governor Warner. He has been a producer all his life, actively and closely identified with farming, mercantile and manufacturing interests. His election will place on the Republican National Committee, as a representative of Michigan, one well fitted to be of service and exceptionally well qualified to represent the party and the state in this important position. There is no salary connected with the place, the only compensation being the satisfaction that comes from the rendering of a real service to party, to state and to country.

All Republicans are urged to vote the party committee ballot by marking a (x) in the square before the name of Fred M. Warner thus:

[X] FRED M. WARNER.

Please call this matter to the attention of as many Republicans as possible before and on election day.

(This advertisement ordered and paid for by Mr. Warner's friends during his absence.)

The Golden Rule —good *ethics* and good *business*

"YES, Sir! Success in *our* line isn't something we can *grab*—we must *build* it. We aim to prosper right here in this community of people who drive motor cars. We need their good-will.

"We don't try to unload a new battery on any man who comes in here with a lame one. No, Sir! We give our patrons exactly the kind of service they would want if they could know batteries inside and out as we do. That's the way we build up their good-will."

The USL Man does not assume that your battery is worn out just because it has *begun* to fail. He will open it up so you can see for yourself how the plates or separators look. If the plates are sound enough to warrant a repair, he will put your battery in first-class trim and guarantee his work for eight months, but he will *not* do this unless it is more economical for you than it would be to purchase a new battery.

But the day will finally come when your old battery has lasted as long as the best battery-skill can make it last. Then, and not before, the USL Man will sell you a new USL Battery—the one with the durable Machine-Pasted Plates, which comes from the factory "Dry-Charged" so that you get it factory-new.

So if you have trouble with your automobile battery and it needs either recharging or repairing, go to your nearest USL Man and enjoy *real* Golden Rule Service.

The Farm Home
A Department for the Women

By MABEL CLARE LADD

EASTER with its promise of a tomorrow is here with the proof fulfilled in the new life of tree and flower and whether it be from custom or instinct, we deck ourselves out in our freshest and newest clothing, breathe a little more deeply of the spring air and prepare to make the most of the day before us.

Some there are who derive much satisfaction from the observance of Lent through fasting while others observe it through just a little more serious consideration of present standards of living—through concentrated effort to better the present life, while just lately there has sprung up, undoubdetly because of the war, a revival of spiritualism. And with this revival has come the fakir who would cash in on people's desire to communicate with those who had passed on.

Brilliant men have studied the subject and much has been written and spoken but still there seems to be but little satisfaction or comfort gained. While all, of every creed agree on the reality of the life beyond, almost all are willing to enjoy the beautiful of the present life. There cannot help but be a certain solemnity and depression connected with these seances and in not a few instances of late, actual instanity has resulted from the brooding of the followers of this science.

There is so much of beauty and of joy—so much satisfaction in the doing of the daily tasks that we wonder why humanity is always looking for something to brood over. Oh for the faith of the little child, who trustingly puts his hand in that of his father, implicitly believing as he trudges merrily on his way.

I found such a pretty little poem this week and I believe that you will enjoy it also, so I pass it on.

THE END OF THE TRAIL

IF I LIVE a life that is clean and square
And aid my fellow man
By lending a hand to help him bear
His burdens the best that I can,
I need not fear what its close may be,
Nor how critics my life shall assail,
Nor what the future holds out for me
When I reach the end of the trail.

If I speak a word of good cheer to one
Whose sorrows have broken him down,
And thus give him hope to struggle on
With a smile instead of a frown,
I shall not fear when the shadows fall
And my earthly strength shall fail;
I'll trust in Him, who redeemed us all,
When I reach the end of the trail.

If a part of my little I freely give
To help those who faint by the way,
Or even pure water, so thirsty ones live
Not thinking what will be my pay,
Whether I live in a house by the side of the road,
By mountain, by river, or vale,
I'm willing to reap the seed that I've sowed,
When I reach the end of the trail.

A RAINBOW SHOWER

WHAT could be more appropriate for a shower for the early spring bride than a rainbow shower? Recently I received an invitation to such a shower and upon being asked what kind of a shower it really was—that is what we were expected to bring—was told that "Anything under the sun" would do, as a bride needed so many things and anything under the sun was also under the rainbow. My curiosity was a bit piqued. Knowing the scarcity and cost of linens, I selected as my gift a bath set—towel and wash cloth with a dainty pink border—at least thought I, that will harmonize with the color scheme, for pink is so prominent in the colors of the rainbow.

The hostess had cleverly covered a crock which was filled with fruit punch, so that the crock resembled a well, with the windlass Above the well was the sign "Wishing Well". All were told that they might draw one drink and wish, but that they must wish aloud. Each guest was pleasantly surprised to draw the golden colored punch instead of just water. And as each guest drank, she wished. After all had drunk, the hostess told each guest that only to those whose faith was supreme would the wish come true, and that hidden about the room they would find their fortunes. Each guest must not touch anything which was not addressed to her. There followed a lively hunt.

Early training in business methods are sure to be a paying investment. We predict that the little son of Mr. and Mrs. John Stark, of Fountain, will be an up-to-date dairyman when he grows up

A girl who was very fond of eating found a sandwich wrapped and tied with pink and green ribbon, and on the outside was a note which advised her that her wish for a husband would be granted if she would eat the mystic sandwich as the "nearest way to a man's heart was through his stomach." Another girl found a top labelled for her, with the inscription, "You will finally get what you are after in business—'A Top' ". Another found a crawn of artificial leaves which suggested that the crown of fame would be hers. A dainty little Miss who is always primping found a powder puff "to make her beautiful" which a girl who is always consulting the Ouija Board found a little mirror "To aid her in seeing through things. The bride—to be—found her's finally at the end of a rainbow which had been made of crepe paper over a frame. The end of the frame extended back of the davenport where huge brass jardineere was the proverbial "Pot of Gold" at the rainbow's end. Needless to say the jardineere held her gifts.

The hostess then put on the record, "I'm forever blowing bubbles", while all sang this popular air—a guessing game was in order and when the refreshments were served the guests were delighted to see the table centered with a dull green basket filled with spring flowers of the rainbow colors, while the hostess had made clever little pots of gold out of cardboard covered with golden colored crepe paper which held the pink candies as favors at each place. The places were marked with a rainbow—hand colored by a clever friend of the hostess.

Even the refreshments carried out the color note. Dainty little sandwiches were found to be filled with stuffed chopped olives, and a delicious fruit salad was stuffed into baskets made of orange shells. Hot creamed chicken in patty shells had a good look because the host-had a golden look because the host-in the cream sauce, and the desert was individual little cakes frosted pink and served with pink ice cream which had been made at home and flavored with strawberry juice to give it the color note.

HOME NEEDLEWORK
Case for Rubbers

Haven't you ever started out, felt that you should take your rubbers but disliked to pack them with your fresh, clean clothing, but at last, in desperation, you took them, carefully wrapped in a pice of paper or a towel. That has been the experience of very many. During the evenings this is a piece of work which can be easily picked up and taken out with you or furnishes pleasant home work, and when completed is an article which you will be glad to own or is a beautiful gift. Use coarse brown crash for the outside, then line it with the thin rubber, bind the edges. Pad the letters well and embroidery it in your favorite color, using satin stitch and French knots.

A picture of the rubber case is given below.

WEEKLY CHEER

Still be thine to see the rainbow
Spanning life's most dreary slope
And to dream of deathless beauty
In the garden of thy hope.

OUR READERS OWN COLUMN

Editor Woman's Department:

I noticed an article in your department relative to getting a switch made for a subscriber from her combings and wondered if I couldn't sell some combings. I have no disease, but lose my hair each spring and have enough saved for about three switches.—Mrs. W. S.

Dear Reader: I have made inquiry at the store where I had the switch made and find that they do not buy dead hair. They will make switches from your own combings for you, but the switches which they have on sale and which are bought by the retail stores for their customers are almost all made of human hair taken from a living person. They have a process whereby they singe the ends and claim that this live hair which will retain its natural lustre much longer than dead hair which of course is the hair that has fallen out. The Chinese market a lot of their hair in our country—in fact they tell me that the nets we buy are mostly all made of Chinese hair. Then hair stores which make a business of thinning out very heavy hair, dispose of this live hair in this manner. I am sorry that I cannot find a market for you for your combings.

Miss Mabel Clare Ladd: I have been reading your department for women and would like to have you tell me about dressing my children. I do not want to dress them to extremes, neither do I wish them to look like the eighteenth century.

What kind of outdoor wrap will I want for my four year old son this summer. He is quite small for his age. I would also like to ask you to suggest a suitable dress pattern for my little girl two years. What kind of panties do they wear and what length do they make their dresses like this.—Mrs. P. M.

Dear Reader: There are certain standards fixed by the style makers, but after all, especially in children's clothes the range of choice is wider than in clothes for grown-ups—so if you get a book of reliable patterns, such as we furnish for 15c, you can find numerous styles for clothes for your kiddies and I am sure that out of this whole spring and summer fashion number you will find something which will please you.

My observation shows me that for little boys about four the shower-proof material is used for their little coats. It wears the best of anything and while it is not heavy like the winter weight coat, because of the fact that it is shower proof, it is also warmer than the ordinary cloth, and can be easily cleaned, which of course is a great advantage in boys clothes. The patterns secured through our Pattern Department are simple and easy to follow and there are patterns for coats contained therein.

For the little girl aged two—hardly more than a baby, the dresses are short—not much below the knees. And the best panties for the child this age, and in fact until they are quite large are those which are made like little bloomers. With these little undergarments securely tied just above the knees, and edged with a narrow embroidery or lace, you need have no hesitancy in dressing her in the short dresses which make a tiny little girl just walking look like a fairy. However for play you will find the little rompers much more satisfactory than dresses and they allow the child much more freedom when she attempts to climb up on chairs. Rompers used to be made for boys only but because of their sensibleness, they have come to be used for boys equally as much, although of course for "very best" nothing will take the place of the dainty white dress for the little Miss.

HELPFUL HINTS

WHEN you set the hens this spring, before you make their nest, place a newspaper in the bottom and then place the straw on top. When you are ready to clean the nest you will find it very easy to lift the paper and straw together with a fork or shovel and thus keep your nest sanitary with very little bother or litter.

When washing sweaters do not pin them on the line, but place each on a coat hanger, button to hold in shape, and hook the hanger over the line.

If you have a panama hat left from last season which you would like to clean, take a clean white

cloth, dip it in lemon juice and sponge it off. This treatment freshens the straw and removes the discoloration wonderfully.

Last summer's black hat will be wonderfully freshened by dusting carefully and then going over it with olive oil. If it has become gray, after the oil has had a chance to become absorbed, apply regular liquid shoe blacking if you cannot get the regular color for hats.

Rubbers are scarce and very expensive, and they have a habit of wearing out just before the spring rains come when we positively must have them. Here's a new scheme! Take the fabric patch which you use for patching the auto tires and put it on the rubber or even a shoe just as you would on your automobile tire. When the patch wears out it is only the work of a moment to put on another and the rubbers will last a great deal longer.

If you are obliged to wear glasses all the time you have been annoyed times without number by their steaming when you are cooking. Try rubbing vaseline on both sides of the lenses, then wipe off all excess oil with a silk handkerchief and polish. The steam will not accumulate on the lenses after this treatment.

A nice damask tablecloth which has become worn in places will still often have enough good material in it to use for napkins, while doilies may be made for the cake and fruit baskets from the smaller pieces which are not so badly worn.

Make a leather or oilcloth pocket for the side of your ice box and in this put the ice pick. It will save many steps this summer.

"HEARTS OF THREE"

(*Continued from page* 15)

knowledge of the Solanos since in the clearing where he had sold them for the silver dollar. Torres' stick fell upon his head, five times, ten times, and went on falling with the certitude that in all eternity there would be no cessation unless he told the truth. And, after all, he was a miserable and wretched thing, spirit broken by beatings from the cradle, and the sting of Torres' stick, with the threat of the plenitude of the stick that meant the death his own owner, the haciendado, could not afford, made him give in and point the way of the chase.

But his day of tribulation had only begun. Scarcely had he betrayed the Solanos the second time, and still on his knees, when the haciendado, with the posse of his neighboring haciendados and overseers he had called to his help, burst upon the scene astride sweating horses.

"My peon, senors," announced the haciendados, itching to be at him. "You maltreat him."

"And why not?"

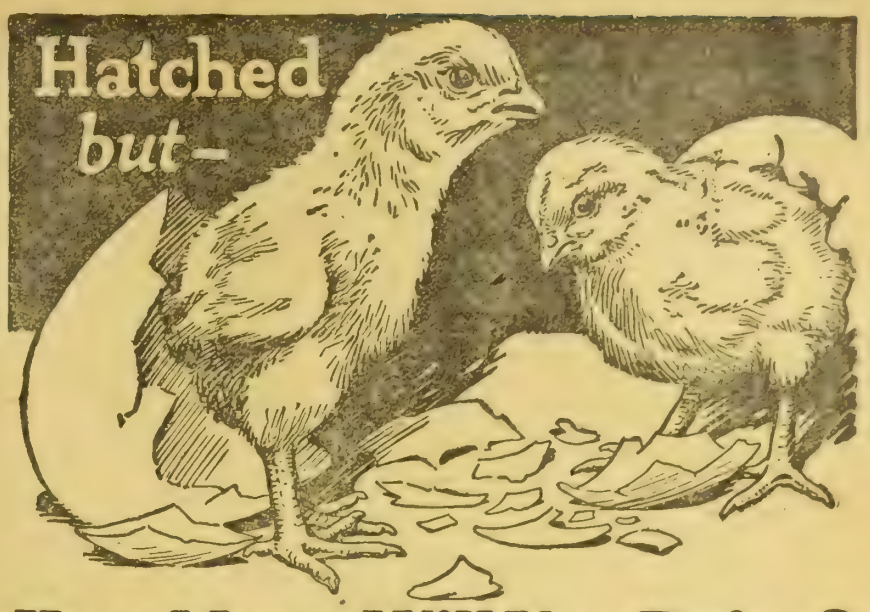
"Because he is mine to maltreat, and I wish to da it myself."

The peon crawled and squirmed to the Jefe's feet and begged and entreated not to be given up. But he begged for mercy where was no mercy.

"Certainly, senor," the Jefe said to the haciendado. "We give him back to you. We must uphold the law, and he is your property. Besides, we have no further use for him. Yet is he a most excellent peon, senor. He has done what no peon has ever done in the history of Panama. He has told the truth twice in one day."

His hands tied together in front of him and hitched by a rope to the horn of the overseer's saddle, the peon was towed away on the back track with a certain apprehension that the worst of his beatings for that day was very immient. Nor was he mistaken. Back at the plantation he was tied like an animal to a post of barbed wire fence, while his owner and the friends of his owner went into the hacienda to take their twelve o'clock breakfast. After that, he knew what he was to receive. But the barbed wire of the fence, and the lame mare in the paddock behind it, built an idea in the desperate mind of the peon. Through the sharp barbs of the wire again and again cut his wrist, he quickly sawed through his bonds, free save for the law, crawled under the fence, led the lame mare through the gate, mounted her barebacked, and, with naked heels tattooing her ribs, galloped her away toward the safety of the Cordilleras.

(*Continued next week*)



How Many Will You Raise?

The loss in little chicks that die the first few weeks after hatching amounts to millions of dollars each year. Everybody must cut down the losses and increase production to the limit this season. How many chicks do you lose from ***Gapes? Diarrhoea? Indigestion? Leg Weakness? Weakness from Rapid Growth of Feathers?*** Prepare them to withstand little chick ailments by feeding

Dr. Hess Poultry Pan-a-ce-a

Remember that disease takes the weaklings—not the strong and healthy. And remember that indigestion is at the bottom of many little chick ailments.

Pan-a-ce-a prevents and cures gapes. Pan-a-ce-a prevents and cures leg weakness.

Pan-a-ce-a regulates the bowels. Pan-a-ce-a produces appetite; it promotes digestion.

And remember good digestion is most essential during the rapid growth of feathers. A Pan-a-ce-a chick will outfeather a non-Pan-a-ce-a chick every time.

Your dealer is authorized to supply you with enough Pan-a-ce-a for your whole flock, with the understanding that it's to prevent and cure *Gapes, Indigestion, Diarrhoea, Leg Weakness;* that you are to see marked results during the growth of feathers; otherwise, he will refund every cent you have paid. 30c, 75c, and $1.50 packages. 25-lb. pail, $3.00; 100-lb. drum, $10.00. Except in the far West and Canada.

The Children's Hour

DEAR CHILDREN: One of our members wrote in last week to ask if I was any relation to the "Laddie" of Gene Porter Stratton, the writer. Now I don't believe that my little friend had really read "Laddie" or he would have known that Gene Porter Stratton's "Laddie" is a dog, and the truth of the matter is that I am a girl—but because my last name happened to be Ladd, my friends have always called me Laddie ever since I was small like you. However, I like boys about as well as girls—and I much prefer to get out and "hike" with boys than to sit in the house and sew with girls, so I think I am entitled to the name "Laddie."

Speaking of "hiking," reminds me that this is the season when we put on our old clothes, our stout shoes and start out to get pussy willows, yes, and build rafts and float them in the swollen streams. Very soon the flowers will be coming up and oh what sport to take some "hot dogs" and go on a long hike, and then when you are so hungry you just feel as if you could eat nails, to build a fire in the woods, warm your weeners and put them between rolls or bread. Never did a feast taste so good as that lunch out of doors.

I wish some of my little friends would tell me of their "hikes"—where you go, what you do and what you learn. There will be a prize and perhaps two for the best letters on this subject. The answer to last week's "animal puzzle" was antelope. Cordially yours—*Laddie.*

OUR BOYS AND GIRLS

Dear Laddie:—I have been reading the children's letters in the M. B. F., and think they are very interesting. I also like the puzzles and Doo Dads. My father has taken the M. B. F. for three years. I am a little girl 10 years old and am in the 4th grade. I have a mile to go to school. My teacher is Miss Nina Winegar. We live on an 131-acre farm and own three horses, about 25 head of cattle and 15 pigs. For pets I have a dog, Cornell, and a cat, Bobby. I help my mother in the house. We also have about 75 chickens. Last week there was no school. There are only seven scholars in the school. I have no sisters or brothers. Well my letter is getting long so I will close and write a riddle—Velma Dixon, Brooklyn, Mich.

Riddle

Black, within; red without; four corners round about. Ans.—Chimney.

Dear Laddie:—This is the first time I have written you. I am a boy, 11 years old. We live on a farm of 100 acres and have four cows, four horses and a colt, 70 hens, and a pig. For a pet we have a yellow cat. Our barn burned some time ago. I have two miles and a half to go to school and am in the 5th grade. My teacher is Miss Fuller. She came from the same place the M. B. F. is published. She is a good teacher and I go to her every day. There are 11 scholars in the school. I have four sisters and five brothers. Well I will close hoping to see my letter in the M. B. F.—Gayeard Ray, Gladwin, Mich.

Dear Laddie—This is the first time I have written to you. I am a boy eight years old and will be nine in April. I am in the 3rd grade at school. My teacher's name is Francis Jenkins, and I like him very well. I live on a farm of 100 acres. We have 2 horses, Dick and Pedro. We also have 3 cows and 2 calves and 1 pig. For pets I have one old cat Whitie and two kittens Tiger and Muggis, also one rabbit. I have two sisters, Pearl and Dora. My mother has about 21 chickens. As my letter is getting long I will close, hoping to see my letter in print.—Daniel Brackangast, Buckley, Mich.

Dear Laddie:—This is the first time I have written to you. We take the M. B. F. and think it is a very interesting paper. I like to read the Children's Hour. The letters are very interesting. I go to the Willis school. I am in the 7th and 8th grades. My teacher is Miss Mina Smith, of Brown City and I like her very much for a teacher. The Willis school and Deanville met with the V. B. and had an arithmetic and spelling match. I won in all. I am a little girl 9 years old. My letter is getting long so will close.—Stella Willis, Brown City.

Dear Laddie—This is the first time I have ever written to you. I am a little girl 6 years old and will soon be 7—the 8th of May. I am going to school and in the second grade. I have one sister and one brother. My brother's name is Daniel. My brother will soon be nine years old. My papa takes the M. B. F. and we all like it. I had the flu last year, but haven't got it this year, and don't want it. Our school is closed now on account of the flu, but everybody is getting better now. I am piecing a quilt. As my letter is getting long I will close hoping to see it in print. Dora Brackangast, Buckley, Mich.

Dear Laddie:—I am a girl 13 years old and in the 7th grade at school. My teacher is Miss Edith Smith. My father takes the M. B. F. and we like it fine. I read the Children's Page every time. I solved the puzzle and the the names are, Harriet, Bernice, Ila and Katie. We live on a 40-acre farm. I liked your story of "The Wonderful Adventure of a Raindrop," but I had rather have one that ends each week. As my letter is getting long I will close for this time hoping to see it in print.—Helen Maynard, Millington, Mich.

Dear Laddie:—This is the second time I have written but the first time I wrote I did not see my letter in print so I am writing again. I am 9 years old and in the 6th grade at school. My teacher is Mrs. J. E. Wright and there are twelve scholars in our school. I like to go to school very much. My father takes the M. B. F. and likes it very much and I enjoy the puzzles and the boys' and girls' letters and read them every week. Well I must close as my letter is getting long. I hope to see it in print.—Gifford Inglis, Millersburg, Mich.

Dear Laddie:—This is the second time I have written to you. We are going to have a box social April 10. We had a picnic the 12th of March. I would have been glad to have gotten one subscription for a pencil box but I received one for my birthday. I would like to get a flashlight. If you would please tell me in your letter this week I will thank you very much. I have a friend, Barbara Roap, who is writing too. She took a great interest in the paper when she saw my letter. This letter is rather long. —Sylvia Nostrand, Conklin, Mich.

Dear Laddie—I am a farmer girl, so I am writing you a letter. I wrote to you once before, but never saw my letter in print. I live on a 200 acre farm. We have 20 cows, 4 horses, 2 colts, 170 chickens. We have an automobile. My father takes the M. B. F and likes it very much, said he didn't know how to get along without it. I have 1 sister, Orpha, 18, and 3 brothers, Walter 16, Carl 12, Floyd 6 years old. I an 13 years old and in the 8th grade. I am sending a subscription for the M. B. F. and please send me one flashlight.—Colon, Mich.

Dear Laddie—I am a girl 10 years old and I am in the 5th grade at school. I go to the St. Michael's school. My teacher is Sister Mary Elnora. I have two sisters, Bernice and Julia, and a brother, Clarence. My father takes the M. B. F. I like the Doo Dads. Well, I hope my letter will not get in sight of the waste basket for this is the first time I have written to you. Gertrude May, Remus,

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. and likes it very much. I go to school, am 10 years old and in the 5th grade. My teacher is Miss Viola M. Groff. I like the puzzles very much. Well I hope my letter will escape the waste paper basket. And I wish some of the girls would write to me. I will close. Charlotte Amelia Vanderbilt, Bay City, Mich.

Dear Laddie:—This is the first time I have written to you. My father takes the M. B. F. I am a girl 8 years old. I have a sister and brother. My brother's name is Oren and my sister's name is Etta. I go to school. My teacher's name is Miss Sullivan. I am in the 3rd grade. We have 5 cows and 6 calves, 3 horses and 25 chickens. I like the Doo Dads well. Elliva Frost, Lowell, Mich.

Dear Laddie—This is the first time I have written you. I am a girl 11 years old and in the 7th grade at school. I live on an 80 acre farm. My father takes the M. B. F. and likes it very much. I like to read The Children's Hour. We have 7 cows, 3 calves and 3 horses. For pets I have two cats. Their names are Whitefoot and Tiger. I have one sister named Eva and one brother named Harold. Well as my letter is getting long I will close, hoping to see it escape the waste basket.—Edith Cope, Emmett, Mich.

Dear Laddie:—This is the first time I have written you. My father takes the M. B. F. and I like to read the letters very much. I am a girl 10 years old in the 4th grade, so I thought I would write a short letter. I live on a 40 acre farm. We have 2 horses and I have a pony of my own. Also 6 cows, 15 sheep, 7 hogs, 2 calves and 100 hens. I have two rabbits and 1 dog for pets.. I hope to see my letter in print. Well I will close for this time, so good by. From Beatrice Hoppins, St. Louis, Mich.

Dear Laddie—This is the first time I have ever written you. My father takes the M. B. F. I am 12 years old and in the 6th grade at school. We live on a 67 acre farm. We have 2 horses, 2 cows and 2 calves. One we call Jumbo is about two weeks old and is a Brown Swiss, and the other calf we call Spot. I hitch it up and drive it all over. I hope to see my letter in print. Well as my letter is getting long I will have to close. Orval Plank, Newaygo, Mich.

Dear Laddie:—I am a girl 15 years old and in the 8th grade. We live on a farm of 110 acres. I have two brothers, Clyde and Charles Leroy, Jr., and three sisters, Ethel, Bessie and Nellie. Clyde is my older brother and lives in Akron, O., and Charles is two years old. My mother is a nurse. I have one pet, a dog; her name is Topsy. If any girls my age will write to me I will be glad to hear from them. I will close hoping to see my letter in print.—Hazel N. Butler, Albion, 4.

Doar Laddie:—This is the first time I have written to you. My daddy takes the M. B. F. and I like to read the letters from the boys and girls. I am a little girl 7 years old. I go to school every day. I am in the 3d grade. The school is just across from our house. I have one little brother, 4 years old; his name is Roy. I have no sisters. I guess this is all I will write this time. Hope I will see my letter in print soon.—Verna Vincent, Leroy, Mich.

Dear Laddie:—I am a girl 15 years old and in the 8th grade. My teacher is Miss Viola Foss. There are nine scholars in our school. I have seven brothers and one sister. My oldest brother is a soldier and his name is John. My father takes the M. B. F. magazine and says it's a good paper. I have one pet, a dog, named Ted. As I have never written before I would like to see my letter in print.—Frances Belle Koons, Homer.

Dear Laddie:—This is the first time I have written to you. I have two brothers and two sisters and am in the 3rd grade at school. We live on an 100-acre farm. We have four cows, three calves and a team, Frank and Fly. We have 14 chickens. I go to school every day now I am 8 years old and like to go. We take the M. B. F. and like it very much. I will close hoping to see my letter in print.—Delmer Stickney, Gladwin.

Dear Laddie:—This is my first letter to you. I am 13 years of age and am in the 6th grade. I have a brother, Clarence, also, Richard, George, Rollie and Leon. I have two sisters, Lucille and Doris. My father owns a store and a farm of 75 acres. We have two horses, a colt and a cow. I have a pet dog, Curley; he is brown and white. Now I will close hoping you will publish my letter. —Mildred E. Adrianson, Doster, Mich.

Dear Laddie:—This is the first time I have written to you. I am 11 years old and in the 6th grade. We live on an 80-acre farm. My father takes the M. B. F. and likes it very much. For pets I have a dog and two cats. I would like to know how I could get a flashlight. If you would write and tell me how I will be well pleased. I will close hoping to find my letter in print.—Barbara Raop, Conklin, Mich.

Dear Laddie:—This is the first time I have written to you. I am a boy 9 years old and in the 4th grade. I live on a 40-acre farm. We have four cows, 13 pigs and two horses. My father takes the M. B. F. and likes it very much and I enjoy the boys' and girls' letters. I will close hoping to see my letter in print.—Harry S. Wilt, Coleman, Mich.

Dear Laddie:—This is the first time I have written to you. I am 10 years old and in the 5th grade. My teacher is Miss Kate Creore. I like all my studies, that is all but arithmetic; it is hard for me. I have one brother, Fred. I like the M. B. F., and think it is a great paper. I do not have much to say and hope my letter will escape the wastepaper basket—Ilah Miller, Dimondale, Mich.

Dear Laddie:—I am a little girl 7 years old and live on a farm of 120 acres. I go to school and have a mile to walk. We have four horses and eight cows. I I have a nice big cat for a pet; its name is Tiger and he looks like one too I will close hoping to see this in our next M. B. F.—Dortha Lofgren Cadillac, Mich

Dear Laddie:—This is the first time I have written to you. I like to read the Children's Hour. I am 10 years old and in the 4th grade. My teacher is Miss Hilda Vogler. I have two brothers and two sisters. I wish some of the boys or girls would write to me. I will close hoping to see my letter in print.—Bernice Hull, Avaca, Mich.

Dear Laddie—I am a farmer boy. I am 7 years old. I am in the 2nd grade. I stand 100 in my lessons every day. We are going to put in beets this year if they raise the price. I don't like to weed beets it's so hard on my little knees. We like M. B. F. very much.—Lidge Burns, Munger, Mich R. 2.

The Junior Cook

French Toast

Cut ten or twelve slices of bread. Bread more than two days old is best and slices cut for table use but not eaten, may be used to good advantage in this dish.

Beat one egg (yellow and white together) with one half teaspoonful salt.

Add one cupful of milk and beat with a fork till well mixed.

Put one tablespoonful meat drippings on a skillet and make smoking hot.

With a fork dip a piece of bread into the egg batter, cover completely and then quickly drop bread into pan. About four slices can be cooked at once.

Turn fire so that the bread will brown in about three minutes.

When one side is browned turn the bread over with a pan cake turner and brown the other side.

Serve very hot with honey, syrup or sugar as desired. If served with old fashioned New Orleans molasses this makes a particularly nourishing luncheon or breakfast dish. Be sure the bread browns nicely and cooks till all trace of wetness or soggyness is gone.

KING WHEAT MOUNTS THRONE IN CANADA

(*Continued from page* 6)

the Ontario farmer is not naturally a free trader. Indeed there is reason to suspect that this unnatural alliance of western free trader and Ontario protectionist has been maneuvred and financed by the same intriguing politicians whose first intention was to affect a tariff "reapproched" the tween Ontario and the west. Failing that, they have "reapproached" the farmers of Ontario and the west, and now seek to reapproch the farmers and the liberal party with a view to winning the next Dominion election, which cannot be postponed beyond the fall of 1921. At all events, Sir Clifford Sifton and certain others who were very busy keeping Sir Wilfred Laurier out in December, 1917, are now equally busy getting a farmer-liberal government in at Ottawa—if they can. King Wheat's realm naturally includes the three prairie provinces, which are popularly known as the wheat belt, the buckle of the belt being the thriving city of Winnipeg. King Wheat takes his name from his chief product. He is, I was going to say, a wheat farmer, but when I think of the reckless way he exhausts his land by his gross neglect of crop rotation, I must call him a wheat miner. He takes everything out of the land and puts nothing back. He is, therefore, a very expensive king to keep up. It has been suggested that he would do a wise and merciful act if he would put some of the money he made in the war into fertilizers for which the famished soil is crying.

King Wheat began to shew his head as a pretender to supreme power in 1911, when the west went almost solidly for reciprocity in food products with the United States. The Ontario farmer, who is being wheedled just now into the belief that his interests and King Wheat's are identical, turned in and helped to defeat the very issue for which he is now contending. The Ontario farmer's views have not changed, but he has been flattered off his feet, so to speak, by King Wheat's efforts to please him. King Wheat has two armies in the west—the United Farmers of Alberta and the Grain Growers' Association of Saskatchewan and Manitoba, and these armies he volunteered to rename the United Farmers of Canada, if only the United Farmers of Ontario and the United Farmers of any other eastern provinces will swing in heartily behind him.

So far the only eastern province he has captured is Ontario, and it is extremely doubtful if he can keep it in line. As a western sovereign King Wheat finds it profitable to sell his bulk products, wheat and cattle to the United States, from which country he can also ship in food supplies for his own use at a cheaper rate than he can from eastern Canada. Free wheat and cattle were what he mainly struggled for in the reciprocity election of 1911, and though he was defeated at the polls, good luck and the war came out to meet him with these blessings in hand so that now he has got a large part of what he wants.

Competition from the United States has no terrors for the western farmer who has to sell what the United States needs to buy and who has to buy from the United States what he is too lazy or too greedy to grow for himself. Give Ontario 18 months to cool off—and union government may be able to hang on that long—and the Ontario farmer will probably realize that what a mixed farmer, selling small wares needs most is his fat protected home markets, scattered bountifully all over the province, which he has enjoyed so long. He will not be inclined to give up the local bone for the western shadow. Something like this, one of King Wheat's satraps, by name Mr. Musselman, has been telling the Saskatchewan grain growers. He warns them that they cannot rely on the Ontario farmer in a general election because he Ontario farmer is inherently a protectionist and will prove himself so in a show-down. In fact King Wheat's hold on Ontario is slipping right now and unless he gets a quick election he is going to lose the fight.

Other circumstances tend to put a crimp in King Wheat's design to capture the whole of Canada. Like all usurpers his slogan is good government, but in the one place where he has had a chance to make good his professions, namely Ontario, he has found himself with a precarious majority of two, obliged to stand pat and play safe. In short he discovers himself not a bold reformer but a cautious pussyfooter of the old school, whose long suit is to talk big and to do nothing that would deprive him of the spoils of office. United farmer government in Ottawa is simply party government over again with the most selfish, the most inexperienced and likewise the hungriest of all the interests on top. It has simmered down to that—sit tight and keep the job.

FARMERS' OUTLOOK AS SEEN BY A FARMER

(*Continued from page* 4)

tune of extravagance and some day the fiddler must be paid.

We believe the Farm Bureau is offering the most feasible plan at the present time for the successful organization of the farmer. Secretary C. A. Bingham says "The organization is gaining members rapidly in the state, fifteen counties have already been organized with a membership of 22,749, the start being made one year ago. Plans are under way for an intensive drive in 21 other counties. The aim of the organization is 100,00 members in Michigan by the end of the year. The scope of the Bureau is nation-wide and their ultimate purpose bringing the producer and consumer together and bringing sufficient pressure to bear in the elections to the end that the interests of agriculture may be properly presented and that laws be passed that shall not be inimical to the producer's interest. If these results are brought about in the near future they shall not be discriminated against, as they have been in the past, then many our hopes that the mad rush from the country to the city will soon be stemmed and ultimately by largely eliminating profiteers and middlemen the consumer will be able to live cheaper and the producer receive his just profits and labor become more contented and national disaster be averted.

BUSINESS FARMERS SHOULD VOTE ON APRIL 5TH

(*Continued from page* 10)

There is no doubt but what Wm. Jennings Bryan has stood by the people against Wall Street for the last 25 years. I am for Bryan first, last and always.—*G. C. Noffinger, Benzie County.*

Our family is divided on the presidential straw vote; one for Bryan; one for Hoover, (mine) and two for McAdoo.—*Apollos Long, Wexford Co.*

Here are two votes for Wm. J. Bryan; second choice, Henry Ford. For governor, Milo D. Campbell. I can not praise your paper enough; the only fault, it ought to be a daily.—*J. S. Daenzer, Vassar.*

Please find enclosed coupon for president. Guess W. J. Bryan has been the best expender of the thing we ought to have and the things he has expounded that we have got such as prohibition and woman suffrage. —*E. N. Coulter, Charlevoix County.*

I am sending my subscription with a new one. I am also in favor of a Farmer Governor (Campbell). But what is the use, I am afraid they will all turn out like Fordney on the bean question. I believe Uncle Rube would be a good governor. Keep coming, Uncle Rube.—*L. K., Carson City.*

My wife and I are both for William Jennings Bryan for president and Robert Lafolette takes second choice here. Our vote shall never favor a general. We are in favor of the warehouse amendment and Milo Campbell for governor.—*A Farmer, Cheboygan County.*

You don't say if the women are in on this straw vote. However, my wife insists on sending in a vote for Eugene Debs. I, myself, would like to see him president, but realizing the hopelessness of the case I enclose my vote for Hiram Johnson, being my choice of those I think stands some show of getting the nomination and seat.—*G. M. Oliver, Shiawassee County.*

After looking over the names in M. B. F. we have concluded Mr. Hiram Johnson is the man we need to head the government in its present state of chaoes. A lot of politicians think that if they are able to get on a certain ticket they are as good as elected but the stiff Democrats are limbering up a bit of late years and are paying some attention to the kind of legislation needed. Here are two votes for Johnson.—*L. G. Edwards, Allegan County.*

$50,000 Saved Farmers This Year

By the Gleaner Co-operative Method of Selling

FIVE MILLION POUNDS OF BINDER TWINE

The Gleaners have contracted with Warden Hulburt of Jackson Prison to sell FIVE MILLION POUNDS OF BINDER TWINE during 1920. By the scale of prices on twine established by the Prison ,the more twine ordered the lower the price. And the Gleaners by placing their order for the enormous quantity of five million pounds are given the lowest price accorded any firm, company or individual.

Every Farmer Who Orders Twine Receives a Saving

The Gleaners are going to sell this enormous purchase of twine on a strictly co-operative basis. The low quantity price awarded us, allows us to give every farmer who orders through us a reduction of one cent per pound. And this benefit we want the farmers to receive—and it's going back to them in a saving in price.

Just stop and figure what this means:—$10.00 saved on every thousand pounds you order—$20.00 on every ton—and a big round $50,000 on the five million pounds we contracted for to secure our low quantity price.

And remember—you receive this Patronage Dividend immediately, there is no waiting—no delay—we allow you to deduct it from the regular quoted price when you pay for the twine.

Here Are the Binder Twine Prices:

Cash Prices (Per 100 pounds gross weight)

If paid for on or before
April 1st, $14.75 less Patronage Dividend of 1c per lb. $13.75
May 1st, $14.86 less Patronage Dividend of 1c per lb. $13.86
June 1st, $14.96, less Patronage Dividend of 1c per lb. 13.96
July 1st, $15.43 less Patronage Dividend of 1c per lb. 14.43
August 1st, $15.54 less Patronage Dividend of 1c per lb. 14.54
Sept. 1st, $15.64 less Patronage Dividend of 1c per lb. 14.64

Time Price (Per 100 pounds gross weight)

$15.75 less Patronage Dividend of 1cper lb. $14.75
(Due on or before Oct. 1, 1920. Interest at 8 per cent per annum after Oct. 1, 1920.)

(Due on or before Oct. 1, 1920. Interest at 8 per cent per annum after Oct. 1, 1920.)

Fifty cents per 100 lbs.—$10.00 per ton—will be allowed any Solicitor who secures twine orders in his locality, distributes the twine and makes collections. This solicitor's commission is included in the net cash and time prices shown at the right and is to be deducted when twine is paid for.

EVERY BALL OF TWINE OF HIGHEST QUALITY

and **fully guaranteed.** The five million pounds we have secured is of **No. 1 Standard grade**—and the state stands back of every ball sold.

Don't wait expecting a lower price. With the unsettled conditions in Mexico resulting in a scarcity of sisal and the increased foreign demand, the price cannot be lowered—if there is any change the price will be increased.

SEND FOR AN ORDER BLANK NOW—and be sure of getting twine at the low prices shown above.

GLEANER CLEARING HOUSE ASSOCIATION

811 Michigan Trust Bldg. GRAND RAPIDS, MICHIGAN

Special—Send for the latest Gleaner prices on sugar, spraying materials and insecticides, fertilizers, feeds, etc. We can save you money. A postal will bring the Price List.

Make an Extra Income Threshing

There's good money made in running a threshing outfit. Last year there were not enough threshers in some states to save the crop. Threshing machine owners were begged to "come and thresh at any price." Why not make an income in this business for yourself? Write and get our proposition on the

Red River Special

There is a demand for threshing with this machine. It's the thresher that "saves the farmer's thresh bill" in grain saved from the stack.

Even if you get a thresher for just your own grain, it would pay you. But why not thresh for a few neighbors, too?

Hitch the thresher to your tractor, or let us supply you with the reliable Nichols-Shepard Steam Engine and have the ideal threshing outfit—good for many years of money-making service.

Farmers Service Bureau

Submitting Soil for Analysis

I would like to know how to submit a sample of soil to the Michigan Agricultural College for analysis.—H. A., Osceola County.

The question of submitting soil samples to us is one of the most unsatisfactory things with which we have to deal, inasmuch as there are many things in addition to the laboratory examination of samples of soil so far as crop requirements are concerned. These you doubtless appreciate and I need not elaborate on them. Therefore, we prefer not to have all the farmers in Michigan submit samples of soil so far as crop requirements are concerned. You understand there is a great deal of work involved in this and in a short time, if we put on a propaganda of this nature we would be swamped with samples.

It is true that we examined a large number of samples of soil for the farmers of Michigan during the year but we are not in position to expand greatly along these lines due to lack of funds for employing men, etc. However, if you will send us about one-quarter pound of your soil taken to a depth of about seven inches we shall be glad to examine it for you. You should state the nature of the subsoil and the length of time the soil has been farmed and also the native timber, if possible. It is essential that it be carefully packed and labeled. We receive a great many samples of soil that are too small in amount and many that are unlabeled and others so packed that the labels are lost. Of course we cannot make replies in such cases.—*M. M. McCool, Professor of Soils, M. A. C.*

Waterproofing Cellar

I want to put a cellar under my house in low damp soil. Can it be cemented to keep water out or not? I thought of giving it a good coat of asphalt and tar in the inside. The house is already built.—J. Z., Burt, Mich.

One of three methods may be used in the case cited. 1. In an ideal mixture of cement and the aggregates, there will be no voids and consequently no possibility of the passage of water thru the concretes. Such an ideal mixture is difficult to obtain in practice. However, use of a richer mixture will reduce the voids and thus increase the waterproof ability of the concrete. A dry mix is more permeable than a wet mix as it is more porous and should not be used where a waterproof concrete is desired. 2. The application of a layer of waterproofing material such as asphalt or asphalt-coated paper between two layers of concrete, while rather expensive, is effective. A layer of concrete is poured, the waterproofing material placed and a layer of concrete not less than two inches thick poured over this. 3. There are on the market products in the form of waterproofing compounds which in themselves are water repelling. Some of these products are in the form of a powder to be mixed with the dry cement, while others are liquids to be mixed directly with the water. This is an effective method and could be used in the case mentioned with satisfactory results.—*Department of Farm Mechanics, M. A. C., Floyd E. Fogle, Instructor.*

Citizens of United States

We were born in Canada of Canadian parents. Our father died and our mother married a citizen of the United States when one of us was 10 years of age and the other 6. We came of age in the United States. We claim to be citizens of the United States. Town and county officials say we are aliens. Are we citizens of the United States or not?—J. and G. G., Mecosta County.

I would be of the opinion that you would not be citizens of the United States. There is a possibility that the courts might construe the law to make you citizens. It says: "The children of persons who have been naturalized under any law of the United States being under the age of twenty-one at the time of naturalization of their parents, shall, if dwelling in the United States, be considered citizens thereof." As neither of your parents were ever "naturalized" I would be of the opinion that the marriage of your mother alone to a citizen of the United States would not be sufficient to make you such. There is a statute applicable to your case found at the bottom of page 264 and top of page 265 of the Michigan Election Laws compiled by the secretary of state by which you may be immediately admitted to citizenship where you had supposed you were citizens.—*W. E. Brown, legal editor.*

Finishing Uncompleted Drain

I'm a tax payer to a county drain. The drain was laid two years ago by the superintendent of county drains. The assessment was levied and the taxes were collected two years ago this winter. The lower part of this drain work was finished and the upper part has never been touched. I am on the upper part of the drain. Paid my taxes two years ago and have no drainage yet. Every man who took a job on this drain had to give a bond for his job to satisfy the superintendent of county drains but I guess some of them were straw bonds. I would like to know who is holding for the completing of this drain as long as the tax is paid?—A Subscriber, Muskegon County.

If the contract is not completed for the construction of the drain in accordance with the contract then the drain commissioner may declare the contract forfeited and re-let the drain contract. If the conract can be let for the same price there is no loss but whatever loss there is falls upon the bondsmen as well as the contractor. If the contractor's bonds fail then the loss must fall upon the taxpayer as the drain commissioner is not an insurer of the bonds, if he exercises his official discretion. However, if he was a party to a straw bond being given then he would himself be liable on his own bond and also personally liable.—*W. E. Brown, legal editor.*

Trespassing on Flooded Land

I have a farm that has 60 acres under water when the high water comes in the spring. Can people come within 40 rods of my house with a boat and shoot rats when I order them off? I have signs up. Am I compelled to let them go across my place to the river or not?—A Reader, Sanilac County.

I am of the opinion that one would not have a right to come onto your land by boat to shoot rats. You are not obliged to allow them to cross your land to the river. At freshet time the public would have the right to use a boat on the surface but not for hunting animals.—*W. E. Brown, legal editor.*

Legal Nomination

At a township caucus after the box is turned and the count begun if four more ballots are passed in and counted, is the nomination legal?—L. E. M., Tuscola Co.

I am of the opinion that the inspectors of election may receive the ballots of persons lawfully entitled to vote even though a technical closing of the ballot has occurred. I think they would be allowed some discretion in the matter.—*W. E. Brown, legal editor.*

Spring Markets Show Strength and Advancing Prices

(By U. S. Bureau of Markets)

SEVERAL important lines of produce advanced to new high points during the past four weeks. Recent gains include potatoes, apples, onions and cabbage. Crop shortage and a vigorous buying demand seem to be the general cause of most of these advances. Severe weather checked shipments to some extent, yet the total movement was about ten per cent heavier than for the same period a year ago, owing chiefly to liberal shipments of new Southern produce. Average total of 14 leading fruits and vegetables was about 1,000 cars per day.

Potatoes Advance

Following the upward price movement which started in October and reached a peak the latter part of January, when No. 1 sacked white potatoes ranged $4.50 to $5, a downward trend took place. Toward the middle of February the market began to recover, when prices ranged $4.15 to $4.50. The highest prices of the season to date were reached the middle of March with a range of $5.35 to $5.70 sacked per 100 lbs. in consuming markets, compared to $1.75 to $2.10 a year ago. This rapid advance has been due to restricted hauling and shipping facilities, weather conditions and diminishing supplies. No. 1 Northern round white stock at Wisconsin, Minnesota and Michigan shipping points on March 15, ranged $4.95 to $5.10 per 100 pounds, sacked f. o. b., compared with $4 to $4.30 a month ago and with $4.00 to $4.25 the middle of January, middlewestern consuming markets quoted this stock about $1 higher than last month at $5.30 to $5.60. New York round whites at shipping points for the first two weeks of March ranged generally $4.75 to $5 sacked per 100 pounds f. o. b. compared with $3.95 to $4.25 the middle of February. Eastern distributing markets for this stock at $5.00 to $5.70 showed a gain of $1 over prices a month ago. Maine Green Mountains in New York City closed at $5.55 to $5.85 bulk per 100 pounds the middle of March, compared with $4.60 to $4.70 a month ago. Supplies of Colorado potatoes are very light and prices at record height, there probably being barely enough to supply local requirements. The market has been very strong with shippers selling carlots the record week in March around $5.00 per 100 pounds f. o. b. shipping points. According to the records of local dealers, these prices are the highest in the potato industry of Northern Colorado.

Shipments of white potatoes four weeks ending March 13 decreased to 8,271 cars from 9,590 cars for the preceding month, and were much lighter than the movement of 10,078 cars for same period last season.

Apples Slightly Higher

Values have strengthened considerably the past four weeks. New York Baldwins A 2 1-2 gained at least 50c, ruling close to $8 per barrel f. o. b. shipping points, and best lots ranged $8 to $9.50 in jobbing markets of leading cities. Northwestern boxed apples gained about 50c, reaching top of $3.15 f. o. b. shipping points for large sizes, extra fancy Winesaps. Sales to jobbers in leading markets ranged $3.50 to $4.25 which may be compared with a range of $4 and $4.50 a year ago. The rise during the past four weeks seems to be a result of the somewhat restricted transportation caused by unfavorable weather. Excellent buying power on the part of consumers also tends to sustain the strength of the markets. Reserve supplies of boxed apples are considerably larger than a year ago and the cold storage stock decreased relatively more slowly during February than during the same month last year. Accordingly, the remaining reserves appear liberal in view of the light demand for export. Shipments four weeks 2,348 cars boxed and 1,569 barreled, as compared with 937 boxed and 1,644 barreled for corresponding four weeks last year.

Onion Prices Tend Upward

A steady strengthening of the onion market has been a feature of the past four weeks with demand and movement moderate. Eastern yellow onions were quoted the middle of February at $5 to $6.50 per 100 pounds sacked, but closed the middle of March at $6 to $6.75. Middlewestern yellow onions followed a similar trend from $5 to $5.75 a month ago to a close of $6 to $6.75. The Chicago market quoted this stock considerably lower at $4.75 to $5.25 last month and ranged $5 to $6 four weeks later. Middlewestern reds closed in Kansas City at $7 to $7.25. Shipments for the past four weeks were 1,041 cars are compared with 1,252 for the same time a year ago.

Uncle Rube Spinach Says:

(Letters to Uncle Rube should be addressed care The Michigan Business Farmer.)

HOW TURRIBLE?

WHAT an awful thing happened in Grand Rapids 'tother day? Why jest think of it! Seventeen citizens of these United States—most of 'em Michiganders—some of 'em rich and all of 'em more or less prominent, were convicted of a crime against the peace an' dignity of the great commonwealth of this country—convicted jest like common housebreakers or boot leggers or anything else common—their wealth an' prominence couldn't save 'em—their crime, it seems, was too great to be white-washed over as so many other crimes of like nature but lesser magnitude, have been in the past, an' now the leaders are under sentence to spend a considerable time in prison at Ft. Leavenworth an' to pay various sums of good American money, ranging in amounts from one to ten thousand dollars an' all for what?

Well, the leader of this most elegant outfit, Paul King, campaign manager for Mr. Truman H. Newberry, U. S. Senator, an' one of the convicted men, says "it indicates the power of the administration, with all the agencies of the gover'ment at its command ,backed up by the great influence an' vast wealth of Henry Ford." He says, "no jury an' no court can make a criminal out of me nor out of my associates. We ourselves are the only ones who could or can do that."

Well I guess mebbe Paul is right—at any rate it seems accordin' to testimony at the trial, they didn't wait for the jury or court to do it—they jest went ahead an' did the job for themselves an' nobody claims they didn't do a fine job—gosh, it was perfectly complete, seems like an' now they set up a turrible whine jest 'cause the've got about what was comin' to 'em.

Mr. King sez "before this thing is ended the right of Michigan voters to freely choose their own U. S. Senator will be vindicated an' with that will come the personal vindication of each one of the men who have already sacrificed much, but who are willing to sacrifice more if need be."

Now it kinda looks to a feller on the fence, jest's if a man was the unanimous choice of the people of the state of Michigan, it was a foolish waste of money an' time an' everything to spend a hundred an' seventy-five thousand good American bucks, jest to nominate that man—to get his name on the ticket an' give him a runnin' chance, so to speak.

Why didn't they let the people go ahead an' nominate their popular choice—commander Newberry, the greatest dry land navigator of a battleship ever known outside of Hostetter's Almanac.

Does it look to you folks as tho' he was the unanimous choice of the people? Did Mr. King think he was when he wrote him that it would cost at least fifty thousand to get him the nomination? Paul King an' Truman H. Newberry both knew that to use that amount of money in their campaign efforts, was a violation of the law an' might land them both in the penitentiary ,but they took a chance, dependin' on their wealth an' prominence to pull 'em safely through.

An' their idea was not only to get Trume Newberry elected—'course they wanted to do that—but still more they wanted to defeat Henry Ford for whom they had no love but whom they secretly feared.

Well they accomplished their purpose an' went on their way rejoicin'—for a short time—then somethin' happened an' the little affair over at Grand Rapids was the natural result.

Mr. King, in his lament, set up through the newspapers sez "the final result will demonstrate beyond the shadow of a doubt that this was the cleanest campaign ever conducted"—which brings to mind an' ol' man I used to know, who made his livin' cleaning sewers an' cesspools an' sed he had the cleanest an' most healthful job in the city. All of which goes to prove that cleanliness in campaigns as well as cesspools depends altogether on how people look at it—it may be so—an' then again' it may'nt. What do you think?—Cordially yours—*Uncle Rube.*

Sense and Nonsense

A Better Way

The sergeant-major was a bit of a martinet—it does happen sometimes—and was constantly finding fault with the slightest things.

One day, as he sat in his room in the barracks he saw a private pass in full uniform with a bucket.

This roused the sergeant-major to a fury, and he promptly dashed to the door and hailed the private.

"Where are you going?"

"To fetch some water, sir," replied the man.

"What!" yelled the sergeant-major. "In those trousers?"

"No sir; in the bucket."—Answers.

Unconscious Truth

A certain clergyman inclined to corpulency, officiating as chairman at a social gathering that had met to celebrate the building of a new schoolroom, addressed the audience in the following manner:

"Friends," he said, "at the close of this meeting there will be a collection. It will not be for the poor," and unconsciously putting his thumbs in his trousers' pockets and tapping with his fingers his waistband, continued, "but for the developing and enlarging of this department."—Galveston News.

Is This the Kind You are Making?

"I want a pound of butter."

"The best?"

"What was the last I had?"

"The best."

"Give me a pound of the other."

One Satisfaction

"What do you think of the two candidates?"

"Well, the more I think of it the more pleased I am that only one of them can be elected."—Michigan Gargoyle.

A Large Difference

"Say, Bill, you know de dffunce b'tween a prophet and a profiteer?"

"No, Sam."

"Well, when a prophet says de world was goin' ta end last Thursday at lunchtime he didn't know what he was talkin' about, but when a profiteer says soap, sugar, an' shoes will be higher next week he knows what he's talkin' about."—New York World.

Kindred Souls

A census taker calling at the home of a maiden lady, asked, among other things, her age. "Have you been over to the Hill twins next door?" "I have." "Did they give you their age?" "They did." "Well, I'm just as old as they are." Whereupon the official filled in his report: "Miss Rose—Old as the Hills."

Same on the Farm

"Mama, this paper says that cattle when with other cattle eat more and fatten better than when kept alone."

"Yes, my child. I guess that is right."

"Well, mama, we must be like cattle."

"Why, what do you mean, child?"

"We always have more to eat and eat more when we have company.—Yonkers Statesman.

But Better Then Than Never

County Crop Reports

TENNESEE—Farmers are working up wood, hauling manure, trimming trees, grading the roads and plowing. Soil is in good shape in most sections and farmers will commence work next week if this weather continues, but indications point to rainy weather before long. The farmers are selling potatoes, hay and live stock. They are buying fertilizer, fence posts, feeds, binder twine and clover seed. The shortage of farm help is becoming more and more noticeable as the spring work commences. Several farmers are moving during this fine weather. A very small acreage of beans will be put in unless the prices improve before long. Farmers are beginning to wake up and the farmers' meetings have much more pep this year than before. Farm Bureau meetings have been held in several townships during the last few days and the meetings are well attended.—C. W. S. The following prices were paid at Flint:—Wheat, $2.40; corn, $1.50; oats, 99; rye, $1.55; buckwheat, $3 cwt.; beans: pea, $5.75; red kidney, $11; hay, $27@32; rye, wheat and oat-straw, $10@15; potatoes, $3.15@3.40; onions, $7.50; cabbage, $8; cucumbers, $3 doz.; hens, 35; ducks, 32@35; geese, 32@35; turkeys, 40@42; butter: dairy, 50@65; creamery, 68@70; butterfat, 72; eggs, 40@42; apples, $2.50@8; beef steers, $10@11; beef cows, $7@8; veal calves, $18@20; sheep, $11.50@12.50; lambs, $17.50@19; hogs, $14.25@15.

MANISTEE—The farmers are getting ready for the spring work. The snow is almost gone and I think the ground is about thawed so plowing could be begun. Weather is wet as it has rained steadily for three days. Soil is damp. Farmers selling some rye and some potatoes at $4 per hundred weight at stations. Most of the farmers' crops are about sold. Not any building or buying to speak of just now unless autos and seeds for the spring sowing. There was a real bright display the other night of the Northern Lights seen here. Some auction sales still being conducted. Some farmers moving away and some coming back to us again.—H. A. The following prices were paid at the Bear Lake market:—Potatoes are now $4 per cwt., at the buying stations. Cars were considerably hung up during the big snow storm but the car situation is expected to get back to normal within a few days. White beans remain at $5.25 per cwt., rye at $1.30 per bushel and wheat $2 per bu. Butter is 50c, eggs, 40c butterfat, 66c. Hogs are 13 to 13 1-2c on foot, 16 1-2 to 18c dressed; beef 5 to 8c alive, 8 to 13c dressed; veal, 10 to 13c alive, 18 to 22c dressed; live chickens, 25c per lb., hides, 18c per lb.

COOK COUNTY, Ill.—Cook County Farm Bureau was organized with 1,206 members. It is planned to engage two county advisors, one for the southern part of the county and one for the northern part of the county. The executive committee is to be made up of six members, two truck farmers, two dairy farmers and two general farmers; three from the southern, three from the northern part of the county. The membership was $15 for three years, $10 for the County Farm Bureau, $5 for the Illinois Agricultural Association. Too early to give an estimate on winter wheat. Rye looks fine. Farmers are ready to begin sowing spring wheat as land is drying fine. Quite a little land changed hands from $150 to $250 per acre.—D. F. T. The following prices were paid at Arlington Heights:—Wheat, $2.45; corn, $1.50; oats, 96; rye, $1.54; hay: No. 1 timothy, $33; No. 1 light mixed, $29; stray-rye, $13; wheat-oat, $12; potatoes, $3 bu.; hens, 35; butter, 76; eggs, 46; hogs, 14 cwt.; veal calves, 18clb.

MONTCALM—The farmers are finishing up their potatoes at $5.35 a cwt., making syrup and cutting wood. The snow is most all gone but by the stump fences. No frost in the woods, on account of so much snow and it is a poor year for syrup. Roads are good for this time f the year. Farmers are all talking about the hired help question. They will do what they can and let the rest go because of wages. The farms are changing hands all the while and sales are still going, from six to eight a week.—G. B. W. The following prices were offered at Lakeview:—Wheat, $2.60; corn, $1.65; oats, $1; rye, $1.65; hay: No. 1 timothy, $25, No. 1 light mixed, $25; straw-rye, $10; wheat-oat, $12; beans, pea, $6, red kidney, $13; potatoes, $5.35; cabbage, 50c head; cucumbers, $1 a hundred; hens, 27; ducks, 28; geese, 24; turkeys, 45; butter, 65; butterfat, 70; eggs, 36; sheep, 8; lambs, 15; hogs, 14 1-2; beef steers, 7; beef cows, 5; veal calves, 10@19.

WEXFORD—The snow has most gone. Hills are bare and cattle can graze quite a bit. Not many sales at present. Some have been hauling gravel until the roads got broken up.—S. H. S. The following prices were paid at Cadillac:—Wheat, $2.19@2.50; corn, $1.50 shelled; oats, 95; rye, $1.45; buckwheat, $2.75 cwt.; beans: C. H. P., $8, red kidney, $7; hay, $34; potatoes, $4 cwt. No. 2, $1 bu. hens, 25@27; springers, 25@27; ducks, 25@28; geese, 22@25; butterfat, 68; apples, $4 cwt.; veal calves, 16@20; hogs, 16@18.

JACKSON, N. E.)—Good weather has been our lot the past week until yesterday, when it rained and turned colder. Wheat and rye look fine and needed the rai. Farmers are drawing manure and are finishing the wood. Some sawing is being done. Farmers are organizing to buy one of the two elevators located at Stockbridge but are only getting subscribers at this date. The consolidated school issue is at stake here and opinion seems divided, those against arguing present high cost of building but favoring the plan in general. Large receipts of rye going to market reported. Some auction sales with prices above normal. The roads are passable with some bad places. —A. F. W.

MASON—Work for the coming season is being planned. Winter tools stored and spring ones brought out. The three days' rain removed most of the snow and greatly benefitted the roads. Some frost still in the ground but present indications point to an early spring. Potatoes ad poultry show a rise in price. Butter and cream remain firm; eggs slightly lower.—B. M.

GRAND TRAVERSE—Nice weather again. A few are making syrup; not much of a sugar season so far. Auction sales too numerous to mention and still coming. Potatoes are about all there is being sold at present. They are a good price.—C. L. B. The following prices were paid at Williamsburg:—Wheat, $2.35; corn, $1.50; oats, 90; rye, $1.60; hay, $38; potatoes, $3 bu.; butter, 50; butterfat, 71; eggs, 37.

BUSINESS FARMERS SHOULD VOTE ON APRIL 5TH

(*Continued from page* 23)

I am enclosing a few votes from our family. I put us down, two for Bryan and one for Hoover and three for Campbell. I, like Mr. Crosby, think that it would be a crime to vote for Johnson, LaFollette or Fordney. I am in favor of the League of Nations without amendments of reservations that would improve it and therefore virtually destroy the longing hopes of mankind and construct a job for war lords and profiteers. In closing will say that M. B. F. is fighting a good fight and gaining ground.—*C. E. K., Gratiot Co*

It is my belief that any executive that can reduce the taxes of a state 30% and still retain a more efficient government than was enjoyed under a higher tax rate, as Gov. Frank Lowden has done in the state of Illinois should be nominated and elected president of the United States by an overwhelming majority. Remember the governor is a farmer and when his time is not occupied performing the duties as governor of his state you will find him tending to his agricultural interests.—*C. B. M., Kalamazoo County.*

I am sending one of your straw vote ballots. My preference is Robert Lansing, ex-Secretary of State, whom the president tried to make a rubber stamp of. If he had known him as well as I do he would not have tried it. Robert Lansing is a Man, in every sense of the word; loyal to his country and flag. I note the names in your straw ballot blank and I want to say that you might better save your paper and time in printing the following names: William E. Borah, Henry Ford, Miles Poindexter, Wm. H. Taft, Woodrow Wilson, William G. McAdoo, A. Mitchel Palmer, Robert La Follette. —*J. H. S., Gratiot County.*

I do not believe in straw votes but for once will indulge in the foolishness. There are several good men to choose from but under present conditions I think Hiram Johnson would come nearer carrying out my views, first, because I think he is for America; second, he has the courage of his convictions and since Lincoln I do not think our country has needed a real red-blooded man as the next few years will bring forth. I think thhe next president should not be wavering but big enough to be president of the U. S. A.—*B. E. K, Montcalm County.*

We think that you gentlemen are doing a good work for all the people and we wish you success. We are very much in favor of Milo Campbell for governor and cast our straw vote for him. We also cast our straw vote for that eminent administrator of governmental affairs and highest type of American citizen, Gen. Leonard Wood, believing him to be a man that will not bow to an autocrat or dictator, one who will gladly abide by the Constitution of the United States, and will counsel with Congress. He will do his best to put down Bolshevism and protect to the best of his ability a law abiding United States of America.—*R. S. B., Saranac, Mich.*

"Keep M. B. F. coming!"

WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.

——it tells you when and where to get the best prices for what you raise!

——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!

——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

Composition of Commercial Fertilizers

(*Continued from page* 5)

Numerous farmers purchase, and many others should, unmixed materials and mix them to suit the particular needs of their soils and the crops grown upon them, such needs being determined by careful methods of experimentation and study. Where one is using appreciable amounts of fertilizers it is sound business practice to determine the fertilizer ingredients that are best suited for the particular needs of soils and crops grown. It is maintained by some that home mixing of fertilizers is a very complicated procedure but this is not the case.

In making calculations for the amount to be mixed the percentage of each, nitrogen, phosphoric acid and potash should be considered. If a 2-8-2 fertilizer is desired the number of pounds of each of these carriers as well as the filler in a ton of the mixed fertilizer is determined. This is accomplished by multiplying the number of pounds in a ton by the percent of each plant food constituent or 2,000 x .02 equals 40 pounds of nitrogen per ton; 2,000 x .08 equals 160 pounds of phosphoric acid per ton; 2,000 x .02 equals 40 pounds of potash per ton.

The amount of carrier required is determined by dividing the weight of the plant food material required by the per cent of the particular plant food constituent in the carrier to be used. Where there is available nitrate of soda containing 15 per cent nitrogen, acid phosphate containing 14 per cent phosphoric acid, muriate of potash containing 50 per cent potash this would be as follows: 40 divided by 15 equals 266 2-3 pounds of sodium nitrate; 160 divided by 14 equals 1,143 pounds of acid phosphate; 40 divided by 50 equals 80 pounds of muriate of potash. Total, 1,489 2-3 pounds of the carriers.

The difference between the pounds of the carriers and one ton gives the amounts of filler required or 2,000 minus 1,489 2-3 equals 510 2-3 pounds which may be made up of sand, dry earth, muck, peat or sawdust.

The Ohio Experiment Station conducted field experiments for eight years to determine if home-mixing of fertilizers would pay. The results of these experiments show, according to the authors, there "was a greater increase of crop from home mixtures than from the factory mixed, used in every case while the cost of the home mixtures was much less than that of the factory mixed." Home mixing also enable one to become familiar with the various fertilizer constituents and consequently a more intelligent use of them may result.

There are several substances that are used as fertilizers that should not be mixed because the available plant food in some may be decreased, notably the phosphates, while nitrogen may be lost as a gas from others.

Caustic lime, wood ashes, basic slag should not be mixed with acid phosphate, dissolved bone.

Cynanamid, caustic lime, wood ashes, basic slag should not be mixed with sulphate of ammonia, tankage, farm manure.

If mixed the following should be added to the soil at once caustic lime with nitrate of soda, muriate of potash, kainit. Acid phosphate with nitrate of soda or ground limestone.

Mixed fertilizers are frequently placed on the market as "specials," such catchy terms as "potato fertilizers," "grain fertilizers," "lawn fertilizers," and others being employed. Moreover, such trade names as "Red Steer Brand," "Ox Brand," and "Western Brand" are in vogue. The brand names should be ignored in purchasing, inasmuch as two or more brands or trade name mixtures may have the same composition, and moreover the price of the same material when sold under different trade names has been known to be different in the same locality. The number of brands of fertilizers sold in different states varies greatly; in certain states more than 2,000 have been placed on the market in one year, and in others less than 500, the number depending somewhat upon the laws regulating the sale of fertilizer materials. The fertilizer industry in general is in favor of a smaller number of brands and also of high analyses or high grade materials, which is a commendable policy.

In the next article I shall discuss the use of fertilizers.

Draining Springy Soil

I have some land that has some springs on it and they run until June so I can not plant any crops on it. This land has plenty of slope. Would tiling it do any good?—E. C. R., Presque Isle County.

If land is wet from water that appears from a spring at one point you should construct a catch basin and drain the basin by means of tile. If the land is wet from seepage water in different places, the only method of proceedure is to lay tile to sufficient depth to prevent water from going under it, and appearing on the surface down the slope. Tile laid under these conditions should have plenty of slope so the water will not pass out of them into the soil as it flows away.—*M. M. McCool, Professor of Soils, M. A. C.*

Oats on Sandy Soil

I have a piece of sandy soil that I wish to sow to oats. This land is very poor. Would it be best to fertilize it? What kind of fertilizer would you use?—A. Z., St. Clair County.

As a general proposition oats are a very unsatisfactory crop for sandy soils and unless one is obliged to sow this crop it should not be seeded on such land. However, you desire to fertilize the land for this crop I would suggest that you apply about 200 lbs. of 2-12-0 fertilizer per acre. I would suggest that you seed a small area of this land to soy beans, first inoculating the seed.—*M. M. McCool, Professor of Soils, M. A. C.*

Sawdust as a Fertilizer

Is hardwood saw dust of any value as a fertilizer, is so, what and why?—G. H. H., Schoolcraft County.

Saw dust cmpares favorably in composition with ordinary straw, yet so far as I am informed this material decays too slowly in the soil to be of any value as a fertilizer. It has been used with some measure of success in the improvement of small areas of very heavy, intractable clay soil; rather large quantities, however, are required on such land.—*M. M. McCool, Professor of Soils, M. A. C.*

SIGHT-VALUE TAX AGAIN

(*Continued from page* 17)

valuation and taxes should be reduced. duced.

I dislike the continual use by single taxers of the term "penalizing industry" as applied to our present tax system. Do they think we can raise our taxes from the shiftless and poor? I asked a neighbor that question and he replied: "I guess so. They've made us come across pretty well so far."

In summarizing I would say: that we now have a fine "unearned increment" tax: that what we need is better enforcement and an adjustment of values according to profit and that in this country, at the present time a land speculator is an angel so long as he holds land for future use and an unholy devil when he starts selling.

Mr. Grenell speaks bitterly against land speculators yet this part of the advertisements of the Hudson Bay Land Co. shows they have considerable in common with each other. Notice how smoothly it reads:

"That Western Canada is hospitable and encouraging to settles can be seen by its system of taxation. A small levy is made on the land; none at all on buildings, improvements, implements, machinery stock or personal property."

Of course factories and other profitable institutions would be exempted as improvements but they forgot to mention incomes.—*S. W., Barry Co.*

WE THANK YOU

Keep the good old M. B. F. coming. Best farm paper printed. We are all strong for Milo Campbell here.—*L. G., West Branch, Ogemaw Co., Mich.*

In renewing it is certainly in order to pay a tribute to your vigorous presentation of the needs and ideals of the farmers and to your untiring and courageous battling for their best interests both in business and political ways It is a pleasure to speak a good word for the M. B. F. With best wishes I am—*L. A., Bangor, Mich.*

FRANK O. LOWDEN

A Business Farmer

—for—

PRESIDENT

Born and reared on a farm. Educated himself through his own efforts. Sent to Congress for three terms. Elected Governor of Illinois. Reduced taxes in Illinois from 90c to 60c in two years on each $100.00 valuation, and saved the state $8,000,000.00. Passed the finest legislation for Agriculture of any state in the Nation.

Lowden is the Farmer's Great Opportunity

Primary April 5, 1920.

Seeds that have Satisfied Michigan for 35 Years

Thirty-five years ago the name APEX was coined to represent only the purest, highest quality, hardiest seeds possible to produce.

Today, thousands of Michigan farm families will tell you that they have prospered on the crops APEX seeds have produced—that the name today stands for exactly what it stood for at the start, plus an unblemished proved, 35-year record.

This is ample evidence of the worth of APEX seeds and the responsibility of the house behind them.

Thoroughly cleaned and re-cleaned —and tested to comply with the *spirit* as well as the letter of Michigan seed requirements.

Sick Baby Chicks?

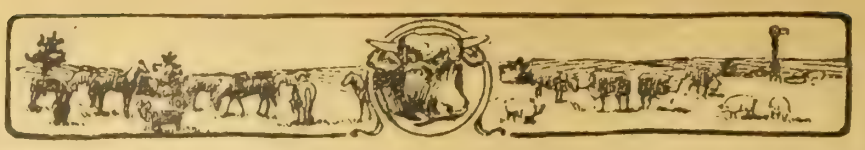
There is only one way to deal with baby chicks and that is to keep them well. Doctoring a hundred or more chicks is mighty discouraging work.

It's pure carelessness to lose more than 10 per cent of chicks, from hatching to full growth. Many lose 40 per cent to 60 per cent, and even more. No profit in that.

Our book, "Care of Baby Chicks" (free) and a package of Germozone is the best chick insurance. WITH BABY CHICKS YOU MUST PREVENT SICKNESS—NOT ATTEMPT TO CURE. "I never had a sick chick all last season"—C. O. Petrain, Moline, Ill. "Not a case of white diarrhoea in three years"—Ralph Wurst, Erie, Pa. "Have 800 chicks now 5 weeks old and not a single case of bowel trouble"—Mrs. Wm. Christiana, Olive Ridge, New York. "Two weeks after we started last spring we were a mighty discouraged pair. Every day from three to six chicks dead. A neighbor put us next to Germozone and we are now sure if we had had it at the start we would not have lost a single chick"—Wm. E. Shepherd, Scranton, Pa.

GERMOZONE is a wonder worker for chicks, chickens, pigeons, cats, dogs, rabbits or other pet or domestic stock. It is preventive as well as curative, which is ten times better. It is used most extensively for roup, bowel trouble, snuffles, gleet, canker, swelled head, sore head, sores, wounds, loss of fur or feathers. 25c, 75c, $1.50 pkgs. at dealers or postpaid.

GEO. H. LEE CO., Dept. F-38 Omaha, Neb.



HAVE YOU A GOOD STALLION IN YOUR COMMUNITY?

If not you should co-operate with your neighbors and county agent in order that some good sires may be brought in by private parties, or leased before the breeding season opens, because, 1, the demand and price for good horses and mules is increasing in cities; 2. Farm demand is improving; 3. There is a shortage of good horses and mules of all kinds.

City trade is improving because transportation users of all kinds have discovered after years of experience that horses furnish the cheapest source of power on short hauls. On this Harry Vickers, president of the Fuel Cartage Co. of Chicago says: "There is work today that the horse can not do—long distance hauling with rapid transportation—but the motor car can never take the place of the horse because the horse can do the work on short hauls just as rapidly and at a lessened cost of 25 to 40 cents on the dollar. Consequently we never allow a truck to displace a team. We will buy a truck to do the work that a horse can not do but we don't send a truck to do the work that a horse can do. It would be like having a dollar and throwing away 40 cents."

Of the farm demand W. S. Corsa says: "Farmers are determined bidders in country sales and prices for good horses have gone up $35 a head in the last 30 days, while mules are bringing from $800 to $1,000 a pair.

Of the shortage W. T. McGreavy of the McGreavy Transfer Company, Minneapolis, says: "What we teaming contractors want is good horses. We don't want scrubs, light of weight, incapable of hard work and selling cheap. We want horses that will weigh 1,700 pounds or more and are willing to pay for them. A teaming contractor in this city paid $800 for a pair of five-year-olds yesterday that weighed 3,200 pounds. The big trouble is that the farmer expects us to pay a high price for a green horse, one that is liable to distemper and isn't properly broke. The buyer of such a horse is taking a big chance that he'll die or be laid up and, consequently, won't pay as much for him. Give us good, sound, big horses with a little experience behind them. We can't get enough of them and the demand will never run out."

Claims of truck and tractor manufacturers that horses and mules are destined soon to disappear are very properly met with the query, "Why should horses and mules, which according to your views, are obsolete and destined to speedy disappearance be in greater demand and at higher prices than ever?"

The best thing a farmer can do this spring is to breed his good mares to a first class stallion.

SILAGE FOR ALL STOCK

The silo was first taken up by the dairymen, and today we find most of the silo in the dairy sections. You can pretty nearly tell the number of cows and the progressive dairymen by the number of silos a community possesses. It is a mistake, however, to conclude that silage is not equally good for other classes of live stock; and this truth is so well known by most keepers of silos that they fail to even comment on the subject.

As silage is our cheapest source of digestible carbohydrates, it can be used profitably by any animal which feeds upon grass. Breeders of beef cattle have for many years used the silo with success, not only for feeding their mature animals but also for growing the young stock. There has been more investigation among our experiment stations to determine the economic value of silage as a beef maker than in any other line of feeding work. Hardly an experiment station equipped with a silo but what has made some test along this line, and it is interesting to note that practically every test has demonstrated that silage not only makes beef cheaper than other foods, but also makes a high quality of beef. Most of the breeders of champion show stock are using silos, and they would certainly laugh at any man who questioned their silage ration.

Horses and mules have been fed silage successfully and economically. Some of our large breeders and dealers in blooded horses have used silos for many years, and there is scarcely a farmer with a silo who does not feed silage in some form to his horses. Of course it should be used much as grass is used, that is, in small rations and principally for horses not at heavy work. Only good silage should be used in the horse ration.

As a ration for sheep it has long met with success, and there are many feeders who use it on a large plan. Not long ago I visited a sheep feeding farm where ten thousand sheep received corn silage as a part of their ration.

For poultry, fowl, goats and swine, small rations of silage can be wisely used. Some poultrymen use what is known as a chicken silo, a small silo filled with various kinds of green fodder. Sunflowers, especially, are valuable, but a mixed ration has been considered the best. For fattening swine it should not be used as the principal ration, but can be used as a small or part ration. As the feed is rather bulky, it will not do to force swine to eat too much, as their stomachs are small.

On the average farm where all kinds of live stock are kept, care should be taken to put up the very best quality of silage. This generally can be accomplished by cutting at the right period, giving care to bring as quickly from the field to the ensilage cutter as possible. Cut fine with sharp knives and pack well. These are the principal requirements for good silage. Of course it is expected that the silo be tight and smooth on the inside. With such a silo filled, it stands as a bank or storehouse from which the farmer can draw at any time and from which he can always realize a profit. *A. L. Haeker.*

KEEPING THE ENSILAGE PURE

Farmers who keep ensilage in silos during the winter months for use in feeding their cattle are oftimes confronted by the problem of the ensilage becoming soured. This souring is usually due to contamination from particles of previous years ensilage which becoming absorbed by the wood in silo walls decays and become foul.

This can be avoided by coating the interior of the silo with a special silo compound now made by paint manufacturers. This silo compound assures freedom from contamination and being made from non-poisonous ingredients, it is superior to paints sometimes used for this purpose but not especially designed for silo painting and which contain elements of a poisonous nature.

SOCIALISTS DO NOT ADVOCATE EQUAL DIVISION OF WEALTH

(*Continued from page* 11)

sites who are sapping the life-blood of the honest producer, here is the remedy.

Socialism would subdue the world and not destroy it, Socialists are constructionists, not destructionists. Socialism would subdue the world, by subduing the money powers of the world. Would make everybody a producer of wealth from the unmortgaged resources of wealth, and would give to the producer the full value of all he produced, "and no more," let me emphasise this words "and no more," by giving 'no more" is our method of subduing the money powers and forcing the profiteering parasites to get off the producers back and go to work or starve.

But Socialism will come only with the souls unfoldment. Therefore, we can understand Socialism to no greater degree than we are intellectually and spiritually prepared to receive it. It is plainly evident that the world right now is not quite ready for Socialism but the world is changing very fast and every change makes it more prepared and Socialism will be here just as soon as we are ready for it.—*A. G., Quimby, Mich*

In This Issue: Sugar Men Misrepresent to Deceive Farmers—Michigan Pea Growers Seek State Organization

The Farmer and His Hired Man

THE HIRED MAN—DOES HE GET A SQUARE DEAL?

I HAVE BEEN rather interested in the hired man discussion and in the last issue of M. B. F., Mrs. Hired Man injects some variety, but, to judge from the way she writes they do not receive much except the $50 per month. Let her figure a little on rent, fuel, milk and fruit at city prices. Probably, also, they have a garden and keep a flock of chickens that run loose and pick up a good deal of their living. I have an idea they can also keep a pig if they wish. If all these items are added to the $50 per month, the arrangement is not so one-sided as it would appear at first glance.

The hours are long, it's true, but does Mrs. Hired Man give any thought to the farmer they work for? Are not his hours as long as those of the hirer man? The latter has nothing invested in the business and whether the place is run at a profit or loss, he gets his wages just the same. Mrs. Hired Man says the farm is valued at $35,000. It is likely the stock and tools would add another $5,000, making the investment $40,000, which amount invested at 6 per cent would yield an income of $2,400 annually, without any labor but if their employer works, he should also have the value of his labor added to that. "The laborer is worthy of his hire." Does the farmer get 6 per cent on his investment? Does he get half that?

"A Hird Man," on the same page, says he has worked on a farm several years and is "just as far ahead today as I was when I began." Is not that his fault? Would he have saved anything if he had been living in a city and doing factory work? The temptions to spend money are much greater in the city than in the county.

On same page, Mr. Stafford tells how one of his hired men saved from $240 to $300 per year, working for from $30 to $50 per month.

A "Hired Man" asks "How Many farmers can afford to pay their hired men a bonus of $500 at the end of the year?" But, does he realize what that question means? The farmer cannot do it, which is proof that in these days of high prices the farmer is not getting a square deal. The manufacturer sets the price on what he produces and he puts it high enough so that he not only has a good profit, but can pay high wages, and add a bonus. The farmer, who is the real produces and he puts it high enough as to what he is to receive for his products, whether it is a dozen eggs, a load of wheat, or a carload of live stock. The buyer tells the farmer what he will give and the latter can take it or haul his stuff home again. If the farmer does not pay from $4 to $6 for an 8-hour day, it's not his fault. It would bankrupt nine out of ten farmers inside a year if they tried it.

I do not believe that the farmer should join the labor unions and keep up the eternal demand for shorter hours and higher pay, but he should organize, so that he is sure of a fair return for his labor and capital invested—"A good living and ten per cent" is only fair.—*Apollis Long, Wexford County.*

"THE HIRED MAN FROM GENESEE COUNTY"

The hired man from Genesee Co. is still alive and in the country, getting up at five a. m. to feed and milk the musical cows.

Oh, the life in the country is one long sweet dream of hard work from 5 a. m. until 9 p. m. at night.

So many are interested in just what becomes of that poor little hired man. Oh, yes, he is alive and you can bet he's busy. He is no quitter you see. He said "If I can get wages enough to live on, and save a little I will stay in the country."

Does he like his new job? Well he does not believe in saying his prayers out loud so you will have to guess at it.

Would like to say I don't like Mr. Halladay's remarks about the hired man having cars. I left my former place because the boss owned a sedan, his wife a roadster, and could not afford to pay the hired man enough to live on. Now is he so hard up he's enjoying himself in a new $3,800 touring car.

The new boss has so many cars he cannot use them all at once, two touring cars, roadster and a truck. Having no driving horse on the place the "hired man" from Genesee Co. bought himself a flivver so he could run down the boss to get orders, and to see what he looked like once in a while. I see H. H. Halladay claims to be State Livestock Commissioner of Michigan. There must be some mistake for if Mr. Halladay lived in Michigan he must know that the hired men must all own some kind of a car so as they can catch up with their bosses once in a while and talk business.

Mr. Halladay says the country is being jitneyized to death. Who is to blame? Every farmer owns from one to four cars and one hired man out of twenty owns a car.

On this place there is no driving horse and the boss don't want to keep one, it is only four miles to the nearest town. I suppose according to Mr. Halladay the hired man and his wife should walk.

If Mr. Halladay were in this hired man's place would he and his wife walk four miles or buy a car? I woud like him to answer this question. Mr. Albert Yager requested to know if the farmer who paid the $500 bonus was in any other business. The farmer is not, he works three hundred acres of land with the help of two married men.

He is a stock feeder in the winter time. Instead of a $3,800 car he is driving a big work team every day, in case of business he drives a Ford touring car.

G. P. Philips and Albert Yager's letters are both worth reading, if their advice was followed there would be much less trouble for the farmers.

Come on you farmers and hired men, get in the ring and tell your stories, so the hired man and farmer can deal together honestly.

Mr. Editor, why should not the farmers furnish references as well as the hired man? Would like to hear your opinion. There's no place like the dear old farm, except in heaven. The hired man from Genesee Co., R. M., Lennon, Mich.

Uncle Rube Spinach Says:

STRIKES AN' EVER'THING

HERE we be! All tied up again! Somethin' more to make the cost of livin' higher an' nothing to do to earn the price of a hot dog even. This time its the switchmen—no cars comin' or goin', every thing dead'er'n a door nail or Gov. Lowden's political boom in Michigan, an' nobody can tell where this darn thing is a goin' to end. There's no question but what the switchmen are underpaid—their job is a dangerous one at best an' they're gittin' less wages than a common street laborer, considerable less, an' I don't blame 'em for wantin' more money, they ort to have it, but it don't seem to me as though it should be necessary to tie up business all over the country—to jeopardize the health and lives of thousands of people—to throw other thousands out of work, to cut off the already scant supply of the very necessities of life in order than a handfull of men, comparatively speakin', could and should get justice done 'em, get a livin' wage somewhere near what other men, engaged in much less hazardous occupations are a gittin'. Kinda seem like's if the government, if we have a government left, might appoint some sort of a board or commission whose duty it would be to adjust labor disputes—not to adjust 'em to suit the employers only, but to adjust 'em in a way that would be fair to both parties.

The idea of tying up business every month or two an' of throwing hundreds of thousands of men an' women out of employment while the unions or the outlaws, as the present strikers are called, an' their employers are squabblin' over the question of wages or of hours or any other sim'lar question, is gettin' darn monotonous to the right thinkin' people of this country, not only monotonous but by gosh it's gettin' to be a serious menace to the welfare and peace of the whole country.

When a few men can tie up commerce, labor, transportation an' prevent the shipments of farmers stock, grain, potatoes or prevent any class of people from receiving the things they need in order to carry on their business. it's time we began to set up an' take notice of things an' to inquire into things an' to know why this is thus. Right here in Battle Creek the effect of the switchman walk-out is becoming serious, the food factories have shut down—they must have cars in order to ship their products as fast as manufactured, and the cars are not forthcomin' less than 45 men, switchmen have quit, but that constitutes the switchmen on both roads an' ties up everything here, so jest a small bunch of men,

Binding Together a State

Here is shown a giant workman, a piece of machinery that digs a hole and sets a telephone pole in three minutes. It works on the principle of a post-hole augur and a giant crane, combined.

WE MUST HAVE YOUR SUPPORT IF YOU ARE TO HAVE THE TELEPHONE

This is part of the equipment with which the Michigan State Telephone Company is binding together a great state, to make it possible for the farmer to transact business in distant town or city and to take advantage of the best markets—for today's farmer is a businessman. This equipment saves labor, which is selling at a premium right now, as the farmer best knows.

The business farmer knows something, too, about costs. He knows that his fine roads cannot be built or maintained today at what they cost five years ago. His automobile, teams, groceries, clothing and farming machinery all cost more. To have them he must sell his product at increased prices.

The telephone company faces the same conditions. Teaming costs three times what it did in 1915. The poles bought from the farmer, the crossarms, the copper and iron from Michigan's mines, all cost more and labor is higher than ever before. No labor-saving equipment will entirely enable the company to meet the situation.

Higher rates, with these labor-saving devices, however, will permit the work of binding together the state to go forward as it should and will help the development of both the country and the city.

Dairymen Want Central Distributing Plant

Action of Federal Fair Price Board May Force Producers of Detroit Area to Take Control of Marketing Their Milk

THE DAIRYMEN of the Detroit area are seriously considering the establishment of a central distributing agency in the city of Detroit where milk from all members may be received, weighed, tested and sold to distributing companies or to grocery stores. At meetings held during the past week in several sections of the Detroit area the subject was discussed at length and the farmers are practically unanimous for such a proposition. Others go so far as to urge the purchase of a pasteurizing plant and distribute their own product from house to house.

N. P. Hull, president of the Michigan Milk Producers' Ass'n, speaking before a meeting of the Macomb County Dairy Council last Saturday, stated that he was pleased to see the interest taken in this kind of proposition and advised that the Chicago Milk Producers' Ass'n was discussing plans for a similar move. It was Mr. Hull's contention, however, that the Association should proceed cautiously in a matter of this kind, claiming that the experiences of other farmers had not fully demonstrated the practicability of such a move. He cited the case of the Grand Rapids farmers, who have been distributing their own milk for a year or more, but who have been obliged to pay as high as ten cents per cwt. to keep their venture going. "The loyalty of those fellows is a surprise to me", said Mr. Hull, "and I really believe they are going to win out".

Macomb Farmers Want Central Agency.

Gideon Bryce of Romeo, president of the Macomb County Dairy Council, stated that the Romeo local had held the largest meeting in its history last week and that he had never seen a finer spirit of co-operation and a willingness to go ahead than was demonstrated at that meeting. He declared that the producers of his section were unanimously in favor of at least a central distributing agency in Detroit, and that they were all willing to contribute such amount per cwt. of their milk as was necessary to take this initial step in assuming control of the marketing of their product.

Others who advocated the central agency was R. G. Potts, vice-president of the Michigan State Farm Bureau; B. E. Beach, business agent for the Oakland County Farm Bureau, and Forrest Lord, editor of The Business Farmer, the latter stating that this contemplated move was merely in accord with what the Business Farmer had urged for the past three years. He stated his conviction that it was not too big a job as some feared for the dairymen of the Detroit area to distribute their own milk, and called attention to the prophecy made by the proponents of the State Elevator Exchange that in two or three years the Exchange would be doing $100,000,000 worth of business annually. He admitted, however, the intricate and delicate nature of the milk distributing business, a point which was well covered by Mr. Beach, who declared that the farmers would have to have the best and most experienced man procurable in charge of their distributing business.

"The farmers feel that they pay the cost of distributing milk anyway", said Mr. Beach, "and they will not object to paying what may be necessary in order to have their distributing business handled by competent and experienced people."

Federal Board Precipitates Action.

The decision of the Federal Fair Price Board to reduce the price of milk to the consumer from 16 to 14 cents per quart for the summer months has created one of the most alarming situations that has been encountered in the Detroit area since the Milk Commission came into existence.

This decision, it has been learned, was rendered as a result of the Board's investigations of the profits of the distributing companies as shown by their income tax statement. These profits were considerably in excess of what is generally considered "fair" profits, in one case amounting to 33 1-3 per cent on the investment. This distributing company in question claimed that the major portions of these profits were from the sale of ice cream, and it is fair to assume that this may be the case. However, it is quite apparent that the distributors of Detroit are prospering and that they are in a position to bear a portion of any decrease in price.

Producers' Officials Get Busy

None of the officials of the Milk Producers' Ass'n with the exception of Mr. R. G. Potts, who is director, were present at either of the first two hearings of the Fair Price Board. It has been explained by Pres. Hull that the Association officers received no invitation to be present and he considered it below the dignity of the Association to seek admittance where it had not been invited. Following the action of the Board, however, in reducing the price of milk, the officers met in conference with Chairman Connolly and presented their claims. The admissions made at this conference, and the results of the conference will be of interest to every producer.

Board Wants to be Fair

The officers of the Association submitted to Chairman Connolly the figures showing what it costs the dairymen of the Detroit area to produce milk, and asked Mr. Connolly if it would not be proper for the board to determine what was a "fair" price and profit for the farmer as well as for the consumer and the distributor. It was argued that the Fair Price Board was not in fact a "fair price board" if it protected the interests of only one party at the expense of another party who was not in a position to defend his own interests. The force of this statement was, we understand, admitted by Mr. Connolly, who stated, however, that the price which the farmer should receive should be determined between them and the distributors. But the producers' representatives soon convinced Mr. Connolly of the difficulties standing in the way of such an agreement and urged that the Fair Price Board determine what should be "fair" prices and profits for both farmers and creamery companies.

Board Does Not Object to 20 Per Cent Profit

"The Board does not object to profits of 20 per cent on the investment", Judge Connolly is reported to have said, "but when dealers in foodstuffs make more than that it is time to call a halt."

The Association officers advised Mr. Connolly that they were not seeking as high profits as that and if the Board would allow the farmers ten per cent profit they would be satisfied. This sounded (*Continued on page 9*)

Is It Time for Action?

IT IS said that "fools rush in where angels fear to tread".

In the estimation of some they are fools who argue that farmers should have as much control over the marketing of his milk and its price to the consumer as he does over its production, and are walking where the angels would not tread when they assume to take over the intricate business of distributing their product.

According to some people the farmers of Michigan have been doing a lot of "fool things" lately, such as organizing a potato exchange, a great selling agency for all farm products, a wool exchange, an elevator exchange, etc. Many there were who predicted failure. "The farmer can't do those things. It is his business to produce". The results answer for theemselves.

Today the dairymen of the Detroit area find themselves facing a cut in milk price which threatens their business. Why? Because they have put up with, if not sanctioned, one of the most wasteful methods of distributing a product on the face of the earth,—the Detroit milk distributing system. For three years the Business Farmer and others have discussed the inadequacy of the present system and urged the producers to establish their own distributing plant. The answer has been, "the time is not ripe". Perhaps they were right. But are they right today? Are not the milk producers big enough and their leaders able enough to solve this problem now and for all time? If the time is not ripe NOW for them to take this business step, it never will be.—Editor.

Sidelights on the Producers' Hearing Before Fair Price Board Tuesday, April 13th

J. W. Cusick, acting as chairman of Board in absence of Judge Connolly, called the farmers a "bunch of clackers," when in a thoughtless burst of enthusiasm they applauded the remarks of a witness.

A. C. Anderson, formerly professor of dairy husbandy at the M. A. C., but now manager of Freeman Creamery Co. at Flint, made the astounding statement that "any city which allows milk distributors less than 50 per cent of consumer's dollar is endangering its milk supply."

"I am sore and don't care to have you answer my question," said Mr. Diehl, a member of the "Fair" Price Board.

Acting Chairman Cusick admitted that there were "a great many things we don't understand about production of milk."

Pres. Hull made an eloquent appeal in behalf of the producers, but got his share of insults from the Board.

The two cent reduction in milk means a saving at the most of only 14 cents per week to the average consumer. But to the farmer who produces one hundred pounds of milk per day it means a loss of $7 per week.

Our opinion: That the high-handed methods and arbitrary ruling of the Fair Price Board constitute one of the most outrageous prostitutions of justice in the annals of the State of Michigan.

Our prediction: That if the milk producers of the Detroit area get justice they will have to take their case to the federal courts.

Use of Commercial Fertilizer on Depleted Soils

Determining the Needs of the Soil and the Proper Elements to Use in Treating

By M. M. McCOOL
Professor of Soils, Michigan Agricultural College

THE JUDICIOUS use of fertilizers is profitable yet there are a number of factors to be considered, namely, why are they needed, the plant relations, the methods of determining fertilizer needs of the soil, the interpretation of the results obtained, the methods of applying the formulae for different crops and the effect of different fertilizers on the soil.

Under most systems of agriculture there is a constant stream of nitrogen, phosphorus ,and potassium from the land to the city. Where grain is grown, for example, and sold there is taken away about three-fourths of the phosphorus contained in the entire crop, and under live stock farming about one-fourth of the phosphorus is removed when the animals are sold. Moreover ,there is always more or less of nitrogen and other elements from the soil by leaching. Thus farming as carried on by the majority of American farmers is a destructive or tearing down process, so far as mineral plant food elements are concerned, and the losses should be made good. Moreover, there are many soils that do not give up soluble plant-food rapidly enough, either early in the season or throughout the growing period, to produce the desired yields, due either to a deficiency in the total plant food, or to the states in which it exists, and, therefore, need fertilization for best results.

Commercial fertilizers are used to increase food production with a safe margin of profit. This may be accomplished either directly by the increased yield of grain and other crops to be consumed by the human race, or by increased production of foods for animals, which in turn are raised for human consumption. Thus in considering the principles of soil management the relationship of soil productivity to farm practice and to the welfare of the nation should not be lost sight of. Indeed, the patriotic individual looks upon a productive soil not only from the margin of profit he may derive from it but as a possibility for a high yield of food for the human race.

Soils may differ in their requirements and if the most intelligent use is made of fertilizers the needs of the soil must be ascertained. This can be accomplished only by means of field trials. Of course, the farmer cannot conduct an elaborate set of experiments since much time, labor and expense are required to bring them to a successful conclusion, yet he can and should determine the lime and fertilizer needs of his farm, relying upon the Agricultural Experiment station for information concerning the more complex relationships such as the time, manner ,amount and kinds of material to apply, the place in the rotation, as well as others. For example, he should know what element or elements in a fertilizer mixture pays for the material by the increased crop production. A simple set of experiments conducted three or four years should answer this question for him.

Winter rye on clay loam soil in July. 250 lbs. of 14 per cent acid phosphate was used on the entire field excepting a strip the width of the drill.

Plan of Experiment to Determine the Fertilizer Needs of a Soil

Plot No. 1; Treatment per acre, no fertilizer; plot number 2; treatment per acre, 50 lbs. nitrate of soda, 200 lbs. acid phosphate; plot number 3; treatment, 200 lbs. acid phosphate and 80 lbs. potash; plot number 4; treatment: 50 lbs. nitrate of soda 200 lbs. acid phosphate and 80 lbs. potash.

If one desires to compare the crop producing power of acid phosphate with a mixed fertilizer three plots will suffice, one receiving acid phosphate at the rate of 200 lbs. per acre, one receiving as much mixed fertilizer as can be purchased for the same amount of money invested in acid phosphate and one no treatment. It is advisable to lime the entire field if it is needed.

The needs of a soil for lime and the value of reinforcing stable manure with phosphorus could be determined by treating one plot with manure, another with manure and acid phosphate, another with manure, phosphate and lime and still another with manure and lime. Of course, the same quantity of a given substance should be added whenever used. Where the soils are very variable, as in much of Michigan, for example the plots should consist of about one-fourth or one-half acres and run lengthwise of the field Moreover, the treatment of the area to be utilized for experimental treatment purposes should have been the same for a few years previous. It would be of little value to lay out the plots on a field, a portion of which had recently received manure, lime or other substances, or had produced a meadow or was poorly drained. Moreover, they should all be managed the same with the exception of the fertilizer and other treatments being studied. That is to say, they should be tilled, seeded, and harvested as near the same date as possible.

One should not be misled by the general appearance of the crop during one or more stages of its development in the interpretation of the results obtained from the different treatments. It may be cited, for example, that an early stimulation of the vegetative or top growth of grain crops may not necessarily mean a greater production of grain, the most important portion of the crop. It is usually desirable to weigh or measure accurately the yields obtained from different plots.

When the use of fertilizers is contemplated the nature of the soil which is to receive it should be considered. If the soil is very deficient in vegetable matter, it is well recognized that the net returns on the investment in fertilizers will be less than if it is well supplied with it, due to its favorable action with respect to the activities of beneficial micro-organisms, the water detaining capacity, and the decrease in the amount of leaching downward of certain of the plant food elements, soil tilth, and consequently better root development of the crops grown, as well as its assistance in releasing potential plant-food. In soil building by means of green manure and catch crops the use of fertilizers may result in the production of greater amounts of humus forming material, and, therefore, be desirable an economical when judiciously used.

Since many plants are sensitive in regard to the acid or sour condition of the soil, the maximum returns from fertilizers are not to be derived until such conditions are corrected by the addition of some form of lime.

In a measure the responsiveness of a soil to a given application of fertilizer depends upon the texture of the soil to which it is applied. Sandy soils are generally recognized as being very responsive to applications of soluble fertilizers and manures the first year of application, but less later on. The fine textured or so-called "heavy soils," are influenced to a somewhat less degree the first season, but, on the other hand, a given application endures longer on them than when applied to sandy soils. In addition, the variations of the soils in a given field should be considered, and "poor spots" should receive special treatments in order to bring about more uniformity of the production of the field.

Unquestionably there are soils in such poor condition of tilth that proper water movements and root development of plants cannot take place upon which an application of commercial fertilizer is a losing proposition until such conditions are rectified in some manner.

Since the maximum returns are to be derived from fertilizers, when as many conditions as possible are favorable for plant growth, the plant relations, that is, the seed, adaption, feeding power, disease resistance, and sensitiveness to variations in climate are to be reckoned with also.

It is well recognized that maximum crop production depends to a great extent upon the per cent of germination as well as upon the strength of the germination of the seed. If the per cent of germination is high, a more uniform stand results. A vig-

Work, Good Cultivation and Plenty of Plantfood Will Increase Yield

By A. E. LINDQUIST

LAST YEAR Bill Jones put in a year of good solid work and plowed his land early, disked it, planted good seed carefully, and then cultivated it thoroughly. The season was favorable for a fine crop, yet his corn, wheat and potatoes did not harvest satisfactorily. The yield was not nearly as good as Ed Smith's down the road. What was the difference? Ed Smith did not work harder; he could not, because Bill Jones had done all that was possible. When Bill questioned Ed to learn the reason for the latter's big yield, he found that Ed had made sure that his seed had plenty of plantfood to start it and to bring it through the season to the biggest yield possible.

As you have probably already guessed Bill Jones and Ed Smith are not the real names of two farmers, but represent two classes of farmers. One which is maintaining the fertility of the soil and securing profitable yields by using fertilizer and the other depleting the plantfood in the soil, not using any commercial plantfood and not securing as profitable yields. Which of these two classes are you in? Every crop removes plantfood from the soil. This must be returned to it if the land is to continue to produce large crops. Manure should be applied, legume included in the rotation, and cover crops should be plowed under, but in addition, even on soil which is considered rich, commercial plantfood properly applied will pay a neat profit above its cost and will help maintain fertility.

Ammonia, phosphoric acid and potash are the three plantfoods which are likely to be present in insufficient quantities, and which are necessary in producing large crops. The supply of ammonia may be pretty well maintained by applying manure, by including legumes in the rotation and in plowing under green manure crops, but it is usually profitable to include 2 per cent ammonia in a commercial fertilizer in order to provide the young plant roots with this important plantfood in the form available early in the spring, before the ammonia and manure has been made available by the soil bacteria, for the bacteria do not begin their work until the soil warms up and in the meanwhile the seedling may have stopped growing because it needs ammonia.

Most soils are deficient in phosphoric acid in the form available to the plant roots; and manure itself is lacking in this element. It is this plantfood which is the limiting factor in producing the maximum growth of the plant and thus the largest yield per acre. Phosphoric acid produces vigorous root growth early in the season and later hastens maturity. Fertilizers for all crops should contain about 10 or 12 per cent of phosphoric acid.

Potash is especially lacking in the heavy peat and muck soils; and light sandy soils too are usually deficient in this plantfood. Potash favors starch formation, aids in making heavy grains and stiffens the stems of grasses preventing lodging.

No matter how much cultivation is given, if the seed is not of good quality, high yields of good produce are not possible; likewise if the soil has not sufficient plantfood in available form, no matter how good the seed is, it cannot produce profitable yields. Land, labor and machinery are high. Everything should be done at the start of the season to assure that all the high priced operation on expensive land will bring the biggest returns and thus the most dollars in the bank at the close of the season.

Your county agent may well be called in to help you to decide which plantfood it will be most profitable to supply. Following are some recommendations which may help you decide what fertilizer will be most profitable for you to use:

(Figures refer to percentages of ammonia, available phosphoric acid and water-soluble potash in the order given.)

With 2 per cent ammonia, a muck soil fertilizer, 2-8-8, 2-10-6; for grain and staple crops, 2-10-4, 2-12-2.

With 5 per cent ammonia, 5-7-2, spring top dressing grain.

With 3 per cent ammonia, vegetable and truck crops grown under field conditions, 3-10-6, 3-10-4, 3-10-2.

With 7 per cent ammonia, 7-8-5, earliest truck crop potato fertilizer.

With 4 per cent ammonia, vegetable and market garden fertilizers, 4-10-6, 4-10-4, 4-10-2; northern potato fertilizers, 4-8-6, 4-8-4.

Ammoniated Phosphate Analysis

For soils where potash is not needed, or on crops which do not respond to the use of potash, 2-12-0, 3-12-0, 6-8-0, 7-8-0.

No Ammonia Analysis

To supplement and re-inforce manure and for use under conditions where nitrogen is not needed; also for legumes, 0-10-8, 0-12-4, 0-12-2, 0-16-0.

Michigan Pea Growers Seek State Organization

Wide Discrepancy between Prices Offered to Growers Causes Dissatisfaction and Shows Need of State Association

THE PEA growers of Michigan have caught the spirit of co-operation and are seeking a state-wide organization with locals in the various counties where peas are grown commercially. Michigan is a great pea state, taking rank among the three or four leaders in the union, but the growers are entirely at the mercy of the companies who make the contracts, being obliged to take what is offered or else grow no peas.

Mr. Guy W. R. Curtiss, president of the Kent City Pea Growers' Ass'n, believes the growers should organize and is ready to take a leading step to bring about such an organization if there is any promise of assistance from the other growers of the state. The suggestion has been made that the pea growers association could affiliate with the beet growers association as both grow crops on contract, and therefore have many mutual problems.

Up until the last year or two pea growers received from two to three cents per pound, depending upon the locality and the canning company with whom they did business. More recently this price has been held at three cents per pound with some companies offering three and a quarter to four cents.

Roach & Company of Grand Rapids, are one of the largest contract purchasers of peas in Michigan and show a disposition to play fair with the farmers. At a meeting held at Croswell several weeks ago, they tendered the farmers a big dinner and explained their contract for the ensuing year. They did not offer, however, what the farmers thought they were entitled to receive, claiming that three and a quarter cents per pound was all they could afford to pay.

The following information concerning the pea situation was given to us by Mr. Curtiss of Kent City:

The Pea Growers' Opportunity

PEA GROWERS who desire to form a state-wide organization should communicate their wishes to the Business Farmer, Mt. Clemens, or Mr. Guy W. R. Curtiss, of Kent City. No matter whether you have signed contracts or not for 1920, the time is ripe for an organization, and if such is to be effected, it should not be deferred until another year. Why not organize an association now which can spend the time between now and the next season investigating contract prices in other states, cost of operation, etc., so that you may be ready next spring to confer with the canning companies and have the facts to back up your claims.—Editor.

W. R. Roach & Company, general offices, Grand Rapids, Michigan, are paying the following prices, that is, they are contracting acreage at these prices: (The company has plants at Kent City, Edmore, Scottville and Croswell where peas are grown.) They will pay 3 1-4 cents per pound for prime green peas delivered at the plant; they are going to charge the growers $3 per bushel for the seed. In some instances they have promised to haul the peas to the plant for the farmer. At Kent City they have about fifty per cent of their usual pea acreage contracted. Croswell has 1,000 acres contracted for and could hadle more. But the farmers there are liable to cancel their contracts it seems. Scottville is in about the same position as Kent City. The farmers at all these plants are demanding four cents per pound.

"The Manistee Canning Company, Manistee, Michigan, are going to pay 3 1-4 cents. This plant is now under the process of erection.

"The Sears and Nichols Canning Company, Chillicothe, Ohio, with a plant at Pentwater, Michigan, paid three cents per pound last year and may pay a little more the coming season. They charged the grower $2.50 per bushel for the seed last year.

"The Fame Canning Company, Indianapolis, Indiana, with three plants in Wisconsin (one at Cumberland) are paying three cents per pound for prime peas and charging the grower $3 per bushel for the seed.

"The Fremont Canning Company, Fremont, Michigan, pay on a sliding scale which makes them average about 3 1-4 cents per pound on all grades. They charged the grower either $4.50 or $5 per bushel for the seed.

"Nathan Simpson, Keeler, Mich., near Hartford pays $75 per ton and furnishes the seed, which would be the equivalent of about $90 per ton at least. However he grows most of the peas on his own farms.

"It is understood that S. M. Carp, Hartford, Michigan, has been paying 4 1-2 cents per pound. Mr. Carp would not say that he was or that he was not. He just evaded the question by stating that he was informed by one of the largest Wisconsin packers that they would pay three cents per pound there.

"The writer thus far has been unable to find any company in Wisconsin which is paying more than three cents per pound for peas. Some are paying less. Some are paying 2 1-4 to 4c on a graded scale. Apparently the average yields in Wisconsin are larger than in Michigan. The cool climate seems to be particularly adapted to the growing of peas."

"I don't think that it will be possible for us to do much this year in a local way, however, we must keep the interest up and arouse the growers all over the state to realize the need of a state organization of the growers of contract crops. We want to get a state organization as soon as possible, and then try to arouse the Wisconsin growers to organize. New York growers have already organized. Wisconsin packs about half the peas in the United States so naturally they will influence the market more or less.

"New York canners have been paying from 2 to about 4c per pound. New York growers have not been making any money to speak of in growing peas for the canners. Wisconsin growers are evidently making money. It appears that Michigan growers are not making anything under the existing prices,"

The MICHIGAN BUSINESS FARMER approves of the efforts of the pea growers to organize, and we hope the movement will be successful. Farmers can no longer protect their interests through individual dealing. The potato growers, the grain growers, the live stock raisers and the beet growers have all recognized this, and each of these various branches of agriculture here in Michigan are now represented by an organization which speaks for them. The pea growers should without further delay cement themeselves into an organization for the purpose of studying and solving their production and marketing problems.

Rebecca Wins the Prize

By E. DAVIS RICHARDS

CONSTERNATION reigned supreme at Pine Tree, when Rebecca won the prize. But then Pine Tree and all its inhabitants of the country round about were judging Becky Sharp by the rest of the lazy Sharps who had lived in the same tumbled down fashion for generations. To be surce Henry Sharp Rebecca's father, had married very much above his station; and perhaps Rebecca inherited some of the excellent qualities of her gentle mother, who like a hot house flower thrives in a foreign place only a short time, then withers slowly as if unable to stand the rigors of the unusual surroundings. Indeed Mrs. Sharp lived only five years after her marriage to lazy Henry Sharp, and left two tiny mites of children, Rebecca aged three and John, a boy of two. That was ten years ago, and Pine Tree had just awakened to the fact that at last a Sharp had really done something worth while.

When the county agent of Henderson county had announced the conditions governing the contest in the boys' and girls' clubs Rebecca's heart had almost stopped beating. Twelve dollars necessary to buy a registered pig, how could she ever make so much money? But make it she must, for the coveted trip to the State University had been the subject of her thoughts for weeks. She decided to take her father into her plan and see if he could not suggst some way in which she might get the magnificent sum of twelve dollars to buy the precious little Berkshire which she felt sure would indirectly be the cause of a great improvement in the whole Sharp family. She therefore startled her father one evening by saying,

"Dad, tell me how I can make twelve dollars!"

"You can't make twelve dollars in any way, Becky. Don't you know that that is a lot of money."

"Yes, that seems an awful lot of money, Dad, just think what it would mean to get to go to the State University for a whole week. Why, I think I would be willing to live here for the rest of my life if I could just get to go there for ever such a little while. Didn't mother go to school there for a year once?"

"Yes, I guess you are just like her, too; she was always wanting better things than she had. Better forget, it, kid, you can't ever make twelve dollars, and if you did you wouldn't know how to raise a pig anyway." And with that encouragement her father left the room. A few minutes later Rebecca confided to the eager young face peering out at her from the old cracked mirror—

"Rebecca Sharp, you ought to be mighty glad to be like your mother, always wanting better things than you have, and Rebecca, you are going to the same school that she went to, if you have to break your neck to do it." She then crawled under the worn covers of her bed to dream for the fiftieth time of just missing the train which was to carry the prize winners to the big school in a distant city.

For the next few months the neighborhood of Pine Tree was constantly besieged by a small girl with such a pleading. "Please won't you buy some wild grapes?" or "Please Mrs. Smith, mayn't I take care of the baby?" or "Please Mrs. Johns, won't you let me come every morning and dust and scrub your porch; you know I want to make some money, because I belong to the Girl's Club."

There were not many who could turn the little appealing eyes away, for as Mrs. Johns, the wife of the grocer, said, "I never had any use for any of the lazy Sharp bunch, but I believe Becky is different, and anyway, I wouldn't sleep any at nights if I didn't help that poor motherless mite." While after the unsuspecting Mrs. Johns left the Ladies Aid, or other social gathering at which she had been expressing her opinion about the "lazy Sharps", her nearest neighbor was heard to remark, "Well, I guess the poor motherless mite is doing her part, too. Do you know I was just telling Sam today that I had never known the Johns' porch to get as many scrubbings as it has since Becky Sharp has been going there, and as to the inside of the house it is spotless, while Mrs. Johns was doing the cleaning herself, I could write my name all over the center table." That opinion was evidently acquised in by those present, as shown by the decided nodding of their heads.

At last the great day came

There were dark days of discouragement before enough money was made to get the coveted pig; then, too, after the little black fellow was finally delivered to her, Rebeecca was afraid he would eat too much or else too little, for her father's statement, "You wouldn't know how to raise a pig anyway" kept coming back to torment her. Her anxiety for the welfare of her prcious pig prevented her from noticing a change, which seemed to be coming over her father. Others, hawever, spoke of it and solicitous expressions were made, such as, "I'm afraid Henry Sharp will hurt himself working," or, "Gee, Sam, is the millenium coming? I hear Lazy Sharp is working in the Red Hill coal mine." But fortunately the unkind things said behind our backs, very seldom are repeated to our faces and so the Sharp household went on entirely ignorant of the surprise they were causing in the neighborhood of Pine Tree.

At last the great day came, as all long expected days must. Even the Berkshire knew something unusual was in the air, for did not every bit of his three hundred pounds still tingle from the contact of that awful brush which Rebecca had weilded so skilfully. Then, too, he knew there was not a bit of dust from the tip of his turned up nose to the little twisted stump of a tail, for she had finished by putting on something that made him slick and shiny. Rebecca was so excited that she scarcely noticed her father or brother, having having eyes only for that precious bit of pig flesh, on which she felt all the future of herself and family hung.

But, arriving at Pine Tree, Henry

(*Continued on page* 17)

Sugar Men Distort Facts to Deceive Farmers

Statements That Leaders are Untrue to Cause and That Movement is Failing is Pure Fiction

FAILING by honorable means to make any headway against the organized strength of the beet growers, the manufacturers have turned to falsehoods and misrepresentations in the hopes of undermining the farmers' faith in their chosen leaders. It has been repeatedly stated that the leaders are agitators and are prompted by selfish motives. What these motives may be has not yet been explained, however. The statement has persisted in some sections that Manager C. E. Ackerman has deserted the growers and signed up a contract on the old basis. Naturally these statements set a good many farmers to thinking, but if they think long enough they will clearly see that the statements are but a part of a studied propaganda on the part of the manufacturers to destroy the organization. Manager Ackerman has NOT signed a new contract, nor has he in any way decreased his efforts in behalf of the growers. He has been on the job every minute since he was elected to handle the organization work, and has been obliged to neglect his own business affairs in order to devote undivided attention to the growers' campaign . Today Mr. Ackerman stands as confident as ever of the ultimate success of the movement, and he will be found fighting to the last ditch.

But he is not alone by any means. The loyalty and determination of the beet growers as the planting season approaches is a revelation of the new spirit of cooperation among the farmers, and there is no evidence of weakening on their part. On the contrary there is multiplied evidence that the growers will not recede a single step from their position even though the alternative may be the planting of some other crop.

At Ithaca last week only twenty out of five hundred beet growers present had not returned their contract, and those twenty signified their intention of returning their contracts at once. At Ashley a few farmers had accepted contracts as a result of the story of the field men that the organized movement was failing and that the leaders had gone back on the growers. As soon as they learned the true facts these men cancelled their contracts. In the office of one of the sugar companies is the contract of a single beet grower pinned to the wall as if to show all beholders that the growers have deserted their cause. They haven't enough wall space in the offices of any sugar company in Michigan to show all the contracts that have been returned and which, providing the manufacturers do not meet the growers' demands, will represent thousands of acres of beet land turned over to some other crop.

The "Strike" the Last Resort

THERE IS one word in the English language which is in singularly bad repute just at the present time. It is the word, "strike." The railway switchmen of the country are on a strike. Transportation is paralyzed, and both financial and physical suffering is in prospect. The sugar beet growers of Michigan are on strike and the issues which have lead up to their strike may easily be confused by the uninformed with the issues involved in the switchmen's strike. But there is a vast difference between the two, a difference which make the one wholly indefensible and the other wholly justifiiable.

To explain: The "strike" is the measure of last resort. When all efforts have failed to bring two parties to a contract, whether verbal or written, to a mutually satisfactory understanding, and when courts of arbitration have failed to settle the differences, then the "strike" may be necessary and excusable. The sugar beet growers have tried for four months to secure a conference with the manufacturers for the purpose of arbitrating their differences. Their advances have been spurned by the manufacturers, who have even refused to meet with the representatives of the growers. Hence the growers have "struck" to the extent of quitting the production of sugar beets and using the land for other crops. If there is a shortage of sugar as a result of this action the public will put the blame where it properly belongs, upon the shoulders of the manufacturers.

The case of the switchmen is different, if we understand the situation correctly. Many of the railroads claim that they had no intimation that a strike was brewing. At least no suggestion was made on the part of the switchmen that a conference be held with the employers. They simply struck without warning, giving the employers no opportunity whatever to listen and adjust the grievances in a peaceful way. The distinction between the farmers' strike and the switchmen's strike should be kept clearly in mind.—Editor.

Don't Accept Seed

It is claimed that the field agents who are distributing the beet seed are asking farmers to transfer it from the company's bags to their own. In years past the companies have always left their own bags. The reason for this request is apparent. A contract assumes an exchange of something of value. The only thing of value which passes between the manufacturer and the grower is the beet seed, and the manufacturer undoubtedly holds that when a farmer "accepts" his seed, he virtually binds himself to the contract. If a field agent leaves a bag of seed at a farm it is not the fault of the farmer, but if the farmer transfers the seed to his own bags, then he is a party to the "acceptance."

Western Growers Strengthen Their Position

We are in receipt of a letter from Mr. Albert Dakan of the Intermountian Farmers' Ass'n of Colorado, enclosing copy of contract in which the farmers have entered with the Western Slope and other sugar companies. The contract is much more favorable than that under which both the western and Michigan growers raised beets last year, but the price offered is slightly less than the price which the Michigan farmers are asking for this year's crop. Mr. Dakan comments upon the contract as follows:

"This is the contract agreed upon between the Holly Sugar Company and the farmers for beets for the Grand Junction factory, 1920 crop. All the Colorado sugar companies have recognized the farmers' committee this spring. The Great Western Sugar Company will meet the farmers' committee soon and take up the 1921 contract. The farmers decided not to wait again until planting season, but to have it worked out early so they could cut out beets and plan for other crops if the company is not disposed to give a square deal."

Contract Specifies Conference

There are at least three paragraphs in the western contract which will be of particular interest to the Michigan growers. They read as follows:

"That the first party (the grower) shall have the privilege of selecting at his own expense, a man of reliable character satisfactory to second party, to check the tares and weights of the beets grown under this contract at the receiving station where such beets may be delivered, and the party of the second part will meet with representatives of the Beet Growers' Association for the purpose of agreeing upon weighmasters and taremen for all receiving stations, and also agree that all weigh stations after being opened up for the season will be open for receiving beets from seven a. m. until five thirty p. m. each working day, and that company employees will remain on duty until all wagons are weighed back; also all scales at receiving station shall be inspected during receiving campaign, by a competent party.

"To permit growers to pile beets on the ground at all stations after October 15th, providing there are no cars in which to load beets on hand and there is no chance of securing same within three hours.

"Party of the second part (the sugar Co.) agrees that before making a beet contract for the season of 1921 they will meet with the representatives of the Beet Growers' Association, to discuss and endeavor to draft a contract satisfactory to both parties concerned."

"Negotiate With Growers," Advises "Facts About Sugar"

THE FOLLOWING article occupied the entire editorial page of the March 27th issue of "Facts about Sugar", which is published weekly by the "Domestic Sugar Producers, Inc", and is "devoted to American sugar production". The editorial might well have been based upon the controversy which is now at its height here in Michigan between beet growers and sugar manufacturers. It is an open indictment of the "stiff-necked attitude on the part of company officials who have refused to meet with representatives of their growers". It is a virtual endorsement of the claims of the Michigan beet growers to recognition. No grower could have presented a better argument for negotiation between himself and the manufacturer than is here presented by the manufacturers' own publication. We submit it without further comment to the sugar beet browers and particularly to those who may think that the growers' demands for a conference are unreasonable:

Beet Industry's Big Problem

"WHILE THE beet sugar industry is conducted with a high degree of efficiency there is one phase of its operations in which improvement is urgently needed. **That is in the relationship between the sugar companies and the growers of beets.**

"It is natural and perhaps inevitable that differences of opinion should develop as to the prices and methods of payment for the crop. Between the minimum figure below which the farmer finds it more profitable to cultivate other crops and the maximum above which the companies find it less unprofitable to close their factories than to operate them there is a margin which must cover the profits of both parties. The proper division of this margin may be a subject of negotiation and compromise but such negotiations can and should be carried on in a businesslike way.

"This is not a counsel of perfection. It is a thoroughly practical proposal for the reason that it will operate to the advantage of both the growers and the companies. **The method of adjustment by public controversy is expensive to both sides.** The struggle to obtain fifty cents or a dollar a ton more frequently delays the work of preparing the soil for the crop. Instead of plowing his beet fields in the fall, which is the best time, the grower waits until after his contract is finally settled, which is frequently so far along in the spring that he is late in getting in his crop, is behindhand in his work throughout the season and obtains a final yield of immature beets which nets him less than would a full crop of higher sugar content at the lower rate. **The company is unable to place its orders for bags, fuel and other supplies until its officers can form an approximate idea of the volume of beets to be handled and its operations are handicapped in consequence. Abandoned acreage, inferior yields and a low quality of beets resulting from delays and lack of co-operation leave both grower and manufacturer dissatisfied.**

* * * * *

"Our observation has been that a large part of the trouble between beet growers and sugar companies has been caused by outsiders who have stirred up ill feeling among the former from motives not at all related to a sincere consideration for their welfare. To a certain degree it has been encouraged by a stiff-necked attitude on the part of company officials who have refused to discuss prices with representatives of their growers but have insisted on confining their business relations to individual farmers. Since uniform prices necessarily prevail in the territory of every company we can see no good reason why group conferences should meet with objection provided the groups are really representative. To demand that the companies shall submit to the dictation of outside individuals who have nothing at stake either in the growing of beets or the manufacture of sugar is altogether unreasonable.

"Misunderstandings arise from lack of frankness on both sides. Growers are misled by unfounded reports of enormous profits earned by sugar companies and company officials do not take the trouble to correct these statements. Farmers put forward exaggerated figures as to the cost of making their crop and insist that these shall be the basis of price agreements. The heat of a contest over prices is not a time when frank statements of fact are likely to be offered or accepted. In July and August, when there is a lull in the activities of the growers and companies alike, is a far better time to get together for a full and friendly discussion of problems and conditions. That is the time when growers and company officials should begin to lay plans for the following season. We hope that midsummer of the present year will see a beginning of such conferences.

"The problem of the relationship between growers and companies is one that has been sidestepped or met by unsatisfactory makeshift arrangements too long. The future welfare and progress of the beet sugar industry demands that it be met courageously, frankly and in a spirit of mutual accommodation. The man who inaugurates such a plan of procedure will be one of the greatest benefactors of the industry."

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

BEAL CITY CO-OPERATIVE ASS'N

Just a few words to readers of M. B. F. Organization is the only key to success for the farmer. We have been shipping our live stock for only a few years and day by day we add new members to our list of shippers of live stock. I can not see how some farmers still hang to the old style of selling to the local buyer and give him the best of the deal. Here we are feeding the stock from 6 months to 3 years and when we get the stock in shape to sell, up comes a telephone call from the local buyer. He talks one minute with you and you sell, and in this minute he makes more clean cash than you do in the three years feeding. Why not handle the business end of our business and get all that belongs to you. I herewith send you the financial report of the Beal City Live Stock Shipping Association as given by Wm. Bleise, manager of the association. Respectfully yours.—*A. P. D., Isabella Co.*

Financial report of Beal City Livestock Shipping Ass'n., Weideman, Mich., Jan. 27, 1919 to Jan. 31, 1920. Total amount received, $63,440.42; total amount paid for stock, $62,641.24; balance for home expense, $799.18. Paid out for manager, $266.60; paid telephone and postage, $3.83; paid lumber and straw, $65.44; paid to insurance fund, $417.20; paid to insurance excess, $17.62; paid to joining fees, $18.00; paid to Michigan Livestock Exchange, $7.00; paid for hardware, $3.49; total, $799.18. Insurance fund, Jan. 31, 1920. Total received from insurance fees and excess, $482.62; total paid out for loss, $426.68; balance on hand, $55.94.

Wm. Bleise, Manager.

Our readers appreciate these little items of news about farmers' co-operative associations. Let us have more of them.—Editor.

BRECKENRIDGE CO-OP. BUYS WHEELER ELEVATOR

A deal was recently made by which the Breckenridge Farmers' Elevator purchased and is now operating the Wheeler Elevator. Stock in the Breckenridge elevator was worth 50 per cent or more advance on its original cost and together with profits it was decided to declare a 100 per cent dividend. The original stock was nominally $25,000 but only $15,000 had been sold. This stock dividend made $30,000 stock, an increase to $75,000 was authorized and of this $42,000 has already been disposed of. This institution is in a very prosperous state and all the stockholders are pleased with conditions. It is expected that Walter Swope will be the new manager. He is an experienced man and will be a very successful manager of this elevator.

DEVELOPMENT OF U. P. CATTLE INDUSTRY

The following report of the growth of the livestock industry in the upper peninsula was recently made by John A. Doelle, secretary-manager of the Upper Peninsula Development Bureau:

"The past three years have brought to upper Michigan some hundred or more new settlers, representing about twenty-five new ranches devoted to the grazing of approximately 41,000 head of sheep and 6,000 of cattle. The Cloverland Cattle Company, Manistique, and the Blaney Land and Cattle Company, near Blaney, are the two largest of the livestock operations, and these two propositions are looked upon to test out the cut-over areas of Cloverland for grazing purposes. They are both well organized and well officered and the results achieved by both should stand as a criterion for what others may expect to accomplish with a big grazing proposition.

"We cannot as yet, make any definite prediction, regarding upper Michigan's adaptability for cattle-raising on a large scale. We are looking to these people to furnish us with the material. We do not feel, by any means, that Cloverland has ever been fully tested out for sheep and cattle. We know that most of our new settlers are making good, and are satisfied. We know, too, that a few have left us and gone back to the west.

"Though we know positively that only in one case has there been any complain about the land itself, the general conception is that all of those who left were dissatisfied—and, since we are exploiting this comparatively new country, the criticism has come thick and fast. The Bureau has had to fight most of it—and it is proving a big job. Influential western interests have allied against us in defense of their own properties and reputation. We know that Cloverland can and will make good—but constantly we are met by this destructive opposition which is taxing the Bureau to capacity to fight off."

MERRITT CO-OPERATIVE ASS'N ORGANIZED

A co-operative marketing association with a membership of over 60 farmers has been organized at Merritt. Merritt is situated in the eastern part of Missaukee Co. and centrally located in as good a stock raising and grain growing locality as Michigan affords. This country is still in the making with plenty of cut over and partially cleared lands for enterprising, progressive farmers who wish to make a home. They will market stock of all kinds—beef, dairy cattle, sheep and hogs as well as wool, cream, poultry, eggs, grain, hay and potatoes.

The officers of the Merritt Co-operative Marketing Association are Frank B. Shaw, president; H. H. Hamilton, secretary and J. T. Hoard, treasurer.

WHO GOT PROFITS ON APPLES

"Godfrey & Sons, commission merchants, cleaned up $90,000 on apples last winter, which they bought for $4 and $5 a barrel from the farmer, and then sold to the retailer for $11 and $12," declared Mayor Hoan of Milwaukee during a speech delivered in Milwaukee on Friday evening.

"But why did the farmer sell his apples at $4 and $5 a barrel?" you naturally ask, for the simple reason that he was not organized to market them himself. He must either take that or let them rot, so he took what he could get. The commission merchant was prepared to buy them in a time of plenty, at harvest, and then placed them in storage until Mr. Consumer was ready to shell out the mazuma for them. He charged all he could get and since Mr. Consumer was getting big wages and had plenty of money he charged a plenty for fear the money might otherwise burn a hole in Mr. C.'s pocket. But why blame the other fellow for taking the money when the producer and consumer are too indifferent to get busy and help themselves? Mr. Farmer doesn't want the money, it gives him a headache to take care of it and Mr. Consumer doesn't want it because he fears that it is "the root of all evil."

AWAKENING IN N. E. MICHIGAN

Any one who has paid attention to Northeastern Michigan during the past quarter century and who has watched its rather slow development since its first big asset, the pine forests, were swept away by the demand for lumber and who sees the spirit which the various communities are going at a new development cannot but help to give notice to the awakened energy which has come to these communities.

Boards of commerce, farm bureaus, farmers' co-operative societies are springing up all over the district and are taking an active part in making their individual communities better places for homes and far better places in which to live and enjoy life than in the crowded industrial cities, where people often occupy beds in relays and where the rent of a single room is frequently more than that of a comfortable house in a small community, and where the profiteer fixes his price for necessities according to the wages paid by the factories.

Good roads are being constructed in every county and are helping not only to make life more comfortable for those who live near them, but are attracting hundreds of outsiders every year, especially during the summer season when the lakes and streams, the trout, bass and pike fishing, lure the city-weary men and women to the great out-of-doors.

Northeastern Michigan, with its fertile fields, its streams and its lakes and even with its stretches of jack pine plains, is a wonderful country, one that is better to come to than it is to go away from, and the people who are already a part of it will do well, not only to stay here, but to help spread its fame throughout the land by telling of the good things which it offers and by continuing the splendid spirit of co-operation and helpfulness which has been aroused among them during the past few years.

A SUCCESSFUL SALE

One of the most successful sales of the season and the first private sale to be held under the management of the Michigan Holstein Friesian Association occurred at Lansing on April 1st when Dwight G. Rapp dispersed his splendid herd of thirty head of Holsteins for a total of $9,775, or an average of $325 per head. The top price of $800 was paid by James B. Jones of Detroit, Mich., for the splendid show cow and producer, Rosa Belle Nudine 2nd. The junior sire sold for $700 and a 25-lb. four year old, Elmhurst Elsie Pontiac Clotho brought $600. The heaviest buyer was E. F. Leland of Fort Wayne, Ind., who purchased eight head of the best for a total of $3,100. The fact that everything was absolutely guaranteed and sold on a 60 day guarantee against tuberculosis with retest privilege gave the buyer every protection and bidding was lively throughout.

FARM BUREAU BACKS COLLECTIVE BARGAINING

Receiving word that the Capper-Hersman bill legalizing collective bargaining by farmers was being held up in committee, Sec'y Bingham, of the Michigan State Farm Bureau, recently dispatched a letter, a copy of which follows, to each Michigan congressman and senator:

"Michigan farmers are anxious for action on the Capper-Hersman collective bargaining legislation now before Congress and it is the request of the Michigan State Farm Bureau, representing 37,548 Michigan farmers, that you endeavor to have this measure reported out of committee at an early date and urge its passage.

"Collective buying and selling of products must be done by farmers if they are to obtain full value of their products. Their natural isolated conditions make individual sale and purchase of commodities costly and unsatisfactory in a variety of ways, hence the vital need of the farmers, not only of Michigan but of the entire country, for legislation such as the Capper-Hersman bill is intended to be."

POTATO MARKETS REMAIN FIRM

There was a limited to moderate movement of white varieties at Michigan and Minnesota shipping points. Demand and wire inquiry were fairly active. Prices ranged 10c higher than last week at $5.70 to $6.10 sacked per 100 pounds f. o. b. shipping points. Middle western consuming markets also were firm, advancing 15c to $.65 to $6.15. St. Louis and Kansas City were again higher than the other markets at $6.15 to $6.50. New York round whites No. 1 gained about 30c reaching $5.55 to $6.15 with moderate demand. In New York bulk round whites No. 1 ranged $5.70 to $5.85 per 100 pounds. Maine Greenmountains were again unchanged in New York at $5.55 to $5.85. Shipments the past week were lighter than the previous week by about 350 cars and nearly 1,000 less than during this period last season 2,563 cars were shipped compared with 2,914 last week and 3,408 the same week last year. Virginia Norfolk section planting is still in progress but the ground is wet from heavy rains. Seed stock is still slow in arriving. Florida—After the early damage to the Hastings section from water and frost a comparatively small crop was expected but from the present appearance of the vines, the crop will be much larger than seemed possible three weeks ago. A few potatoes will move from the section during April. The bulk of the crop will move, however, after May 10 with the movement running over into early June. With the season later than usual, accurate yield figures can not be determined at present. The crop however, is in excellent condition at present and a yield at least up to the average is expected.—*Bureau of Markets report for week ending April* 5th.

My Experience in Draining Quicksand

TEN YEARS ago I moved from central Ind. to Newaygo county, Mich., and bought a farm. After framing it a year I found that tile drainage was needed on much of it. As there was no tile mill available I concluded to buy a hand cement tile machine. We operated it in the basement of the house in winter months, putting in all of our winter output the following spring. They are all holding up good except the swamp land, just begun decaying. Will say in regard to the cement tile, they will not stand up in any acid soil as the acid eats up the lime and they decay. Soil that has sufficient lime, they become firmer, but will say that I like them very much where I have to go through a bad piece of quicksand as the ends are straight and lay closer together.

Five years ago we bought 100 acres on the banks of the Muskegon river, 125 feet above river bed with many of the old river channels running across it and very wet and springy. We were not in need of any outlet, but some method to tile-drain it, as the man we bought out had failed. When we came to examine it we found 16 inches of soil on top with six inches of quicksand under it with living water. Under this were six to 12 inches of gravel so when we commenced to dig the whole thing would tumble in on us. We managed to get about four rods and abandoned it until fall; then completed it by putting one rod or two in each day, letting the water drain out of the quicksand.

If anyone does not know the nature of quicksand, just pour a few shot in a vial of water and hold it up and look at it. Quicksand is round of any size and will run with water, turning your tile on end. Many swamps and slews could be drained in Michigan by putting your tile in, in the fall, when there is no water, by going below the quicksand or draining the water off by degrees. Quicksand is as solid as any other sand when the water is drained off from it. I have improved many quicksand swamps and bogs in the past 10 years. All are giving perfect satisfaction. Gravel or cinders are the top soil, in fact anything that will screen the water out of the sand packing any of the three tightly around the tile. I have hauled gravel to these flaggy bogs when I would sink out of sight digging my ditch ahead of me and laying a single tile at a time, pouring gravel on it and pack it under and around it until it became perfectly solid, keeping a small board over the end. We have grown just as good corn over these spots as anywhere else in the field.—*F. Moore, Newaygo, Mich.*

MARKET FLASHES

WHEAT PRICES TOPS SEASON'S RECORD

WHEAT PRICES PER BU., APR. 13, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.72		3.05
No. 2 White	2.70		3.02
No. 2 Mixed	2.70		3.02
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.55	2.50	2.51
No. 2 White	2.53	2.47	2.48
No. 2 Mixed	2.53	2.47	2.48

The Detroit wheat price is the highest today of the season the market advancing ten cents per bushel since last week. There is active demand for this grain, a considerable amount of which is now going overseas. The milling demand was good prior to the rail strike, but the shutting off of electric power may lessen this demand temporarily. Reports from the fall wheat acreage continue to be of a discouraging nature, the abandoned acreage exceeding the average by a large margin, and many of the fields now in bearing being infested with the Hessian fly. In the face of such conditions no one would assume to say to what heights wheat may go before the 1921 crop is harvested.

CORN DROPS AFTER ADVANCE

CORN PRICES PER BU., APR. 13, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.68	1.81¼
No. 3 Yellow	1.73		
No. 4 Yellow	1.69		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.80½
No. 3 Yellow	1.65	1.56	1.80
No. 4 Yellow	1.62	1.59	1.78

Corn was strong with other grains at the close of last week but on account of the difficulty of dealers to get their cars switched which forced them to pay demurrage charges, buying has dropped off considerably and there is an easier tone to the market. As soon as the rail congestion in the local yards is relieved and dealers can make good on their sales activity is expected to be resumed at least until such time as the suspended transportation of the country gets into motion again and supplies increase.

The bears who have been so conspicuous in the corn market for months past seem to have lost courage and there are few who dare gamble on lower prices. Opinion is practically unanimous that this market will tend upward until the new crop is harvested.

OATS REACH NEW HIGH LEVEL

OAT PRICES PER BU., APR. 13, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.13	1.04	
No. 3 White	1.12	1.02¼	
No. 4 White	1.11		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.70	.70	.75
No. 3 White	.70½	.69	.75
No. 4 White	.69½	.68	.70

Oats have reached $1.13 per bushel on the Detroit market, and gains strength every day. This crop is woefully short and a good many who had hopes of large supplies back in the farmers' hands have at last come to realize this fact. Oats have been in moderately good demand for export all the season. It was expected that the oat states would increase their acreage materially this spring but early forecasts of the acreage do not bear out that expectation. The backward spring from which all sections of the country are suffering has delayed seeding and farmers are getting uneasy. While it is yet too early to make a prediction on the 1920 oat acreage it is not believed that it will be much more than normal. This would be an unusual situation for as a general rule farmers plant heavily of a crop following a season of scarcity and high prices. Oats will be a safe crop for Michigan this year.

RYE AND BARLEY

Rye continues firm, but there is little trading as we go to press, because of the scarcity of supplies. The price on the Detroit market is quoted at $1.97. Barley has likewise advanced jobbers offering $3.25 per cwt. for No. 3 grade.

LAST MINUTE WIRES

DETROIT—Strike causing uncertain markets. Potatoes advance. Corn slumps following advance. Beans higher. Wheat in active demand and higher. Oats slump 2c after the advance. Hay in demand. Live stock in demand but supply is small.

CHICAGO—Markets very uncertain. Oats advance 3c. Corn off 1c. Potatoes higher.

(Note: The bove summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

Weekly Trade and Market Review

THE ENTIRE commercial situation of the northern half of the country is at the mercy of the rebel strikers, and no one can say what the outcome will be. The strike has forced thousands of industrial plants to close their doors, throwing hundreds of thousands of workmen out of employment. Freight is at a standstill and the passenger service demoralized. Perishable food in transit has been left to rot and cities are short of supplies.

The effect of the strike is seen in nearly all industrial and commercial activities of the country and even if settled at once the loss occasioned will run into millions and will still further upset the financial balance. Profiteers and speculators aree taking advantage of the shortage of supplies to boost prices and unheard of prices are being paid this week for some commodities in most of the cities of the strike region.

Practically all grain, with the exception of corn, vegetables and dairy products have advanced as a result of the strike. The farmer will receive little benefit of this increase, however, as the prices are abnormal and furnish no basis on which to make contracts for future supplies. The advance has scarcely been felt at local buying points, as the elevators and produce buyers naturally look for a reduction from the high crest of the "strike" prices when the movement again becomes normal and supplies increase. As a matter of fact the farmer will undoubtedly suffer eventually from the strike. The high price curtails consumption and it takes some time to recover from this effect even after normal conditions again prevail.

The strike has upset all predictions on the market. Except for this disturbance the grain markets would undoubtedly have advanced in a normal way, but it is almost certain that there will be some drop from present levels, though probably not great.

BEANS FIRM AND HIGHER

BEAN PRICES PER CWT., APR. 13, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.25	7.50
Red Kidneys		13.00	14.75
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.50	7.50	8.00
Prime	6.75	7.00	7.25
Red Kidneys	10.25	11.00	10.75

Beans have taken another advance of 15c, the second in ten days, and the smallness of receipts is helping to sustain the market. Demand is as quiet as ever, but domestic supplies are gradually diminishing and there must come a change in this market before long. We had hoped by this time to have more encouraging news for our bean growers, but the "news" has not yet broke. Very few farmers are selling beans at present prices, feeling that they would prefer to carry their crop over for another season if necessary rather than take a loss at present prices.

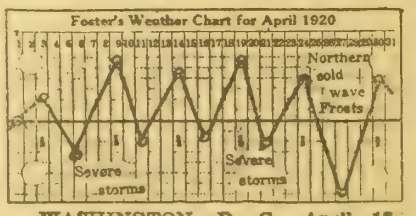
POTATOES $5 PER BUSHEL

SPUDS PER CWT., APR. 13, 1920		
	Sacked	Bulk
Detroit	3.34	
Chicago	7.25	7.40
Pittsburg	6.17	6.40
New York	6.00	
PRICES ONE YEAR AGO		
Detroit	2.30	2.20
Chicago	1.90	1.90
Pittsburg	2.50	2.40
New York	2.25	2.20

Potatoes responded the most as the result of the strike which still further curtailed supplies already inadequate for the normal demand. In two days' time potatoes advanced on the Detroit market from $9.50 per 150 pounds to $12.50. Some sales were reported at around $7 per bushel but the district attorney's agents soon got busy and forced the prices down, claiming that the profiteers were taking advantage of the situation. The strike is seriously interfering with the carlot movement of potatoes and local dealers are going slow on their purchases. If the strike continues long, thereby forcing people to pay exorbitant prices or go without spuds, it may have a serious affect upon the price for the balance of the season. A period of warm weather immediately following the settlement of the strike would, it is the opinion of some, mean a sudden unloading of supplies to take advantage of the high prices with the result that prices would immediately drop to below normal values. However, the price of potatoes is now so high that there is little likelihood that they will drop much below the level which they have held for several weeks past.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., April 17, 1920.—Warm waves will reach Vancouver about April 16, 21, 27, May 1, and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 17, 22, 28, May 2; plains sections 18, 23, 29, May 3; meridian 90, upper great lakes, lower Mississippi valleys, Ohio-Tennessee valleys 19, 25, 30, May 4; eastern sections 20, 25, May 1, 5, reaching vicinity of Newfoundland about April 21, 26, May 2, 6. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will control cropweather from near April 17 to near May 6. Severe storms and most rain are expected during the week centering on April 22 and frosts will go far south during the week centering on April 27. No material cropweather change is expected during April. The average precipitation and the departures from normal temperatures for February, March, April, thus far, are expected to continue, at least, to May 6. This is a very plain, easily understood, positive crop weather forecast covering April 17 to May 6.

The most dangerous storms ahead of us appear to be timed for the weeks centering on May 12 and 24. First mentioned will probably be most severe, but I advise care in reference to both of them. Heavy rains are expected from the first mentioned where precipitation has already been sufficient.

Inadequate supplies and strong demand is keeping the hay market in a firm condition. The lateness of the spring will retard the pastures and force many farmers to feed hay for several weeks later than usual. A big factor in the future of this market will be the car supply and transportation. We do not look for any material declines in this market, but feel that farmers who want to take advantage of the top-notch price should not delay much longer in getting their supplies to market.

BOSTON WOOL MARKET

The Commercial Bulletin says: "There is a somewhat better tone to the market, as shown in the government auction Thursday. Fine wools are still in demand, and there is said to be some business in medium wools but prices are somewhat uncertain on these wools.

"The foreign markets are steady. The manufacturing situation is hardly changed, mills being well engaged on old orders, but finding new business very uneven. Little new is reported from the west.

Ohio and Pennsylvania fleeces—Delaine unwashed, 97c@$1; fine unwashed, 74@76c; 1-2 blood combing 83@85c; 3-8 blood combing, 62@70c.

Michigan and New York fleeces—Fine unwashed, 70@73c; delaine unwashed, 95c; 1-2 blood unwashed, 80@82c; 3-4 blood, unwashed, 67@68c.

Wisconsin, Missouri and average New England—1-2 blood, 72@75c; 3-8 blood, 63@65c; 1-4 blood. 60c.

Virginia, Kentucky and similar—1-2 blood unwashed, 85@86c; 1-4 blood, unwashed, 67@68c.

Scoured basis: Texas—Fine 12 months $1.90@1.95; fine 8 months, $1.60@1.70.

California—Northern. $1.90@1.95; middle county, $1.70@1.75; southern, $1.50@1.60.

Oregon—Eastern No. 1, staples, $2@2.10; eastern clothing, $1.70@1.80; Valley No. 1, $1.70@1.75.

Territory—Fine staple, $2.05@2.15; half blood combing, $1.85@1.95; 3-8 blood combing, $1.50; fine clothing, $1.75@1.85; fine medium clothing, $1.65@1.75.

Pulled—Extra, $1.95@2.05; AA 1.80@1.90; A supers, $1.65@1.75.

Mohairs—Best combing, 60@65c; best carding, 55@60c.

DETROIT PRODUCE MARKET

Offerings of all kinds of produce are light and market firm. The scarcity less obvious in eggs than elsewhere. Offerings quite liberal and there is no sign of scarcity for the next few days. Potatoes higher and very scarce. Buyers taking all the poultry offered and the supply is sufficient. Dressed hogs and calves are scarce and firm, in the fruit deal trading was slow and general tone steady, although western boxes were quoted higher and the supply was light. This line feels the effect of the strike more than any other as the goods have so far to come over the railroads. Butter receipts are quite liberal and lower prices are quoted. Chicago quotes lower butter prices owing to shipments going to that market instead of elsewhere. It is the same here. Detroit is getting butter that would go to New York but for the strike.

Apples—Western boxes, $4.50@5; Baldwin, $3@3.50; Greening, $3.25@3.50; Steel's Red, $3.50@4 per bu.

Calves (dressed)—Fancy, 25@26c No. 2, 20@22c per ub.

Onions—Indiana, $6.50@7 per 100 pound sack.

Dressed hogs—Best, 20@21c; heavy, 18@19c per lb.

Live poultry—Spring chickens, best, 40@42c; leghorns, 40@42c; hens, 45@48c; small hens 42@45c; roosters, 24@25c; geese, 30@35c ducks, 40@45c; turkeys, 44@45c per lb.

LIVESTOCK IN BETTED POSITION

The strike has raised the most havoc in the livestock trade, and because of the necessity of feeding en route, rail shipments have all but ceased in some of the mid-west sections. This immediately makes for a tighter and higher prices for the stuff that was fortunate enough to reach the livestock yards. Farmers who are in a position to truck or drive their cattle to the Detroit yards will profit from the present situation. We have heard a number of farmers state that they were going to truck their cattle thrugh to Detroit this week. The strike is also a temporary benefit to the farmer who sells to his local butcher who as a rule purchases a large share of his meat in dressed form from the packers and who will be obliged to depend upon the local supply until freight is again moving.

LIVE STOCK MARKETS

CHICAGO—Cattle: Killing yearlings mostly 25 to 50c higher; top, $14.75; other beef steers and shestock about 25c higher; bulk steers, $11.50@13.50; best heavy steers, $14.25; butcher cows, largerly $8.50@10; canners around $5; bulls are steady to lower, demand narrow; veal calves, $1 to $2 lower; bulk to packers, $12@12.50; no trade in stockers and feeders. Hogs: Market unevenly higher; bulk 25 to 50c higher, heavy weight gaining most; top, $15.25; bulk, $14.40@15.25; closed strong; pigs, 25 to 50c higher; light pigs largely $12.50@13. Sheep: Market mostly steady; offerings are largely shorn lambs at $16@17.25; on load $17.50; no good wooled lambs offered; good wooled ewes, at $14.

EAST BUFFALO—Dunning & Stevens report: Cattle, strong. Hogs: strong; heavy, $17@17.50; yorkers, $18@18.25; pigs, $17.25@17.50. Sheep: steady, wool lambs, $22.50; clipped, $19@20; yearlings, $18.50@19.50; wethers, $16@17; ewes, $14@14.50. Calves, $7@19.

FARMING FOR FUR

Farming for fur promises to become a lucrative occupation. Many skunk farms are now in operation and fox farms as well. This is especially true in Canada. Prince Edward island, the smallest province of the Dominion, with an area of only two thousand squire miles (about the size of three ordinary counties in the central West) and a population of only ninety-four thousand people, has two hundred seventy-five fox farms, from which the revenue the past year has been $1,000,000. It is conservatively estimated that this revenue can be doubled.

General Review of Potato Market

THE POTATO market this spring has shot holes into everybody's predictions. Sixty days ago, ninety per cent of the farm papers, the farmers and the market experts were in agreement that prices had reached their high level and that any changes would be downward. Thirty days ago found values even higher, but with the prophets still quoting scripture, statistics and precedent to prove that the crest had been reached. But the "false prophets" of the Bible had nothing on the potato prophets of 1920. The potato market is still soaring and no man knows to what heights it may go.

It is inevitable that some farmers should have been deceived by the reports and predictions that have been made and been a little hasty in disposing of their holdings. THE BUSINESS FARMER advised its readers to hold their potatoes until late in December when it recommended that a portion of them be sold. The price at that time was good in comparison with the prices of the previous two years, and we feared that prices might recede as they had so frequently done in previous years following the holiday season. Fortunately, this did not happen, but we continued to advise our readers who had their stock stored in readily available places, to keep feeding their supplies to the market gradually, believing that this practice would if followed consistently bring to the majority of growers the largest possible returns for their crop. Hundreds of farmers who stored their potatoes in pits last fall and were unable to reach them until spring found their stock frosted and even the high prices insufficient to compensate them for the loss sustained by reason of their hoding them over. Others who stored their potatoes in this manner without any damage to the spuds have profited by so doing.

Some farmers have taken exception to the advice given by THE BUSINESS FARMER claiming that by following it they lost money. Investigation shows that the majority of these did not follow this advice to the letter. A good many who had their potatoes in warehouses sold all their holdings last December when we advised them to sell a part. They thought they would go us one better, concluding that if it was our judgment that it was good business to sell a part of the crop, it was better business to sell all, which was, of course, not the case. We are frank to admit that farmers who followed our advice to the letter and fed their potatoes to the market gradually have not received as much money from their crop as those who ignored this advice and held all their spuds till this spring. Yet at no time since January 1st has the price been so low as to cause the farmer who sold an actual loss. This fact is inescapable: That had all the farmers of the country withheld their potatoes from the market last winter waiting for the higher prices of spring, the consumer would have gone without potatoes, and warm weather would have seen hundreds of carloads dumped onto the market to meet a decreased demand and consumption, which would have resulted in low prices and losses to the farmer. It must be apparent to everyone that some farmers must lose or sell at a low price in order that other farmers may secure the top price. Not all can get the highest price of the season. For price is subject to many influences aside from supply and demand, such as weather, movement, condition of supplies, prices of other foods, etc.

Some time when all the farmers of the country are organized the potato growers will recognize the absolute necessity of selling portions of their crop at stated seasons of the year. All that is necessary for them to do to prove to their own satisfaction the wisdom of such a course is to refer back to former years, and figure out in dollars a nts the practice that would have brought them in the greatest amount of mon-ev

Dairymen Want a Central Distributing Plant

(*Continued from page 3*)

like a fair proposition to Judge Connolly, and we understand that he has taken the matter under advisement and will take some action to officially determine what the farmers should receive for their milk during the period in which their fair price to the consumer may be in force. Additional hearings are being held upon the matter as we go to press.

Would Dairymen Strike?

It has been rumored that the dairymen might strike if the price fixed by the Fair Price Board was too low to pay them cost of production. While there is not, of course, any law which prevents an individual from refusing to produce milk or anything else, the Lever law through which the Fair Price Board gets its legal authority, expressly forbids two or more persons to conspire for the purpose of limiting production of foodstuffs, and under this law which will remain in effect until the treaty of peace with Germany is signed, it would clearly be illegal for the members of the Milk Producers' Ass'n to agree among themselves to reduce production and sale of their product. It is not believed, however, that such an eventuality as this is likely to occur. Present negotiations are likely to result in a continued fair price to the farmer which will enable him to carry on his business without loss or curtailment.

General Dairy Situation

The development in the Detroit area is particularly unfortunate at this time because of the surplus of dairy products. Farmers who have sold milk to condensaries have already felt the pinch of slackened demand. In the dairy districts surrounding some of the big cities the price has dropped 50 per cent. In Chicago farmers are receiving but $2.50 per cwt. for their milk, and their Association held a big meeting down there last week to determine what should be done.

It goes without saying that the dairy industry cannot stand the loss which now seems inevitable without serious damage. Farmers will certainly be obliged to reduce their herds and cut down production. Then in time the vast surplus of condensed milk may be consumed and condensaries will again be in the market. But by that time the dairy herds will have been depleted, and we shall have another period of shortage and high prices, to be followed in due season by surplus and low prices.

Would Advertise Product

The only means that has been suggested for getting rid of the milk surplus without loss to the producer, is to advertise the product, and create a greater demand from the people of the cities. Manufacturers and producers of nearly all other commodities spend enormous sums in advertising their product, and with good results. The Michigan Milk Producers' Ass'n has an advertising fund but it is not large enough to secure appreciable results. Under a plan which we are not at present at liberty to disclose the State Association hopes to inaugurate, with the approval of the members, an intensive advertising campaign, to cost at least $40,000, one-half of which will be borne by the producers and the other half by the distributors. At such meetings as this proposition has been discussed, the majority of the producers have favored it, and it is our conviction that the plan mentioned, if backed by sufficient amount of money, will increase the demand and consumption of dairy products very materially.

WOOL FUTURE

Wool has sold at 60 to 69 cents per pound during the past week at shearing stations adjacent to Chicago, these prices being paid for half blood Western clips. Fine wools are worth 80c to $1.00 per pound in Boston, while quarter-blood goes begging bids.

How long this condition will continue must be left to conjecture. J. D. Halliday, president of the National Wool Warehouse Company at Chicago, himself an extensive wool grower, who says:

"Supply of grease wool, here and abroad, while ample for present needs is meeting an extraordinary demand, so that growers need feel no concern about maintenance of prices. Manufacturing equipment in this country and abroad is working to full capacity, weavers in the United States consuming about 60 million pounds of wool monthly. The buying power of the public appears ample and well distributed, which coupled with the temperamental disposition of the American people to buy beyond actual needs when means are plentiful, supplies the requirements of a strong wool market.

"An unusual situation is presented in the wide range of prices between the different grades of wool, which is without precedent and is the direct result of an insistent consumptive demand for fine fabrics. This has impaired the market for medium and coarse wools. It is a condition not likely to continue, however, probability being that attractive and serviceable fabrics resulting from the blending of coarse and fine wools, will in due time appeal to the sentiment and common sense of the buying public, resulting in readjustment of prices favorable to medium and coarse grades."

UNCLE RUBE SPINACH SAYS

(*Continued from page 4*)

receivin' less than they are entitled to and two railroad companies unwillin' to pay a fair wage to men in dangerous occupations will be the means of throwing thousands of men an' women out of employment, will prevent the shipment of the necessities of life into the city, will help the farmers from disposin' of their farm products, will shut off the supply of raw material from hundreds of the factories an' stagnate business entirely for nobody knows how long.

What is true of Battle Creek is true of hundreds of other cities an' communities an' yet there is no law to reach such matters—the government through congress an' president Wilson or who ever it is that's responsible for the laws of this free democracy have been so busy jangling over the League of Nations an' what we shall do for European countries that, by gash they've forgot that we have a country of our own to look after an' everything seems to be running loose and wild don't seem to be no head to anything an' kinda looks like we would all go to the devil an' nothin' being done to stop us.

Seems to me there might be some sort of commission appointed who would have absolute authority to settle all disputes between laborers and employers an' if either party refused to abide by their decision jest lock 'em up until they come to their senses. Sure it is, if there is not somethin' done purty soon there is goin' to be a jamboree right here in free America that will make the little squabbles over in Europe, that country that our president loves so well, look like a summer picnic.

When men are out of work an' money runs low an' expenses runs high an' hunger stares 'em in the face an' their family are gettin' destitute then look out! Darn rash thoughts gets into a fellers system at such a time an' strange things happen an' who will the blame rest on—not on Europe nor on the hungry and destitute, but, seems to me the government down at Washington will have a mighty serious subject for thought. What do you think? Cordially yours —UNCLE RUBE.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, a New York millionaire, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker, plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis,' to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. Francis explores another island where he meets a young man who gives his name as Henry Morgan and proves to be a relative of Francis.' He is also hunting for the treasure. They form a partnership. Francis learns that Henry is the lover of the girl he met and that her name is Leoncia Solano. Francis returns to the first island where he is captured by Torres and the Jefe Politico of San Antonio. They proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang him when Henry appears. They release Francis and throw Henry into prison. The Solanos and Francis release Henry and they escape to the boat that Francis has chartered. They are pursued by Torres and the Jefe with his soldiers. They land on an island where they procure horses and start through the hills with the Jefe and his gang in pursuit.

AND while Francis Morgan and the long and suffering Maya half breed plodded on deeper into the Cordilleras to overtake the rest of their party ahead, and while the oil fields of Juchitan continued to go up in increasing smoke, still farther on, in the heart of the Cordilleras, were preparing other events destined to bring together all pursuers and all pursued—Francis and Henry and Leoncia and their party; the peon; the party of the haciendados; and the gendarmes of the Jefe and, along with them Alvarez Torres, eager to win for himself not only the promised reward of Thomas Regan but the possession of Leoncia Solano.

In a cave sat a man and a woman. Pretty the latter was, and young, a mestiza, or half-caste woman. By the light of a cheap kerosene lamp she read aloud from a calf bound tome which was a Spanish translation of Blackstone. Both were barefooted and bare-armed, clad in hooded gabardines of sack-cloth. Her hood lay back on her shoulders, exposing her black and generous head of hair. But the old man's hood was cowled about his head after the fashion of a monk. The face, lofty and ascetic, beaked with power, was pure Spanish. Don Quixote might have worn precisely a similar face. But there was a difference. The eyes of this old man were closed in the perpetual dark of the blind. Never could he behold a windmill at which to tilt.

He sat, while the pretty mestiza read to him, listening and brooding, for all the world in the pose of Rodin's "Thinker." Nor was he a dreamer, nor a tilter of windmills, like Don Quixote. Despite his blindness, that ever veiled the apparent face of the world in invisibility, he was a man of action, and his soul was anything but blind, penetrating unerringly beneath the show of things to the heart and the soul of the world and reading its inmost sins and rapacities and noblenesses and virtues.

He lifted his hand and put a pause in the reading, while he thought aloud from the context of the reading.

"The law of man," he said with slow certitude, "is today a game of wits. Not equity, but wit, is the game of law today. The law in its inception was good; but the way of the law, the practice of it, has led men off into false pursuits. They have mistaken the way for the goal, the means for the end. Yet is law law, and necessary, and good. Only, law, in its practice today, has gone astray. Judges and lawyers engage in competitions and affrays of wit and learning, quite forgetting the plaintiffs and defendants, before them and paying them, who are seeking equity and justice and not wit and learning.

"Yet is old Blackstone right. Under it all, at the bottom of it all, at the beginning of the building of the edifice of the law, is the quest, the earnest and sincere quest of righteous men, for justice and equity. But what is it that the Preacher said? 'They made themselves many inventions.' And the law, good in its beginning, has been invented out of all its intent, so that it serves neither litigants nor injured ones, but merely, the fatted judges and the lean and hungry lawyers who achieve names and paunches if they prove themselves cleverer than their opponents and than the judges who render decision."

He paused, still posed as Rodin's "Thinker," and meditated, while the mestiza woman waited his customary signal to resume the reading. At last, as out a profound of thought in which universes had been weighed in the balance, he spoke:

"But we have law here in the Cordilleras of Panama, that is just and right and all of equity. We work for no man and serve not even paunches. Sack-cloth and not broadcloth conduces to the equity of judicial decision. Read on, Mercedes. Blackstone is always right if always rightly read—which is what is called a paradox, and is what modern law ordinarily is, a paradox. Read on. Blackstone is the very foundation of human law—but, oh, how many wrongs are cleverly committed by clever men in his name!"

Ten minutes later, the blind thinker raised his head, sniffed the air, and gestured the girl to pause. Taking her cue from him, she, too, sniffed:

"Perhaps it is the lamp, O Just One," she suggested.

"It is burning oil," he said. "But it is not the lamp. It is from far away. Also, have I heard shooting in the canyons."

"I heard nothing——" she began.

"Daughter, you who see have not the need to hear that I have. There have been many shots fired in the canyons. Order my children to investigate and make report."

Bowing reverently to the old man who could not see but who, by keen-trained hearing and conscious timing of her every muscular action, knew that she had bowed, the young woman lifted the curtain of blankets and passed out into the day. At either side the cave-mouth sat a man of the peon class. Each was armed with rifle and machete, while through their girdles were thrust naked-bladed knives. At the girl's order, both arose and bowed, not to her, but to the command and the invisible source of command. One of them tapped with a back of his machete against the stone upon which he had been sitting, then laid his ear to the stone and listened. In truth, the stone was but the out-jut of a vein of metalliferous ore that extended across and through the heart of the mountain. And beyond, on the opposite slope, in an eyrie commanding the magnificent panorama of the descending slopes of the Cordilleras, sat another peon, who first listened with his ear pressed to similar metalliferous quartz, and next tapped response with his machete. After that, he stepped half a dozen paces to a tall trees, half dead, reached into the hollow heart of it, and pulled on the rope within as a man might pull who was ringing a steeple bell.

But no sound was evoked. Instead a lofty branch, fifty feet above his head, sticking out from the main trunk like a semaphore arm, moved up and down like the semaphore arm it was. Two miles away, on a mountain crest, the branch of a similar semaphore tree replied. Still beyond that, and farther down the slopes, the flashing of a hand-mirror in the sun heliographed the relaying of the blind man's message from the cave. And all that portion of the Cordilleras became voluble with coded speech of vibrating ore-veins, sun-flashings, and waving tree-branches.

While Enrico Solano, slenderly erect on his horse as an Indian youth and convoyed on either side by his sons, Alesandro and Ricardo, hanging to his saddle trappings, made the best of the time afforded them by Francis' rear guard battle with the gendarmes, Leoncia, on her mount, and Henry Morgan, lagged behind. One or the other was continually glancing back for the sight of Francis overtaking them. Watching his opportunity, Henry took the back-trail. Five minutes afterward, Leoncia, no less anxious than he for Francis' safety, tried to turn her horse about. But the animal eager for the companionship of its mate ahead, refused to obey the rein, cut up and pranced, and then deliberately settled into a balk. Dismounting and throwing the reins on the ground in the Panamanian method of tethering a saddle horse, Leoncia took the back trail on foot. So rapidly did she follow Henry, that she was almost treading on his heels when he encountered Francis and the peon. The next moment, both Henry and Francis were chiding her for her conduct; but in both their voices was the involuntary tenderness of love, which pleased neither to hear the other uttering.

Their hearts more active than their heads, they were caught in total surprises by the party of haciendados that dashed out upon them with covering rifles from the surrounding jungle. Despite the fact that they captured the runaway peon, whom they proceeded to kick and cuff, all would have been well with Leoncia and the two Morgans had the owner of the peon, the old-time friend of the Solano family, been present. But an attack of the malarial fever, which was his due every third day, had stretched him out in a chill near the burning oil-field.

Nevertheless, though by their blows they reduced the peon to weepings and pleadings on his knees, the haciendados were courteously gentle to Leoncia and quite decent to Francis and Henry, even though they tied the hands of the latter two behind them in preparation for the march up the ravine slope to where the horses had been left. But upon the peon, with Latin-American cruelty, they continued to reiterate their rage.

Yet were they destined to arrive nowhere, by themselves, with their captives. Shouts of joy heralded the debouchment upon the scene of the Jefe's gendarmes and of the Jefe and Alvarez Torres. Arose at once the rapid-fire, staccato, bastard-Latin of all men of both parties of pursuers, trying to explain and demanding explanation at one and the same time. And while the farrago of all talking simultaneously and of no one winning anywhere in understanding, made anarchy of speech, Torres with a nod to Francis and a sneer of triumph to Henry, ranged before Leoncia and bowed low to her in true and deep hidalgo courtesy and respect.

"Listen!" he said, low voiced, as she rebuffed him with an arm movement of repulsion. "Do not misunderstand me. Do not mistake me. I am here to save you, and, no matter what may happen, to protect you. You are the lady of my dreams. I will die for you—yes, and gladly, though far more gladly, would I live for you."

"I do not understand," she replied curtly. "I do not see life or death in the issue. We have done no wrong. I have done no wrong, nor has my father. Nor has Francis Morgan, nor has Henry Morgan. Therefore, sir, the matter is not a question of life or death."

Henry and Francis, shouldering close to Leoncia, on either side, listened and caught through the hubble-bubble of many voices the conversation of Leoncia and Torres.

"It is a question absolute of certain death by execution for Henry Morgan," Torres persisted. "Proven beyond doubt is his conviction for the murder of Alfaro Solano, who was your own full-blood uncle and your father's own full-blood brother. There is no chance to save Henry Morgan. But Francis Morgan can I save in all surety, if—"

"If?" Leoncia queried, with almost the snap of jaws of a she-leopard.

"If . . . you prove kind to me, and marry me," Torres said with magnificent steadiness, although two Gringos helpless, their hands tied behind their backs, glared at him thru their eyes their common desire for his immediate extinction.

Torres, in a genuine outburst of his passion, though his rapid glance had assured him of the helplessness of the two Morgans, seized her hands in his and urged:

"Leoncia, as your husband I might be able to do something for Henry. Even may it be possible for me to save his life and his neck, if he will yield to leaving Panama at once."

"You Spanish dog!" Henry snarled at him, struggling with his tied hands behind his back in an effort to free them.

"Gringo cur!" Torres retorted, as, with an open back-handed blow, he struck Henry on the mouth.

On the instant Henry's foot shot out, and the kick in Torres' side drove him staggering in the direction of Francis, who was no less quick with a kick of his own. Back and forth like a shuttlecock between the battledores, Torres was kicked from one man to the other, until the gendarmes seized the two Gringos and began to beat them in their helplessness. Torres not only urged the gendarmes on, but himself drew a knife, and a red tragedy might have happened with offended Latin-American blood up and raging, had not a score or more of armed men silently appeared and silently taken charge of the situation. Some of the mysterious newcomers were clad in cotton singlets and trousers and others were in cowled gabardines of sackcloth.

The gendames and haciendados recoiled in fear, crossing themselves, muttering prayers and ejaculating: "The Blind Brigand!" "The Cruel Just One!" "They are his people!" "We are lost."

But the much-beaten peon sprang forward and fell on his bleeding knees before a stern-faced man who appeared to be the leader of the Blind Brigand's men. From the mouth of the peon poured forth a stream of loud lamentation and outcry for justice.

" You know that justice to which you appeal?" the leader spoke gutturally.

"Yes, the Cruel Justice," the peon replied. "I know what it means to appeal to the Cruel Justice, yet do I appeal, for I seek justice and my cause is just,"

"I, too, demand the Cruel Justice!" Leoncia cried with flashing eyes, although she added in an undertone to Francis and Henry: "Whatever the Cruel Justice is."

"It will have to go some to be unfairer than the justice we can expect from Torres and the Jefe," Henry replied in similar undertones, then stepped forward boldly before the cowled leader and said loudly: "And I demand the Cruel Justice."

The leader nodded.

"Me, too," Francis murmured low and then made loud demand.

The gendarmes did not seem to count in the matter, while the haciendados signified their willingness to abide by whatever justice the Blind Brigand might mete out to them. Only the Jefe objected.

"Maybe you don't know who I am," he blustered. "I am Mariano Vercara e Hijos, of long illustrious name and long and honorable career. I am Jefe Politico of San Antonio, the highest friend of the governor, and high in the confidence of the government of the Republic of Panama. I am the law. There is but one law and one justice, which is of Panama and not in the Cordilleras. I protest against this mountain law you call the Cruel Justice. I shall send an army against your Blind Brigand, and the buzzards will peck his bones in San Juan."

"Remember," Torres sarcastically warned the irate Jefe, "that this is not San Antonio, but the bush of Juchitan. Also, you have no army."

"Have these two men been unjust to any one who has appealed to the Cruel Justice?" the leader asked abruptly.

"Yes," asserted the peon. "They too, have beaten me, and without cause. My hand is bloody. My body is bruised and torn. Again I appeal to the Cruel Justice, and I charge these two men with injustice."

The leader nodded and to his own men indicated the disarming of the prisoners and the order of the march.

"Justice!—I demand equal justice!" Henry cried out. "My hands are tied behind my back. All hands should be so tied, or no hands be so tied. Besides, it is very difficult to walk when one is so tied."

The shadow of a smile drifted the lips of the leader as he directed his men to cut the lashings that invidiously advertised the inequality complained of.

"Huh!" Francis grinned to Leoncia and Henry. "I have a vague memory that somewhere around a million years ago I used to live in a quiet little old burg called New York, where we foolishly thought we were the wildest and wickedest that ever cracked at a golf ball, electrocuted an Inspector of Police, battled with Tammany, or bid four nullos with five sure tricks in one's own hand."

"Huh!" Henry vouchsafed, half an hour later, as the trail, from a lesser crest, afforded a view of higher crests beyond. "Huh! and hell's bells! These gunny-sack chaps are not animals of savages. Look, Francis! They are semaphoring! See that near tree there, and that big one across the canyon. Watch the branches wave."

Blindfold for a number of miles at the last, the prisoners, still blindfolded, were led into the cave where the Cruel Justice reigned. When the bandages were removed, they found thmselves in a vast and lofty cavern, lighted by many torches, and, confronting them, a blind and white-haired man in sackcloth, seated on a rock hewn throne, with, beneath him, her shoulder at his knees, a pretty mestiza woman.

The blind man spoke, and in his voice was the thin and bell-like silver of age and weary wisdom.

"The Cruel Justice has been invoked. Speak! Who demands decision and equity?"

All held back, and not even the Jefe could summon heart of courage to protest against Cordilleras law.

"There is a woman present," continued the Blind Brigand. "Let her speak first. All mortal men and women are guilty of something or else are charged by their fellows with some guilt."

Henry and Francis were for withstraining her, but with an equal smile to them she addressed the Cruel Just One in clear and ringing tones:

"I have only aided the man I am engaged to marry to escape from death for a murder he did not commit."

"You have spoken," said the Blind Brigand. "Come forward to me."

Piloted by sackcloth men, while the two Morgans who loved her were restless and perturbed, she was made to kneel at the blind man's knees. The mestiza girl placed his hand on Leoncia's head. For a full and solemn minute silence obtained while the steady fingers of the Blind One rested about her forehead and registered the pulse-beats of her temples. Then he moved his hand and leaned back to decision.

"Arise, Senorita," he pronounced. "Your heart is clean of evil. You go free.—Who else appeals to the Cruel Justice?"

Francis immediately stepped forward.

"I likewise helped the man to escape from an undeserved death. The man and I are of the same name, and, distantly, of the same blood."

He, too, knelt, and felt the soft finger lobes play delicately over his brows and temples and come to rest finally on the pulse of his wrist.

"It is not all clear to me," said the Blind One. "You are not at rest nor at peace with your soul. There is trouble within you that vexes you."

Suddenly the peon stepped forth and spoke unbidden, his voice evoking a thrill as of the shock of blasphemy from the sackcloth men.

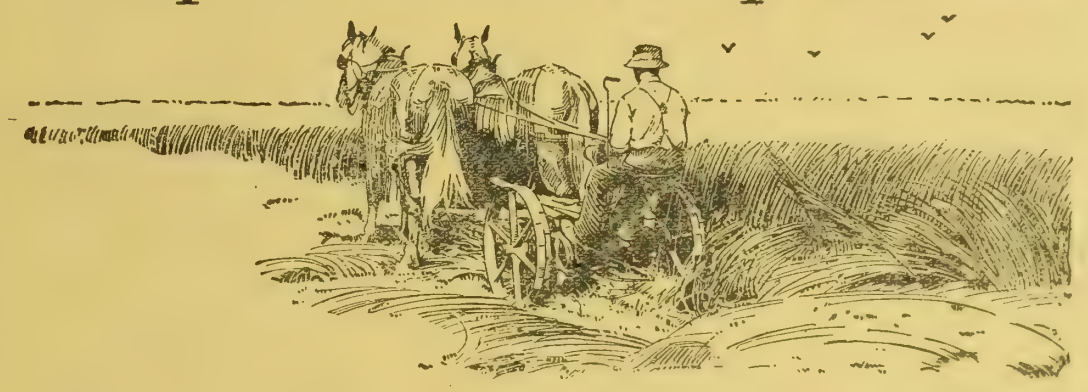
"Oh, Just One, let this man go," said the peon passionately. "Twice was I weak and betrayed him to his enemy this day, and twice this day has he protected me from my enemy and saved me."

And the peon, once again on his knees, but this time at the knees of justice, thrilled and shivered with superstitious awe, as he felt wander over him the light but firm finger-touches of the strangest judge man ever knelt before. Bruises and lecération were swiftly explored even to the shoulders and down the back.

"The other man goes free," the Cruel Just One, announced. "Yet is there trouble and unrest within him.

(Continued on page 15)

Clip a Clean Crop Clean



A CLEAN crop of hay represents good profits—when it is clipped clean. Every ragged spot where the mower fails to follow the ground (rough places) represents lost hay—less profit—because the grass is not clipped clean.

McCormick, Deering, and Milwaukee mowers work so that the cutter bar follows the ground whether it is smooth or rough. The sickle dips down into the hollows, and with equal facility skims over the knolls, with the cutter bar close to the ground its full length — and clips the grass clean.

This is possible because of the triangular design of the drag bar which gives the cutter bar the necessary flexibility — a floating action that conforms to the ground surface. Result: No lost hay through ragged clipping, lost traction of drive wheels, or clogging of sickle.

Many such superior features in **McCormick, Deering, and Milwaukee mowers and rakes,** and in **International side-delivery rakes, tedders, combination rakes and tedders, loaders, sweeprakes, stackers,** etc., recommend these hay tools to every discriminating farmer. All these are of the same high standard of quality and efficiency, Write us about any of them. And see your nearby International full-line dealer.

Johnson and the League of Nations.

JOHNSON'S success in Michigan is being pointed out as a repudiation of the League of Nations idea. We do not look upon it as such at all. Johnson's attitude toward a League of Nations has not been generally understood, and thousands voted for the Californian who in their hearts believe in an international peace tribunal and supposed that Johnson favored the idea although opposed to the league covenant in its present form.

Johnson won in Michigan on his personality. As the running mate of Roosevelt in 1912 he polled a tremendous vote, far greater in fact than he polled in the primary election. His pugnacious countenance, his record as a scrapper, his condemnation of special privilege and the corrupting influence of money in politics, and his former association with Roosevelt,—all had a powerful influence on the popular imagination which found expression at the polls.

Johnson's success in Michigan was fortunate in several respects. In only one respect we can mention was it unfortunate. Of all the candidates in the field Johnson depended the least upon organization and political palavering. While all his leading opponents spent thousands of dollars to line up the party machines and to advertise their promises, Johnson went over the heads of the local organizations straight to the people and won by pure personality. His success restores our faith in the good sense of the people and their ability to think and act for themselves without the dictation of the local political machines. In that respect Johnson's success was fortunate.

But all the advantages that democracy might have gained in the triumph of independent action over organized dictation may be more than offset by the blow to the League of Nations idea which the Johnson success seems to deliver. Greater than all the nation's domestic problems combined is the question of America's future place in the affairs of the world. Within a League of Nations we can at least partially observe what is going on about us in the diplomatic affairs of our neighbors. Outside of the League we have the entire world against us, jealous of our prosperity, distrustful of our "democracy", injured at heart because we cannot trust it, and therefore ready upon any pretext to organize a coalition against us. Outside of the League of Nations, with all the other powers on the inside, the United States must equip and maintain a standing army and navy of sufficient strength to whip the world.

The League of Nations issue will loom up larger and larger as the conventions and election approach, and if the people have their way about it the candidate who gives the best promise of securing for the United States a safe and dignified position in the international peace tribunal, will be the next President. An ideal way of sounding out the sentiment of the people on the League of Nations issue would be by a referendum vote which would bind the next President to carry out the wishes of the people. In this way we would not have to sacrifice a Johnson on the issue or take a lesser man.

Exit Edwards.

THE WETS must be pretty well starved for propaganda food to find any comfort in the Michigan election which gave Edwards 13,196 votes, or less than 4 per cent of the entire vote cast in Michigan. Yet they are using the Edwards vote as an argument that the "prohibition sentiment is turning".

In the old local option days there were always a few people in every community who voted for every candidate for office who was known to be opposed to local option. That was all the qualification the candidate had to have. He could be the most depraved individual of the community, and yet there was always those few who went to the polls and voted for him if they voted for nothing else. These voters aren't all dead yet by any means, and in the aggregate they represent quite a considerable body of people. They have shown their hand in every election of recent years where the wet and dry issue have been in evidence, and they showed their hand in last Monday's election when they put all other considerations of their country's welfare behind them and voted for Edwards.

It is no surprise that Edwards received 13,000 votes. The surprise is that he didn't receive twice as many. If the Edwards votes shows anything at all it shows that the people of Michigan have reaffirmed their faith in prohibition and given Mr. Edwards notice to make a graceful exit from the political field.

Agricultural Editors Organize.

THE FARM paper editors who have been talking about the advantages of organization have acted upon their own advice and last week at Chicago the American Agricultural Editors' Association came into being. It is not the primary purpose of this association to secure benefits for the editors who are its members, but to help them be of greater service to the farmers who read their publications.

This may be accomplished in many ways. For one thing the association will endeavor to establish more sympathetic and helpful relations between the Department of Agriculture and the farmers. For another it will seek to formulate some general agricultural policies to which all members can subscribe and help to promote. Rural credits, the rural church and school, better marketing and similar matters relating to the welfare of the farmer and his family will receive the united attention of the organized editors.

The association expects also to take an interest in legislative affairs touching agriculture. In the past the farm papers have frequently acted in tacit concord but no effort has been made to marshal their opinions into an organized influence. Hence the force of their efforts has largely been lost. In the future the farm paper editors will speak to Congress through their association and should be able to exert a large and beneficial influence.

Clouding the Issue.

THE SUPPORTERS of Mr. Dickinson's candidacy for Governor have a great deal to say about the courageous manner in which he attacked the Newberry expenditures just prior to the primary election, but they are conspicuously silent about his change of front a few weeks later when in a resourcefully penitent mood he published an open letter urging all good Republicans to stand by Mr. Newberry at the election.

Far be it from us to cast any reflections upon the record of Lieutenant Governor Dickinson. That he has been a bold, consistent and helpful champion of prohibition we are glad to admit. That he has served the people well and faithfully in the several offices with which they have honored him is a fact which cannot be disputed. Give to Mr. Dickinson all the credit that is his due, and his qualifications will even then fall far short of those possessed by the farmers' candidate, Milo D. Campbell.

Mr. Campbell has been an outstanding figure in Michigan politics for many years, and has invariably stood for progressive legislation and reform. When he was a member of the Michigan legislature back in 1885 he actively supported the state's first prohibition amendment, and has been a zealous temperance advocate ever since. His experience, both as a legislator and an executive, has been broad and fruitful. He is an organizer, a doer, a man of sterling principles, active and agressive in defense of the right and in opposition to the wrong. He is a fighter. It shows in his face. It shows in his figure. It shows in his deeds. He is not only a farmer, but a leader of farmers and during the past five years has performed a service for milk producers and others engaged in farm enterprises, the value of which cannot be estimated.

Mr. Campbell is making a clean and honest campaign. He has spread no distasteful stories about his opponents nor scattered any innuendos that they are not what they seem to be. As the choice of the state's three largest farm organizations, he has a right to claim that he is "the farmers' candidate", and to solicit the support of the farmers as such.

There are at least three important reasons why the farmers should vote for Milo Campbell. The first is that he is the biggest man in the field today for the job. The second is that his chances for success among the present contenders are excellent. The third is that the farmers would have a man in the Governor's chair who has lived with them and worked for them and knows their every problem. Is it necessary to say more?

Strikes.

WE CONCEDE the right of the laboring man to organize and strike if necessary in order to secure fair treatment from his employer. But we concede to no man the right to strike to enforce unreasonable demands and vent his spite upon the public. The man who believes in the doctrine that his organized might makes it always right for him to strike regardless of the merits of his case or the welfare of the public is a nuisance and should be dealt with by law. The switchmen who have gone on a strike in many of the leading railroad centers of the country belong to this type and are entitled to no sympathy or consideration from the public. They are not only striking at a time when the welfare of the country depends upon the maximum of production and transportation, but they are striking in defiance of the orders of their own union chiefs. Gov. Allen of Kansas has, as usual, taken a forward step to force these men to lay their claims before a court of arbitration and go back to work pending the decision, and every true American citizen will back his and all other efforts to bring an end to unjustifiable and unauthorized strikes.

Mr. Fordney Failing.

THERE WAS a time when Congressman Fordney was one of the most influential members of Congress. As chairman of the House Ways and Means committee his influence was both sought and feared. Industries that desired a protective tariff had but to enlist the support of Mr. Fordney and their bill was invariably reported out of his committee. But, oh, "how the mighty have fallen". In the last six months a half dozen or more special tariff bills have safely passed his committee and the House, but Mr. Fordney cannot muster enough votes in his own committee to pass the farmers' bean tariff bill, a measure which ought to command every ounce of his influence. Ought it to be necessary to suggest to the thousands of bean growers who live in Mr. Fordney's territory that next fall would be an excellent time to recall their representative in Congress, and put a better man in his place?

In the March issue of the Michigan Patron, "Jim" Helme calls W. H. Wallace "Michigan's Gary", and is unable to account for the autocratic attitude assumed toward the farmers by a man who is on the board of the farmers' college. It's the dollars, Jim. Mr. Wallace has many excellent qualities, but personal qualities cannot be allowed to take precedence over the dollar. Mr. Wallace, like a good many other men, will let all the virtues in the world go to the devil before he will give up the dollar

What the Neighbors Say

THINKS WHISKEY GOOD FOR FLU

This has been a long and lonesome, also cold winter. There was not much recreation in this part of the woods, only to go outside and freeze and come inside and thaw out which caused much sickness. It was the flu, flu, flu, and nearly everyone had it, including myself and family, and if it had not been for some neighbors who didn't have it there would possibly have been more who would have crassed the river.

Now I see different letters about flu and whiskey. Some people say imagination is very nearly the whole cure for sickness. If you get a doctor and he gives you some medicine and you imagine the medicine and the doctor are all right you will get well quicker, etc. Well, now I didn't mean to say that the doctor isn't all right and that his medicine isn't all right, for if it were not for the doctors, St. Peter would be a good deal busier than he is. Now if you lived out in the country about six miles and farther and the snow was piled four and five feet deep and there was a blizzard for two or three days and it was impossible for you to get a doctor out to see you when you are coming down with the flu—I don't mean to say when you are near death, understand, but just coming down with it—when those chills start to play tag and hide and seek up your spine, and when you have to eat raw onions and drink ginger tea and black pepper tea, and you feed your children the same dose, and when they see you coming with another dose they will back up and shake their heads, and say "no,"—now if you had quart of good pure whisky and you fixed up a good warm drink and went to bed and covered up and began to sweat for an hour or so, I wonder if it would help or not? Well, I imagine it would, at least until the roads broke and you could get a doctor. There are some doctors who might be paid for saying that whiskey is no good. You know that isn't the experience of us farmers. I have seen doctors give whiskey to a day old baby for colic, and he didn't do it to make him cry harder.

I would like to see our government provide some way next December, January and February so that a man with a family could get a quart and a single man over twenty-one get one pint in the same way as we get our sugar with cards.—*J. S., Onaway, Mich.*

Your plan, John, would serve no better purpose than to give every male inhabitant a chance to have a little jag. Instead of decreasing flu mortality it would very likely increase it, for the vital statistics show that the rate of mortality in flu and pneumonia cases are much greater among the users of alcoholic stimulants than among total abstainers. Let a man who has frequently indulged in alcoholic drinks contract pneumonia and in the majority of cases it is all up with him. The records of the health authorities of the United States government and the various states prove that whisky is neither a preventive nor a cure for these cases, individual experiences to the contrary notwithstanding. Therefore, why should the government permit the use of whiskey?

I know about your northern Michigan blizzards, John. I've traveled in the teeth of them more than once. I've wallowed through snow-banks three and four feet deep with the thermometer ten below, and I've had my share of cougn and colds and chills and sneezes. My parents had six children and raised them all, and not to my knowledge have any of them ever tasted whiskey, either in a pure or adulterated form. There were a good many times when we couldn't get a doctor for days, and I shall not forget the hot ginger tea, the calomel, and the hot foot-baths which my mother prepared for us and which always did the business until the doctor came.

The fact of the matter is, John, that people who have become accustomed to the use of whiskey both as a beverage and a medicine, think they cannot get along without it, but the people who have never had it in their house have had just as good success if not better with other stimulants and sweat producers, and wouldn't use whiskey if it was as free and plentiful as the air.—Editor.

SQUARE DEAL FOR LABOR

Editors M. B. F.—Your editorial "Paying the County Agent" was excellent. We've got to pay our way. These are critical times. Appeals to patriotism and the commotion of war have resulted to the disadvantage of the average citizen but the slow-moving, ponderous sentiment of the American farmer will eventually set things right However, I do not like his or your attitude toward labor. This attitude is what drove our labor from the farm. I want labor to come back well paid and with shorter hours. We cannot lay the hgh cost of living to high wages. The labring mn never has or never will get more than is coming to him. We cannot say that the labor shortage is due to short hours. Of what commodity are we short enough to make it profitable for labor to produce it?

Everything should be left to the law of supply and demand until everything is governed. The laborer has only his labor to sell. Let him strike if he does so peacefully.

Blame for much suffering was laid at the door of the striking coal miner. Mine owners and railroads were more to blame than he. Farmers, like myself, who could have cut wood were as much so. If all the present laborers should die there wouldn't be a labor shortage. More of us would go to work although not quite so hard or for such long hours or so little pay.—*Stanley Warner, Barry County.*

You are in error to assume that we are unfriendly to labor. We have conceded the right of labor to strike if necessary to secure fair treatment. Nearly all other farm papers question that right. But what we ask for the farmer we cannot with reason deny to others. If you will read or re-read our editorial entitled, "Reaction" in the March 20th issue, you will learn where we stand with respect to labor.—Editor.

CITY IS HOME OF "SITE VALUE"

There seems to be a prejudice against the "site value" tax among farmers that is hard to understand. The home of the "site values" is in the cities and towns. There is scarcely any "site values" in agricultural land. It may be that the prejudice arose because the earlier advocates of this form of taxation called it a "land value" tax and the farmer failing to distinguish between "land value" and "improvement value" jumped to the conclusion that he would get the worst of it. It may be that this prejudice was fostered by certain designing city dwellers and politicians who have always missed no opportunity to exploit the farmer through his prejudices. We know very well that he has always paid more than his just share of taxes. The farmers' values are improvement values. If all the farm land in VanBuren county had been stripped of its original timber last year, it would cost as much to remove all the stumps, drain the swamps and build the roads within two years as the land exclusive of buildings is worth. Therefore there is little if any "site value" in the farm land of Van Buren county as a whole. The fact is, we farmers have so very little "site value" that we are compelled to tax our improvements and personal property to maintain our schools, roads, and township government. Why, then, should we object to a "site value" tax which is located in the cities and which we and our fathers and grandfathers have been creating for four or five generations. The amount of revenue such a tax would produce would depend upon the amount of "unearned increment" taken but it seems only fair that a portion should be taken. Those who argue that all of this value which is produced by society as a whole should be taken by taxation are not practical reformers because of the difficulties of determining the amount of this valu and the effects of taxation upon it. However, it is certainly time that we make an effort to appropriate a part of the "unearned increment" or "site value" of land for the use of its creators (who are the whole people) by means of a special "site value" tax. Here is an inexhaustible source, from which the revenues of government can be drawn for all time, if it is brought into force intelligently and gradually.—*John C. Stafford.*

Glad to have your views on this important subject, Mr. Stafford. Possibly the reason for the prejudice among the farmers against site value taxation is that they do not understand it. We may all have our theories and opinions, but what counts with the taxpayer are facts which will show a comparison between agricultural taxes under the two systems.—Editor.

WAITING FOR FARM BUREAU

I have been a Democrat since '76, but like Dave Harem's horse will stand without tying. Have never been locked to a party slate and had the key thrown away. Shall vote for Campbell for governor and Hoover for president. We need a few like Governor Allen, of Kansas, to show the mob what American laws can do.

I admire Gov. Sleeper as a man and he is a warm personal friend of mine, but as a governor as far as the farmers and taxes are concerned he has been a fizzle. We do not want any more Ivories, Forresters or Merriemans in our state legislature either. If the last four years have been a business administration give us a farmer's legislature and governor now for a change.

We have tried the schoolmaster and the banker and a lawyer, elevator, legislature. They have done us up to a finish. Now give us something else that is used to hard knocks. Send along your Farm Bureau in to Sanilac county. We read it up here and are waiting for it.—*H. W. B., Sanilac County.*

Truly this is an age of evolution. Two letters on the same mail, (the above is one of them)—one from a Democrat, the other from a Republican, both declaring themselves free in the future from partisan ties and ready to vote for the "best man" no matter on what ticket a candidate.—Editor.

PRAISE AND CRITICISM

I have been a reader of your M. B. F. since its first issue and think you are issuing a very good paper. Of course, I could not expect any mortal man to edit a paper that would exactly suit me or anyone else. You see no two of us mortals think exactly the same on every question. Now, for instance, you were determined that the railroads were better under government ownership. I cannot agree with you there, but if I am entitled to my belief so are you. I never could see where the government made a great success in anything pertaining to the railroads or the wire service either.

Might say I am one of thousands who tried to please the government by going into hog raising on a large scale. This all to my sorrow. I lost heavily last year and expect to all but quit the game this year. Hogs are now very numerous here now and many cows are being sold. Many of the big cattle feeders here lost money this winter. Help is not to be had. Old and young are going to Jackson or Lansing to help make autos and also get rich.

Remember me to Uncle Rube.—*L. W. M., North Adams, Mich.*

We couldn't make much of a paper out of M. B. F., if we tried to please everybody all the time. The best we can do is to weigh carefully both sides of every question and take the course which seems to us the wiser. Most of the farm papers are opposed to governmeent control or ownership of railroads. Most of the advertisers in farm papers are opposed to it. It would be easy, therefore, for us to take the same stand. But our study of the railroad situation convinces us that the interests of the people were best served during the war by government operation. In fact that is conceded by the rail heads themselves. Hence, we assume that the interests of the public would be best served in time of peace by the same.—Editor.

THANKS M. B. F. FOR FAIRNESS

I wish to express my sincere thanks to you for your kindness and fairness in publishing my letter on the defense of Socialism, in your April 3rd issue of M. B. F., "just as I wrote it." I am aware of the fact that organized capital has throttled the daily press and all popular literature in this country and is plotting to suppress and abolish all literature not of their class. This means the abolition of free speech and a free press in this country. I am also aware of the fact that the editors of some of the daily papers actually mutilate and destroy the real meaning of a letter written for the benefit of the poor man and laborer. The meaning of many letters is thus changed to the opposite and so badly distorted as to be scarcely recognizable by the writer. Who do the editors do this? I answer, "Because they are in sympathy with organized capital, and against organized labor including the farmer." Organized capital has no more respect for farmers than it has for labor unions and the farmers will soon find this out to their own sorrow. Organized capital stands against the farmer, and I an happy to know that M. B. F. does not lean on organized capital for its financial support. My sympathy goes to the editor in his effort to maintain freedom of speech and a free press. Wishing you abundant success and prosperity.—*A. G. Quimby, Mich.*

No man deserves thanks for doing what is his manifest duty. While I would probably not agree with you that capital is in organized opposition to laboring men and farmers or that it has subsidized the press to make its opposition more effective. I do recognize that hundreds of newspapers exclude the truth from their columns for fear of antagonizing its patrons. Undoubtedly capital has spread misleading tales about organized labor and its ultimate aims. But is it not equally true that labor agitators have misrepresented capital, and pictured it as a Great Destroyer, ruthless and heartless? Are the so-called "capitalist" papers and more arbitrary and one-sided than the organs of union labor or socialism. Not all employers of capital are deadly enemies of labor. And we rejoice to see that not all labor union heads believe in the destruction of capital. We believe in the free and open discussion of the relations between farmers, laboring men and industrial heads, to the end that each may share in the good things of life according to his just deserts.—Editor.

The Week's Editorial

THE NON-FARMER AND THE BOOM IN FARM LANDS

THE RECENT unprecedented boom in farm lands, in which men in no way identified with farming have taken a conspicuous if not an initiating and leading part, will not tend to allay hostilities mischevous for the farmer. The land gambler, working strictly in the interests of number one, has talked grandly of doubling, tripling and quadrupling values. To the fanfare of trumpets, the crashing of cymbals and the tintinnuabulation of bells, the slick promoters of the land game have kept up a running patter about garden spots of he world, heavy yields, soaring prices, money in the bank, and all those things to be found in the bright lexicon of bunk and balderdash. To the land gambler the boom has meant some easy money, which will have to be worked out of the soil by the man who cultivates it. To the leisurely land speculator it has meant an enhancement in the value of his holdings, which must be reflected in the rents he charges for their use. To the farmer it may mean more or less: enrichment here, impairment of fortune there, and bankruptcy somewhere else. To the consuming public it has meant only a scramble to get in on a good thing, and that the farmer is guilty of profiteering, as charged in the inditcment.

Town and city owners of farm lands, held for speculation, cannot be insensible of the danger to themselves in exploiting the original sources of supply. It cannot be difficult for them to visualize a position, becoming more and more uncomfortable and, possibly, eventually untenable. The most natural and most probable action on the part of any person menaced is to seek asylum with those who may be strong enough to protect them. It is for members of the farmers' organizations to determine what their attitude toward such refugees of social warfare shall be. They need not decide whether the land speculators and the land gamblers are threatened with a worse punishment than they deserve, but only whether they can afford to jeopardize their own position, which is not so seriously assailed, by giving aid and comfort to men whose position is bitterly criticised and whose footing is insecure.—*Iowa Homestead.*

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

RIGHT now is the time to think of the planting of shrubbery if you are to start it this spring. Nurserymen are displaying shrubs and small trees for re-planting, and even a small expenditure will be enough to make a showing and each year you can add a few shrubs or vines.

The Spirae and Japan Quince are both lovely shrubs for early blooming and the foliage is pretty all the year around. Personally I think there is nothing prettier than the beautiful trumpet shaped, rose colored weigela and they can be planted right with the spirea with good effect for they are about the same size.

A friend just purchased a new bungalow on the outskirts of the city and will motor in each day. She took me out to see it when it was first completed, and it was certainly pretty, but somehow it looked so bare—so new—nothing homelike about it. Later in the summer I visited her to find that shrubs had hidden the foundation, the lawn was all sodded, young maples had been planted across the front of the lot and she had even laid plans for the transferring of quite a large sized maple tree for the back yard this spring. The other day I visited her again and she showed me a pretty little bird house which will be put up in the tree which has already been planted while the ground was frozen. And she is planning on erecting a lattice gate over the back fence and having it covered with Dorothy Perkins, while a wistaria vine will be planted this spring over the back porch. Even the garage will be partially hidden by the French lilacs in purple and white.

And mind you, this is not a city residence. It is in the suburbs and they have a small plot of ground where they have their own garden and raise a few chickens. But my friends has caught the idea of the "Home Beautiful." The house is the picture—the frame is the garden and grounds. And she has not only added to the beauty of her home but had added materially to its value. She tells me that real estate dealers and home seekers are continually stopping and asking her if it is for sale.

There must be a nurseryman not far from your home, but if not, just write to the Farm Home Department, tell us how much you can spend for shrubs this spring—what you would like, etc., and let us help you out.

Treese and shrubs beautify the home grounds, but more beautiful than these are the children at play in the yard, for they typify the true home life. The above picture is that of the farm home of Mr. and Mrs. Louis Pulver, of Williamsburg, one of our contest pictures.

OUR READERS OWN COLUMN

DEAR MISS LADD: I am going to take advantage of your Personal Service Shopping Bureau. I have been looking for bolts of cotton satin—sometimes called Nusatin and don't seem to be able to find any in our stores except in ready made garments. Do they carry it in stock in the Detroit stores and how much is it per yard?—Mrs. X. Y. Z.

Dear reader: It seems that almost every material of late has two or three different names. I find no store here that has what they call "Nusatin" but one of the leading stores informs me that they think you refer to what they carry and call Venetian Cloth, which is a cotton satin—washable and used principally for the wash skirts. They carry it in white only and the 32 inch sells at $1.25 and $1.50 per yard, the difference in price being due to a difference in weight and then there is one which measures 36 inches and retails at $2.00 per yard. No difference in price is made when it is bought by the yard. I also found what is called a "two season satin" which is cotton back but is not guaranteed to wash. This comes in nearly all colors and retails at $2.00 per yard. Our Shopping Bureau will be glad to get samples and prices if you will give full information—that is the colors you are interested in and what use you desire the material for. In asking questions of this department, always be as explicit as possible as it helps us in shopping for you.

Dear Miss Ladd: Can you advise me whether it will be possible for me to get separate glass bottle for my silver table castor and where I could procure the same, also the cost. I would like to secure enough for two casters, each containing a salt and pepper shake, a vinegar bottle, oil bottle and mustard jar. Also could your purchase for me a ball of rose crochet cotton—size 70 and what would be the cost?—Mrs. E. H. C.

Dear Mrs. C.: In the first place you did not give me the size of the bottles you wished for the casters. However in this instance it will not be necessary for I have made inquiry of all the larger wholesalers as well as the retailers and they all advise me that because of the various styles and sizes, it is impossible for them to carry a stock of extra bottles except in a very few cases where they carry bottles to fit casters which they sell in large quantities to hotels, restaurants, etc. Therefore unless your casters were of late make and standard size and design, I would not be able to help you out in this matter.

Yes, I can purchase rose crochet cotton, No. 70 for you at 35c per ball. If you desire me to buy this, send me a sample of the rose color you would like it to be like as nearly as possible as there are many shades of rose—an old rose, a rose pink and a regular rose.

WEEKLY CHEER

Cheerfulness is what greases the axles of the world; some people go through life creaking.

—Anonymous

Editor Woman's Department, M. B. F.: Will you please tell me what will take beef blood out of an ingrain carpet. We soaked it in salt water and then washed it but the stain still remains.—Mrs. R. K.

Dear Mrs. K.: How I wish you had inquired before attempting to get the stain out at all. The proper treatment is to soak any cloth article stained with blood in cold water over night, being sure that the water covers the stain entirely. Then with warm water and ivory soap wash it thoroughly, rubbing the spot well, and you will always find this effectual. Salt sets color every time and I doubt if you can get the stain out after you have applied it. You know they always soak new calicoes and ginghams in salt water before washing them in order to set the color, and it has acted the same way with the blood stain of course. However you might try the cold water and then with a brush and hot soapy water, perhaps with persistent effort and a lot of elbow grease you may be able to do something with it.

My dear Miss Ladd: Will you please give me the names of several movie magazines and their prices.—Mrs. T. G.

Dear Madam: The two best known movie magazines are the "Motion Picture Classic," the subscription price of which is $2.50 per year, and "Photo Play," at $2 per year.

Mrs. C. W.: Yes, we can secure for you a pattern for child's overalls. Send 15c for the pattern and give size of the child. You did not give us this information. Perhaps you wanted the pattern for the child for whom you ordered the other patterns, but as you did not state, and that child is only two, we hardly judge it might be the same. Patterns you know, cannot be exchanged so we dislike to buy without definite instructions as to size, etc.

Dear Miss Ladd: Will you please tell me through the paper how much one of those wire dish drainers are with a place for spoons, knives and forks in the center.—Mrs. A. A. C.

Dear Mrs. C.: The baskets which you desire are $2.50 each, to which you would need to add 6c parcel post charges and it would be better to also add insurance charge as an article of that nature might become bent in the mail unless it were insured. The baskets with just the compartments for plates, cups and saucers are $1.75 and are more used as the silver scratches so easily that most persons do not care to dry it this way.

The Farm Home Department: If you have not already too many methods of keeping ham, in answer to Alvina, I think ours is worth printing. —Mrs. O.

Dear Mrs. O.: We are all anxious to learn. Your way sounds practical and I gladly print it as it is sure to help some one. Make a mixture of sugar and salt, twice as much sugar as salt (or molasses may be used) and 1 tablespoon salt petre to 1 pt. sugar. Rub this on the ham every third day for nine days—making three times in all. Then smoke the hams. After they are smoked, remove the skins, slice and pack in crocks. I use a wooden potato masher to press the slices firmly down. Fill in all the cracks and crevices with bits of fat and melted grease. One can usually try out enough grease from the rhines to fill in the space and cover the ham, but if not pour melted lard over the top—enough to thoroughly cover the meat. When you use the ham, always melt the fat and recover the unused portion.

Dear Miss Ladd: How shall I address the chemist of the Food and Drug Department—Mrs. H. M.

Dear Mrs. M.: Address your letter to Michigan Food and Drug Department, 802 University Avenue, Ann Arbor, Michigan.

As We Give

Cast behind thee grief and sadness,
That would linger in your mind,
For the world is full of gladness—
Only seek, and you shall find,
Ye whose eyes behold the beauty
Wrought by nature's willing hand,
Tread the path of earnest duty,
As your conscience would command.

Love is law, assistance pleasure—
As we give shall we receive;
Freely let us always measure,
And in noble deeds believe,
While as mortals we are living,
Let us aid a struggling friend,
And to him when you are giving
Also to the Lord you lend.

Clad in robes of sweet emotion,
'Mid the wreck of ebbing time,
Lost in glory of devotion,
Dwell our deeds of love sublime,
Each fair and priceless treasure,
In our memories to live,
Bringing thots of love and pleasure,
Never slow their hopes to give.

Time and life are onward fleeting,
Opportunity shall wane;
Be not then content with seeing
Lives whose lots arce hopeless pain.
Live to aid and comfort others,
To assist a purpose pure;
To encourage weary brothers
And their fainting hopes assure.

When the shades of death descending
Call us from our daily strife,
Each fond hope and purpose ending
In the path of mortal life;
We shall know our fair ideal
Risen from the lowly sod;
Each kind thot and deed made real,
In the image of our God.

—*Marion Cowa*

MUSICAL TERMS

SO MANY calls are received for new games to be used for social affairs that we propose from time to time to publish good guessing games. They sharpen the wits and furnish pleasant pastime.

Part of a fish—Scales.
What a tight shoe does—Presto.
A fine dandy—A swell.
Something to keep the cattle in pasture—Bars.
What a pair of shears should be—Sharp.
To open a door with—Key.
Short letters—Notes.
What tired people like—A rest.
What a weather vane does—Turn.
Three sisters of the same age—Triplets.
What can a pocket do—Hold.
A vegetable—A beet (beat.)
Month of the year—March.
A black, stick substance—Pitch.
What a tape line helps to do—Measure.
Something to wear—A tie.
Mean and low—Base (bass.)
One residence in an apartment house—Flat.
A boy under twenty-one—Minor.
Officer in the army—Major.

"HEARTS OF THREE"

(*Continued from page 11*)

Is one here who knows and will speak up?"

And Francis knew on the instant the trouble the blind man had divined within him—the full love that burned in him for Leoncia and that threatened to shatter the full loyalty he must ever bear to Henry. No less quick was Leoncia in knowing, and could the blind man have beheld the involuntary glance of knowledge the man and woman threw at each other and the immediate embarrassment of averted eyes, he could have unerringly diagnosed Francis' trouble. The mestiza girl saw, and with a leap at her heart scented a love affair. Likewise had Henry seen and unconsciously scowled.

The Just One spoke:

"An affair of heart undoubtedly," he dismissed the matter. "The eternal vexation of woman in the heart of man. Nevertheless, this man stands free. Twice, in one day, has he succored the man who twice betrayed him. Nor has the trouble within him aught to do with the aid he rendered the man said to be sentenced to death undeserved. Remains to question this last man; also to settle for this beaten creature before me who twice this day has proved weak out of selfishness, and who has just now proved bravely strong out of unselfishness for another."

He leaned forward and played his fingers searchingly over the face and brows of the peon.

"Are you afraid to die?" he asked suddenly.

"Great and Holy One, I am sore afraid to die," was the peon's reply.

"Then say that you have lied about this man, say that his twice succoring of you was a lie, and you shall live."

Under the Blind One's fingers the peon cringed and wilted.

"Think well," came the solemn warning. "Death is not good. To be forever unmoving as the clod and rock is not good. Say that you have lied and life is yours. Speak!"

But, although his voice shook from the exquisiteness of his fear, the peon rose to the full spiritual stature of a man.

"Twice this day did I betray him, Holy One. But my name is not Peter. Not thrice in this day will I betray him. I am sore afraid, but I cannot betray him thrice."

The blind judge leaned back and his face beamed and glowed as if transfigured.

"Well spoken," he said. "You have the makings of a man. I now lay my sentence upon you: From now on through all your days under the sun, you shall always think like a man, act like a man, be a man. Better to die a man any time, than live a beast forever in time. The Ecclesiast was wrong. A dead lion is always better than a live dog. Go free, regenerate son, go free."

But, as the peon, at a signal from the mestiza, started to rise, the blind judge stopped him.

"In the beginning, O man who but this day has been born man, what was the cause of all your troubles?"

"My heart was weak and hungry, O Holy One, for a mixed-breed woman of the tierra caliente. I myself am mountain born. For her I put myself in debt to the haciendado for the sum of two hundred pesos. She fled with the money and another man. I remained the slave of the haciendado, who is not a bad man, but who, at first and always, is a haciendado. I have toiled, been beaten, and have suffered for five long years, and my debt is now become two hundred and fifty pesos, and yet I possess naught but these rags and a body weak from insufficient food."

"Was she wonderful?—this woman of the tierra caliente?" the blind judge queried softly.

"I was made for her, Holy One. I do not think now that she was wonderful. But she was wonderful then. The fever of her burned my heart and brain and made a task-slave of me, though she fled in the night and I knew her never again."

The peon waited, on his knees, with bowed head, while, to the amazement of all, the Blind Brigand sighed deeply and seemed to forget time and place. His hand strayed involuntarily and automatically to the head of the mestiza, caressed the shining black hair and continued to caress it while he spoke.

"The woman," he said with such gentleness that his voice, still clear and bell-like, was barely above a whisper. "Ever the woman wonderful. All women are wonderful . . . to man. They love our fathers; they birth us; we love them; they birth our sons to love their daughters and to call their daughters wonderful; and this has always been and shall continue always to be until the end of man's time and man's loving on earth."

A profound of silence fell within the cavern, while the Cruel Just One meditated for a space. At the last, with a touch dared of familiarity, the pretty mestiza touched him and roused him to remembrance of the peon still crouching at his feet.

"I pronounce judgment," he spoke. "You have received many blows. Each blow on your body is quittance in full of the entire debt to the haciendado. Go free. But remain in the mountains, and next time love a mountain woman, since woman you must have, and since woman is inevitable and eternal in the affairs of men. Go free. You are half Maya?"

"I am half Maya," the peon murmured. "My father is a Maya."

"Arise and go free. And remain in the mountains with your Maya father. The tierra caliente is no place for the Cordilleras-born. The haciendado is not present, and therefore cannot be judged. And after all he is but a haciendado. His fellow haciendados, too, go free."

Henry stepped forward:

"I am the man," he stated boldly, "sentenced to the death undeserved for the killing of a man I did not kill. He was the blood uncle of the girl I love, whom I shall marry, if there be true justice here in this cave of the Cordilleras."

But the Jefe interrupted.

"Before a score of witnesses he threatened to his face to kill the man. Within the hour we found him bending over the man's dead body that was yet warm and limber with departing life."

"He speaks true," Henry affirmed. "I did threaten the man, both of us heady from strong drink and hot blood. I was so found, bending over his dead warm body. Yet did I not kill him. Nor do I know, nor can I guess, the coward hand in the dark that knifed out his life through the back from behind."

"Kneel both of you, that I may interrogate you," the Blind Brigand commanded.

Long he interrogated with his sensitive questioning fingers. Long, and still longer, unable to attain decision his fingers played over the faces and pulses of the two men.

"Is there a woman?" he asked Henry Morgan pointedly.

"A woman wonderful. I love her."

"It is good to be so vexed, for a man unvexed by woman is only half a man," the blind judge vouchsafed. He addressed the Jefe. "No woman vexes you, yet are you troubled. But this man"—indicating Henry—"I cannot tell if all his vexation be due to woman. Perhaps, in part, it may be due to you, or to what some prompting of evil may make him mediate against you. Stand up, both men of you. I cannot judge between you. Yet is there the test infallible, the test of the Snake and the Bird. Infallible it is, as God is infallible, for by such ways does God still maintain truth in the affairs of men. As well does Blackstone mention just such methods of determining the truth by trial and ordeal."

ESSEX MOTORS DETROIT U.S.A.

Tests That Proved Hudson Also Speak for Essex

And Essex Holds World's 50-Hour Endurance Record

Built by the same makers, Hudson's unequalled records also speak for Essex. They foretold performance never expected of a light car.

The prophecies now are facts.

An Essex stock chassis set the world's 50-hour endurance mark of 3037 miles. That is officially certified by the American Automobile Association. And Essex holds the world mark of 1061 road miles in 24 hours. A stock touring car did that.

Local road, speedway and hill climbing records in every section of the country are held by Essex. Scores of abusive tests have proved the endurance that 30,000 owners find in the daily service of their Essex cars.

Judge Essex Quality By the Hudson Standard

But it is not only in the performance that Essex shows the same stamp of quality as Hudson. Its beauty of line, its luxury of appointment are the work of years of leadership in coach design.

See the care and completeness, even in the smallest details. Its riding comfort, its smooth, quiet running ease, with the suggestion of well-contained reserve power, are qualities comparable to the finest of high-priced cars, yet you gain all of the advantages of the light weight type, more important today than ever.

Judge the Essex, not by the lightweight standards that you have known, but by the much more exacting requirements of the large costly cars. Measure it by the highest standard of performance and fine quality, rather than by its moderate price.

You, too, will find the appeal that has won 30,000.

In the Hudson's unmatched records this important fact is clear—No ability is sacrificed in one direction to gain supremncy in another.

Hudson Records Prove Its All-Round Mastery

Hudson is the fleetest. Its stock car speed records have never been equalled. On the speedway its racing cars won more points than any other team ever gained.

But its speed means no forfeit of other qualities. For in official tests, the Super-Six has also out-performed all other types, in endurance, hill-climbing and acceleration. In every motor performance it has established leadership by unanswerable proofs.

Only a supreme advantage, that others cannot use, could account for such all-round dominance. Hudson has it in the Super-Six motor. It minimizes vibration to within 10 per cent of vanishing—nearer the ideal than any type we know.

In the same size motor the exclusive Super-Six principle added 72 per cent to power, and 80 per cent to efficiency. Endurance is practically doubled.

Hudson Motor Car Company, Detroit, Michigan.

HUDSON SUPER SIX

The Children's Hour

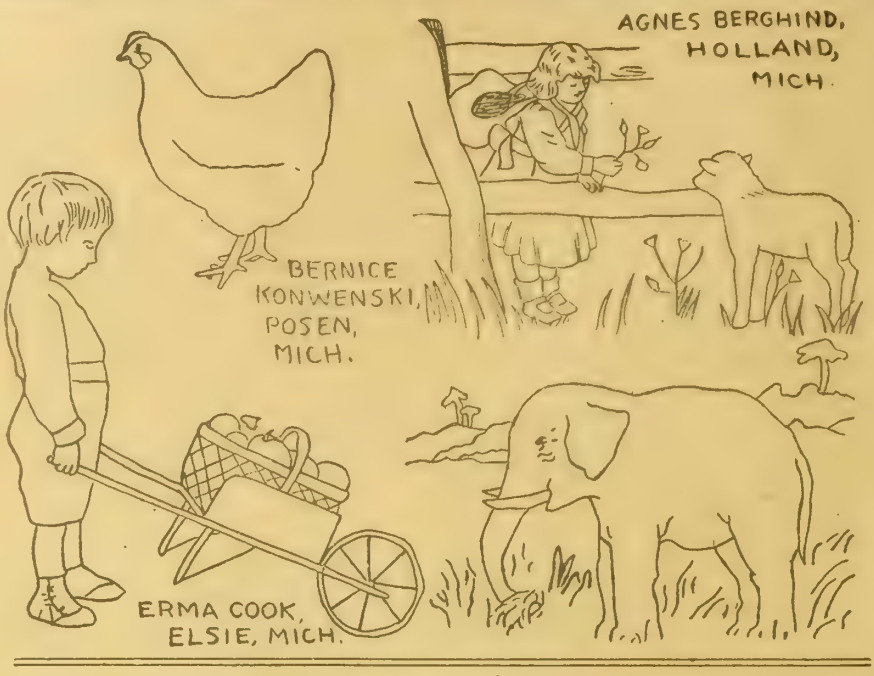
DEAR CHILDREN: Again this week I am more than pleased to publish four drawing submitted by our children which have won prizes. The names of the prize winners are below the pictures, except one where I do not find the name and address appeared on the picture. Remember, even though your write a letter when you send in an original drawing, be sure that your correct name and address and your age appear on the bottom or back of the actual drawing.

One of our little prize winners, Hazel Ball, writes us that she is going to study art. Of course that will place her in the professional class. We are sure that she will make a success of her work and wish her all manner of success, bu tas ours is a contest for amateurs, we will no longer be able to award her prizes for that wouldnt be fair to those who never received any instruction and are competing.

An inquiry comes from one of our correspondents as to how they shall submit their drawings. Of course if you have regular drawing paper and drawing ink, that is the best thing to use. Many haven't it though and no way of getting it, so we accept drawings in lead pencil but none are accepted in colors as they cannot be reproduced. Now let's get busy little folks and see who will be next.

No drawing are accepted which are traced. Some have been submitted but of course we had to discard those.

I have found such a splendid little poem this week that I hope you will all enjoy. It is supposed to be for little boys, but I think it is just as good for little girls as for little boys. Affectionately yours, LADDIE.



TRY TO BE THE FELLOW THAT YOUR MOTHER THINKS YOU ARE

While walking down a crowded city
street the other day,
I heard a little urchin to a comrade
turn and say:
"Say, Jimmie, don't yer know, I'd be
as happy as a clam,
If I only was de feller dat me mud-
der t'inks I am."

"She t'inks I a ma wonder, and knows
her little lad
Would never mix wit' nottin' dat
was ugly, mean or bad.
I often sit and t'ink how nice 'twould
be—gee whiz,
If a feller was de feller dat his mud-
der t'inks he is."

So, folks, be yours a life of toil or
undiluted joy,
You still can learn a lesson from the
small, unlettered boy;
Don't try to be an earthly saint, with
eyes fixed on a star—
Just try to be the fellow that your
mother thinks you are.

—*Noodles Fagan.*

OUR BOYS AND GIRLS

Dear Laddie—I am a boy thirteen years old and in the seventh grade. For pets I have some cats and a Shetland pony. I drive the pony to and from school. I like all my studies at school, except arithmetic. I live on a farm of 120 acres. We have 14 cows, four calves and three geese. We have a milking machine and it takes about half an hour to milk 12 cows. We have 50 chickens. We get two geese eggs and 20 hens eggs. We set our incubator about three weeks ago, and we had 55 little chickens out of 100 eggs. We set it again this morning with 82 hens eggs and nine geese eggs. My father takes the M. B. F. and he likes it very well. I like to make out Walter Wellman's puzzles. I an sending the name of the fifth animal which I believe to be antelope. You asked us if we liked a complete or continueed story. I like a complete story best. Hoping to see my letter in print I will close.—Lloyd Shreve, R. F. D. 4, Lansing, Mich.

Dear Laddie—I am sending one copy of one of my drawings to see if I can't win a prize. If this one will not win I have some that will be sure to win the prize. I am just a country girl and am going to high school. I am in the 9th grade and have only one year at this school yet. My father has taken the M. B. F. for one year and is going to renew it for another year. My father has sold his farm because of his health, and we expect to have a sale soon. Well, I have not said much about myself, so I guess I will let you know who I am. I am about six foot five inches high and am quite fleshy, blue eyes, light brown hair and a fair complexion. I weigh about 140 lbs. I always read the boys and girls letters and like them fine.—Sarah Kobel, Elmira, Mich.

Dear Laddie—I am a girl 11 years old and in the 4th and 5th grades. My teacher's name is Miss Gladys Lutz and I like her very well. I have one sister and one brother. We have 160 acres of We are building a new brick bungalow. We have taken the M. B. F. for the past year and eenjoy it very much. If some of the girls would write me I would gladly answer them.—Your little friend, Ethel Wehmeyer, Bentley, Mich. R. 1.

My Plans for the Summer

When school is out I am planning to go to Detroit for a couple of weeks. While I am there I am going to stay with my uncle and aunt. I want to go to Belle Isle and see all the things of interest for children and have all the fun there is to have. I want to go to the park some day and see all the different things, and I would like to go through the Ford factory. When I get back home I am going to help in the garden and make up for lost time.—Hazel Gere, Clio, R. 3.

Dear Laddie—I am a boy nine years old and in the second grade. I started to school when I was 7 years old. We have two horses and one calf and papa gave it to me. My sister has a cow too. I am glad spring is here. I like to read the boys and girl's letters. I have one sister and no brothers. We live on an 80-acre farm. My father has a Buick car. We have seven cows and two pigs, and about 30 chickens. We get from one egg to six a day. I wish some of the boy would write to me. My brother takes the M. B. F. and we like it very much. My teacher's name is Mr. Gamble. —Vernie Peterson, Rodney, Mich., R. 2.

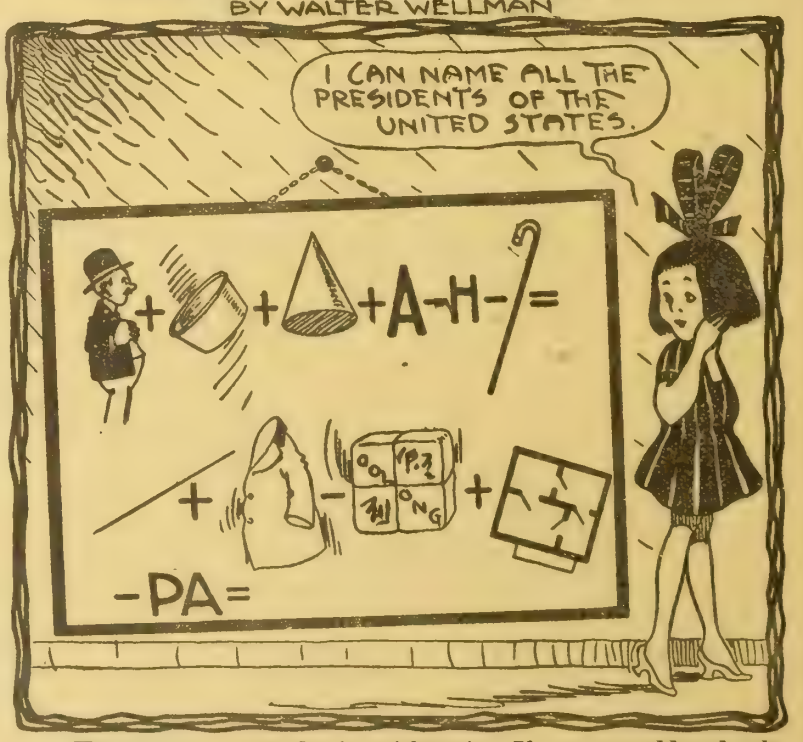
Dear Laddie—This is the first time I have written to you. I live on a farm of 120 acres. I have a big dog and he is a great pet. We have 20 little new baby pigs. They are all white. Our chickens are all white too. They are leghorns. We get more than six dozen eggs a day I go to school every day. I'm in the 6th grade. I would like to see my letter in print. My papa takes the M. B. F. and I enjoy reading the letters from the boys and girls.—Robert E. Brudges, Bailey, Mich.

Dear Laddie—This is the first time I have written to you. I live on an 80 acre farm and have seven little pigs and the mother pig is dead. I have two little nieces. We have a piano and phonograph.—Laura Bennett, West Branch, Mich., R. F. D. 3, Box 54.

Dear Laddie—I am a girl 11 years of age. My father owns a farm of 240 acres. We take the Business Farmer and like it very much. I have a brother 19 years old. I have one little dog, named Shep. We have 24 head of cattle. I like to read the boys' and girls' letters—Winifred Roberts, Newberry.

ARITHMETIC

BY WALTER WELLMAN



Here are two examples in arithmetic. If you can add and subtract the names of the articles, you should have, as a result, of two of the names of former presidents of the United States. Can you do it?

Answer to last week's puzzle:
BIRD SOFA FEAT HER F LOCK TO GET HER
BIRDS OF A FEATHER FLOCK TOGETHER

Dear Laddie—I am 13 years old and am in the 6th grade. I have a mile to walk to school. My teacher's name is Miss Irene Biergans. I enjoy reading the boys and girls letters. I'd rather have a complete story each week than a continued one. My father has been taking the M. B. F. for many years. I have five brothers and one sister, her name is Agnes. SShe is five months old. As my letter is getting long I will close, hoping to see it in print.—Esther Wirth, St. Johns, Mich .

Dear Laddie—I have been reading the children's page and am very interested in it, so I thought I would write. I am a girl ten years old and am in the 6th grade. I like the puzzle corner and like to study them out. I go to the district No. 7 school. I like the stories and am very interested in them. My teacher's name is Mrs. Martain Monzo. I like her real well. I like the continued stories best.—Your friend, Minnie Monzo, Carsonville, Mich., R 3

Dear Laddie—This is the first time I have written to you. I am a boy 11 years old and in the 5th grade at school. I have three sisters and two brothers. We live on a 40-acre farm. For pets I have a dog. There are 11 pupils in our school. Our teacher is Miss Fuller. She is a good teacher and I like to go to school. I like to read the letters in the M. B. F.—Howard Huff, Gladwin, Mich.

Dear Laddie—I am 10 years old and in the 5th grade. My parents have taken the M. B. F. for a long time and we all think it a fine paper. I do because it has the Children's Hour in it. I like to read the boys' and girls' letters. I have one brother. My teacher is Miss Kate Creore. I will close hoping to see my letter in print.—Ilah M. Miller, Dimondale.

Dear Laddie—This is the first time I have written to you. Step over, please, and let me join your merry circle. I live on an 100-acre farm. We have five head of horses, 30 head of cattle, etc. I am 15 years old May 13th next. I wish some of the boys and girls would write to me for I would answer. Your new niece—Edna Cruickshank, Alger, Mich.

Dear Laddie—I am a girl 13 years old and attend the Warren school. I am in the 6th grade. My teacher is Miss Evelyn Kenyon. I like her very much. I have two sisters and one brother. Their names are Irene, Dorothy and Arthur. Dorothy is the baby. We have two horses and five cows. We live on a 40-acre farm.—Edna Boehm, Auburn, Mich.

Dear Laddie—This is the first time I have written to you. I live on an 180-acre farm. I have six sisters and five brothers; three of my brothers were in the war. I made out the farm cut-out puzzle and got pig for the answer. I will close by adding that I am 11 years old and in the 7th grade.—Helen Mongeon, Brimley, Mich.

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. and likes it very much. I have read in M. B. F. that you give prizes if you solve the puzzles by Walter Wellman. I found that by cutting and putting the puzzles together it formed a pig. He was scared very much.—Vernon Sandel, Boyne City, Mich.

Dear Laddie—I am a girl 11 years old and in the 7th grade. My teacher is Miss Pomella. I like her. I have one-half mile to walk to school. I have six brothers and two sisters. My sisters are twins. For pets I have a dog named Nick and two cats, Jack and Niger.—Marguerite Donnellon, Tyre, Mich.

Dear Laddie—This is the first time I have written to you. I am a girl 10 years of age and will be 11 in June. I have one brother and one sister. Their names are, Howard, who is 12 and Margaret, 4 years old. I will close as I am going to draw a picture.—Florence Faber, St. Johns, Mich.

Dear Laddie—I have written to you before. My mother died last year, April 1 leaving four children and twins born on April the first. We call them our little "April Fools." I have a step-mother now and two step-brothers who are twins. I am 10 years old and in the 5th grade.—Mary Yeske, Gallen, Mich.

Dear Laddie:—This is the first time I have written to you. My father owns a 40-acre farm. We have two cows and a calf. For a pet I have a cat, Tabby. I have a sister, Herbetta and a baby brother, Clark. I hope to see my letter in print.—Alma Morehouse, Doster, Mich.

Dear Laddie—I am a boy 7 years old. I go to school and am in the 2nd grade. We live on an 80-acre farm. My father takes the M. B. F. I have a sister; her name is Maxine. She is four years old and goes to school.—Lloyd Teller, Gagetown, Mich.

Dear Laddie—I have been reading the stories and letters in the M. B. F., and was interested so thought I would write. My father takes the M. B. F. and likes it very much. I have three brothers. We live on an 120-acre farm.—Rhea Leone Bisard, Grant, Mich.

Dear Laddie—This is the second time I have written to you. I am 9 years old but will be 10 April 2. I am in the 5th grade. I like my teacher very much; her name is Eulah Welch.—Mabel Delamater, Farwell, Mich.

County Crop Reports

SANILAC (C)—Well March has passed and it was a very nice month. We are not having much rain, not as much as there ought to be. The roads are good most all over the country for this time of year. April is coming in rather cool. We are having a good deal of high wind, but no damage has been done around here up to the present. Wheat and meadows have come out of the winter looking good, but I thing a good rain now would help a lot, it would settle the ground and start things growing. The farmers are pressing up what hay they had to spare from the winter feeding. The flu and measles and other sickness around here are about done. Some of the farmers are getting ready for the spring work, such as cleaning out the manure and other spring work.—A. B. Prices offered at Sandusky: Wheat, $2.25; oats, 91; rye, $1.69; timothy seed, $5.40; clover seed, $29; alsike, $31; hay, No. 1 timothy, $25; No. 1 light mixed, $25; beans, (C.H.P.) $6; potatoes, $1.50@2 bu; butterfat, 64; eggs, 40; hogs, 10@15; veal calves, 14 @16.

MANISTEE—Some of the farmers are cutting wood, attending auction sales of which there is a number around here. Some are hauling and selling potatoes, there is buying at all the buying stations, lots of cars being loaded here and also being shipped at prices the highest for many years. One of our old neighbor residents died a few days ago. Weather tried to warm up some but it caught cold and we have been having it very cold and stormy, also terrible heavy winds, almost a cyclone. Trees were blown down and other damage. Not much building beeing done here. Some buying at sales. Sugar is 18 and 20 cents a pound here. Kerosene oil getting cheaper, 21 cents a gallon. Pitty on the poor oil man to lose money for their customers that way.—H. R. A. Prices offered at Bear Lake: Potatoes, $5 cwt; white beans, $5.25 cwt; rye, $1.60; wheat, $2.10; butter, 50; eggs, 38; butterfat, 65; hogs on foot, 13 1-2, dressed, 18; beef, 5@8 alive, 10 @13 dressed; veal, 18 dressed; live chickens, 25; hides, 18.

SHIAWASSEE—A severe storm took place in this part of the county Sunday at about noon that lasted far into the night with a high north wind,not extremely cold, but very disagreeable. Some oats have been sown on fall plowed ground. But very little plowing has been done as yet this spring. Farmers having sugar bushes report very short but satisfactory run of sap. Wheat generally came thru the winter in good condition. Clover seeding has not stood the winter well.—D. H. M. Prices offered at Corunna: Wheat, $2.43@2.45; corn on ear, $1.50; oats, 92; rye, $1.65; hay, No. 1 timothy, $22; No. 1 light mixed, $25; rye straw, $8; wheat-oat straw, $12; beans, (C.H.P.) $5.75 cwt; potatoes, $2.75; onions, $5.50; cabbage, 4; hens, 28; springers,32; ducks, 12; geese, 38; butter, 58; butterfat, 63; eggs, 38; sheep, $10@11; lambs, $13.50@ 21; hogs, $11.50@12; beef steers, prime, $10; beef cows, $7@7.75; veal calves, best, $15@16; wool, dull; apples, $2@3.

MASON—Quite a little plowing was done during the last of March. Colder weather with frequent snow flurries have retarded the work. High prices combined with favorable weather and roads brought the reserve stock of potatoes. The county agent proposition lost out by a majority of 61 votes at the April election. It is now up to the farmers of the county to either buy out the Gleaner interest in the Scottsville warehouse and elevator and continue doing business as the Mason County Co-operative Association or combine with the Gleaners. Both are good. Either can be made a 100 per cent success if everybody boosts.—B. M. Prices offered at Scottsville: Wheat, $2.35; rye, $1.70; hay, No. 1 light mixed, $25; wheat-oat straw, $10; potatoes, $5.30; hens, 30@32; butter, 55; butterfat, 64; eggs, 36; dressed beef, $12@14; veal calves, $18@20.

ALLEGAN—Farmers busy preparing oat ground. Weather very backward at present. We have just had a very severe snow storm. About four inches of snow fell in the last twenty-four hours. Previous to this, the soil was getting into good condition for working. Potatoes in this section have all been sold. Wheat in this section came through the winter in fine shape. Roads were in very bad shape, but are in fairly good condition at present.—W. F. Prices offered at Allegan: Wheat, $2.40; corn, $1.60; oats, 95; rye, $1.65; hay, No. 1 timothy, $28; wheat-oat straw, $9; beans (C.H.P.), $6.75; potatoes, $5 cwt; sheep, $8.50; lambs, $10.50; hogs, $12.50; beef cows, $7; veal calves, $18.

MIDLAND—The farmers are beginning to plow for the spring crops. The weather is unsettled, some rain and wind. The soil is in good condition to plow. Some hay is being sold now. Some silos are being built. Some damage was done by the storm of last Sunday night, moving some barns from their foundations. There was an awful cyclone in Adams county, Ind., the writer's home town. Relatives, friends and neighbors' buildings laid flat.—J. H. M. Prices offered at Hemlock: butter, 55; butterfat, 64; eggs, 38.

GRAND TRAVERSE—Farmers are not doing much these days; very cold and disagreeable weather. Auction sales still in progress. A sad accident occurred in this vicinity today. A hired man was hurt badly by a bull. Two doctors were called and they started to take him to a hospital and when about two miles on the road he died. Another prominent man, a farmer, had three fingers out off his left hand while buzzing wood.—C. L. B. Prices offered at Williamsburg: Wheat, $2.35; corn, $1.50; rye, $1.60; hay, No. 1 timothy, $41; potatoes, $3.25 bu; butter, 50; butterfat, 72; eggs, 37.

VAN BUREN—Farmers have been busy at their grapes, some trimming, posting, tightening wires, drawing out brush and tying. Fred Murch has a new tractor to try out on his vineyard. Business was stopped by Sunday's blizzard, not much been doing this week. Tuesday night thermometer got down to ten degrees above, affecting the cherry buds. Early Richmond especially. Paw Paw community is about to form a co-operative association for benefit of its farmers. There is a fine prospect for fruit this year up to the present. V. G.

MONROE (W)—We are having some cold bad weather at present. The weather man must have March and April mixed up, for we had fine weather in March. Some of the farmers sowed their oats, barley and spring wheat in March. The farmers are now hauling manure and doing odd jobs on account of the cold weather. Wheat and new seedings are looking fair at this writing. Prices offered at Petersburg: Oats, 97; hay, No. 1 timothy, $25; No. 1 light mixed, $22; hens, 28; ducks, 30; turkeys, 30; dairy butter, 55; butterfat, 68; eggs, 40; hogs, $14; beef steers, 10; beef cows, 5; veal calves, 18.

Rebecca Wins the Prize

(*Continued from page 5*)

Sharp caused more than one comment on his unusually clean and well groomed appearance. Mr. Johns, the groceryman, was the first to remark, "Well what in the world has come over Henry Sharp? Just look at him, shaved and as spick and span as if he had just stepped out of a bandbox. He seems to have lost that sloppy droop to his shoulders, even."

"He sure has," replied Sam. "I bet there is a woman in it somewhere. I've always noticed when a widower begins to spruce up there is a prospective wife No. 2 some place near by."

"Success to her. She has done a good work so far," replied Mr. Johns, mentally reviewing the fact that at that very moment Sam owed him a large bill for groceries, while Henry Sharp had been doing a strictly cash business ever since he had been working in the mine.

All interest was now centered in the various enteries. The judge was talking about confirmation, quality and conditions; he had also examined the books of each boy and girl, while they were almost beside themselves with alternate hop and fear.

Rebecca felt an unusual kindness in her father's manner when he came up and taking hold of her arm whispered, "Becky, your pig is the finest one here; everybody says so. I'm mighty proud of you, Becky."

Becky Sharp had no recollection of the happening of the remainder of the day, but to the shiny black Berkshire that evening after he had been safely placed in his old pen she confided, "You nice old piggy, you won the prize all right, and you made Daddy clean up and go to work, and you are going to send me to the University, to a really school, cause you know Daddy said it was, because I worked so hard to make money to get you. That made him feel ashamed of himself for not giving mother any of the better things she wanted so badly, and that is the reason he is putting twenty dollars in the bank every month for me, so that when I get old enough I'll be going to the school that my mother went to;" and in her ectasy of excitement Rebecca gave the black Berkshire entirely too much feed for one three hundred pound porker, but he, the gourmand that he was, grunted contentedly in his best piggish manner.

Sam whispereed to the groceryman the next time he was in the store, "I was right, wasn't I Johns? You remember I told you there was a woman somewhere, because Henry Sharp was so changed, but I never thought it was his fourteen year old daughter."

he tied up the allotted two pounds of sugar Mr. Johns replied, "She is a plucky youngster, all right, but I believe its the memory of that wife of his who died some years ago, that worked the change in Henry Sharp."

For Sick Chickens

Preventive and curative of colds, roup, canker, swelled head, sore head, chicken pox, limber neck, sour crop, cholera, bowel trouble, etc. Mrs. T. A. Morley of Galien, Mich., says: "Have used Germozone 17 yrs. for chickens and could not get along without it." Geo. F. Vickerman, Rockdale, N. Y., says: "Have used Germozone 12 years; the best for bowel troubles I ever found." Frank Sluka, Chicago, Ill., writes: "I have lost but 1 pigeon and no chickens in the 3 yrs. I have been using Germozone." C. O. Petrain, Moline, Ill.: "I never had a sick chick all last season." Bernard Horning, Kirksville, Mo., says: "Cured my puniest chicks this spring." Ralph Wurst, Erie, Pa., says: "Not a case of white diarrhoea in 3 yrs. I raise over a thousand a year." Good also for rabbits, birds, pet stock.

GERMOZONE is sold generally at drug and seed stores. Don't risk a substitute. We mail from Omaha postpaid in new 25c, 75c and $1.50 sizes. Poultry books free.

GEO. H. LEE CO., Dept. F38 OMAHA, NEB.

SEED CORN

Have you any to sell?

A little ad in M. B. F.'s Classified Business Farmers' Exchange will do the trick!

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or commissions. If you want to sell or trade your farm, send in your ad today. Don't just talk about it. Our Business Farmers' Exchange gets results. Address The Michigan Business Farmer, Adv. Dept., Mt. Clemens.

A Newly Invented SAW RIG

Pat. Appl'd For.

Low introductory offer puts this new saw rig within reach of all, at small part of cost of other rigs. Saws your winter's wood in few hours. Powerful 4-cycle motor. Easy to operate, light to move. 30 days' trial to prove our claims. 10-year guarantee. FREE BOOK.

Prompt, careful attention given to all complaints or requests for information addressed to this department. (Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for a reply.)

A CURE FOR WORMS

(1) Are copperas and copper sulphate a sure cure for worms in horses? Should they be mixed and how much should be fed at a time?

(2) What is good for flees on dogs?

(3) What will keep a horses tail from scaling off and the hair from coming out?—E. C., Alcona County.

(1) Copperas and Copper Sulphate are by no means desirable drugs to be given, for worms in horses; they are used as a tonic in convalescence; and to reduce enlarged glands. These drugs can safely be mixed, but should be given either in the form of a ball or in a mucilaginous solution, the dose is one drachm each twice daily. The following will be found the most satisfactory treatment for the common round worm found in the intestines of horses. Tartar emetic, given in two drachm doses twice daily in the feed for four to six days, or one half ounce dissolved in warm water is given on an empty stomach, followed in four to six hours by one pint of raw oil.

(2) To rid a dog of flees, first bathe animal thoroughly with warm water to which add one tablespoonful baking soda; this will soften the nits which, by the way, will be found on the ends of the hair. Then for each quart of warm soft water, add one ounce of Creolin and bathe thoroughly; washing the head and ears first; dry with flannel cloths and repeat in three days if necessary.

(3) If a horses tail is scaly and the hair comes out, the following treatment will be found very beneficial: Give one ounce Fowler's solution of Arsenic twice daily for two weeks. Externally use the following lotion: Zinc Sulphate and Sugar of Lead equal parts one ounce; add soft water to make one quart and apply, rubbing well in morning and night.—*W. A. Ewalt, veterinary editor.*

IMPROVEMENT OF ROAD

About forty rods from where I live there is a short steep sand hill that a person can hardly get over with an empty wagon. Last year the man that threshed in our neighborhood would not attempt to go over it and I had to haul my grain about a mile before I could get it threshed. I have told the road commissioners to fix the road four or five times and they always tell me that they did not have money to fix it with.—A Reader, Osceola County.

The highways are under the control of the highway commissioner. If he has no money to improve the road there is no way to compel him. The manner and amount of such improvements are very largely in the discretion of the highway commissioner.—*W. E. Brown, legal editor.*

PETITION FOR BUILDING ROAD

Last spring my neighbor and myself as well as all the farmer men of our town, signed a petition for to grade and gravel 3 3-4 miles of road to comply with the state requirements so to draw the reward. Now we signers were to give varying sums which amounted to $1,960. This petition was read twice at the township meeting last April, voted on and accepted by the voters of our township. But the township board refused to build same and did not. In said petition it stated that said road was to be finished in 1919. Of course we did not have to pay the $1,960, but wanted the road and were ready and willing to do our part.—F. A. H., Tuscola County.

Your letter does not specify what statute the petition was filed under. I am unable to determine without an examination of the law under which the petitioners attempted to proceed. Under ordinary conditions I would expect that the town board had authority to exercise their discretion in the matter of any petition.—*W. E. Brown, legal editor.*

MINORS IN GAMBLING HOUSE

I would like to ask the question if any one has the right to allow school children to go into any public place where they shake dice for pennies.—A Subscriber, Gratiot County.

The following is a part of the statute, sec. 7223, governing the matter referred to: "No minor child under seventeen years of age, nor any minor who is a student in any public, private or parochial school in the state of Michigan, shall be permitted to remain in any saloon * * * or in any place of amusement known as a dance house, concert saloon, variety theatre; or in any house of prostitution; or in any room or hall occupied or used for hire, gain or reward, for the purpose of playing billiards, pool, cards, dice, or any other unlawful game; or in any room or hall used or occupied for gaming, pool selling or betting in any manner whatever; or in any room or hall in which any cigars or tobacco are sold or kept for sale, where any such games are played. Any proprietor, keeper or manager of any such place who shall permit any such minor child or minor student to remain in any such place, and any person who shall encourage or induce in any way such minor child or minor student to enter such place or to remain therein shall be deemed guilt of a misdemeanor, and on conviction thereof shall be punished by a fine of not less than $25 nor more than $50 or by imprisonment in the county jail not less than ten days nor more than 30 days, or both such fine and imprisonment in the discretion of the court.—*W. E. Brown, legal editor.*

FILING CLAIM FOR LOSS

On Jan. 2nd I shipped by Michigan Central R. R. 10,048 lbs. of sweet corn to The Landreth Seed Co., Port Huron, Mich. When I shipped the corn it was in good condition, dry and cool. I have several neighbors who will make affidavit to this effect. The shipment was delayed in transit and I have received a letter from the seed company in which they inform me that the corn came to them in poor condition, wet and was not fit for seed, and they have offered to sell it for me for $50.00 per ton. The price which I was to receive was 7 cents per pound and as I have carried out my part of the contract it does not seem fair to me that I should stand the loss on this which amounts to considerable. Can I file claim with the railroad company with any expectation of receiving the difference in price between what I was to receive and what the seed company offered me? Would you advise me to allow the seed company to sell the corn or not? I hold sample of the corn showing the condition when shipped. How would you advise me to proceed? This shipment was on the road over six weeks.—C. B., Branch County.

If your arrangements with the Seed Company required you to deliver the corn at their station in good order, it would be best for you to file claim with the R. R. It is, however, a matter that involves so many difficulties to comply with all of the requirements that it will be quite necessary for you to consult local counsel to assist you in the details of proving a claim either against the Seed Company or against the R.R.—*W. E. Brown, legal editor.*

ADOPTING A CHILD

If you were to take a child without adopting it when it was a baby, and keep it until it was 16 years old, could you adopt it without the consent of its guardian if it was the wish of the child and the people that had the child? Would the guardian of it still be the guardian, or would the adopted parents be its legal guardians over all its property from its former parents or other property that it should inherit from some other relative, or would the guardian still hold until the child was 21 years old, and if not where would you go to have the legal papers made out and what would be the legal charges? If the guardian would not give up his guardianship what could be done? G. E. B., Clinton County.

The law requires the consent of the parents, or parent. If no parent then the guardian. If the child is sixteen and desires the adoption to take place and the guardian refuses consent the Judge of Probate would be justified in removing the guardian and appointing another upon the suggestion of the child. Such guardian can then consent. The guardian appointed by the court might be continued as guardian of the property but not of the person. Or the Judge of Probate might discharge the guardian entirely as the best interests of the child would require.—*W. E. Brown, legal editor.*

FOUR OR SEVEN INCH GRAIN DRILL

Which is the best, a grain drill that sows four inches or one that sows seven inches apart, that is puts the grain in the ground 4 or 7 inches apart.—R. W. L. Isabella County.

Experiments seem to show that there is no particular advantage in drilling small grains in rows only four inches apart. This method of drilling, however, has been used to advantage for grass seeds. The four-inch drill will usually cost more and will be somewhat heavier draft on heavy soils.—*O. E. Robey, acting head of Department of Farm Mechanics, M. A. C.*

Commercial Fertilizer on Depleted Soils

(*Continued from page 4*)

orously growing seedling is more likely to produce a good heavy plant than a slowly growing seedling.

Some crops are better adapted to certain classes of soils than others. It may be cited, for example, since sandy soils tend to be drouthy, the crops that possess the more deeply penetrating root systems are more successfully grown on them. On the other hand, since the heavy soils tend to resist penetration and are less subject to drouth, the shallow and more fibrous rooted crops are successful. Again, different varieties of crops may be higher yielders than others when grown on the same soil. Some varieties, or strains readily succumb to plant diseases, while others are very resistant. Inasmuch as the rotation of crops is essential for ideal conditions for plant growth it should certainly be practiced whether or not fertilizers are used.

We are forced to conclude that the greatest net returns are to be obtained from the use of fertilizers when all conditions are as near ideal as possible for plant growth.

Since fertilizers are applied to soils because of deficiency of plant food, or of slow availability of one or more elements that are present, the amount to apply will be governed by a number of conditions.

When one applies a relatively small amount of a mixed fertilizer and the early growth of the crop is stimulated, and later on obtains its food primarily from the soil, it must be looked upon as a process of stimulation. Let us suppose, for example, one applies 200 lbs. per acre of a 2-8-2 fertilizer to wheat, which means an application of 4 lbs. ammonia, 16 lbs. of phosphoric acid, and 4 lbs. of potash, and the yield of the wheat is 30 bushels per acre, then more nitrogen and potash are removed from the soil than are added in the fertilizer mixture. This undoubtedly means, unless one is supplying nitrogen to the soil by means of legumes or stable manure, he is rapidly approaching nitrogen shortage in the soil. However, since most upland soils are well supplied with potential potassium there is less tendency for a shortage in this substance.

In practice many apply a sufficient amount of fertilizer to the soil to supply the crop with the various elements and ignore the plant food present in the soil. This system of fertilizing is generally practiced when the soils are devoted to large cash crops where quality and earliness are chief considerations, as in the production of market, garden and green house crops.

The aw of diminishing returns must be considered in soil management. It is well recognized that small applications of manure or commercial fertilizer results in a greater percentage increase of yields than do larger ones. Owing to this condition and the fact that the cost of fertilizer increases with the quantity used the value of the crop finally becomes less than the cost of the fertilizer treatment. If one were to apply a mixed fertilizer at the rate of 100, 200, 400, 800, 1,600 and 2,000 lbs. to the acre respectively he would find that the fertilizer would cease to be profitable for most crops when the application exceeded 400 pounds per acre. If large cash crops such as potatoes, beets and cabbage were being grown the maximum profits would be obtained from somewhat larger applications.

The method of applying fertilizers depends upon the amount added and the nature of the root systems of the crops fertilized. Where large applications are made broadcasting and dragging in well before seeding are followed, inasmuch as the residue is uniformly distributed in the soil for the crops that follow. For applications smaller than 400 lbs. per acres (unless mixed and distributed with some substance, like sawdust, dry earth, or muck) the grain drill with fertilizer attachment is generally employed and desirable. Where small amounts are used chiefly for the stimulation of early growth, the mixture should be applied in the hill. Some potato and beet growers apply portions of the fertilizer in the hill and the remainder along the rows later on. Thorough incorporation in the soil mass is looked upon as being essential for best returns, unless top dressings of meadows and pastures are made.

There are possibilities in altering our methods of applying fertilizers. As a general rule potash is applied to the upland soils for the benefit of the crop that is grown the year it is applied. In other words the amount added is so small that little, if any, remains in the soil for those that follow. Moreover, nitrogen is utilized in the same manner, if added in larger amounts than is needed by the crop it will be washed out before the next season. On the other hand phosphorus is and should be used in much larger amounts and, as shown in another article, does not leach out of the soil to any appreciable extent. The nitrogen and potash could be placed in the row or near it when cultivated crops are grown, and the phosphate distributed throughout the soil mass. Such an arrangement should result in the most efficient use of the fertilizer constituents. This would apply where one purchases the unmixed goods.

If one is using small amounts of mixed fertilizers mainly for crop stimulation, and the residues ignored, they may be applied to any crop, but if large amounts are being used and the surplus amounts of phosphorus and potash are to be utilized by succeeding crops, the mixture should be applied to the heavy cash crops in the rotation and the crops that follow make use of the residues.

Sense and Nonsense

Checked His Pants, Too

A young fellow, who was off on a jaunt out west, fell into hard luck and had to pawn one of his suits. Just before starting for home he managed to get it out again. When he reached home his mother, while unpacking his trunk, came across the coat with the pawnbroker's tag on it.

"John," she inquired, "what is this tag on your coat?"

John, not wishing to have his mother know of his temporary embarrassment said:

"Oh, I was at a dance and checked my coat."

Soon she came across the trousers with the same kind of a tag on them.

"John," she demanded, "what kind of a dance was that?"

Hello, Moses

At one of the western camps was a young rookie who, during the first few days of his sojourn, was the victim of so much guying that he doubted all the men and their motives. One night while he was on guard the tall figure of one of the officers loomed up in the darkness before him.

"Who goes there?" he challenged.

"Major Moses," replied the officer.

The rookie scented a new joke. "Glad to meet you, Moses, old top," he said cheerfully. "Advance and give the Ten Commandments."

Mysterious Disappearance

"What became of that young man who was paying so much attention to you?"

"I don't know. I let him walk to the grocery store one afternoon with me, and after he saw how much we had to pay for things to eat, he just quit coming to see me."
Post.

Two Wrongs, One Right

"An optimist is a man who cherishes vain hopes, and a pessimist a man who nurses vain regrets."

"And what is the man who does both?"

"Oh, he's just a plain ordinary human."

A Matter of Rank

"Are you the captain of your soul?"

"Sort of a second lieutenant," ventured Mr. Henpeck dubiously.

Spring—

Supported by Strength that Guarantees Long Mileage Life

—the robust Gillette Non-Skid tread takes the sharpsting out of jolts and puts joy into motoring.

The Gillette Chilled Rubber Process toughens rubber so that it can't be cut to ribbons or deadened by road strain or shock.

Abolishes tread and fabric separation.

Reduces sand blisters and blow-outs to next-to-nothing.

Gives you a Non-Skid Tire of greatest comfort — greatest safety — and greatest mileage.

Feeding Cows to Increase Their Milk Production

FEED AND production records, which should be of interest on account of the accuracy with which the nutrients fed could be calculated, were obtained during the past year on seven Holstein-Friesian cows at the Beltsville (Md.) experiment farm of the Dairy Division, United States Department of Agriculture. These cows, which are a part of the foundation herd used in line breeding and inbreeding project in charge of R. R. Graves, have now completed their first semi-official yearly test as heifers, and in accordance with the plan of the breeding work they will be tested later on as mature cows.

The cows are fed in such manner as to show their producing capacity, though no attempt was made to force them to extremes. The animals were not run on pasture, and did not receive any green feed during their lactation period. Consequently full and accurate records of all nutrients consumed are available. All of these cows were milked three times a day throughout the year's work. All test animals are handled under as uniform conditions as possible, in order that the records of the next generation, when made under the same conditions, may be comparable. The names and herd numbers of the animals that completed their records are:

No. 228. Gerben Queen Segis Cornucopia, 294761.

No. 227. Beauty Korndyke Gerben, 288919.

No. 229. Mercedes Laura Ollie, 307236.

No. 230. Watson Segis Pontiac Homestead, 316969.

No. 231. Lone Star Pontiac Segis, 2nd, 323757.

No. 214. Lady Colantha Walker, 365573.

No. 225. Lone Star Pontiac Segis, 239068.

Cows 228 and 227 are daughters of Hazelwood Korndyke Gerben, 98063. Cows 229, 230 and 231 are daughters of Piebe Laura Ollie Homestead King, 110474. No. 214 is a daughter of Johan Woodcrest Lad 11th, 103987, and was bred at Beltsville. No. 225 is a daughter of King Segis Pontiac Count, 93909.

All the animals in this list, with the exception of No. 214 were shipped from Minneapolis on March 22, 1918, arriving at Beltsville on April 1. With the exception of No. 229, there was no time for any special fitting, and in fact all were in ordinary condition at time of calving. No. 228 freshened April 4; No. 231 freshened April 10; Nos. 230 and 227 freshened April 18; No. 225 freshened April 29; and No. 229 freshened May 28. The following table gives a summary of the production and feed consumption, also the age of the animals at the time the test was started.

Composition of Grain Ration

The grain mixture that was fed to these cows was made up of the following feeds, by weight:

Corn meal	2 parts
Gluten feed	2 parts
Wheat bran	2 parts
Oats	3 parts
Dried brewers' grains	2 parts
Cottonseed meal	2 parts
Linseed oil meal	3 parts

Molasses was fed at the rate of 0.6 pound per day after December 1, 1918. The dried beet pulp was fed after being soaked in water. It should be borne in mind that these cows were not fed from the viewpoint of economy of production, but rather to ascertain their producing capacity.

It will be noted that there is a considerable difference in the amount of total digestible nutrients consumed per 1,000 pounds of milk produced; per 100 pounds of fat produced; and per 100 pounds of solids produced.

There was very little difference in the size of cows 231 and 214, yet No. 214 produced 1,173 pounds more milk and 48 pounds more fat than did No. 231, and consumed slightly less digestible nutrients per 1,000 pounds milk and per 100 pounds fat produced.

Troubles Suffered by Cows

All the cows shipped from Minneapolis suffered severely from heat during their first summer at Beltsville, Md. No. 228 was troubled some with foot rot, and was also used in a water experiment from November 5 to March 28. No. 227 was troubled for some six weeks following her freshening by an obstruction in one teat. No. 231 was off feed at two different times as a result of bloating from alfalfa hay. No. 229 was very sick in December of her test from compaction followed by a slight case of pneumonia, and lost considerable weight during her illness.

Al of these animals made considerable gains in weight during their tests. Undoubtedly a part of the surplus digestible nutrients consumed over the amounts required for production and maintenance were used for this growth and gain in their weight. The surplus of digestible protein consumed was much greater than the surplus of total digestible nutrients. Men who feed cattle for large production have long thought that the narrower ration acted as a stimulus to greater production. From the standpoint of economy the narrower ration is no more costly than a wider ration, at present prices of feeds.

SUMMARY OF FEED AND PRODUCTION RECORDS FOR ONE YEAR FOR SEVEN HOLSTEIN COWS

Number Herd	Age test started	Milk produced	Fat	Fat produced	Feed Consumed: Grain	Beet Pulp	Alfalfa hay	Molasses	Corn silage	Nutritive ratio of ration	Digestible nutrients per 1,000 lbs. milk	Digestible nutrients per 100 lbs. fat	Digestible nutrients per 100 lbs. total solids	Total digestible nutrients consumed pounds

Lowering the Cost of Keeping Stock by Feeding Silage

I HAVE BEEN looking up this silo business of late, and I have made up my mind that Bill Spivins will have a silo next year right up alongside of his red dairy barn. I am giving you the conclusion of some two or three years of investigation, and you can put it down that I am going to do just what I say.

For several years I have milked a few cows, fed out a few steers, and practiced what you might call general farming. My wife and I have gotten along very nicely and have gotten ahead. Occasionally we keep a few accounts so we know something of what departments of our business are paying. I must confess, however, that my wife deserves the credit for telling me about the good work of the cows and chickens. For some reason it is hard for a man to keep track of these small sums which come in every few days but which at the end of the year show a surprising total. I told her that I had noticed recently that our best farmers were inclined to erect monuments somewhere among their buildings, and these monuments certainly reflected something. The round high towers give a splendid opportunity for a man to look around him and take a survey of his property; more than that, these fellows who have the observation towers seem to have very big cream checks, and when they ship out a load of cattle there is a sort of shine and fullness to them which makes them top the market. I noticed that when they had those cold stormy spells, the men who owned the silos seemed to be perfectly content, and I am sure their cattle were. This chopping corn out of shocks when it is covered with snow and ice is not the kind of job which keeps the boys on the farm, and it's not the kind of feed that puts the milk in the pail. The other day when I hauled in a load of corn stalks that had been weathered for some six months, and looked like hazel brush well cured my wife remarked that she would prepare some of the cabbage which had been left in our garden for my dinner. I observed the cabbages as I came in, and really thought that she had summed up the situation correctly. When I found some good old sauer kraut and spare ribs on my plate I couldn't help but think of those good cows and their brothers smiling over their mess of silage.

SADIE GERBEN HENGERVELD DE KOL

I figured up the other day and found that our cows were producing about one hundred and fifty pounds of butterfat a year, and this I know is above the state average; but I found that Henry Jones' cows had averaged over three hundred pounds of butterfat for the year, and this meant that he received about six times more out of his cows than I did out of mine, for it costs about so much to keep a cow a year and of course there is no difference in the cost of milking whether a cow gives four quarts or four gallons. The investment is there, and it's a cow that

CATTLE

HOLSTEIN-FRIESIAN

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.
A son of Maplecrest Application Pontiac—152652—from our heavy-yearly-milking-good-butter-record dam will solve it.
Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.
He is one of the greatest long distance sires. His daughters and sons will prove it.
Write us for pedigree and prices on his sons.
Prices right and not too high for the average dairy farmer.
Pedigrees and prices on application.
R. Bruce McPherson, Howell, Mich.

FOR SALE
THOROUGHBRED HOLSTEIN COWS

D. E. DEAN, Milford, Mich.

C HOICE REGISTERED PERCHERONS For Sale
1 gray mare 12 yrs.
1 black mare 3 yrs.
1 sorrel mare 3 yrs.
Spring Colt.
BARNEY GIESKEN, R3, St. Louis, Mich.

F OR SALE—IMPORTED BELGIAN STALLION. Weight 1,800. Will sell at reasonable price if sold at once. John Townsend, Armada, Mich.

BELGIAN AND PERCHERON DRAFT STALLIONS

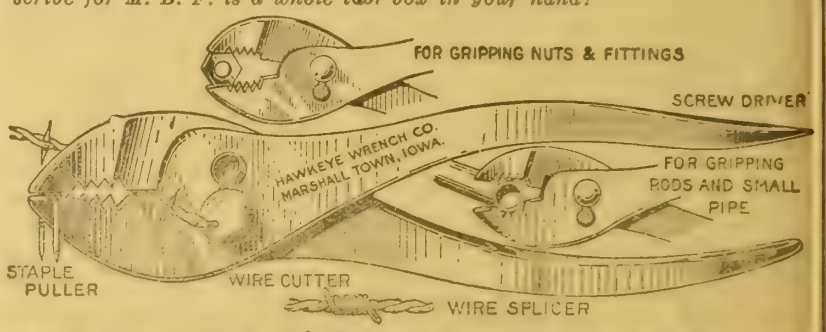
With Size and Quality

MR. FARMER: Now is the time to raise draft horses. I put out stallions on a breeding plan. If your locality needs a good draft stallion, let me hear from you.

FRED G STEVENS
Breckenridge, Mich.

THE OLD FAVORITE

"The crocodile wrench you sent me for getting my neighbor to subscribe for M. B. F. is a whole tool box in your hand!"



THE "CROCODILE" WRENCH is drop forged from the finest tool steel and scientifically tempered. Every wrench is guaranteed against breakage. It is 8 1-2 inches long and weighs ten ounces. Teeth and dies are case-hardened in bone black, making them hard and keen. Requires no adjustment, never slips and is always ready for use.

DIES ALONE WOULD COST $1.50

and would be worth more than that to every farmer, as they would often save valuable time besides a trip to town for repairs.

SIX HANDY FARM TOOLS IN ONE

A pipe wrench, a nut wrench, a screw driver and three dies for cleaning up and re-threading rusted and battered threads, also for cutting threads on blank bolts.
The ideal tool to carry on a binder, reaper or mower.
Will work in closer quarters than any other wrench.
Light, strong, compact and easily carried in the hip pocket.
Dies will fit all bolts used on standard farm machinery.

—HOW TO GET YOUR CROCODILE!

Clip out this ad and mail it to us with the names of two new subscribers, with $2 to pay for them. The "Crocodile" wrench will be sent to you prepaid in the next mail. Remember, the subscribers must be NEW ones—not renewals.
(Don't forget to send your own name and address when sending the subscriptions.)

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.
——it tells you when and where to get the best prices for what you raise!
——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!
——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all!

ONE YEAR	$1	No Premiums,
THREE YEARS	$2	No free-list, but worth
FIVE YEARS	$3	more than we ask.

O. I. C. SOWS FOR SALE

ONE OF THE BEST HERDS IN MICHIGAN
Spring gilts and fall yearlings bred for March, April and May litters. I ship C. O. D., pay express and register in buyer's name. If you want a BIG TYPE sow, guaranteed right in every way, write me.
J. CARL JEWETT, R. 5, Mason, Michigan

ower Cost Keeping Stock by Feeding Silage

(*Continued from page* 20)

ust be kept; so if a cow makes a ofit on one hundred and fifty lbs. butter it is a pretty small one, and is easy to see where this profit can increased ten times by slightly creasing her production. The cost hay and feed as well as of pasture so high that it seems that a fellow as got a lot of money to throw away he leaves half of his corn crop each ar to be spoiled by the weather and orm.

I have noticed that all the Experient stations use silos. They also ve all proven that they are practil and will lower the cost of keepg stock. I have noticed that our st farmers and breeders use the lo to the limit, not only for winter it also for summer feeding; and at reminds me that when a fellow n get a profit on two hundred dolrs an acre land used as pasture, he ll have to get better cows than ine, and they will certainly have to crackerjacks. I claim it can't be ne especially in one of our average asons. I have observed that when rn grows best, blue grass withers d dies; and if some of this good ch pasture land could be put into rn and that put in the silo, a whole t more feed and profit could be obined from the acre.

Siage is used not only for dairy ws but for all kinds of young stock, d for fattening cattle, sheep, horss, and chickens; in fact, about evything on the farm will eat it but e hired girl. Sam Jones' claim he efers it to dill pickles.

There is another thing that I noe about this silo business. Every ce in a while, in fact it is pretty ar twice in a while, some durn ing goes wrong with the crop. We ve a hot wind that cuts down the eld, or it gets so blamed dry it es not fill, or we have a hail which st about strips it to pieces, or a tch gets drowned out and we have put in a late crop which gets caught with the frost, or if we are a little late in planting, an early September frost will put it out of commission. The fellow with the silo is always prepared to save whatever he grows and then to turn it into a high priced product that can be marketed for cash as cream or beef. I figure that down in this country with the average corn crop at least one half is in the stalk and leaves. This is the average, taking one season with another. If a fellow can tell me that he can afford to grow this crop and throw half of it away, I certainly can say to him that he is fortunate. If he can save the whole crop I figure he can be sure of a profit.

Yes, I have made up my mind, and you can put me in the silo class. I will have my watch tower right up above the barn as soon as I can get it there. When the neighbors go by they will remark that Spivins is prospering; they always figured that he was a pretty smart fellow and sooner or later would show evidence of it; nothing can keep a good fellow down, and it will be only a few years before he will be buying up some of these surrounding farms The county agent has been calling on him lately, and they claim he has been figuring on going into pure bred stock.

Yes, dear reader, Bill Spivins has got silo wise. He is going to run his farm so as to make the most of it at the same time build up the place so that when he gets through he can sell it for the top price; or if he has a boy who wants to go on with it, he will leave him the richest farm in the neighborhood. The silo is just as essential as the cow; for unless you can feed a cow well and with profit, you're better off without her. The silo will feed a cow with profit, and that it enough. What's the use of trying to prove things after they are already proven. Yours truly.—*Bill Spivins.*

COMPLETE DISPERSAL SALE

— at —

Clio, Mich., April 24th, 1920

at 12:30 p. m.

The entire herd of Andrew J. Littlefield, consisting of 55 head of purebred Registered Holsteins and 5 head consigned by Harry D. Gage of Clio.

TWO THIRTY POUND BULLS

ADMIRAL RAG APPLE—A two year old son of Rag Apple Korndyke 8th and the 32.45 lb. four year old, Uniform Shadeland.

BURTONDALE LIEUWKJE KORNDYKE, a five year old son of Sir Lieuwkje Korndyke Kate DeKol and the 30.67 lb. cow Bessie Calamity Countess.

There will be ten daughters and twenty grand-daughters of the 1,200 lb. yearly record bull, MAPLE CREST KORNDYKE HENGERVELD.

There will be twenty daughters of the 30 lb. bull BURTONDALE LIEUWKJE KORNDYKE.

There will be thirty females in calf to ADMIRAL RAG APPLE.

About a dozen of these cows have records ranging from 14 and 15 lbs. at two years to 27 lbs. at maturity.

The rest are undeveloped young cows of fine individuality and rich breeding—just what you want for foundation stock.

You cannot afford to miss this sale if you are looking for well bred stock at a reasonable price.

All animals will be tubereculin-tested by a state approved veterinarian.

Clio is ten miles north of Flint on the Pere Marquette R. R., and the Michigan Electric Railway, and is on the Dixie Highway.

Catalogs by E. M. Hastings, and will be mailed on request.

Time—Time!

Time is the essence of everything to the Country Business Man.

The element of time is of even greater importance to the agriculturist, the stock raiser, the dairy or truck farmer, than it is to the urban business man.

In seed-time, haying or harvest time, the loss of a day may mean the loss of a large part of the season—and much, if not all, the net profit on the year's work.

For weather and growing crops will not wait.

Nor will the markets—either local or national.

When a broken farm implement necessitates taking the team off urgent work for several hours to get the repairs or replacements, it often means loss of many times their value—less acreage in crops—or grain lost through over-ripening.

That's when the pneumatic-tired Reo "Speed-Wagon" proves its worth and quickly pays for itself.

It leaves to the horses or the tractor the field work while it does all the road running.

This Reo "Speed-Wagon" markets at twenty miles an hour instead of four.

Eighty per cent of the time now wasted between farm and town can be made available for increased profits.

And—the Reo will do another day's work after the horses are in the barn.

Successful farmers no longer consider getting along without a motor truck—it makes successful farmers.

There is a Reo Dealer in your Vicinity.

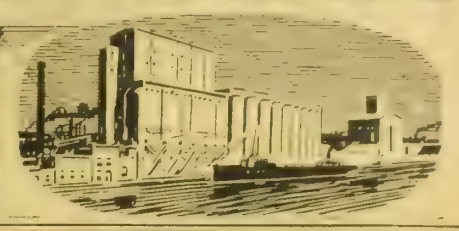
An Independent Farmer's Weekly Owned and Edited in Michigan



Vol. IX, No. 32 | MT. CLEMENS, SATURDAY, APRIL 24, 1920 | $1 PER YEAR

(Just to be a boy again!

In This Issue:—Federal Judge Restores Sixteen Cent Milk—Governor Seeks Beet Conference—Protection for Buttons Free Trade for Beans—Consumers' Boycott Brings Potato Prices Down—Why I Prefer the Farm to the City.

If your barns burned to-night?

What would it cost YOU to replace them?

HAVE you stopped to consider what it would cost to duplicate the buildings on your farm to day? With lumber, hardware, nails, roofing and paint at unheard of prices? Even country carpenters are now asking a dollar an hour and are hard to find at that figure.

You Are Under-Insured

if you are not carrying **twice as much** insurance on your farm buildings today as you did last year !

Fire comes without warning and without pity to all. It is the common enemy of all and this big safe company, with a Million Dollar capital, backed and officered by men known to every business farmer in Michigan, stands ready to carry your fire, hail or windstorm risk, at the lowest possible rates.

It does make a difference in the insurance company you pick!

But if you are to-day insuréd in a good company or mutual, don't give up that insurance, simply take out a like amount in the Peninsular and then you will not be carrying any more insurance than present high prices demand.

Remember we do not insure all farm property at the same rate. The best risks have the lowest rates. We give the business farmer credit for his protective improvements.

Drop us a postal card to-day for rates and other information, sent free.

Latest Facts on R. R. Situation

Pere Marquette Decides not to Accept Government Guarantee

(By the Farmers' National Council)

ADMISSIONS are leaking out day after day from railroad officials and financial writers as to what the return of the roads really means to the American people. The Farmers' National Council was regarded as radical in opposing the return of the roads and urging the two year extension of government operation. Events to date thoroughly justify the fight they made.

Mr. F. J. Lisman, financial writer in Commerce and Finance, discussing the railroad situation comments that if the Interstate Commerce Commission should say hereafter that it would allow the railroads, say 6 1-2 per cent on the capitalization, in order to restore their credits, "then it would be necessary to permit the companies to earn $190,000,000 additional annually which is only an increase of about 3 per cent on the gross earnings which now are well toward $6,000,000,000 a year."

Must Allow Companies Seven to Eight Per Cent

Mr. Lisman also says "In order to really give a broad basis of credit to the railroad companies it would be necessary to grant a rate level of which would permit the companies to earn from 7 per cent to 8 per cent. Every 1 per cent extra on fair valuation would amount to about $200,000,000. While it would be in the interest of the shippers to have the railroad companies get this money, it is hardly to be expected that the Interstate Commerce Commission will take such a broad view as to permit this—there would be too many objectors."

No New Companies to be Organized

Mr. Lisman says, "it is absolutely certain that under the new law no independent railroad companies will be organized, either for the purpose of building branch lines or main lines because capital need not take any risk for the purpose of betting a return of 5 1-2 per cent at best, if successful, and less than that if not successful. Any new branch lines will have to be built by the municipalities or shippers themselves, or the communities will have to build good motor roads in order to get an outlet for their products."

The Market Letter of Goodbody & Co. for March 5th, last, says, "when the railroads have been valued as of the present, which none have as yet been—we would not be surprised to see roads like the New Haven, Rock Island, Southern Railway and Chesapeake & Ohio, earning from 5 to 20 per cent on their common stocks. We agree with Mr. John Moody's conclusion that, under the new law, 'the best railroad stocks should be worth as much in the future as they were before the war."

Guaranteed Compensation Close to Highest Earnings

Mr. Moody says: "It now looks as though this 5 1-2 per cent on the property investment would give the railroad stocks an average earning power of about 6.32 per cent. as compared with 6.36 in 1910, 6.39 in 1907, and 6.72 in 1906, when the highest previous record of surplus earnings was made."

Under the terms of the bill, March 15th, was the last day on which the railroads could accept the extension of government guarantee for six months. The Pere Marquette which earned the largest surplus under government operation has decided not to accept a guarantee, as did the Southern Railway, though during 1919 it showed a deficit of nearly $9,000,000. The United States Supreme Court has recently given a decision on the valuation of the Kansas City Southern Railway that when valuing the railroad the actual costs of acquiring condemned lands as of July, 1914, will have to be taken into consideration.

Mr. Lisman comments on this decision, "It probably would be a reasonable assumption that, taking the railroads of the United States as a whole, the increase in valuation will amount to about 10 per cent."

Mr. Sherley, director of Finance of the Railroad Administration. has reported that at least $435,000,000 more must be provided to settle matters arising out of Federal control, than was claimed in the railroad bill.

These figures are estimates and are doubtless low, because the majority of the railroads have accepted the government guarantee of compensation and they can inflate expenditures to as high a point as possible and then secure a given dividend.

Railway Owners Admit 50 Per Cent Freight Increase Needed

As tne Interstate Commerce Commission is opening hearings to determine what changes in freight rates will be necessary to meet the one billion dollar advances for expenses and for wages to nearly 2,000,000 employes during the two years of government operation, the owners of the railroads are trying to make it appear that this advance has reduced the railroad net income to about 2 and 3-4 per cent, or half the minimum under the new transportation law. Railroad experts estimate that an increase in freight rates of approximately 25 per cent will be needed to take care of advances already granted and that if the Brotherhoods requests for fair wages are granted, rates will have to be increased 25 per cent more, making a total of 50 per cent over the present rates, that is ,an increase of one-half.

Government Operation Would Prevent Large Increase

Continued government operation would have prevented large increases. It should be remembered that although costs of operation, including material and maintenance increased rapidly under government operation, the prices of the service rendered by these rates increased only an average of about 1-3 exclusive of increase necessary to meet payment of wage increases prior to the period of government operation. With the tremendous economies which were being effected under government operation no large increase would have been necessary to make the roads self sustaining. Every outlay by the railroads of $50,000,000 involves an increase of 1 1-2 per cent in rates under private operation. Within the next two years the railroads will have to borrow approximately two billion dollars under private operation. For this they will have to pay about 7 per cent interest. Under government operation money could be secured at about 4 1-2 per cent, which would make a saving in interest on $2,000,000 of $50,000,000; and prevent thereby an increase in freight rates of 1 1-2 per cent on this single item of interest. The total interest charge would be reduced several hundred million under public ownership. Under private operation this burden falls on those least able to bear it.

Return of Roads to Blame

The increase in wages is not due entirely to private operation, though to some extent, but increases in interest charges, an increases in prices paid for material, supplies, equipment, etc., due to the provisions of the bill returning the railroads, which guarantees the roads a net return after they have paid maximum prices for material, supplies and equipment are directly attributable to private operation. Under government operation railroads are conducted to develop agriculture, manufacturing and commerce; under private operation, purely for profit making. An increase of 50 per cent in freight rates would mean a total increase in revenue of close to $2,500,000,000; such an increase will require the farmers to pay the roads close to $400,000,000 more a year for carrying farm products than at present rates. Furthermore if the increase in the cost of living, due to an increase in the freight rates is five times the rate increase, as stated by the Director-General of Railroads, and other authorities, the addition to the consumers cost of living burden will be fully $10,000,000,000 a year. of which the farmers as large users of commodities transported will have to pay at least one-third. So the return of the railroads will cost farmers in increased prices at least $3,600,000,000 and in higher freight rates on farm products $400,000,000, a total of $4,000,000,000.

Manufacturers Refuse to Attend Conference

Tell Governor Sleeper That They Have Sufficient Acreage for 1920 Operations

ONCE MORE the sugar manufacturers of Michigan have shown that they are the most colossal bluffers that ever came down the pike. In response to an invitation which Gov. Sleeper directed to the sugar beet growers and manufacturers to attend a conference at Lansing this week and endeavor to adjust the differences which now threaten to cut the production of sugar in this state by fifty to seventy-five per cent, they replied, to the effect that "nothing could be gained by such a conference; that they had all the acreage they could handle for their 1920 operations; and that the Governor was 'unduly alarmed.'"

Gov. Sleeper's invitation was sent out the latter part of last week at the behest of parties, it was announced "who were interested in having Michigan produce a normal supply of sugar." As soon as it was announced that the Governor desired a conference, Mr. C. E. Ackerman, manager of the Beet Growers' Ass'n, wrote a letter to Mr. Sleeper commending him for his action and offering to participate in such a conference. Mr. Ackerman also wired the Governor, Attorney General Palmer and the Saginaw Board of Commerce, that "thousands of acres of land which was plowed for beets is already being planted to other crops, and unless differences are adjusted very soon the sugar beet acreage will be short."

Mr. Ackerman received a letter last week from the Saginaw Board of Commerce offering the services of that Association as a mediator. Mr. Ackerman replied that the growers appreciated the interests of the Board but held that the only way the differences could be settled was by a conference between representatives of the sugar companies and of the farmers.

We adhere to this statement, and for that reason we are glad that the manufacturers have refused to attend a conference at the Governor's request, although we commend the Governor for his efforts to bring the producer and the manufacturer together. A conference such as suggested would merely be the means of patching up the difficulties as heretofore, and would be a virtual admission on the part of the growers that their organization had failed to produce results. The Beet Growers' Ass'n is certainly big enough to handle this situation without outside interference, and it WILL handle it, if every member stands loyal to the organization.

The manufacturers claim their acreage is sufficient. While we cannot but admire their nerve for making such a statement at this stage of the game, their disregard for the truth is rather contemptible. There are only between 10,000 and 12,000 beet growers in Michigan, and today over 10,000 of them are members of the State Association. By their affiliation with the Association or by a definite promise these men have agreed not to plant beets in 1920 unless they get their price. So when the manufacturers claim their acreage is sufficient, they are telling downright falsehoods, and every beet grower knows it.

Beet Growers, you have the fight of your lives upon your hands. And yet victory is yours if you only know it. Why not have faith in your brother beet grower? If every one of you make up your mind to sign no contract and STICK to that decision, the manufacturers MUST meet with you or else their factories will not run. This is so plain and self-evident that it needs no emphasis. The manufacturers know this as well as you, and they are relying solely upon their ability to outwit you and outbluff you.

The western beet growers stood like a wall behind their demands, and they won! You beet growers of Michigan cannot do less. If the western sugar companies can meet with representatives of the growers, the Michigan sugar companies can do the same, and it will be a blot upon organized agriculture, if the growers do not STICK, man for man, until the fight is won.

The Future ot Beans

IT IS extremely fortunate at this particular time when the beet growers are looking about for the best crop for their beet land that the bean market should recover from its long slump and prices increase. Beans are Mcihigan's old standby, and during average years they are a safer and more profitable crop than sugar beets. Reports from California, New York and Michigan are to the effect that the acreage will be cut forty to sixty per cent. We believe this is a correct estimate. This means that beans are going to be scarce,—it always happens after a season of plenty,—and prices will be high. Beans ought to make the best crop that the sugar beet farmer could plant. There is plenty of good seed available; the crop works well in rotation; and it doesn't require as much labor as beets. Why not, beet growers, just tell the sugar manufacturers to go to Halifax this year, and instead of sugar beets, plant beans,—or grain?

Federal Judge Restores Sixteen Cent Milk

MILK is back to 16 cents per quart in Detroit and farmers will receive $4.05 per cwt., less surplus deduction, for at least the balance of April.

The restoration of the former price comes as a result of a ruling by Judge Arthur J. Tuttle that the provisions of Section 4 of the Lever Act are too vague as to what constitutes a fair price, and that it is unconstitutional. Judge Tuttle issued an order restraining U. S. District Attorney John E. Kinnane from prosecuting the milk dealers for selling milk at 16c per quart.

Thus ends temporarily the dictation of the Federal "Fair Price" Board, and leaves the Milk Commission free to adjust the price as heretofore. How long this freedom may be enjoyed is a matter of conjecture, as Mr. Kinnane has intimated that he will appeal the case and Judge Tuttle has recommended that a legal board be appointed by the federal government.

THE FIRST battle in the struggle of the milk producers and distributors to maintain their right to charge a price for milk commensurate with the cost of producing and distributing it was precipitated last week when the distributors filed a petition with Judge Tuttle, federal judge, asking that an order be issued restraining the Fair Price Board from enforcing its ruling reducing the price of milk from 16 to 14 cents. Judge Tuttle refused to issue the injunction until he could examine the Lever law and pass upon its constitutionality.

Farmer Foots the Loss

The reduction in the price of milk amounts to 2 cents per quart or about 93 cents per hundred pounds. The creamery companies claim that they cannot distribute at a less margin than they have been getting, and the farmers claim they cannot produce milk at less than $4.05 per cwt. The only difference between the two is that the creamery companies retain their own margin and take the reduction out of the farmers. But that's to be expected. The farmer has been the goat so long that he's becoming accustomed to it, and submits to the indignity without much complaint.

Imlay City Farmers Strike

As a result of the Fair Price Board's decision the distributing companies have reduced their price to the farmer to $2.75 per cwt., for 3.5 milk. Of course, no dairyman, no matter how good and efficient a business man, can produce milk at this figure under present costs, and the continuation of this price for any length of time means ruination to thousands of milk producers. Most of the producers are submitting temporarily to the arbitrary dictates of the Board and have made no appreciable cut in the amount of milk they have been furnishing the companies, but a good many others have started reducing their herds and otherwise cutting down on their whole milk sales.

The most drastic action that has been taken was instituted this week when several hundred farmers in the vicinity of Imlay City went on a strike and refused to sell milk at the new price. The loss to them amounts to around $2,000 a day, but they are cheerfully taking their medicine, bitter as it may be. There is much current talk of a strike in other sections of the Detroit area. Were it not for the Lever act which prevents the milk producers from striking as a body, it is practically certain that the city of Detroit would be clamoring for milk at any old price within a fortnight.

At the special meeting of the Producers' Association last week, arrangements were made to create a fund for advertising purposes and to establish a "nest-egg" for emergency purposes. The question was asked as to whether or not this "nest-egg" was to be used to establish a distributing plant. Pres. Hull replied that he did not think the time was ripe to discuss the distributing proposition? While we have the utmost respect for Pres. Hull's foresight and ability, we ran scarcely agree with him on this point. We believe that if the time was ever ripe or if the time will ever be ripe for the milk producers of the Detroit area to seriously discuss the establishing of their own milk plant in Detroit, that time is the present. We should like to hear from the milk producers on this point.

Northern Michigan a Rich Agricultural Empire

Potatoes, Sugar Beets, Live Stock, Fruits and Grains are Profitable Crops in Northern Section

By A. M. SMITH, Missaukee County

PROBABLY few people in our great country realize that lower Michigan, north of Grand Rapids is only partly developed even where it is considered fairly well settled, and that nearly the entire northern half of that great territory is as yet not half developed nor cultivated in any way.

There are many reasons why this great territory is as yet a partial wilderness. One is that lumbering interests held much of the territory and for years prevented the settler from gaining a foothold. Another is that vast areas of virgin prairie, ready for the plow were infinitely more inviting that the cut-over lands which require a large outlay of labor before they are ready for the crop. Another has been, that the one important money crop, potatoes, has been uncertain because of the seasons and fluctuating prices, which some years have been good and other years as low as 10 cents a bushel.

Then there has been a general impression abroad in the older parts of Michigan that the northern part of Michigan was practically worthless. We want to forecast the great changes which are imminent for this large area, an empire in itself, and will show why this is true.

First its location as to markets is excellent. Everybody realizes that a home market is the best market. Both by rail and water, marketing facilities to great cities from northern Michigan are excellent and within Michigan herself and at her doors are millions of people who must be fed. Then again we realize that the cheap prairie lands of the west are occupied. The land looker must turn back now in his quest for a cheap home. Nowhere can he find his needs supplied better than in the territory comprising the cut-over lands of the lower peninsula of Michigan. Recent developments in agriculture along the lines of money crop such as potatoes and sugar beets and stock raising such as sheep, beef cattle and dairy cattle, makes the future prosperity of this great territory assured. As these industries should go along together, I shall deal with them in that way.

No, this is not a scene in California. It is a typical view of a Northern Michigan orchard sloping down toward one of the thousands of lakes of the region.

Stock raising and dairying in this territory is attractive for many reasons. On good soil pasturage is abundant and the business farmer settler has found out that if he will cut the brush off his land and seed it to grasses that he very soon has abundant pasturage which make dairy cows milk abundantly and beef cattle and sheep wax fat, and he also discovers that after three or four years he has a splendid cleared field free from brush and briars, ready for the plow with a relatively small expense for labor in stumping and chunking up if he has hard wood land.

It is the opinion of the writer that many of the pine lands should not be cleared until the hard wood lands shall be exhausted. But it looks now very much as if the pine stumps were soon going to be worth for fuel all it costs to pull them and work them up into wood.

With the aid of dynamite and modern methods of clearing land the task of making a farm out of cut-over land is not as great as one would think.

The writer has done considerable of this kind of work and has made it a practice to take every stump before ever attempting to plow. Better 10 acres cleared than 20 half cleared, has been my motto. The truth of this was impressed on me early in my farming career. I was clearing in the spring for a crop of potatoes, and as I was in a hurry to get to planting I left a few stumps. One of these was a big hemlock which a pound of dynamite would have blown out. When I dug my potatoes I measured the ground occupied by the stump and found that the same area near the stump had grown one bushel of market potatoes, worth when dug fifty cents. I then and there determined that "never again" would I cultivate a stump as I receive no increase from such labor.

I find that cattle keep down brush just as well as sheep after the brush has been cut off. Present prices for butterfat and good dairy cows make this branch of stock raising most attractive, although of course many prefer beef cattle and sheep and a man usually does best with the line he likes best. The stock raising industry fits in well too with the money crops, so increasingly important in western Michigan. Manure furnishing the humus and important fertilizing elements so much needed in the raising of potatoes and sugar beets is no inconsiderable part of the profits of stock raising. And the turning of cheap grass and rough feeds into beef, mutton and butterfat balance up the expense accounts incurred in the raising of the money crops. Most important to this great new area at present is the splendid outlook for the potato crop on which for so long the farmer of northern Michigan has depended to obtain money with which to meet his payments and pay his taxes and grocery bill.

For this crop so far as marketing

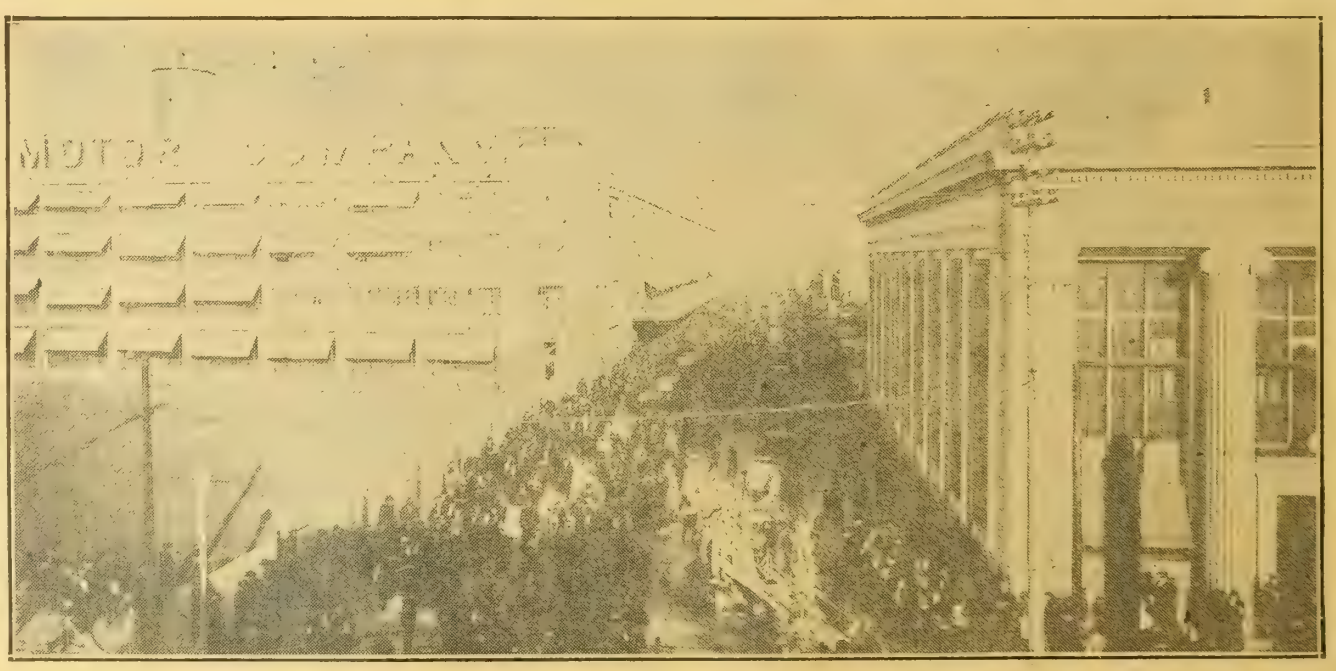
"Why I Prefer the Farm to the City"—By One Who Has Tried Both



A partial view of the Highland Park plant of the Ford Motor Company showing a "few" of the 30,000 men employed there. Three hundred days out of the year this army of men punch their time clocks in the morning, sit at machines all day long as though they were a part of the machine, and at night flow out through the doors, like ants out of an ant-hole, and stand in long lines often in the pouring rain waiting their turn to board the street cars into which they are jammed like sardines, some of them to ride for an hour or more before reaching home. Hundreds of thousands of men work year after year under these conditions. Would you exchange the pure air, the sunshine, the birds and the flowers—yea, even the hard manual labor of the farm,—for this?

By R. E. BENNETT, Sanilac County

CHORES are finished for the night and have just read the article "How can we Keep the Boys and Girls on the Farm," by Mr. Fred Cressy.

Want to say that Mr. Cressy knows of what he is talking. Any man (or woman for that matter) who has ever lived in the city will certainly agree with Mr. Cressy and I think a few of us can go him one better. From Mr. Cressy's letter, I surmise that he was born and raised on a farm. Myself, I was not that fortunate. Yes, I said fortunate, I know!

Ever since coming to the country and calling it "home," I have never let a chance pass when I could argue with a boy or man and relate to him my experiences, especially if he mentioned the word city. I am happy to say that I have succeeded in keeping at least one boy on the farm.

We all know that there is adventure in all of us, some have more; some less and I certainly had my share. And it is equally certain to crop out at some time or other.

We are unfortunate enough not to have either boys or girls of our own, but have always had a deep interest in them and hope that our recital will at least make some other man's boy think before he bids the "old farm" goodbye.

I was born in a little town on the Ohio-Indiana line in 1888, and it has been town or city ever since until the past few years. Was married in 1907 during the small panic and it was a panic or practically so all the time I stayed in town. Not that I didn't make good money, for I did. I was an automobile trimmer and upholsterer and handy at other things, but, oh, that word "but." It's as bad as that word "if." Well anyway I (I'm going to take the blame if there is any) I wanted to wear good clothes, in other words, be dressy, wanted my house furnished of the best and always tried to keep up my end with the boys, no matter what the cost or whether the butcher and grocer got paid or not. Now, you will say "well that was his fault, he didn't need to do it. Could have saved if he wanted to." Say, take any young couple who are socially inclined, set them down among strangers where money talks or anyhow a show of money does (it's the same for a short time) and if they can do any saving in any city, on any wages paid an un-skilled or even most skilled workers, they deserve all the credit and honor due any hero.

It can't be done.

Well, anyway we dressed good, ate good, took in shows, boat rides, and dances and other things of no need to mention, going farther in debt all the time. All this we thought we had to do, to make an impression on the neighbors to make them think that we were "getting along." Actually only fooling ourselves. Aren't most of us alike on that subject?

Then we awoke one day.

I was working at the Packard Motor Car Co. at Detroit and drawing from $60 to $83 every two weeks. This was in 1915. Good wages for then. I gave the wife $50 every pay day to run the house and believe me or not, I nearly always had to borrow money between times for carfare and lunches. Of course we were trying to buy or pay for a little home, but not succeeding at any alarming rate. At last we decided to try farming. (get that—at last—you know) the court of last resort, and any dub could farm! My idea—the wife knew better, she is a farmer's daughter. So we sold out, paid our debts and had — nothing left. Just a little measly hundred dollars.

Well, anyhow we moved to Tuscola county, and bought an 80-acre tract of wild and—and that is another chapter.

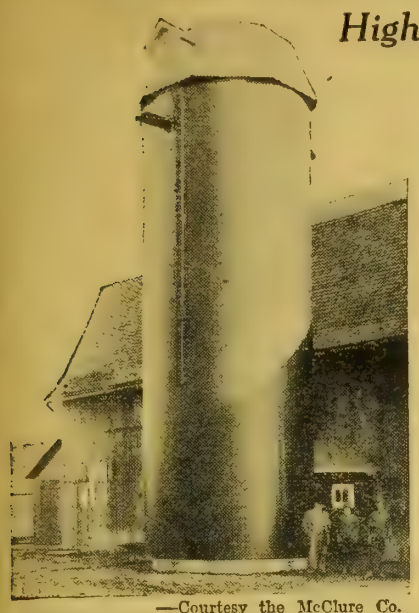
We are not there now.

The good wife and myself both agree that the city isn't and the job "ain't" that would bet us back and keep us there. We have accumulated have more in the end, eat more real years than we did in all the time we spent in the city.

Let me urge you, Mr. Hired Man, you, Mr. Renter and also you, Mr. Owner, stay put on the farm. You'll have more in the end, eat more real food, wear just as good clothes, have oceans of less troubles, and be far more happy and contented than if you make your little sale, and moved to town, there to be just a little fish in a great sea full of other little fish, each trying to exist in half the room and on half the bounty that your maker intended you to have.

Recent Tests Show Feeding Value of Silage

High Cost of Dairy Food Makes Farmer More Dependent Upon Silo



—Courtesy the McClure Co.

Fred Rupprecht and sons of Richville, Mich. Mr. Rupprecht has 90 acres, and milks 12 Holstein cows. He has taken an old run-down farm and put it into a profitable state. He has just completed a most beautiful brick dwelling at a cost of $8,500. The farm is equipped with all modern conveniences even to a series of electric lights in his silo chute so that the boys can get out silage even if dusk has fallen. Mr. Rupprecht is a reader of The Business Farmer.

THE INCREASING cost of grains, hay and commercial feeds makes it increasingly necessary for the dairy farmer to produce more succulent food on his own farm. The problem of preparing and storing sufficient food for the dairy herd during the winter months and when the pastures are dry is acute on the farm without a silo. But where the silo is available, the problem is largely solved.

There are comparatively few modern farms in Michigan which do not have one or more silos as a necessary adjunct to the business. A good many farmers find, however, that a single silo does not provide enough capacity for all the silage that is needed for both winter and summer feeding, and so we find on many farms the multiple silo which gives the farmer an abundant supply of silage against all emergencies.

The various types of silos on the market have been discussed so many times that the average farmer is fairly well acquainted with their construction and the peculiar advantages claimed for each. As time goes on improvement is made in the silo, all tending to minimize loss from spoilage, to increase quality of silage, and to add to the general attractiveness and usefulness of the structure.

One of the most recent departures from the usual type of silo that has come to our attention recently are the silos on the farm of W. J. Brown, at Redford. Mr. Brown, who is a Detroit merchant, is developing one of the most modern farms in Michigan and the equipment is the finest procurable. Because Mr. Brown is financially able to purchase the best for his "play farm" does not lessen the interest in the type and quality of barns, silos, poultry houses, etc., which he is erecting. The barns on the Brown farm are stuccoed, and the owner desired a silo which would match the appearance of his other structures. So he purchased a popular make of wooden silo and applied the stucco, with the result that he has a silo that offers great resistance to heat and cold, that is solid and rigid and that insures good silage next to the walls, and last but not least, a silo that is attractive in appearance.

Some Silage Facts

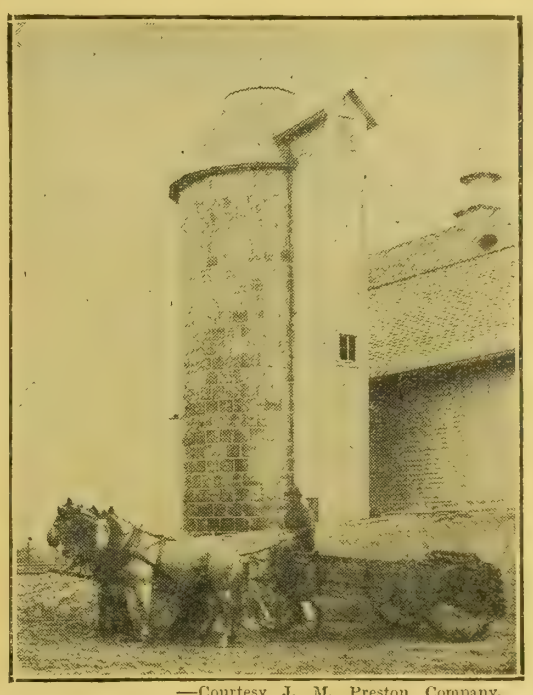
The experiment stations of four of our leading stock raising states have recently published bulletins concerning the feeding of silage in large and small rations to steers. One station compared cane with corn silage as a ration for calves. The experiment stations of our country have for thirty or thirty-five years been using silos. These early structures, however, were crude and hardly fitted for preserving fodder. They were, as a rule, square boxes built in the corner of the barn and either made of stone or boulders. They ranged from fifteen to twenty feet square and very little higher. The silage spoiled in the corners and naturally they were unsatisfactory. These old silos, however, have long disappeared and now modern silos are in use, made of either tile, cement or wood. They are round and narrow in diameter but lofty in height running from 30 to 40 feet.

Up till about four or five years ago the stations that were studying silage rations compared this ration with a shelled corn, oil meal or cotton seed meal and hay ration, but in the last year or two the experiment stations almost without exception are comparing a ration somewhat as follows: say 16 pounds of shelled corn or ground corn, 2 to 3 pounds of cottonseed or oil meal, 25 pounds of clover and say 1 pound of alfalfa or clover hay. This, as a rule, has beencompared with, say 50 pounds of silage, 2 to 3 pounds of cotton seed or oil meal and a pound of alfalfa or clover hay. In other words, instead of comparing a silage with a non-silage ration, they have concluded, almost without exception, that silage was the great cheapener of costs and they are comparing a half silage ration with a full silage ration rather than a comparison between a full silage ration and a non-silage ration.

It is interesting to note that the experiment stations have nearly ceased working on silage as a dairy ration for they have long ago established this fact and have shown its economy as a milk and butterfat producer. They are therefore turning their atention mostly to the amount of silage to use in the beef ration.

Later on in this article we will give the actual figures from the four experiment stations above mentioned. It is outstanding though, in these various experiments that the gains per day have been approximately the same for the combined corn and silage ration and the heavy silage ration lots. Some of the stations show better gains per day in the corn and silage lots. In average cases, however, the cost of manufacturing a hundred pounds of meat was from 20 to 50 per cent lower when the heavy silage ration was used. It is admitted that when the cattle were fed the heavy silage ration the flesh was not quite as hard as a rule, the buyer valued them at 25 to 50 cents per hundred lbs. less. But in spite of this handicap, a heavy increase in the profit was made with the heavy silage fed lot.

In the following tables attention is being paid to silage experiments which pertain directly to silage comparing same with steers fed a small amount of silage with shelled or ground corn.



—Courtesy J. M. Preston Company.

Scene on a modern Michigan farm showing hollow tile silo. This type is meeting with approval in many of the corn belt states.

Missouri

Eight head per lot	Lot 1 (pounds)	Lot 5 (pounds)
Average initial wt.	836.12	820.95
Average wt. at end of 83 days	1114.66	1021.00
Average daily gain	3.35	2.39
Average daily ration:		
Shelled corn	15.29	
Linseed oil cake	2.55	3.67
Corn silage	25.23	40.33
Clover hay	2.88	4.84
Cost of feed per steer	$ 50.23	$ 21.17
Cost per hundred lbs. of gain	$ 15.95	$ 10.69

Kansas

Two year old steers fed for a period of 110 days, in lots of ten each.

	Lot 1. (pounds)	Lot 4. (pounds)
Average daily ration:		
Ground corn	15.31	
Alfalfa hay	13.	2.95
Linseed oil meal	2.72	2.69
Sorghum silage		60.55
Initial wt per steer	944.92	963.10
Final wt per steer	1309.44	1296.67
Average total gain per steer	364.52	333.57
Average daily gain per steer	3.31	3.03
Feed required to make 100 lbs. of gain:		
Ground corn	462.04	
Linseed oil meal	81.96	88.66
Alfalfa hay	392.32	97.43
Sorghum silage		1996.81
Feed cost per 100 pounds of gain	$ 21.48	$ 12.31

Iowa

Standard Corn Belt ration vs. "no grain" ration. Two year old steers fed from December 22nd, 1918, to May 26th, 1919—120 days. Five steers to the lot.

	Lot 1. (pounds)	Lot 7. (pounds)
Final weight	1360.1	1335.2
Average daily gain	2.98	2.74
Average daily feed:		
Shelled corn	15.	
Linseed oil meal	3.	3.
Corn silage	27.4	52.
Afalfa hay	.9	1.5
Block salt	.03	.03
Feed required to make 100 lbs. of gain:		
Shelled corn	504.7	
Linseed oil meal	100.8	109.6
Corn silage	819.8	1899.1
Alfalfa hay	31.6	56.
Block salt	.88	.93
Cost of gain	$ 22.60	$ 16.08
Profit per steer	$ 15.83	$ 23.11
Cost of feed:		
Shelled corn, per bu		$1.45
Linseed oil meal, per ton		70.00
Corn silage		12.00
Alfalfa hay		20.00
Block salt		20.00

It is interesting to note in the above experiment that the farmer who can sell his corn crop in the form of silage to his steers at $12 per ton (counting the average yield for Iowa as ten ton to the acre) will make a good big profit, even though he comes out even in the operation of feeding his steers. In the above experiment it shows that the Iowa farmer can sell his crop to his steers at $120 per acre and that he can still make a profit on the steers of from $23.11, not including the hogs, up to $27.32 if the hogs are counted.

Wisconsin

Ten two year old steers to each lot. Average weight per steer, 920 lbs. Length of feeding, 112 days.

	Lot 1 (pounds)	Lot 2 (pounds)
Average final wt. per steer	1188.7	1179.5
Average daily gain per steer	2.4	2.33
Average daily ration:		
Shelled corn	12.4	
Cotton Seed Meal	2.7	3.5
Corn silage	32.8	56.4
Mixed hay	2.2	2.6

—Courtesy the McClure Co.

Scene on the W. J. Brown farm near Redford, showing wooden silo after it got its coat of stucco to match other farm buildings. The stucco idea is declared to be a departure in silo construction. The material serves to prolong the life of the silo and decreases the danger from frost. Moreover, it makes the silo very attractive in appearance.

Cost of average daily ration	$ .54	$ .37
Feed required per 100 lbs. of gain:		
Shelled corn	514.7	
Cotton Seed meal	113.8	152.2
Corn silage	1364.2	2422.0
Mixed hay	90.3	11.9
Cost of 100 pounds gain	$ 22.64	$ 16.03
Profit per steer ,not counting hogs	$ 8.44	$ 20.35
Profit per steer, counting hogs	$ 19.86	$ 25.33
Cost of feed:		
Shelled corn, per bu.		$1.33
Cotton Seed meal, per ton		65.00
Corn silage, per ton		8.00
Mixed hay, per ton		25.00

Dr. C. W. Campbell, head of the Animal Husbandry Department at the Kansas Experiment Station, points out "that a comparison between the results obtained in lots one and four show that 1996.81 lbs. of silage fed in lot four replaces 469.6 pounds of corn fed in lot one. In other words, a ton of sorghum silage replaces 8 1-2 bushels of corn." He also mentions that the yield of corn on the college farm owing to the extreme dry weather of last summer, was only about 3 1-2 tons per acre but that the yield of sorghum silage was approximately 9 tons to the acre.

It is well to digest for a moment and note that at the time the Kansas station was feedng the above two year old steers they were feeding calves also. They show that the calves made a gain of 321 pounds each in 110 days. The steer made a gain of 354 pounds in the same period; the daily gain per calf being 2.92 pounds and per steer 3.22 lbs. In other words, they point out that, considering weights and costs, better gains can be made with the calves than can be made with two year old steers.

The above experiments are carried through on a straight profit and loss basis, careful watch being taken at all times that every part of feed that went to the steers was properly charged to them at the prices prevailing in that state at that time. These prices, of course, will vary in different states and in different localities in the same state.

There is another angle to this: How many pounds of beef were produced per acre? We have an idea that the average farmer is more interested in these figures than any other and none of the experiment stations have taken the pains to reduce their figures to a "per acre" basis. It is rather hard for a layman to do this, but it seems to me fair to take the broad proposition that a field of corn that produces 40 bushels of ears will produce ten tons of silage. Of course these figures wil vary with different localities and different years, but, taking one year with another, the above estimate is probably fair. I know of many farmers who have secured twelve to fifteen tons or even more silage per acre. In fact, some of the experiment stations themselves reported

(*Continued on page* 23)

Farm Bureau Announces Plan of Wool Pool

Any Local Co-operative Association in Organized Farm Bureau Counties May Act as Assembler for That County

REMOVAL of the headquarters of the Michigan State Farm Bureau from Birmingham, where it has been for the last year, to Lansing, will take place April 30th. This action was prompted by the purchase of a large office building and warehouse at 221 No. Cedar Street, Lansing, recently. In addition to housing the general offices of the Farm Bureau, this Lansing building will also include the seed and wool departments of the organization. The specious storage facilities of the warehouse are expected to be taxed this spring and summer following shipments of wool from the various counties for pooling at Lansing, which will begin within the next two weeks. Local assembling points are being established all over the state for the convenience of the forty-three odd thousand members of the organization. This wool will be handled on a co-operative cost basis. Other arrangements for the removal to Lansing than the desirability of having all the Farm Bureau departments under one roof are the excellent railroad facilities of that city, the geographical location and the proximity to the Michigan Agricultural College.

Preliminary to plans for activities pertinent to Home Economics and Boys' and Girls' Club work in the state which will be carried on by the Farm Bureau under direction of Mrs. J. C. Ketcham, member of the executive committee of the organization, names of chairman of Home Economics departments of the various county Farm Bureaus and names of the leaders of the Boys' and Girls' Club work in the various counties are desired so that co-operation may extensively be obtained. The various counties are asked to send these names to Mrs. Ketcham at the secretary's office as soon as possible. Home Economics and club work occupy an important part in the educational program of the Farm Bureau, though up to the present time it has been possible to do little in this connection because of pressure of problems of a more imperative nature.

Membership campaigns of the Michigan State Farm Bureau were this week under way in Hillsdale and Jackson counties, coming to an end in the latter, and with more than 2000 members seemingly certain. The total membership of the state organization now is close to 43,000.

Rules Governing the Pooling of Wool

In counties where the Farm Bureau membership campaign has been completed or is now under way, Kent, Tuscola, St. Clair, Allegan, Oakland, Barry, Van Buren, Gladwin, Lapeer, Genesee, Montcalm, Monroe, Macomb, Shiawassee, Eaton, Wayne, Ottawa, Washtenaw, Livingston, Berrien, Calhoun, Clinton, St. Joseph, Cass, Lenawee, and Jackson, the County Farm Bureau will appoint the firm, individual or co-operative organization to handle the assembling of wool.

Any co-operative organization, firm, or individual selected by the County Farm Bureau organization may assemble wool upon signing contract and complying with instructions and regulations issued by the Michigan State Farm Bureau.

In counties where the Michigan State Farm Bureau membership campaign has not been completed and is not now under way, county agents are requested to arrange for assembling wool in their respecive counties by a responsible individual, firm, co-operative organization, Grange, Gleaner arbor, or other agency.

The assembling agent must sign a contract with the Michigan State Farm Bureau and comply with the instructions and regulations issued by the Michigan State Farm Bureau.

No assembling agent of the Michigan State Farm Bureau will be permitted to purchase wool on his own account or act as agent for any other individual firm or corporation in buying, handling, storing or marketing of wool.

All persons marketing wool thru the Michigan State Farm Bureau will be required to sign wool growers' contract and abide by all rules and regulations issued by the same.

County Agent or other Michigan State Farm Bureau representatives must secure signature of assembling agent upon assemblers contract as issued by Michigan State Farm Bureau and forward same, with full name and address PLAINLY WRITTEN thereon to the Michigan State Farm Bureau Wool Department, Lansing, Michigan.

Agreement and Contract with Wool Grower

The Michigan State Farm Bureau agrees:

1. To pay all transportation and labor charges, including trucking, handling, grading, sacking, shipping, salesmanship and all expenses incident to the proper handling and marketing of wool, including all bookkeeping and clerical work.

2. To furnish the necessary sacks, and tags, storage facilities for proper handling of wool.

3. To carry such insurance as may be necessary to protect the consignor against loss or damage by fire while wool is in possession of the Michigan State Farm Bureau.

4. To investigate and handle any claims for loss or damage to wool consigned to the Michigan State Farm Bureau.

5. To arrange for advancement to the consignor on application, of credit loans at six (6) per cent interest on wool consigned, in amount not to exceed seventy-five per cent of the estimated value of the wool so consigned, and to be deducted from final settlement.

6. Final settlement to be made within a reasonable time after all wool has been sold.

In consideration of this agreement the consignor agrees:

7. To accept the warehouse weights and grades as a basis for payment on all wool consigned, as may be fixed by the Michigan State Farm Bureau.

8. To accept as a basis for advance loans the estimated value as fixed by the Michigan State Farm Bureau.

9. To allow the Michigan State Farm Bureau to deduct such sum as may be charged against the wool for freight sacks, and other expenses, and for services as are necessary, from the final payment due the shipper.

Date .....

I hereby agree to ship not later than July 15, 1920, approximately ..... fleeces of wool to the Michigan State Farm Bureau to be graded, stored and marketed under the terms of the above agreement.

Address .....

County .....

The Facts About Tax Exemption Clause of Rural Credits Law

FOR MANY years, we labored with the farmers of this country, for the purpose of inducing the government to provide some system by which long time farm loans, at reasonable rates of interest, could be obtained. After fifty years of effort, we at last have the Federal Farm Loan Act, under which farmers have been able to secure loans on long time payments and at a comparatively low rate of interest.

Under the Federal Farm Loan Act are also provided the Joint Stock Land Banks, which have their place, and have done much good towards financing our farmers, but the old enemies of rural credits have been at work. The Farm Mortgage Brokers' Association of America has brought suit to test the constitutionality of the Federal Farm Loan Act and now, while the suit is pending before the Supreme Court of the United States, operations of the entire Federal Farm Loan System have been practically suspended.

While the Federal and Joint Stock Land Banks are "marking time," the Mortgage Brokers are not; they are busy with their propaganda to have Congress destroy the Federal system as soon as the Supreme Court renders a decision favorable to the Farm Loan Act, which is anticipated by both its friends and enemies.

During the suspension of the Land Banks, Mortgage Brokers are reaping a rich harvest from the farmers in commissions, brokerage and other extortions and using a part of it to pay lawyers for legislation and others for propaganda to influence congress and public sentiment. To do this the old cry of "class legislation" is raised against the Farm Loan Act. Those who charge this should come with clean hands, but they do not, for all the interests which have been enjoying government favors and fattening off the farmers for years are now joining the mortgage brokers in a vicious attack on the most important act ever passed by Congress for the benefit of agriculture.

The great need of the government at this time for revenue is prominently put forward as a reason for the repeal of the tax exemptions on farm loan bonds, without which the continuance of the farm loan system is impossible.

Mortgage brokers are spilling a few crocodile tears and much printer's ink over millionaires escaping taxes through buying these tax-free Farm Loan Bonds. We have in our possession their advertisements, and chuck full of mis-statements and appeals to passion and prejudice; and we also have their circulars forwarding these advertisements to other mortgage brokers, urging their use in their territory with the assurance that their private interest will thereby be promoted.

No thinking farmer will be fooled by these pleas; they know this gentry of old. They know it was the method used by the Mortgage Brokers who charged all the traffic could bear, and more, which made the Farm Loan Act a necessity. Mortgage brokers wish to farm farmers not to finance farmers. Their selfish interest alone is their present motive masquerading behind solicitude for the public treasury, and indignation over rich tax dodgers.

While farmers know all this, a good portion of the public does not, and it therefore, becomes necessary to counteract such specious propaganda.

Here are some facts: In the United States there are now outstanding some sixteen billions of tax-free securities, three-fourths of which benefits mainly city dwellers. Of this aggregate, tax-free Farm Loan Bonds issued by both Joint Stock and Federal Land Banks constitute less than two per cent; about one and two-thirds per cent for Federal Land Banks and one-third of one per cent for Joint Stock Land Banks.

Why is there no out-cry against this 98 per cent of tax-free securities? How much does it help the United States Treasury and hurt the rich tax-dodgers to remove the tax exemption from two per cent and leave the 98 per cent tax free? The answer is made that most of the 98 per cent is in state and municipal bonds, which cannot be taxed under the constitution. That was true until the adoption of the Sixteenth Amendment which reads: "Congress shall have power to lay and collect taxes on incomes from whatever source derived," etc. This Sixteenth Amendment was before the New York Legislature in 1910, when governor Chas. E. Hughes, who was afterwards a member of the Supreme Court of the United States, sent a message to the legislature against ratification, solely on the grounds that incomes from state and munipal bonds would in his opinion become taxable by the United States government. His opinion carries much weight. Why has there been no attempt to tax incomes on these state and municipal bonds?

If there is any doubt about the power of congress to do so, why is it not put up to the Supreme Court for decision? Is it the old story that the chief beneficiaries of these bonds are organized and can make their influence felt at Washington, while farmers are not yet so organized and can, therefore, be discriminated against with impunity.

The farmer asks no special privileges. If there is a public necessity that there should be a reasonable tax levied on the incomes from all securities, the farmer would not object to including Farm Loan Bonds, but he is getting very tired of being singled out, discriminated against, made the goat and offered as the sole sacrifice to the public good. The recent decision of the Supreme Court, holding that stock dividends when paid in cash are taxable, but when paid in a stock certificate are not, will lose millions of revenue to the treasury, and this decision so favorable to the corporate class will be urged as an additional reason why Farm Loan Bonds should be taxed to help replace the loss in revenue.

Some of the bills affecting the Farm Loan Act now before congress are aimed against Joint Stock Land Banks only, others against the Farm Loan System as a whole, but the aggressive enemies of the system are behind all of these bills.

Limiting loans to $10,000 does not enable the Federal Land Banks to meet the need for increased agricultural production, and there are other valid reasons why the dual system provided by congress in the Farm Loan Act, should be maintained. All friends of the act, therefore, should stand together and demand of congress that there be no tampering with the Farm Loan Act, but if, on account of imperative necessity for revenue, Farm Loan Bonds are to be taxed, then an identical tax should be laid on all other securities of whatever nature and kind, now tax free.

The Farm Loan Act is now facing a crisis and farmers should speak in its defense both individually and through organizations and speak loud enough to be heard and heeded. Unless they do this and do it now the whole system of Rural Credits will be lost, or, what is worse, so hampered by malicious legislation that the farmers who need the financial assistance will be unable to obtain any real benefit therefrom.

The Southern Planter.

Personal Rural Credits

AT THE convention of agricultural editors a committee was appointed to study the McFadden Personal Credits bill now before congress. The committee consists of Mr. Carl Williams, editor Oklahoma Stockman and Farmer; Dr. Spillman, editor Farm Journal; C. W. Pugsley, editor Nebraska Farmer; Jas. Thompson, editor Iowa Homestead; Forrest Lord, editor Michigan Business Farmer. This committee already knows the need of a personal credit system for helping those who cannot take advantage of the federal farm loan system, but it will endeavor to ascertain whether or not the McFadden bill will do the business. A report of its findings will be made at the next meeting of the Association which will probably be held in Washington city some time next month.—Editor.

Consumers' Boycott Reduces Potato Demand

Movement by Detroit Hotels and Housewives to Stop Eating Potatoes Becomes Nation-Wide

THE CONSUMER has rebelled against the high cost of potatoes, and from one end of the country to the other the order has gone forth, "eat no potatoes until the price comes down." This is no ordinary boycott. It is organized and is being encouraged by the Department of Justice and by the Bureau of Markets. Its effects are already being felt, and for the first time during the present year the Bureau of Markets reports potatoes, "weak and slightly lower."

The boycott had its incipiency in Detroit where potatoes jumped from $9 to $13 per 150 pounds in three days' time. For a week or more Detroit consumers were forced to pay $1.80 per peck for spuds. Later this price dropped to $1.40 per peck, but that is far above the "fair" price fixed by the Federal Fair Price Board. This board rules as follows:

"Effective April 20 at 12 o'clock noon.

"The fair price board determines that the fair retail price of the best potatoes per bushel of 60 pounds, in this district is $3.60 or 90 cents per peck of 15 pounds. Retailers should buy to sell on this basis.

"At this time purchasers are warned to use particular care that they are not defrauded by short weight or short measure.

"This price is subject to revision at the next or any subsequent meeting of this board."

The moving spirit back of the boycott in Detroit is Mrs. Frederick G. Ray, president of the Women's Federated Clubs, who presided at a meeting held in that city last week at which representatives of some of the largest hotels and eating houses of Detroit attended.

Farmer Not Blamed

The majority of the speakers at the conference agreed that the farmers were not to blame for the high prices. This shows progress for our city cousins. George Nedtweg, president of the Detroit Stewards Club said that much of the blame for existing conditions rested on the shoulders of the commission men. He cited the fact that "the farmer has not received more than $4 during the past years and in many instances he has been paid less for a bag of 150 pounds. At that price we should get them for about $7 at the most. Instead we pay $13 to $15."

Nedtweg also charged that "the railroad yards are filled with carloads of potatoes, and that owners willingly pay demurrage charges. That one car recently changed hands six times a day, each purchaser making a profit of approximately $75, without one of them seeing the car—the bill of lading being sold. People outside Michigan—one of the best potato growing states in the country—get the food cheaper than we do."

As a result of this meeting the following resolution was adopted and later posted in all the eating places in the city:

"Resolved, that the present market price of potatoes is extremely inflated and unreasonable. Therefore, omit potatoes and help beat the market."

The publication of this resolution soon showed its effects in a slackened demand for potatoes. Retailers claimed that they could not sell for the prices suggested as they had paid more than that for their supplies. Commission merchants put up the same plea. But the consumer was obdurate and consumption rapidly dropped. The market immediately began to wobble and prices slumped off 50 cents to a dollar per 150 pounds. The high prices of Michigan stock had also encouraged the importation of Canadian spuds, large quantities of these arriving by boat from Windsor. As a result of these conditions the Detroit potato market is in a somewhat shaky condition this week.

Detroit Movement Spreads

The boycott idea quickly spread from Detroit to adjacent towns. In Mount Clemens it is estimated that potato consumption has been reduced a third, and similar results are reported from Lansing, Saginaw and other Michigan cities.

In New York federal agents raided the offices of the big packers and commission firms, and representatives of Wilson & Company, Swift & Co., Armour & Co., and the New York and New Jersey Produce Company were arrested for profiteering. One produce man was charged with having purchased 45,000 pounds of Maine potatoes and re-selling them at a profit of 62 per cent. Another was accused of having sold for $13.50 a hundred, potatoes they had bought for $6.75 a hundred.

Chicago Dealers Under Scrutiny

It is reported that thirty or more of the largest potato dealers in Chicago are to be indicted for profiteering. "Government action was contemplated following the exposure of the fact that dealers were holding big quantities of foodstuffs in railroad yards to maintain high prices."

Potato Shortage Acute

Reports from all sections of Michigan indicate an acute shortage of potatoes, both for seed and consumption purposes. It is stated that so many farmers have been lured by the high prices to sell their last spud that a seed shortage is imminent, and that Michigan may have a short crop this year if the farmers are obliged to depend upon home-grown seed.

Here's a Beet Grower Who Talks Business

I BEG SPACE in your worthy paper for a few lines, which may be of some benefit to the beet growers, and brother farmers, as well. The title being, "I refused to be soft pedaled."

Last evening a representative of one of the sugar companies called on me, and wanted the secretary of our Association and myself to go to the sugar factory's office and see the figures of the company for the purpose of showing us that beet growers are wrong and the sugar company is right. Now that would sound nice to a man who had lost his mind and was in a bughouse and needed a vacation.

Here is the point. Could any person get any intelligence from looking at a company's books and taking the balance figures from the ledger, and discover anything about the cost of production, not knowing anything about what the company had invested or anything about its overhead expenses, depreciations, etc.

Now was not that a bright suggestion? I would say no. I said to this agent, "what good would there be in that? They could mislead in their figures as well as in words, to one who would be foolish enough to fall for two or three hours of soft pedal stuff, from the sugar company."

I also asked him why the Company did not meet the Beet Growers' Association in Saginaw which would have been the proper place to present their figures and correct errors if any were made. He said, "they were not invited to the meeting; that the farmer just demanded the price."

Now when he found I was not going to fall for that he said the company showed him figures showing that the farmer could raise beets for $60 per acre, outside the "hunky" labor and make 88 per cent and the Sugar Company was only making 23 per cent. What do you think of that, the poor Sugar Companies misused by the rich, heartless farmers, Ha ! Ha !

I asked him to produce his figures for proof and his efforts in the proof for the Sugar Co. was about as near as one could come to buying a Hudson Six with a setting hen. When I produced the farmers' side of the beet business, I really believe that agent had a change of heart and is about to repent and join the big church, with the ten thousand beet growers, or at least be in sympathy with us.

Another agent told me the reason his company would not attend our meetings was they did not want the farmer to run their business. Do the farmers want the sugar companies to run both, the farmer and the factory. I for one surely object to being a silent partner in the deed. I have too much confidence in our Mr. Editor, Mr. Ketcham, Mr. Ackerman, Mr. Price and other gentlemen in the state and local associations as leaders to think they would want to be unjust to any one. I will close, believing the fight is won.—Geo. H. Histe, President of Coleman Association.

You are certainly to be commended for your refusal to be caught in the company's net. The books of a corporation doing a million dollars worth of business a year are about as illuminating as the moon on a cloudy night. A brief examination of the books would prove nothing. It would require hours, if not days of study by an expert accountant to discover the profits or losses of such a concern, the cost of manufacturing the sugar, the entries that might be made here and there for concealing the profits, etc. This show of frankness and honesty of purpose by the manufacturers is sham and hypocrisy and the farmers will not fall for it. The growers will be glad to examine the SWORN statements of the manufacturers when presented to the proper officers of their Association, but anything less than that will receive scant consideration.—Editor.

"My Experience in Growing Fruit on Light Sandy Soil"

By J. M. MERRILL

SANDY loam is the best soil for grapes. At any rate such has been my experience, and I am willing to verify this statement with an experience of several years standing.

In our country there were two kinds of soil, the sand "barrens" and the heavy clay soil farther back from the rivers. Along the streams, sometimes extending back for several miles, the white pine of commerce grew in serried ranks, beckoning the axmen to come to the harvest.

This pine was long ago exhausted. Much of the land on which it grew is still untilled, left to grow up wild stuff which has many times been destroyed by fires till the old pine slashings of the last century are no longer in evidence.

These annual fires did great damage to the light soils of the timber country, rendering much of it unfit for farming purposes. Despite these drawbacks, however, some more venturesome than others have staked their belief in the virtue of light soils by squatting on these cutover ranges, and where the squatter has it in him to stick, and work out the right methods, fine farms have been the result.

Nevertheless there are numerous deserted ranches all through the one time lumber country, deserted because their settlement was made with too great faith in the productiveness of a soil none too strong at the outset, and much depleted of its original fertility by the forest fires which burned off the vegetable matter, the dropping of years, leaving only the bare, bleak sand, which was disappointing and bound to be till thoroughly renovated and nourished by the turning under of green manure in the shape of rye and red clover.

In my experience on a forty of this land I found that where the common red clover would not grow the mammoth sort oftimes succeeded, and there is nothing better for soil enrichment than a liberal crop of this large clover turned under.

A friend of the writer purchased a forty not far from a thriving little city. On this forty was a mound of several acres that had been so long neglected it had become a desert of drifting sand. While the rest of the farm was a valuable loam, this spot was useless. My friend wasn't to be balked, however, and he mapped out a plan of campaign that he believed would redeem the sand plot.

The first year he sowed rye, which in itself is a very poor substitute for clover. This he plowed under in early summer, renewing the rye with a seeding of clover. The succeeding season was dry. The rye did well, but no report from the clover.

It required four years to fetch that sandy spot into fertility. The fourth year a good catch of clover cinched the redemption, and thereafter the few acres so long given over to non-production were the most valuable acres on the farm.

Knowing how, mixed with a little stick-to-itiveness does the work, and such work is destined in time to bring up the greater part of our light soils to productivity second to none. I raised 100 bushels of fine potatoes to the acre on "pine sand" with at least thirty stumps dotting the acre. Afterward, with the removal of the stumps and a few sowings of mammoth clover turned under, the land was second to none in all the country round, producing annually as large crops of everything as did the heavy clay soils in the immediate vicinity, and with one half the work that hot sun and continuous rains inflict upon the heavy land farmer.

One of these sand farms propertly rejuvenated makes a better all around farm than does the heavier soils. More different crops can be produced on sand loam, made loamy by repeated clover fertilizing than on the clay lands. These soils can be worked late in the fall and early in the spring which is an advantage that will readily be recognized.

Speaking about grapes. The heavy-landers made a few essays at vinyarding with indifferent success, while on my sand loam the lucious fruit grew to perfection. My patch of Wordens was the envy of every heavy land farmer for miles around, and I soon had enough customers among these to take care of all I had to sell.

The rolling sand hills are the natural home of the peach. While peaches can be grown on the heavy soils, and many of them are thus grown, the sand knolls, after having been fitted with the proper food, are the supreme delight of the peach grower. Elberta peaches, the great shipping fruit, grows to perfection for size and edibility on these hills.

A neighbor raised peaches on heavy soil. His Elbertas were not two-thirds the size, nor anywhere near as nicely colored as were mine grown on a sand hill the soil of which had been brought to a state of exceeding fertility by the proper administration of manures and culture.

It may be well to emphasize here the necessity of constant cultural methods to produce the most satisfying results.

While the cities, because of the high wages brought about by the war are growing just now at the expense of the country, there's going to be a reaction before long, and when that time arrives the sand lands of the one time lumber region will come into its own. Rightly farmed there is no better place for the conscientious and determined man than on one of these so often derided sand eighties.

Organic Matter Contained in Various Soils

What Animal or Vegetable Matter Assists Most in Renewing Soils Fertility

By M. M. McCOOL
Professor of Soils, Michigan Agricultural College

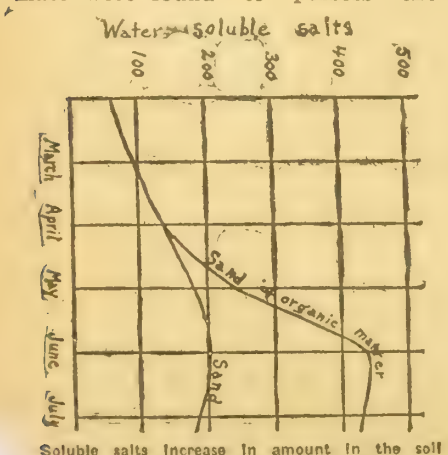
I HAVE prepared for the readers of this paper three articles on the subject of vegetable matter of soils. This is justifiable because of the tremendous importance a proper amount of this material in the soil has upon productivity. In fact everyone who has had experience in farming and especially in attempts at raising soil productivity realizes that the increase of this material in many and its maintenance in others is of utmost concern to the Michigan farmers. This is popularly spoken of as vegetable, organic matter and humus respectively. Suffice it to say that organic matter is derived from both animal and plant life and that the term humus refers to either or both of these when partially decayed or rotted.

The organic matter in soils is very complex. It exists in various stages of decomposition some being made up of undecomposed roots, stems and leaves of plants, some of partially decayed and some is composed of waxy material. The majority of the mass is composed of non-nitrogenous compounds. There are in addition, although in much smaller amounts, nitrogenous compounds from the decomposition of which nitrates are furnished to the plant; inorganic or mineral constituents. The latter exists as salts in the cells, as crystals, as incrustation and as organized bodies or part of living matter. Included among others are the phosphates, carbonates and sulphates of calcium magnesium and potassium. When the organic matter decays or is leached in the soil some of these compounds become available for the crops, unless removed in some manner before being taken up.

Due to its influence on the physical condition of the soil organic matter is important. Some of these effects are increased somewhat of the water holding capacity, the absorption of gases, and numerous inorganic compounds; alters the tilth or makes good structure of soils, tending to bind together the particles of the coarse sands, thereby decreasing the porosity, the excessive aeration and percolation of water through them. It prevents the crusting of the surface of very fine sandy soils by heavy rains, and also materially decreases the erosion of soil by both rain and water.

The chemical effects of organic matter are none the less important than the physical. As indicated above, organic matter contains all the essential elements of plant food. Upon decomposition these are liberated and become direct sources of plant food. During the decomposition of organic matter there are formed several substances such as carbon dioxide and others that assist in breaking down mineral matter of the soil and thus increase the available plant food elements.

The organic matter content of virgin soils varies with climate and the moisture content, texture and depth from the surface and with the native vegetation. A large number of virgin soils taken from regions of widely different conditions of climate were found to possess the



Soluble salts increase in amount in the soil from spring to summer and markedly with vegetable matter. Lack of this material limits crop production of many soils. To obtain it time and fertilizer are frequently essential.

This sandy soil produced about thirty bushels of wheat per acre when first farmed. Because of depletion of organic matter it is useless today.

amount of this valuable constituent as given in the following table:

	Sandy Soils	
	Surface	Subsoil
N. E. U. S.	1.66	.60
S. E. U. S.	.93	.41
No. Central	1.84	.76
So. Central	1.16	.55
Semiarid states	.99	.62
Arid states	.89	.64
	Loam and clay soils	
	Surface	Subsoil
N. E. U. S.	3.73	1.35
S. E. U. S.	1.53	.73
No. Central	3.06	1.07
So. Central	1.80	.65
Semi arid states	2.64	1.11
Arid states	1.05	.62

It is notable that these results show somewhat higher amounts of organic matter in soils of cooler regions, higher rainfall, fine texture, and larger quantities in the surface than in the subsoils.

Prairie soils invariably contain more organic matter than adjacent timber soils. This is due to the fact that grasses with their network of fibrous roots as well as stem and leaf growth, effective agents in the accumulation of vegetable matter, do not thrive on timbered areas. The chief source of the material in the timber are the leaves and twigs that fall on the surface of the timbered lands which decay or are burned by forest fires. The average amount of vegetable matter in a large number of timbered soils was 1.93 in prairie soils 4.5 per cent.

Soils of high water content usually contain large quantities of vegetable matter. This is active in two ways. In the first place it favors plant growth and in the second place where the soils are very wet much of the year the rate of decay is slower than it is in soils of somewhat lower water content. This effect is exemplified by a comparison of swamp and upland soils. A fair basis for judging and comparing different kinds of soil would be about as given in the table below:

Class	Poor	Good
Medium sand, per cent	.1	2.85
Fine sand, per cent	.2	4.5
Loam, per cent	3.5	6.5
Clay, per cent	4.5	7.5

Organic matter to be effective in aiding crop production must decay. There are several conditions that affect its rate of decomposition in the soil, namely, mechanical condition, stage of decay, composition, temperature, moisture content of the soil, soil texture, tillage, nature of surface, lime, and depth from the surface.

Stable manure and plant residues decay more rapidly when finely divided than they do when in a coarse condition. Upon this principle in the main is based the practice of frequently working recently drained muck lands previous to crop production, as well as the disintegration of manure, cornstalks and other by-farm products.

The initial decay of manures, roots stems, and leaves of plants in the soil is more rapid than the later stages. It should be understood that a soil may be high in its content of the more resistant material and yet be unproductive. In other words smaller quantities of active material in the soil may be more effective than larger quantities of old and less active stuff. However, the rate of decomposition of the older material may be speeded up as is shown later on.

The composition of the vegetable matter added to a soil affects the rate of decay. As a rule the rate decreases with an increase of the amount of fibre present. Inasmuch as plants at maturity and when ripe contain more of this than they do in earlier stages of development, it is not advisable to permit green manuring crops to become mature before turning them back to the land unless a slower rate of decomposition is desired. Moreover, corn stalks and cereal straws decay more slowly in the soil inasmuch as they contain less nitrogenous matter,

High soil temperatures result in a more rapid decay than low ones provided the soil is moist. The rate is quite slow when the temperature is forty degrees or less, but it may be more than two and one-half times as rapid at a temperature of about sixty degrees.

This factor or condition accounts for the very rapid depletion of vegetable matter in the soil of regions of long growing seasons, the temperatures suitable for decay being of much longer duration than it is in the soils to the northward.

Rotting of vegetables in the soil proceeds most rapidly when the water content is about the same as that for maximum plant growth and approaches that content at which tillage is not easily and effectively performed. It is commonly spoken of as the optimum water content. Either a very wet or a very dry soil is undesirable for this action. A deficiency of water in light soils doubtless sometimes accounts in a large measure for poor returns from spring applications of stable manure.

Decay takes place more rapidly in moist sands than it does in finer textured soils. This is due in part to the higher temperature in the spring, in part to better drainage but doubtless the excessive aeration is largely responsible for it. Such being the case a given amount of manure or crop residues do not endure so long in the light soils as in heavy ones. Of course provision should be made for repeating the operation at shorter intervals in case of the former.

Tillage operations hasten the rate of rotting of vegetable matter in the soil. This is due probably to the increased aeration of the soil, dissemination of germs in the soil and to the exposure of fresh surfaces. This, of course, means that soils long under cultivation contain much less of the valuable material than in the virgin state, the changes that it has undergone depending in a large measure upon the system of farming. Row or cultivated crops cause more rapid losses than do small grains or grasses.

We have taken samples of soil from more than one hundred farms in southwestern Michigan and have made chemical analyses of them. The samples were collected from virgin that is uncropped and soils long under cultivation. It is impracticable to present the detailed results of these studies in this article but the conditions with respect to the changes in the vegetable matter content of the majority of the forms are striking. In many cases the cropped lands contain less than one-half as much as the virgin soils while in others less than one-fourth as much and in a few instances the cropped soils contained as much or more than the virgin. Where the latter condition maintained either much live stock has been fed or much manure shipped in from the stockyards.

A broad view of the situation may be obtained by an examination of the following figures:

Soil	Organic matter
Virgin, per cent	5.4
Cropped, per cent	2.8
Loss, per cent	2.6

It is notable that the systems of farming appreciably affects the loss of organic matter. Usually livestock brings results in a less striking decrease than grain farming. Of course, if livestock are raised and the manure voided carelessly handled and little of it returned to the land and the second growth of clover is removed by grazing, the losses entailed may be as large or larger than if grain farming is followed.

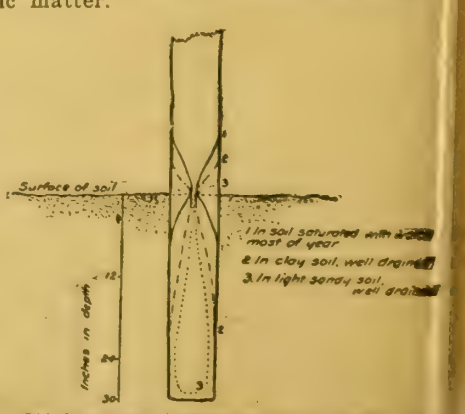
Another point to consider is that the rate of decay is less where the land is covered by vegetation than it is where it is devoid of it. Thus when we add the effects of tillage and that of uncovered soils we find that the practice of summer plowing is a very destructive one.

Sufficient lime in the soil favors rotting of organic matter. It is effective in this respect because it favors the development of lower organisms or forms of life that cause the decay of vegetable matter. It is especially valuable in speeding up to some extent the decay of old or rather inert forms. This should not be taken as a criticism of the proper use of lime. This will be discussed in detail later on.

The rate of decay as affected by depth from the surface of the soil is important. It has recently been shown that clover hay decays more rapidly if left on the surface of heavy soils than it does when incorporated in the furrow slice. Moreover, the rate rapidly decreases below the depth of ordinary plowing.

At the Ohio Agricultural Experiment Station equal amounts of clover hay were added to two plots of rather heavy soil. In one case it was left on the surface, in the other it was incorporated in the soil mass by the means of a spade. The application was made on October 12 and on May 5 or 206 days later 66 per cent had decayed on the surface and 28 per cent where it was mixed with the soil.

With sands somewhat greater depths are required to effectively reduce the rate then with fine textured soils. Examination of fence posts that have been in soils of different texture and drainage throws light upon this subject. The accompanying figure after Tikken, illustrates the effect of texture, water content, and depth upon the rotting of organic matter.



Old fence posts indicate the rate at which organic matter decays at different depths in the soils of different texture and drainage.

Protection for Buttons; Free Trade for Beans

Striking Illustration of Congressional Discrimination Between Manufactured and Agricultural Products

By THE EDITOR

FOR LO, these many years, Congress has smiled with favor upon certain interests of the United States. When the manufacturing, industrial, commercial, mining, railroad and other interests generally associated with "Big Business" wanted any special legislation they sent sent their high-priced lawyer-lobbyists to Washington, and by a little "touching of the palm" here and a little manhandling there, they usually got what they went after. Times haven't changed greatly either. Every legitimate legislative assistance has been given the "infant industries" of the country, not alone while they were toddling upon the legs of immaturity, but long, long after they had begun to walk and support themselves. Congress has been kind to Big Business. Tariff land grants, oil and mining leases, etc., have been freely given. As a result industry has thrived and prospered as never before in the history of any country.

We have no word of censure for what has been done through legislation to assist the development of American industry. On the contrary we approve of it. The United States could not have enjoyed an era of such amazing prosperity had it not been for the supporting arm of a solicitous government. It may be all very true that every citizen has not received a proportionate benefit from this governmental paternalism. We rather think that it has been responsible in a measure for the creation of the great private fortunes of the country. Nevertheless, the mass of people have been benefited indirectly, and probably would not have had the government done otherwise.

But what Congress has done and still stands willing to do for the industrial interests of the country, it ought to be equally ready to do for others. But it is a matter of record that agriculture has been repeatedly snubbed by Congress, and labor has received but little more consideration. To be sure, there is the Department of Agriculture, to which every Congressman points with a reproving finger when agriculture accuses Congress of showing favoritism to others, but bestowing none upon husbandry.

"Ah, you forget, my good man," says Congress, "that we passed the Federal Farm Loan Act for the farmers." But if "my good man" has his wits with him he will retort, "Yes, you did after you had passed the Federal Reserve Act for the commercial interests."

We could cite a score of worthy measure of benefit to agriculture which have been pigeon-holed in Congress. We could mention others that finally became laws only because every agricultural interest in the country sent its representative to Washington who fought the bills through tooth and nail. When the commercial people want any favors of Congress they are received with wide open arms and a "what-can-we-do-for-you" pat on the shoulder. In every committee and on the floor of each house the commercial bill has its friends who tenderly nourish it along. But when an agricultural bill is introduced, Congress glares and says, "what do you want here?," and if that doesn't take the wind out of its proponents sails, the committee tears it to pieces, or refuses to report it out "because the President might veto it."

"Piece-Meal" Tariff Bills

At every session of congress special or "piece-meal" tariff bills are introduced and hearings are held before the House Ways and Means Committee. If these tariff bills have to do with manufactured products little opposition is encountered from the "protectionist" members of the committee. It's a funny thing how the congressmen from rural districts will stand for anything sponsored by their city colleagues, and the latter will stand for nothing or little that is sponsored by the rural solons. At least, that's the way it looks. A tariff bill levying a duty on the imports of an article that comes into competition with a domestic-manufactured article invariably receives the support of both rural and urban Republican members. But a bill levying a duty on agricultural products is often opposed by a protectionist who hails from the city on the grounds that it will increase the cost of living to the consumer.

Sponsors of special tariff bills on agricultural products are reminded that "it is a terribly hard job to get these 'piece-meal' bills through." So when the piece-meal bill goes to the morgue its friends are usually prepared for the obsequies.

Special Tariff Bills Passed House of Representatives

SPECIAL bills have been reported out of the House Ways and Means committee and passed by the House of Representatives providing for a tariff on the following articles: Tungsten Ores, Magnesite; Zinc Ore, Pigs, Sheets and Dust and Zinc compounds; Pearl and Shell Buttons, Chemical Porcelain and Glassware, Laboratory Apparatus and Surgical and Dental Instruments; Dyestuffs.

(Please note that none of the abeve bills (which are the only special tariff bills passed by the House this session of Congress) are of any benefit to agriculture.)

Agricultural Tariff Bills Still Pending Before Ways and Means Committee

The Osborne bill providing for duty of 2 cents per pound on beans; a bill providing duties on cattle, sheep, swine, horses, mules; on corn meal, oats, rye, wheat and rye and wheat flour; on citrus fruits; on wheat and potatoes. All of these bills were introduced early in the session. They are still in the Ways and Means Committee of which Congressman Fordney of Michigan is chairman.

Protecting the Pearl Button Industry

A striking example of the elasticity of "protection" and the difference in the reception given to bills of agricultural and industrial import, is found in a comparison of the present status of the respective bills protecting pearl buttons and beans.

H. R. 7705, "placing a duty on pearl buttons and shell buttons, finished or unfinished, of one and one-half cents per line per gross and 15 per centum ad valorem; etc.," passed the House September 2nd, was presented to the Senate September 3rd, and referred to the Finance Committee. Reported to the Senate by the Finance Committee March 22, without amendment.

Purpose of this bill is to protect the pearl button industry against the competition of cheap Japanese labor.

H. R. 7737, "on beans, not specially provided for, of 2 cents per pound, etc." This bill was introduced in the early part of last October. Hearings were held before the House Ways and Means Committee on October 13 and 16, representatives being present from every important bean state of the Union. This bill still reposes in the committee, and Mr. Fordney says that it will not be reported out during the present session of Congress.

The Relative Importance of the Two Industries

Some amusing things are disclosed in a comparison of the relative importance of the pearl button industry and the bean industry. For the following facts about the amount of money invested and the number of people employed in the pearl button industry, we are indebted to the American Economist which publishes an extract of the arguments presented in behalf of the bill by Senator Curtis of Kansas, as follows:

"The question of protecting the fresh-water pearl button industry in this country is not a new one. These producers have factories in 17 states and employ over 20,000 people and have invested in the business, exclusive of stocks of raw material and finished products on hand, about $3,500,000. The production for 1914 was over 21,000,000 gross valued at $4,879,844, which would be an average of 22.5 cents per gross.

"The cost of producing buttons in Japan is very much less than in this country, and in recent years the industry has been greatly developed in that country. In 1912 Japan exported 5,000,000 gross, and in 1916 her exports amounted to 15,000,000 gross. In 1917 and 1918 they exported to this country a cheap button sewn on cards, and these cheap buttons displaced domestic buttons of a better quality.

"The average price per gross of buttons imported in 1917 and 1918 was 20.4 cents per gross. The Japanese are sending large quantities of the cheaper grade of buttons to this country. In February, 1919, the domestic production was about 1,400,000 gross, while the imports from Japan amounted to 590,000 gross in that month. It is evident that unless the present duties on pearl buttons are increased the importation from Japan will greatly increase, and when conditions have changed in Germany and Austria, or upon the resumption of trade with those countries, large importations will come from their factories. The evidence produced before your committee clearly shows that Japan is flooding the American market with buttons made by the cheap labor of that country.

"In Japan the wages paid to those employed in the button industry is an average of about 15 cents per day, while in this country factories are paying from $2.50 to $3 per day for similar labor.

"Under the tariff of 1909 the imports of buttons from Japan were not very large, but in 1913 the amount imported from Japan reached the number of 284,437 gross, valued at $56,392, but the reduction in duty, the change from specific to ad valorem, to 45 per cent ad valorem below the twenty-sixth line and 36 per cent above, caused a great increase the first year, and the importation in 1914 amounted to 739,961 gross, valued at $185,149, and in 1917 the importations amounted to over 5,000,000 gross valued at $913,000, and in 1918 the importations of buttons from Japan was of the value of $1,145,000. This great increase in the importation of pearl buttons from Japan and the great decrease in the production in this country is ample evidence that in a short time the manufacture of fresh-water pearl buttons in this country will cease, unless it is given such protection as will enable the producers to compete with the buttons produced by the poorly paid labor of Japan."

Importance of Bean Industry

At the hearing on the bean bill last fall, Mr. Aaron Sapiro, attorney for the California Bean Growers' Ass'n, presented figures showing the importance of the bean industry which involves several times over the amount of money invested, the labor employed, and the value of the product, in the pearl button industry.

Mr. Sapiro testified that the bean lands of the United States represent a value of over $250,000,000. In addition to that there are county warehouses and elevators for the purpose of handling beans, having an estimated value of about $30,000,000. Then there are cleaners and hand picking equipment valued at $15,000,000.

"There are a great many people employed in the bean industry in the United States. It is estimated that there are over 70,000 actual bean growers in this country— almost 30,000 in Michigan alone; and over 100,000 working on bean farms, devoted primarily to the bean industry. There are over 6,000 employed in warehouses; in cleaning and picking, over 10,000; and about 1,000 employes in clerical work.

"The average value of the bean crop in the United States has been around $100,000,000 a year."

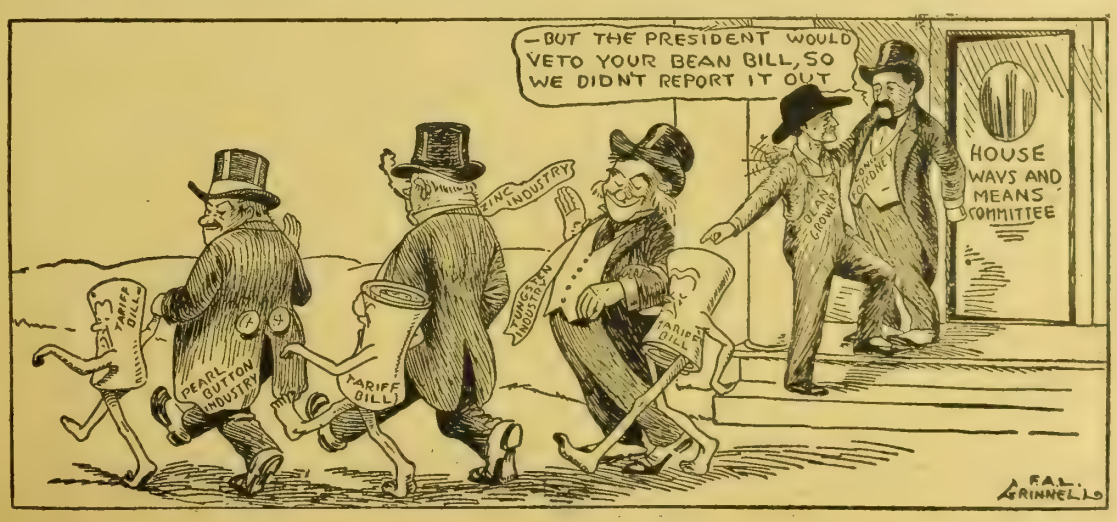
Additional Facts

It was argued by the bean delegates to the above mentioned hearing that there were special circumstances why the bean growers of the United States should be given protection against foreign competition. Facts were presented showing that after the Grain Corporation, through Mr. Kimball, had encouraged the pea bean growers to increase their acreage, Mr. Kimball had, acting in the name of the government purchased enormous quantities of pintos and Japanese Kotenashis, thereby forcing the pea bean growers to throw their supplies on the open and over-loaded market, causing them a great financial loss.

The Ways and Means Committee was urged to take these facts into consideration and help to make partial amends for the injury and injustice done growers by government.

Conclusion

The conclusion after a careful comparison of these facts is that the bean growers of the United States are being discriminated against. With or without the assistance of congressman Fordney the bean tariff should have received equal consideration with the tariff bills that have been reported out of committee. With so much in favor of the proposed bill and a committee chairman representing one of the most important bean sections of the United States it becomes more and more of a mystery why the bean tariff bill has not been reported out.



CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

NATIONAL SHIP BY TRUCK WEEK PLANNED

National Ship by Truck—Good Roads Week, to be observed May 17-22, inclusive, is being planned throughout the country, according to Washington headquarters of the Ship by Truck Bureau.

Tentative plans include motor truck tours lasting through the week and covering virtually every section of the country, according to reports received from sixty-five cities where branch offices have been established. Good roads organizations and associations interested in motor truck transportation will form the nucleus, it is said, of a temporary organization to promote activities during the week. Virtually every rural section of the country from coast to coast will be traversed by caravans of motor trucks during Ship by Truck—Good Roads Week, giving practical demonstrations of the utility of truck transportation and preaching the doctrine of better highways.

Other plans include essays by school children, sermons and the distribution of literature, all designed to arouse interest in a national program of highway construction along lines advocated by such organizations as the American Automobile Chamber of Commerce, the National Grange, the United States Chamber of Commerce, the National Automobile Chamber of Commerce, the National Association of Motor Truck Sales Managers, and the Ship by Truck Bureau.

Endorsements from government officials, Senators, Congressmen and educators have been received.

Governors of various states are expected to issue Ship by Truck—Good Roads Week proclamations.

"We need a broadened policy which will concentrate Government funds on national highways releasing State and County funds for use on State and County roads," says Senator Charles E. Townsend, author of the Townsend Good Roads Bill, discussing the possibilities of the week. "Nothing could be more valuable," he continues, "than a national discussion of this question such as that proposed during the National Ship by Truck—Good Roads Week."

Professor R. C. Atkeson, Washington representatives of the National Grange, says: "I heartily approve the general idea involved in Ship by Truck Week and the study and attention that will thereby be directed to the problems of highways, transportation and distribution."

MANY CARS OF LIME FOR FARMS

During the month of February Cass county farmers bought 365 tons of ground lime from the Solvay Process company of near Detroit for use in fertilizing their farms. At the same time 470 tons were bought by Van Buren county farmers, 337 by Berrien farmers and 315 tons went into Barry county.

Figures for March are not yet out, but it is known that seven carloads of this lime were bought by five Wayne county farmers, who bought direct and estimate that the seven cars made a total of over 300 tons.

Much of this purchase will go to starting a field of alfalfa, while some will be used in sweetening the soil and enriching it for other crops. The effects of this outlay will be noticeable for several years, with the expense paying for itself the first year in most cases.

COURT PROTECTS PURE PAINT MAKERS

The Federal Trade Commission has ruled that the Penn Lubric Oil Co., trading as Midwest Linseed Oil and Paint Co., Kansas City, Kan., respondent in a formal complaint issued by the Commission, refrain from certain unfair methods of competition in the manufacture and sale of oils, greases and kindred products.

The Commission's ruling is on the following practices: (1) Falsely representing by letterheads, advertisements, etc., office or factory or equipment or place of business; (2) selling linseed oil which has been mixed with low grade mineral oil and other ingredients as "Commercial Raw Linseed Oil Not Sold or Intended for Medicinal Purposes", without indicating to the purchaser that the same is adulterated; (3) selling or arvertising for sale linseed oil when the product sold or advertised has been adulterated with baser mineral oil, chemicals or other ingredients, unless it is clearly and distinctly shown to the purchaser the true character of the product offered; (4) selling or offering to sell in any manner paints, oils, greases, etc., which have been adulterated or which cantain adulterated ingredients, as and for pure products.

BANKERS SUPPORTING DAIRY CATTLE MEN

Financial backing for dairy men who wish to build up their industry through the introduction of purebred foundation stock has been guaranteed in at least one Michigan county. At a recent meeting of Guernsey breeders in Berrien county, the First National Bank of Watervliet went on record as ready to loan up to $50,000 to men who want to purchase purebred Guernsey stock.

Berrien is already one of the leading Guernsey counties of the whole middle west, and the plans now call for the importation of at least 100 additional head of purebred females. This foundation stock is expected to give a tremendous boost to the industry in this section of the state.

"There is no better way to develop the livestock interests of the state than on the co-operative community basis," says J. A. Waldron, Dairy Extension Specialist at the Michigan Agricultural College. "Co-operative purchase of foundation stock (as the Berrien county breeders are planning at present) purchasing and interchanging of high class, tried sires; co-operative marketing of dairy products; and advertising and marketing of surplus cattle, are among the possibilities of community work.

"The outlook for purebred cattle breeders of the state is unusually bright at the present time. Present conditions in the dairy industry demand that producers use the most efficient 'machines' possible and the demand for high class stock is certain to increase."

GLEANERS NEGOTIATING AT SCOTTVILLE, FIFE LAKE

A farmers' mass meeting was held in Community hall at Scottville and Nathan F. Simpson of the Gleaner Clearing House Ass'n of Grand Rapids presented a proposition of joining with the Gleaners in the ownership of the Scottville Produce Co.

L. A. Siple of Greenville addressed a large gathering of Gleaners at Fife Lake in the interests of the Gleaner Clearing House Association. It is probable the Fife Lake Gleaner Warehouse association will become an integral or a co-operative part of the proposed $1,000,000 state Gleaner Clearing House organization with headquarters in Grand Rapids.

VERMONTVILLE FARMERS TO BUY ELEVATOR

The newly organized farmers' co-operative Citizens Elevator company of Vermontville, has completed negotiations for the C. A. Anderson & Son elevator there, the first payment of the price agreed upon, $15,555, having been paid last week. The elevator will be turned over to the new company July 1.

Late Michigan Crop Report

THE outlook for winter wheat and rye is somewhat better than the average of past 10 years as shown by recent reports furnished to the Michigan Co-operative Crop Reporting Service. The joint report issued by Coleman C. Vaughan, Secretary of State and Verne H. Church, Field Agent, U. S. Bureau of Crop Estimates, for April 1, also shows that these grains have wintered well under the prevailing favorable weather conditions, although the production indicated is not as large as that of last year. The supply of farm labor is far short of farm needs and much less than the normal supply. However, the demand has not increased over last year, and it is only slightly greater than normal for the reason that wages are higher than most farmers can afford to pay. The majority of farmers will do what work is possible without hiring, so that many farms will not be worked to their full capacity and many will not be worked at all this year. This condition will undoubtedly cause a reduced crop production in Michigan this year.

Winter Wheat

The condition of winter wheat is 86 per cent, or 6 per cent less than on December 1, and 9 per cent below the condition of last year's crop on the corresponding date. It is still three per cent better than the ten-year average for April 1. There was a relatively heavy snow covering throughout the winter, but on rolling and hilly lands high winds caused the snow to drift badly, leaving the tops of hills bare. There was considerable damage done last fall by the Hessian fly in many southern counties. On the whole, the crop is in a satisfactory condition except in occasional localities. March was unusually favorable for the crop.

The estimated amount of wheat marketed at mills and elevators in the state during March is 514,000 bushels, or a total of 10,362,000 bushels since August 1, 1919.

The outlook for the United States is less flattering, as the condition is only 75.6 per cent as compared with 99.8 one year ago, and 84.1 the ten-year average. This low condition combined with the marked decrease in acreage indicates a total winter wheat crop of only 483,617,000 bushels last year.

Rye

As is usual, rye shows a better condition than wheat in the state, being 92 per cent as compared with 95 per cent on December 1, 96 per cent one year ago, and a ten-year average of 88 per cent. Practically no complaint regarding the outlook for the crop was received from any section.

Rye promises a total crop in the United States of 75,841,000 bushels as against 88,478,000 bushels last year, the condition being 86.8 per cent. The average one year ago was 90.8 per cent and the ten year average 89.0 per cent.

Breeding Sows

The usual inquiry relative to the number of breeding sows on farms shows that there are three per cent less than last year and five per cent less than the usual number. There was an increase immediately following the war, but the relatively high price of feeds in comparison with the price of pork has discouraged the increasing of herds and caused the reduction for the United States as a whole is ten per cent.

Labor Supply and Demand

The supply of labor on Michigan farms is only 80 per cent of that of one year ago and 60 per cent of normal. Notwithstanding this marked shortage, the demand is only about equal to that of last year. The wages are too high to warrant the hiring of the amount of labor needed to fully operate the farms.

The supply for the United States as a whole is 87.3 per cent of last year and 72.4 per cent of normal, while the demand ,like the situation, in Michigan, is about the same as last year and only slightly more than normal.

STATE THRESHER LAW RULED VOID

The state law requiring threshers to file monthly reports with the secretary of state showing how much grain, the different kinds, and the acreage they threshed, has been declared unconstitutional by Judge Collins of Owoso. He directed a verdict of not guilty in thhe case of W. A McAvoy, who operated his machines after his state license had been revoked for failure to make the report.

The defense attacked the law as confiscatory in that it did not pay threshers for making out reports. Carl Young, president of the Michigan Federation of Labor, and J. C. Scannell, secretary, swore that the law was of no benefit to the laboring classes.

The prosecution claimed the law was adopted in 1917 as a war measure, at the request of the federal government, which desired statistics on the nation's food resources. The attorney general's department was represented at the trial.

FARMERS SHOW THE WAY

According to the bureau of markets, department of agriculture, the farmers of the United States have organized nearly 200 mutual fire insurance associations which have in force policies totaling $6,000,000. Practically all of this business is done on a co-operative, non-profit basis and the companies have been uniformly successful. They pay their losses promptly and they give their members a chance to obtain insurance protection practically at cost, says the February Sunset.

The farmers were forced to go into the co-operative fire insurance business because the commercial fire insurance companies either declined to write policies covering country property or else charged prohibitive rates. They were doing well and making good money on their city business. This attitude of the commercial companies was a good thing for the farmers—it compelled them to save money on their insurance through co-operation.

Property owners in the cities are continuing to pay the commercial companies a fat profit. Some day they'll take, organize co-operate and put that profit into their own pockets. The farmers have shown them how to do it.

STATE OWNED FLOUR MILLS IN NORTH DAKOTA

Five state owned flour milling plants will be erected by North Dakota, according to plans announced by J. H. McGovern, manager of the State Mill and Elevator association. They will have a total capacity of about 5,500 barrels of flour production and storage capacity of about 2,500,000 bushels.

Four of the plants will include mills with capacities of from 500 to 700 barrels and elevators of approximately 250,000 bushels capacity. The fifth will include two milling units of 1,000 barrels each for spring wheat and a third unit of 1,000 barrels for macaroni wheat. The terminal elevator will have a capacity of 1,500,000 bushels.

The terminal elevator will be equipped to unload six cars simultaneously. It will include 32 concrete bins, each with a capacity of 43,600 bushels and 31 inter-space bins, each with a capacity of 13,000 bushels. The cleaning house will have ground dimensions of 60 by 120 feet and will be 140 feet high.

A COMBINATION SALE

Mr. Vernon E. Clough of Parma, Michigan held a combination sale April 7th. Eleven pure bred Holsteins and his entire herd of grade cows were sold. The list of purebreds consisted of 5 cows, 4 heifer calves and 2 bull calves and sold at an average of over $200 per head while Mr. Clough's herd of grade cows averaged $101.66 2-3 per head which goes to show which is the most profitable cattle to stock your farm with.

Mr. Clough reports he is well satisfied with the receipts from his sale.

Steels

Make the Maxwell Thrifty

SEVERAL million dollars have been expended to provide more elegance, more refinement, more comfort to the current Maxwells.

It is in ever so many ways a superior appearing car; superior, too, in action.

But not a single pound of weight has been added to burden the work of its great engine!

Therefore, despite the many processes of improvement, it doesn't cost a penny more to run a Maxwell than it did a year ago.

The underlying principle of every Maxwell is to give economic transportation.

This means light weight. But it means strong steels, as well.

It is no easy trick to provide both lightness and strength in metal.

Such a rare combination means high cost steels.

And you would find, if you compared a Maxwell with *any* car, that it equaled that car pound for pound in fine metals.

How such steels affect your pocketbook is obvious.

1. They are light in weight and hence give more mileage on a gallon of gasoline.

2. As they are fine steels they give *long* and *uninterrupted* wear.

Which are but two of many reasons for that definite tendency of world-wide friendship towards Maxwell.

In six years nearly 400,000 have found their answer to the motor car question in a Maxwell.

This year 100,000 Maxwells are being produced.

This will supply but 60% of the demand.

MAXWELL MOTOR COMPANY, INC.
DETROIT, MICHIGAN

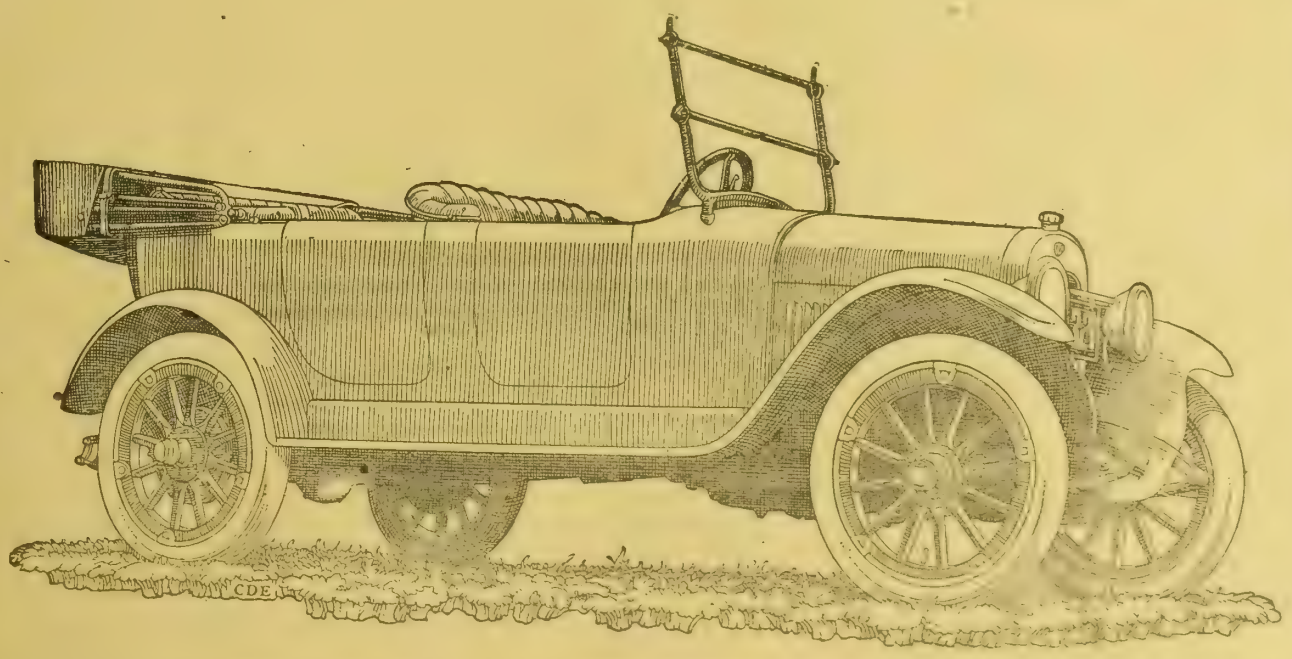
More miles on tires



"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, a New York millionaire, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis,' to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. Francis explores another island where he meets a young man who gives his names as Henry Morgan and proves to be a relative of Francis.' He is also hunting for the treasure. They form a partnership. Francis learns that Henry is the lover of the girl he met and that her name is Leoncia Solano. Francis returns to the first island where he is captured by Torres and the Jefe Politico of San Antonio. They proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang him when Henry appears. They release Francis and throw Henry into prison. The Solanos and Francis release Henry and they escape to the boat that Francis has chartered. They are pursued by Torres and the Jefe with his soldiers. They land on an island where they procure horses and start through the hills with the Jefe and his gang in pursuit. Torres with the Jefe and his gendarmes succeed in capturing the Morgans and their friends, but as they are about to torture Henry and Francis they are surrounded by a band of men. These men are followers of a blind-man, called "The Cruel Just One," who lives in the hills. The men take their captives before their leader.

CHAPTER XI.

TO ALL intents it might have been a tiny bull ring, that pit in the heart of the Blind Brigand's domain. Ten feet in depth and thirty in diameter, with level floor and perpendicular wall, its natural formation had required little work at the hands of man to complete its symmetry. The sackcloth men, the haciendados, the gendarmes—all were present, save for the Cruel Just One and the mestiza, and all were lined about the rim of the pit, as an audience, to gaze down upon some bull-fight or gladiatorial combat within the pit.

At command of the stern-faced leader of the sackcloth men who had captured them, Henry and the Jefe descended down a short ladder into the pit. The leader and several of the brigands accompanied them.

"Heaven alone knows what's going to happen," Henry laughed up in English to Leoncia and Francis. "But if its rough and tumble, bite and gouge, or Marquis of Queensbury or London Prize Ring, Mister Fat Jefe is my meat. But that old blind one is clever, and the chances are he's going to put us at each other on some basis of evenness. In which case, do you, my audience, if he gets me down stick your thumbs up and make all the noise you can. Depend upon it, if it's he that's down, all his crowd will be thumbs up."

The Jefe, overcome by the trap into which he had descended, in Spanish addressed the leader.

"I shall not fight with this man. He is younger than I, and has better wind. Also, the affair is illegal. It is not according to the law of the Republic of Panama. It is extra-territorial and entirely unjudicial."

"It is the Snake and the Bird," the leader shut him off. "You shall be the Snake. This rifle shall be in your hands. The other man shall be the Bird. In his hand shall be the bell. Behold! Thus may you understand the ordeal."

At his command ,one of the brigands was given the rifle and was blindfolded. To another brigand, not blindfolded was given a silver bell.

"The man with the rifle is the Snake," said the leader. "He has one shot at the Bird who carries the bell."

At signal to begin, the bandit with the bell, tinkled it at extended arms length and sprang swiftly aside. The man with the rifle lowered it as if to fire at the space just vacated and pretended to fire.

"You understand?" the leader demanded of Henry and the Jefe.

The former nodded, but the latter cried exultingly:

"And I am the Snake?"

"You are the Snake," affirmed the leader.

And the Jefe was eager for the rifle, making no further protests against the extra-territoriality of the proceedings.

"Are you going to try to get me?" Henry warned the Jefe.

"No, Senor Morgan. I am merely going to get you. I am one of the two best shots in Panama. I have two score and more medals. I can shoot with my eyes shut. I can shoot in the dark. I have often shot and with precision, in the dark. Already may you count yourself a dead man."

Only one cartridge was put into the rifle, ere it was handed to the Jefe after he was blindfolded. Next, while Henry, equipped with the tell-tale bell, was stationed directly across the pit, the Jefe was faced to the wall and kept there while the brigands climbed out of the pit and drew the ladder up after them. The leader, from above, spoke down:

"Listen carefully, Senor Snake, and make no move until you have heard. The Snake has but one shot The Snake cannot tamper with his blindfold. If he so tampers it is our duty to see that he immediately dies. The Snake has no time limit. He may take the rest of the day, and all of the night, and the remainder of eternity ere he fires his one shot. As for the Bird, the one rule is that never must the bell leave his hand, and never may he stop the clapper of it from making the full noise intended of the clapper against the sides of the bell. Should he do so, then will he immediately die. We are here above you, both of you, Senors, rifles in hand, to see that you die the second you infract any of the rules. And now, God be with the right, proceed!"

The Jefe turned slowly about and listened, while Henry, essaying gingerly to move with the bell, caused it to tinkle. The rifle was quick to bear upon the sound, and to pursue it as Henry ran. With a quick shift he transferred the bell to the other extended hand and ran back in the opposite direction, the rifle sweeping after him in inexorable pursuit. But the Jefe was too cunning to risk all on a chance shot, and slowly advanced across the arena. Henry stood still, and the bell made no sound.

So unerringly had the Jefe's ear located the last silvery tinkle, and so straightly did he walk despite his blindfold ,that he advanced just to the right of Henry and directly at the bell. With infinite caution, provoking no tinkle, Henry slightly raised his arm and permitted the Jefe's head to go under the bell with a bare inch of margin.

His rifle pointed, and within a foot of the pit-wall, the Jefe halted in indecision, listened vainly for a moment, then made a further stride that collided the rifle muzzle with the wall. He whirled about, and, with the rifle extended, like any blind man felt out the air space for his enemy. The muzzle would have touched Henry had he not sprung away on a noisy and zig-zag course.

In the center of the pit he came to a frozen pause. The Jefe stalked past a yard to the side and collided with the opposite wall. He circled the wall, walking cat-footed, his rifle forever feeling out into the empty air. Next he ventured across the pit. After several such crossings during which the stationary bell gave him no clue, he adopted a clever method. Tossing his hat on the ground for the mark of his starting point, he crossed the edge of the pit on a shallow chord, extended the chord by a pace farther along the wall,and felt his way back along the new and longer chord. Again against the wall, he verified the correctness of the parallelness of the two chords by packing back to his hat. This time, with three paces along the wall from the hat, he initiated his third chard.

Thus he combed the area of the pit and Henry saw that he could not escape such combing. Nor did he wait to be discovered. Tinkling the bell as he ran and zigzagged and exchanging it from one hand to the other, he froze into immobility in a new place.

The Jefe repeated the laborious combing out process; but Henry was not minded longer to prolong the tension. He waited till the Jefe's latest chord brought him directly upon him. He waited till the rifle muzzle, breast high, was within half a dozen inches of his heart. Then he exploded into two simultaneous actions. He ducked lower than the rifle and yelled "Fire!" in stentorian command.

So startled, the Jefe pulled the trigger, and the bullet sped above Henry's head. From above, the sackcloth men applauded wildly. The Jefe tore off his blindfold and saw the smiling face of his foe.

"It is well—God has spoken," anaounced the sackcloth leader, as he descended into the pit. "The man uninjured is innocent. Remains now to test the other man."

"Me?" the Jefe almost shouted in his surprise and consternation.

"Greetings, Jefe," Henry grinned. "You did try to get me. It's my turn now. Pass over that rifle."

But the Jefe, with a curse, in his disappointment and rage forgetting that the rifle had contained only one cartridgefi thrust the muzzle against Henry's heart and pulled the trigger. The hammer fell with a metallic click.

"It is well," said the leader, taking away the rifle and recharging it. "Your conduct shall be reported. The test for you remains, yet must it appear that you are not acting like God's chosen man."

Like a beaten bull in the ring seeking a way to escape and gazing up at the ampitheatre of pitiless faces, so the Jefe looked up and saw only the rifles of the sackcloth men, the triumphing faces of Leoncia and Francis, the curious looks of his own gendarmes, and the blood-eager faces of the haciendados that were like the faces of any bull-fight audience.

The shadowy smile drifted the stern lips of the leader as he handed the rifle to Henry and started to blindfold him.

"Why don't you make his face the wall until I'm ready?" the Jefe demanded, as the silver bell tinkled in his passion-convulsed hand.

"Because he is proven God's man," was the reply. "He has stood the test. Therefore he cannot do a treacherous deed. You now must stand the test of God. If you are true and honest, no harm can befall you from the Snake. For such is God's way."

Far more successful as the hunter than as the hunted one, did the Jefe prove. Across the pit from Henry, he strove to stand motionless but out of nervousness, as Henry's rifle swept around on him, his hand trembled and the bell tinkled. The rifle came almost to rest and wavered omin ously about the sound. In vain the Jefe tried to control his flesh and stil the bell.

But the bell tinkled on, and, in despair, he flung it away and threw himself on the ground. But Henry, following the sound of his enemy's fall, lowered the rifle and pulled the trigger. The Jefe yelled out in sharp pain as the bullet perforated his shoulder, rose to his feet cursed, sprawled back on the ground and lay there cursing.

Again, in the cave, with the mestiza beside him at his knee, the Blind Brigan gave judgment.

"This man who is wounded and who talks much of the law of the tierra caliente, shall now learn Cordilleras law. By the test of the Snake and the Bird has he been proven guilty. For his life a ransom of ten thousand dollars gold shall be paid, or else shall he remain here a hewer of wood and a carrier of water, for the remainder of the time God shall grant him to draw breath on earth. I have spoken, and I know that my voice is God's voice, and I know that God will not grant him long to draw breath if the ransom be not forthcoming."

A long silence obtained, during which even Henry, who could slay his foe in the heat of combat, advertised that such cold-blooded promise of murder was repugnant to him.

"The law is pitiless," said the Cruel Just One; and again silence fell.

"Let him die for want of a ransom," spoke one of the haciendados. "He has proved a treacherous dog. Let him die a dog's death."

"What say you?" the Bind Brigand asked solemnly. "What say you, peon of the many beatings, man not born this day, half-Maya that you are and lower of the woman wonderful. Shall this man die the dog's death for want of a ransom?"

"This man is a hard man," spoke the peon. "Yet is my heart strangely soft this day. Had I ten thousand gold I would pay his ransom myself. Yea, O Holy One and Just, and lo, I two hundred and fifty pesos, even would I pay off my debt to the hacienda do of which I am absolved."

The old man's blind face lighted up to transfiguration.

"You, too, speak with God's voice this day, regenerate one," he approved.

But Francis, who had been scribbling hurriedly in his check book, handed a check, still wet with the ink to the mestiza.

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.

——it tells you when and where to get the best prices for what you raise!

——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!

——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all! ONE YEAR.....$1 / THREE YEARS...$2 / FIVE YEARS.....$3 — No Premiums, No free-list, but worth more than we ask.

MICHIGAN BUSINESS FARMER, Mt. Clemens, Mich.

Dear Friends—Keep M. B. F. coming to the address below for .....years for which I enclose herewith $.....in money order, check or currency.

Name .....

P. O. .....R. F. D. No.....

County .....State.....

If this is a renewal mark an X here ( ) and enclose the yellow address label from the front cover of this issue to avoid duplication.

"I, too, speak," he said. "Let not
e man die the dog's death he de-
rves, proven treacherous hound
at he is."
The mestiza read the check aloud.
"It is not necessary to explain,"
e Blind Brigand shut Francis off.
am a creature of reason, and have
t lived always in the Cordilleras.
know the Chemical National Bank
New York, and through my agents
ve had dealings with it aforetime.
e sum is for ten thousand dollars
ld. This man who writes it has
ld the truth already this day. The
eck is good. Further I know he
ll not stop payment. This man
o thus pays the ransom of a foe
one of three things: a very good
an; a fool; or a very rich man.
ll me, O Man, is there a woman
nderful?"
And Francis, not daring to glance
right or left, at Leoncia or Henry,
t gazing straight before him on
e Blind Brigand's face, answered
cause he felt he must answer:
"Yes, O Cruel Just One, there is
woman wonderful."

CHAPTER XII.

T THE precise spot where they had been first blindfolded by the sackcloth men, the cavalde halted. It was composed of a mber of the sackcloth men; of oncia, Henry, and Francis, blindded and on foot. Similarly esrted, the haciendados, and the Jefe d Torres with their gendarmes, had eceded by half an hour.
At permission given by the sternced leader, the captives, about to released, removed their blindlds.
"Seems I've been here before,"
enry laughed, looking about and
entifying the place.
"Seems the oil-wells are still burng," Francis said pointing out half
e field of day that was eaten up
the black smoke-pall. "Peon,
ok upon your handiwork. For a
an who possesses nothing, you are
e biggest spender I ever met. I
ve heard of drunken oil-kings
hting cigars with thousand dollar
nk notes, but here are you burng up a million dollars a minute."
"I am not a poor man," the peon
asted in proud mysteriousness.
"A millionaire in disguise!" Hentwitted.
"Where do you deposit?" was
oncia's contribution "In the Chemal National Bank?"
The peon did not understand the
lusions, but knew he was being
ade fun of, and drew himself up
profound silence.
The stern leader spoke:
"From this point you may go your
rious ways. The Just One has so
mmanded. You, senors, will disount and turn over to me your
ules. As for the senorita, she may
tain her mule as a present from the
st One, who would not care to be
sponsible for compelling any seita to walk. The two senors, with-
t hardship, may walk. Especially
s the Just One recommended walkg for the rich senor. The possesn of riches, he advised, leads to
o little walking. Too little walkg leads to stoutness; and stoutness
es not lead to the woman wonderl. Such is the wisdom of the Just
ne.
"Further, he has repeated his adce to the peon to remain in the
ountains. In the mountains he
ill find his woman wonderful, since
oman he must have; and it is wisest
at such woman be of his own
eed. The woman of the tierra caente are for the men of the tierra
liente. The Cordilleras women are
r the Cordilleras men. God disikes mixed breeds. A mule is abrrent under the sun. The world
as not intended for mixed breeds,
t man has made for himself many
ventions. Pure races interbred
ads to impurity. Neither will oil
r water congenially intermingle.
nce kind begets kind only kind
ould mate. Such are the words
the Just One which I have repeatd as commanded. And he has esecially impressed upon me to add
at he knows whereof he speaks,
r he, too, has sinned in just such
ays."
And Henry and Francis of Angloaxon stock, and Leoncia of the
atin, knew perturbation and embarassment as the vicarious judgment
the Blind Brigand sank home.
nd Leoncia, with her splendid eyes
of woman, would have appealed protest to either man she loved, had the other been absent; while both Henry and Francis would have voiced protest to Leoncia had either of them been alone with her. And yet, under it all, deep down, uncannily, was a sense of the correctness of the Blind Brigand's thought. And heavily, on the heart of each, rested the burden of the conscious oppression of sin.

A crashing and scrambling in the brush diverted their train of thought as descending the canyon slope on desperately slipping and sliding horses, appeared on the scene the haciendado with several followers. His greeting of the daughter of the Solanos was hidalgo-like and profound, and only less was the heartiness of his greeting to the two men for whom Enrico Solano had stood sponsor.

"Where is your noble father?" he asked Leoncia. "I have good news for him. In the week since I last saw you, I have been sick with fever and encamped. But by swift messengers, and favoring winds across Chiriqui Lagoon to Bocas del Toro, I have used the government wireless —the Jefe of Bocas del Toro is my friend—and have communicated with the President of Panama—who is my ancient comrade whose nose I rubbed as often in the dirt as did he mine in the boyhood days when we were schoolmates and cubicle-mates together at Colon. And the word has come back that all is well; that justice has miscarried in the court at San Antonio from the too great but none the less worthy zeal of the Jefe Politico; and that all is forgiven, pardoned, and forever legally and politically forgotten against all of the noble Solano family and their two noble Gringo friends——"

Here, the haciendado bowed low to Henry and Francis. And here, skulking behind Leoncia's uncle, his eyes chanced to light on the peon; and, so lighting, his eyes blazed with triumph.

"Mother of God, thou hast not forgotten me!" he breathed fervently, then turned to the several friends who accompanied him. "There he is the creature without reason or shame who has fled his debt of me. Seize him! I shall put him on his back for a month from the beating he shall receive!"

So speaking, the haciendado sprang around the rump of Leoncia's mule; and the peon, ducking under the mule's nose, would have won to the freedom of the jungle, had not another of the haciendados, with quick spurs to his horse's sides, cut him off and run him down. In a trice, used to just such work, the haciendados had the luckless wight on his feet, his hands tied behind him, a lead rope made fast around his neck.

In one voice Francis and Henry protested.

"Senors," the haciendado replied, "my respect and consideration and desire to serve you are as deep as for the noble Solano family under whose protection you are. Your safety and comfort are sacred to me. I will defend you from harm with my life. I am yours to command. My hacienda is yours, likewise all I possess. But this matter of this peon is entirely another matter. He is none of yours. He is my peon, in my debt, who has run away from my hacienda. You will understand and forgive me, I trust. This is a mere matter of property. He is my property."

Henry and Francis glanced at each other in mutual perplexity and indecision. It was the law of the land as they thoroughly knew.

"The Cruel Just One did remit my debt, as all here will witness," the peon whispered.

"It is true, the Cruel Justice remitted his debt," Leoncia verified.

The haciendado smiled and bowed low.

"But the peon contracted with me," he smiled. "And who is the Blind Brigand that his foolish law shall operate on my plantation and rob me of my rightful two hundred and fifty pesos?"

"He's right, Leoncia," Henry admitted.

"Then will I go back to the high Cordilleras," the peon asserted. "Oh, you men of the Cruel Just One, take me back to the Cordilleras."

Air-cure Your Hay the International Way

IT ISN'T sun-drying that puts quality into hay, but *air-curing.* And hay is air-cured best when side-tedded into light, breeze-sifting windrows such as those that trail off in the wake of

International Combined Side-delivery Rakes and Tedders

You can follow closely behind the mower with this machine and rake the hay before the leaves begin to wilt. The teeth strike the heads of the hay first and rake clean, picking up every last wisp—and there is no shattering of leaves. The hay is turned completely over and deposited in snug, airy windrows through which the air circulates freely, curing evenly both stems and leaves with its magic touch.

There are points of mechanical excellence that distinguish this fast-working, gentle hay-handling machine from all other types of side-rakes and tedders. There are also many points of mechanical excellence that distinguish all hay machines made in the International Harvester factories — **McCormick, Deering,** and **Milwaukee mowers** and **self-dump rakes, International tedders, sweep rakes, stackers** and **loaders.** Ask your nearby International full-line dealer to show you.

Prussianism Out-Prussianized

THE ACTION of the Federal Fair Price Board in fixing the price of milk below the cost of production is equivalent to the confiscation of property.

What is the difference between this kind of confiscation and the confiscation practiced by the Germans in Belgium? We can see none.

The arbitrary ruling of this Board in reducing the price of milk from 16 to 14 cents regardless of the cost of producing the milk is the most damnable prostitution of justice that has ever come to our attention. It is a reversion to the old Prussian doctrine that might makes right. Because it is practiced by a commission clothed with authority by the government of the United States makes the doctrine no less obnoxious and no less dangerous to liberty and justice.

The Lever law which makes it possible for such a Board to be appointed and to exercise autocratic powers was a war-time emergency act. Had it not been for the precious squabble over the League of Nations covenant the treaty of peace with Germany would have been signed long ago and the Lever act repealed. Technically we are still at war, and technically the Attorney General of the United States who is a candidate for President, has the power to appoint boards to control the prices of food products and make the consumer, who is also a voter, believed that some great service is being performed in his behalf.

The autocratic powers of the Fair Price Board would arouse the envy of a Czar or Kaiser. Indeed, the decree "that on and after April 15th the price of milk SHALL BE, etc." sounds like a royal manifesto addressed to ignorant serfs instead of an order issued to a body of honest, law-abiding, and intelligent American citizens. Once more, Prussians, you have been out-Prussianized!

Legislative Checks

STRANGE to say the Illinois Agricultural Association is opposing the adoption of the initiative and referendum in that state. The claim is made by the spokesmen of the organization that the people of the cities outnumber the people of the country and would therefore hold the balance of power in a popular election upon an amendment to the constitution. They assert that they are satisfied to leave the important work of revising the constitution to their regularly elected representatives.

We find it hard to understand the position taken by the Illinois Farmers' Association. The farmers of Michigan have employed the initiative and referendum to good advantage on a number of occasions and it goes without saying that they would not be willing to part with this effective check upon legislative abuses. Here in Michigan, as well as Illinois, the city population exceeds the rural population, and while we would not care to trust all of our city cousins to vote right on constitutional amendments, enough of them will do so to insure the adoption of good and needed amendments and defeat undesirable ones.

It must be that our Illinois neighbors are proceeding on the theory that there is nothing in common between the people of the towns and the people of the farms. Such an attitude shows a regrettable lack of faith in human nature and ignorance of the similarity of views between many urban and rural folks as expressed in elections of states where the initiative and referendum are in effect.

There has been considerable progress in recent years in bringing thhe people closer to the government. Not only has this resulted in arousing thhe people to a greater appreciation of their responsibilities as citizens and a greater interest in government affairs, but it has likewise been the means of securing some very important changes in local and state government. The movement has had its enemies and they are as busy as ever trying to make the form of government less popular and less accessible to change by bodies of voters. We hope that our Illinois friends have not been deceived by the enemies of popular government and will take no action that will cast any reflection upon the initiative and referendum.

Settling Strikes

THE STRIKING switchmen are returning to work, and production and transportation are slowly coming back to normal. The strike has demonstrated our absolute dependence upon the railroads. It has also demonstrated our absolute dependence upon the men who operate the trains and throw the switches.

Much has been said of the necessity from a public policy viewpoint of protecting the interests of investors in railroad securities and insuring the roads of sufficient returns to enable them to maintain their equipment in a serviceable condition. But much more might be said of the advisability from a public policy viewpoint of protecting the interests of the denim-clad men who work for the railroads.

The average person would hardly have thought it possible for switchmen to tie up the transportation of the country in such a manner. Had the engineers quit, or even the firemen, it would have been easy to forecast the result. But the throwing of a switch seems to be such a trifling operation. Anyone could throw a switch! But we now know that anyone couldn't throw a switch and that the movement of trains is as much at the mercy of the switchman as the engineer; as much at the mercy of the engineer as of the dispatcher; and as much at the mercy of the dispatcher as of those who own the trains and pay the dispatcher, the engineer and the switchman.

There has been a pronounced tendency on the part of the American people to reward brains and money at the expense of labor. But the switchmen's strike reveals plainly that this is not only an unfair but a dangerous policy. The switchmen claim that they cannot live on the wages they have been receiving and there is ample evidence that this is true. While the going out on a strike without giving the employers any notice or any opportunity to adjust the grievances was wholly inexcusable and injured the cause of the strikers in the eyes of the public, it nevertheless had the effect of impressing upon the public the expensive folly of ignoring the interests of the wage earners.

If it is the public's business to guarantee rail owners a dividend on their investment, it is equally the public's business to see that the rail workers receive a wage which will enable them to live comfortably and save a little money. If there is dispute over how large this wage should be, the whole matter should be left to a court of disinterested persons, and every possible effort made to adjust the differences by mediation. Until some such tribunal is provided by the government and some such policy is recognized by all parties concerned the nation will continue to suffer from periodic strikes.

When Words Fail.

WORDS FAIL to express the honest anger that burned in the heart of every listener when J. W. Cusick of the Federal Fair Price Board, called the farmers a "bunch of clackers" at a session of the Board on Tuesday evening of last week. Faces went white at the insult. Hands clenched and men muttered hard words under their breath. But inflated with the conceit of his authority Cusick continued to pour out abuse and insults which under other circumstances and in other surroundings would have been promptly resented with blows.

Cusick is the same man with whom the writer had a verbal battle several months ago. He was a member of the Wayne County Fair Price Committee before which the writer appeared to take issue with statements made by the Committtee about farmers and to defend the prices and practices of farmers. Every person on the committee with the exception of Cusick was polite, courteous, gentlemanly and receptive. But Cusick had a preconceived notion that all farmers are profiteers, and at every opportunity vented his spite against them. It was for this reason that we opposed and tried to prevent his appointment to the Federal Fair Price Board. His antics as above described show him to be utterly unworthy to act as a representative of the government in a judicial capacity, and incapable of rendering a fair decision.

"It Isn't so Bad"

WHEN WE get a little pessimistic and think that things are kind of going to the dogs, we turn back to some of the cheery letters we have received from our readers and say to ourselves, "things aren't so bad after all". It takes a heap of courage for the man and the little family on the farm to be contented during these days of high living costs and labor shortage, with the city spreading its temptation of high wages, easy living and the pleasures of life all about them. Many a strong man has surrendered to the will o' the wisp, sold his every earthly possession at auction and gone to the city to take an "easy" job and revel for a few brief weeks in the bright lights. Then,—disillusionment,—a distaste for the new job and a great, heart-rending longing for the old farm. Country folks drift cityward, 'tis true, but many there are who drift back, determined never again to wander from the peaceful farm home. It' a bit old-fashioned, we must confess. There's nothing fancy about it. In fact both the inside and outside, the furniture, the carpets and the wall paper are plain,—as plain as the gingham apron which mother wears. But in every nook and corner, and about every piece of furniture from the old four poster in the spare chamber to the what-not in the parlor there lingers a pleasant memory of days that have gone before. This is home, and no matter how poor and humble the fittings, it will always be home to those who have lived long years beneath its roof. Hope is never dead and courage is never lost where the love for home is strong in the hearts of men and women.

Paint Up!

THE MISSOURI College of Agriculture calls attention to the fact that despite the increased cost of paint no farmer can afford to let his buildings go through a season without the protection which the paint affords. We are reminded that $16 will buy enough paint to cover a barn thirty feet long, sixteen feet wide and sixteen feet high. This paint should last four years, so that the annual cost of keeping such a building protected from the elements is but $4.

Paint is insurance and it is the cheapest insurance against the wear and tear of the seasons that the farmer can buy. Every business farmer carries fire insurance, although he may never expect his barn to burn. How much more essential is insurance against the depreciation of his buildings which is constantly taking place. Paint is high but the cost of lumber, nails and labor is higher. Therefore save money by painting up!

What the Neighbors Say

IF THE FARMER SHOULD STRIKE

I have been reading in M. B. F. and other papers a great deal on the labor question both pro and con and also of the strikes that are occurring on every hand and so am going to ask a question and then endeavor to answer it as viewed by a farmer.

Question: If the farmers would go on a strike for six months beginning April 15th what would happen? It seems to me the farmers are the one class who should strike if anyone should for the buyer puts the price on everything the farmer has to sell and the seller puts the price on whatever he has to buy so there you are.

Now if the farmers would quit let's see what would happen: In the first place they would dispose of their live stock and while there would be an over production of meat for a while, when the strike was over there would be a meat famine for years to come and before six months there would be no stock yard strike as now but the strikers would be looking for a job at whatever wages they could get.

There would be no fertilizer or farm machinery bought so these factories would close without a strike and men would be begging for jobs.

There would be no crops grown so there would be no need for elevator men nor freight handlers, either railroad or steamboat so that there would be no strike of either as there is today but thousands of men would be walking the streets hunting for jobs.

The farmers wouldn't be buying automobiles so I presume that there would be no shortage of cars as they tell us now so the factories would cut down production throwing thousands of men out of employment.

With the farmers producing nothing and buying nothing the railroads and boat lines would be put out of business throwing thousands of men out of work.

And now last, but not least, with production cut off the result would be prices so high that none but the rich could buy and perhaps not them as there would be nothing to buy.

In conclusion wil say the farmer is in the best position of any man in the world to strike and stay put for as a rule he can grow enough for his own needs so need not worry but he is patriotic enough to stay on the job twelve hours a day every day in the year. Strikers, remember every time you strike you are not only hurting yourself but the farmer also. —*T. R., Cass County.*

You have admirably expressed what the results would be if the farmer should strike, but you could go even farther. For my part, I can think of no earthly calamity so terrible in its consequences as a strike of the farmers. When a gang of factory workers strike, they may return to work at any moment. Production has been merely suspended and the wheels of industry go on as before. But if the farmer should strike for sixty days, say from the first day of May to the first day of July, he would throttle agricultural production for an entire year, and, oh, what suffering there would be! I think it is the knowledge of the enormous responsibility which he bears that keeps the farmer steady and rational.—Editor.

STICKING TOGETHER

As I am a reader of the M. B. F. and quite interested in the sugar beet fight, I would like to have a little information about a few things. Last winter in Jan., the Mich. State Farm Bureau had a drive in Tuscola county, also in my township, and almost every farmer signed up and joined it, so did I, as I understand that it is a union something like miners or R.-R. unions ,that means "stick-to-itiveness brings success," but now quite a number of these men and also members of the Beet Growers' Association, sign up beet contracts, under the old price, and now I would like to know, is it right to join a union and not stand by it? Wouldn't it be right to make them cancel their contract?

Several townships in Bay county have organized a farmers' union and they make everyone that joined the union, cancel his beet contract, or be called a slacker and expelled out of the union. The majority of farmers in my township who joined the union, feel the same as myself, "No beets under the old contract."—*A. H., Tuscola county.*

There is a war-time emergency act on our statute books called the Lever Law Until the Treaty of Peace with Germany is approved by Congress and signed by the President, any persons who conspire or agree with other persons to interfere with the production and transportation of necessities, "for the purpose of enhancing the price" will be held guilty of violating this law and be liable to imprisonment. Had it not been for the recommendation of Attorney General Palmer that the beet growers of Michigan sign no contracts pending an investigation of the sugar beet situation, it is probable that those of us in Michigan who have encouraged the growers to stand for a square deal, might have come within the arm of this law.

It is never justice to force a man to do anything against his will even though the object desired may be worthy and entirely to his benefit. One of the reasons for the great public condemnation of labor unions, and strikes is that the leaders attempt to coerce employers and non-union men who would take their places in the shop. Farm labor must depend upon absolute justice to all concerned if it is to attain its highest measure of usefulness. The man who does not remain loyal, "for the good of the organization" which he has joined, if for no other reason, is deserving of the contempt of his fellow members. Those who are signing up beet contracts on the old basis are so few in number that it hardly pays to bother with them. They will be heartily ashamed of themselves when the time comes that those who have been loyal win the fight.—Editor.

"GIVE US THE GOOD OLD DAYS"

Will say there are two voters in this place, an old man and an old woman. Will never vote for an army general. We have had too much militarism already. Johnson, Lowden or Edwards, whoever seems to be the best, someone who will make the times different. Our backs are bending under the load of unnecessary taxes. I refer to the one hundred and one hired men that prohibition has created, state constabulary, and everything that goes with it. Am tired of such reform.

Give us back the good old times, twelve or fourteen years ago. Times have been getting worse ever since they started tampering with the liquor laws. Now a person has to be as good as dead before the doctors will give them an ounce of liquor. When people used to doctor themselves with quinine and half a pint of liquor they would need no doctor, but where the doctors made pennies then he makes dollars now. Oh, such graft, and most of them voted for prohibition to fill their own pockets. —*J. S. L., Brown City, Mich.*

Hoot, mon, take a drink o' cider and forget it. You'll never have back the old days, you know, even if you turn every grocery store in the land into a saloon. Prohibition wasn't actually the reason for the creation of the State Constabulary. It was just the EXCUSE. Had it not been for prohibition during these after-the-war days you would have had to maintain a standing army of soldiers that would make the Constabulary look like a boy scout troop in comparison.—Editor.

A NEW PARTY

When part of a scaffold breaks down the proper thing to do depends on whether that particular scaffold is still needed. There were rotten Republicans in Lincoln's day. Some of them got into office and a few broke down. As the party was still agreed on the vital issues of the day it would have been foolish to demolish it because it contained defective material. But today no important issue unites either the Republican or the Democratic party. Neither now gives firm support to progressive statesmen. Each contains good material, but each has served its purpose and ceased to be useful. Therefore, tear them down and use their progressive elements to build a new progressive party.

A few will refuse to join such a party because it is not progressive enough. Don't sneer at them, however "radical" or "visionary" they seem. Among such are being hatched ideas which, when developed, will become the practical, progressive reforms of tomorrow.—*Stacy Brown, Ionia Co.*

Mind you, we are as well acquainted as you with the failings of the two old parties, and should a leader come forth with a new platform and a new party which could give some promise of bettering conditions, we would be strongly inclined to follow him, knowing all the time that the new party would eventually go the way of all political parties. Hiram Johnson recently said, "I have had enough of a third party movements," and there are no real leaders in America today who have the courage to inaugurate a new party. Some day we shall scrap all political parties and make it a free-for-all. —Editor.

THE CAUSE OF SOCIAL UNREST

The letter of Mr. Bengal goes to prove that the seed sown by the German propagandists before and during the war found in his case the good soil and brought forth a hundredfold.

He says the main cause of social unrest in this country is that our people have found out that they have been the tools of England, pulling her chestnuts out of the fire. Let me ask him what is the cause of social unrest in every country on earth? Was there ever a great war that did not cause social unrest? Millions of men taken from manufacture, commerce and agriculture, placed in army and navy; all the resources of the country concentrated on war, material and army supplies, then suddenly returned to peaceful pursuits. This will unsettle conditions anywhere.

It may be true that Mr. Cameron does not know of an instance where German soldiers intentionally poisoned wells but he could not have been everywhere and men who would shell open lifeboats where poor wretches had taken refuge after their vessel had been torpedoed; men who would drop bombs on defenseless women and children in unfortified towns and cities; men who began the horrible use of poison gas which did poison wells and water ponds, would scarcely refrain from doing anything even intentionally putting poison in a well. Will Mr. Bengal explain the killing of Edith Cavell?

He asks why Germany had not attacked Holland, Switzerland or Luxemburg. Everything points to a belief that Germany intended the annexation of Holland but did not care to stir up things knowing this would cause trouble with England. Berlin wisemen said our wisest course is now to build up our resources. But the next generation will see a greater Germany, possessing in all probability the Netherland, striking south to Trieste on the Adriaic and including Palestine and a considerable portion of Asia Minor as well.

The late Dr. Emil Reich said shortly before the late war, "The time is not remote when Holland will be called to defend her title to Java against an Asiaic enemy and must have aid or lose her eastern colonies." "Alliance," he said, "with Germany would preserve the integrity of the Dutch possessions and the price would be Holland's acceptance of rule as an individual state of the German empire.

"As to Luxumberg, it was practically dominated by Germany and Germany could await the proper time. Switzerland, with her mountain defences was not easy to conquer as history shows. Why did not Germany strike France through Switzerland? Those same mountains and not her love of the Swiss stood in the way. Why did she not confine her operations to her own border? Because she knew she could conquer Belgium and never intended to restore it, but intended Belgium to be a German state.

Let us take a look at German history of recent years. In 1862 we find William I, grandfather of William II (now an exile in Holland) struggling to induce the Prussian Diet to grant him money with which to double his army. Failing in this he invited into his ministry the then young reactionary leader, Otto VonBismark, and to him entrusted the task of uniting the German states into an empire with Prussia as the dominant power. Bismark in 1863 said in the most famous speech he ever made, "Not by speeches and by majority votes are the great questions of the day decided but by blood and iron."

In 1863, chiefly by Bismark's contriving, Prussia and Austria went to war against Denmark and took the duchy of Lauenburg and the provinces of Schleswig and Holstein. In which thhe Keil canal and the German naval base were built. Austria was to administer Holstein and Prussia Schleswig. Prussia paid Austria $1,800,00 for the duchy of Lauenburg. Bismark approved of the whole affair because he believed it would lead to war with Austria and that a great German nation under Prussian domination could

The Week's Editorial

WOULD YOU EAT, NEXT WINTER?

WITH TYPICAL American unconcern for trouble until it thunders at the front door—typical American unpreparedness—we are sleeping on the threshold of a summer crisis which is leaden with possibilities of food shortage next fall and winter that will pinch us all disastrously. There is no greater "paramount issue" challenging public opinion today than the shortage in farm labor. The farmer realizes it, but vainly pleads for help. In thousands of instances he is planning to plant only a portion of his fertile acres because crops require labor—nor can crops be argued or threatened or cajoled into accommodating themselves to seven-hour-days and five day-weeks—nor will nature join a Soviet. The food manufacturer realizes it because he is finding it difficult to make adequate contracts for native products. The food wholesaler realizes it because when he tries to look ahead and anticipate his markets he discovers that nothing is certain this year except uncertainty. As for the rest of us—if we fail in our "realization" now, we will make up for it in an intensified "realization" later when the food supply shortens, prices inevitably go still higher as an inevitable result and rations ultimately all but disappear. * * * It is all very well for Congress to make larger appropriations (as last week) "to investigate and encourage the adoption of improved methods of farm management and farm practice". Everything that can be done to inject efficiency into agriculture is a valuable contribution to a better farming net result. Furthermore, every progressive marketing improvement which eliminates unnecessary way-stops in the journey of food from the farm to the consumer leaves just that much more money on the farm to permit the larger farm earnings which are necessary if the farm is to compete successfully with urban industry for help. But today we are face to face with a condition, not a theory. We must have action; not philosophy. The American farmer—the *Michigan farmer*—must have farm help or America—Michigan and all the rest—will wake up in the grip of a deadly food shortage when the final 1920 harvest has been gathered in. * * * During the war, it was "patriotic" to help the farmer with his crops. Human need for food did not end with the armistice. To help the farmer with his crops is more vitally essential today than it ever was before. Organization to that end is a crying, driving need. This is the really imminent "labor problem". If you doubt it, ask any average Michigan farmer for testimony. So far as life and livlihood are concerned, it is vastly less menacing for factories to close for want of help than for fields to go untilled. There is no blinking this axiom—nor its present and prospective application. A state-wide conference—in which the farmer, for once, shall have his say and day—is an immediate necessity as The Herald views the situaeion. Answer is not easy; but some answer must be found.—*Grand Rapids Herald.*

SAMSO

Heavy Duty Horse Power *for* Draw Bar and Belt.

Horsepower—*plenty of it*—stripped of all unnecessary dead weight! Horsepower for draw bar and belt! At the right price—for both first cost and upkeep! That's what every farmer wants. That is what the designers, engineers and producers had in mind when they developed the SAMSON MODEL M TRACTOR.

You want a tractor that will take the place and perform the duty of a barn full of horses, without costing you a fortune or a big part of your crop to buy and maintain. That is exactly the kind of tractor you get in the SAMSON MODEL M.

It's the last word in modern, down-to-the-minute tractor construction. It is not like the average "I" beam and channel steel frame tractor that weighs so much that it takes a large amount of its power for self-propulsion. It is a close-coupled power unit all by itself from radiator to rear wheels.

Every working part is enclosed and protected against dust, mud or rain. It has no lost motion, for it is built and lubricated throughout like a $3000.00 automobile, insuring great efficiency, ease of operation, maximum length of life and service. The price—the unheard of figure of $840.00—is due to correct designing, engineering and quantity production.

The even distribution of weight, compact unit design, and low center of gravity, give the SAMSON great stability, making it hug the ground and preventing all danger of rearing up and tipping over.

The SAMSON MODEL M is the one tractor you should look at before you buy a tractor of any make or kind. It's not too heavy, it's not too light. It is accessible, easy to operate, dependable and sure.

Booklet Sent FREE!

Ask your dealer for a demonstration of the SAMSON MODEL M or write today for FREE booklet which gives you a comparison in figures showing the cost of maintaining the SAMSON MODEL M compared with horses. You will be surprised at these figures. Horseflesh is an expensive luxury—to say nothing of the chores three times a day every day in the year, and the drudgery they cause you.

Every farmer should have a copy of this instructive book. Sent FREE!

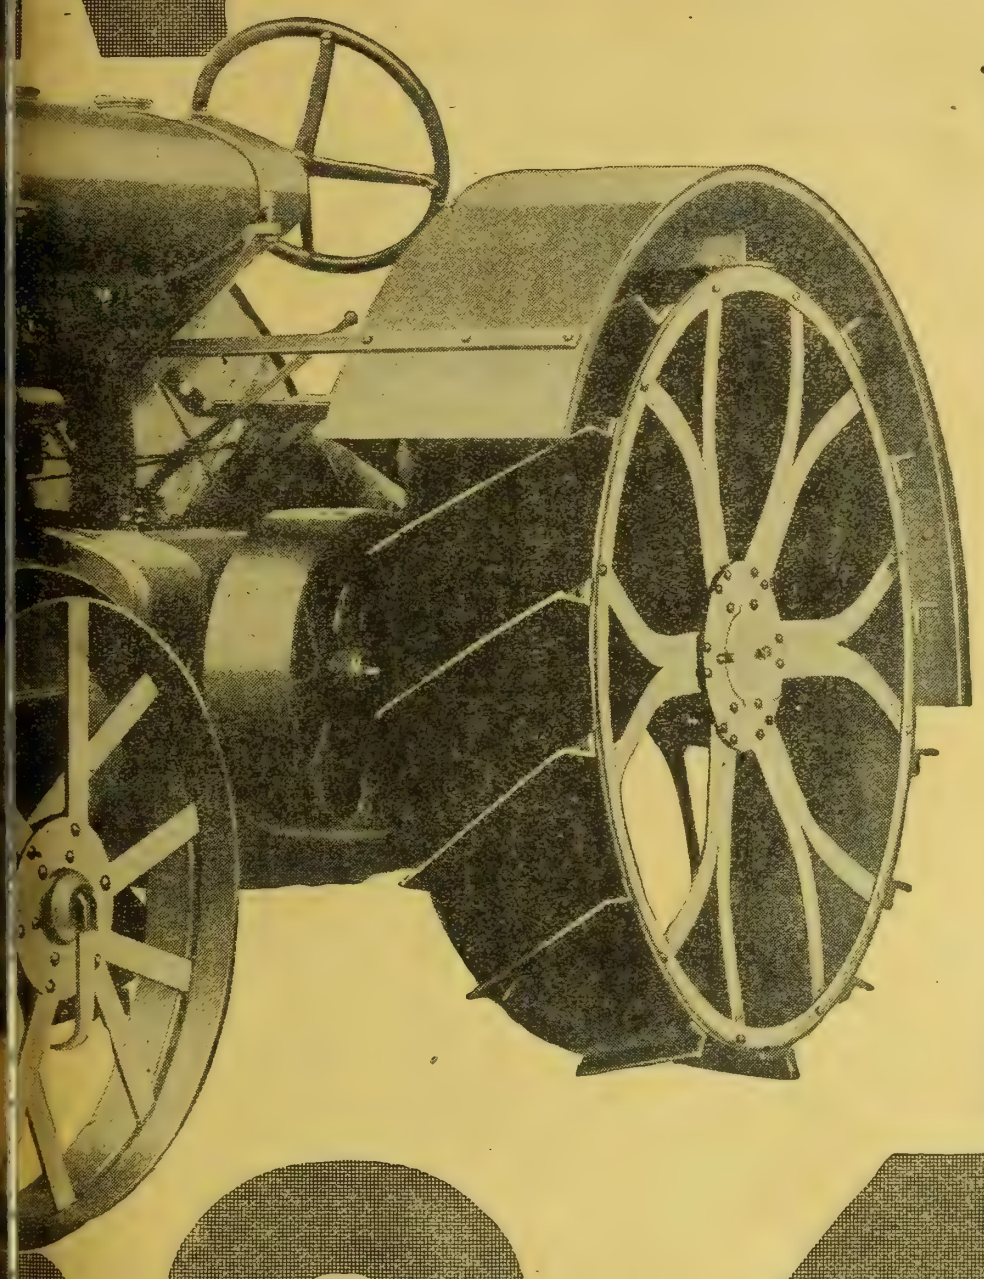
SAMSON TRACTOR COMPANY, 113 Samson Avenue, JANESVILLE, WISCONSIN

Division of General Motors Corporation

Manufacturers of Samson Trucks, Samson Passenger Cars, Samson Tractors and Samson Farm Implements

Here, Mr. Farmer, is the tractor that does not take a fortune to buy or the profits from your farm to maintain

Write for FREE Booklet



What the Samson Does:

Draw Bar

—will pull a two or three-bottom plow.
—will pull a tandem disc harrow.
—will pull two 20-foot spike-tooth harrows.
—will pull two 4-horse grain drills.
—will pull two 7-foot binders.
—will pull large road grader or do any other heavy-duty, draw-bar job.

Belt Power

—will handle any heavy-duty belt power job.
—will run a 22 to 24-inch grain separator.
—will run a 4 to 6-hole corn sheller.
—will run a heavy buzz saw.
—will run a heavy-duty grinder or ensilage cutter up to 14 inches.
—will run a centrifugal water pump for irrigation purposes.
—will handle stone crusher or large concrete mixer
—will handle large hay balers and in fact will do any belt power job requiring steady, reliable power within the range of the machine, from morning till night.

Complete with Platform and Fenders, Governor, Power take-off, Brackets for Canopy Top and Regular Cleats.
Price f.o.b. Janesville, Wis., $840.
Price, f. o. b,. Stockton, California, for Pacific Coast Delivery, $940.
Prices subject to change without notice.

$840

MARKET FLASHES

WEEKLY MARKET AND TRADE CONDITIONS

The strike continues to be the dominating influence in the industrial and agricultural situations. For the better part of a week switchmen have been returning to work, but many are still out and it will be some time before the freight and passenger movement becomes normal. The losses resulting from the strike cannot be estimated, and nearly every person in the strike territory had to help pay the bill. For a time THE BUSINESS FARMER was uncertain whether or not it could secure enough power to run its issue last week . Every other industry in Mount Clemens was closed, but the Detroit Edison Company held that the publication of a farm paper was an essential industry and we were allowed to run uninterrupted. This week it was necessary to take some of our type pages to Lansing and have them "electrotyped." Although we have a complete equipment for making "stereotyped" curved plates from which the majority of our pages are printed, we have no facilities for "electrotyping," and pages which contain fine half-tone engraving must be electrotyped to print up well. The Detroit plant which does this electrotyping was obliged to close down and it was at considerable extra expense that these pages were taken by automobile to Lansing where a shift of electrotypers worked until midnight Saturday night to "plate" them.

In Detroit over 80,000 men were out of work more than a week because of the inability of some of the plants to secure coal and of the Edison Company to supply all its patrons with electric current. Scarcely a city in the entire state escaped some effects of the strike.

Excepting for the financial loss and inconvenience due to the strike everything is running along about the same as usual, and business is quick to respond to the renewal of train operations. A more alarming situation impends, however. The rail chiefs have issued a statement that unless certain wage demands are granted 100,000 railroad men will strike by April 28th. The wages asked look high in comparison with former years, but will stand a comparison with wages paid for skilled workmen in other lines of industry. One naturally wonders where all the wage demands and increases are going to end, whether or not employers can continue to advance wages and the prices of their products without any limit. Naturally the farmer is affected by almost every wage increase. A part of it comes out of his pocket in the long run. There is no particular danger in inflated prices and wages providing everybody is affected alike. But when one class benefits at the expense of another, you have a fine condition for strikes, if not something infinitely worse.

There have been no important changes in the markets. Trading has been from hand to mouth, the supplies received during the past week being scarcely sufficient to stablish a market price. There have not been within fifty per cent of enough receipts to care for the immediate cash demands, and those in need of grain and other products have simply been obliged to do without. The grain markets all opened strong the first of last week. Then corn slumped a little, and oats got a bit shaky. But as soon as it was learned that there was to be no immediate improvement in the strike situation, these grains stiffened and prices have ruled higher ever since. The bears have found it discouraging business to gamble on lower prices when there are two buyers for every seller.

The position of all farm products is encouraging, and while the increase in receipts which will follow the settlement of the strike will probably cause temporary decline, these will be of no moment and the market should immediately right itself and advance. There is no getting around the fact that the country has not the supplies to meet the demands and this being true, prices cannot be lower until the new crops are harvested.

LAST-MINUTE WIRES

DETROIT—Wheat scarce. Corn, Oats and Rye higher and firm. Beans in demand and higher. Hogs and Cattle lower.

CHICAGO—General trend of all grains point to higher prices. Hogs higher.

(Note: The bove summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT A SCARCE ARTICLE

WHEAT PRICES PER BU., APR. 20, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.82		3.10
No. 2 White	2.80		3.06
No. 2 Mixed	2.80		3.06
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.55	2.50	2.51
No. 2 White	2.53	2.47	2.48
No. 2 Mixed	2.53	2.47	2.48

Wheat is not to be had on some markets for love nor money. The strike has added to the chronic shortness of wheat supplies at consuming points and no advance that has been recorded the past week has been sufficient to bring out the needed supplies.

While the condition of winter wheat has been slightly improved because of the recent rains, it is by no means satisfactory and will not register but little more than the 75.6 condition reported by the government, which was the second lowest on record. The late spring has delayed seeding of spring wheat and the acreage will be below normal for both this reason and the reason that farmers cannot get help to put in the crop. Taken altogether the wheat situation does not look altogether bright from the consumer's and dealer's viewpoint, but the farmer who has the crop will make some money out of it this year. It looks as if considerable spring wheat will be planted in Michigan this year, providing the planting conditions are favorable.

The farther the season advances the more certain it becomes that wheat prices have not reached their high levels. Domestic demand is good and there is no let-up in exports. It is reported from Argentina that an embargo is about to be placed on exports of wheat from that country which means that Europe must depend upon the United States and Canada for a much larger supply than at first expected.

CORN SCARCE AND HIGHER

CORN PRICES PER BU., APR. 20, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.82½
No. 3 Yellow	1.77	1.74	
No. 4 Yellow	1.72		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.82¾
No. 3 Yellow	1.69	1.61½	1.81¾
No. 4 Yellow	1.66	1.60	1.79

Either farmers are too busy with spring crops to market the balance of their corn, or else they are not satisfied with the price. Perhaps also they haven't any more corn to market. Anyway, dealers aren't getting the corn and the price goes up a notch or two each week. Farmers who determined to hold out from selling their corn for less than $1.50 are able to realize that figure and in some sections considerably more, but even this price does not bring out the corn. Various guesses are made as to what the acreage will be this year, some predicting that it will be the largest acreage on record. The yield for 1919 was a huge one, and many wiseacres predicted that this would mean low prices, but the supplies mysteriously disappeared and the trend of the market has been exactly the opposite to what was generally expected. Corn prices would be higher right now were it not for the threat of the government to investigate an alleged "corner" in the market. If there is anything that will frighten traders or anyone else for that matter it is the threat of an investigation, which, though it may prove nothing at all, casts a shadow upon all transactions. The dealers involved in the alleged conspiracy include some of the biggest traders in Chicago.

It is reasonable to suppose that corn will maintain its present levels and possibly reach higher ones the next sixty days. There may be a drop when supplies that have been help up in transit on account of the strike reach the market but this will be of only short duration.

Michigan farmers had such good luck with corn last year that many of them are tempted to increase their acreage this year. While we do not think that corn would be as good a cash crop as others we could mention, we do not think any farmer would be taking a very long chance on increasing his acreage. The almanac shows that the 1920 season should be good corn weather and does not indicate a killing frost in Michigan until the middle or latter part of October.

OATS IN DEMAND

OAT PRICES PER BU., APR. 20, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.13	1.05½	
No. 3 White	1.12	1.04½	
No. 4 White	1.11		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.74	.73	.80½
No. 3 White	.73½	.72	.79
No. 4 White	.72½	.70	.77

There's no longer any guess work about the future of oats. While the export demand has dropped off owing to the high prices, the scant supplies have been so depleted that difficulty is encountered in getting enough for the normal daily needs of domestic consumers. Detroit quotes best grade of oats at $1.13 per bushel.

There is considerable uncertainty as to the acreage to be planted to oats this spring. The unseasonable April weather has been prevalent all over the United States and seeding has been delayed for several weeks. It is pointed out that this does not augur well for a good crop in the early seeding sections, as early seeded oats always do better than late seeded oats. However, the seeding season in Michigan is late enough not to be materially affected by the backward weather and if normal weather should prevail until the middle of May Michigan will have a normal acreage or better of oats. Of labor all crops oats require the least labor, and this fact will command oats to a good many farmers this year.

RYE CONTINUES UPWARD

Rye is strong and higher being quoted at $2.08 for No. 2 on the Detroit market. It is believed that this market will decline the least of any of the grains when the strike is settled and transportation resumed because of the continued heavy export demand.

BEANS ADVANCE AGAIN

BEAN PRICES PER CWT.			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.50	7.25	7.50
Red Kidneys		13.00	14.50
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.50	7.50	8.00
Prime	6.75	7.00	7.25
Red Kidneys	10.25	11.00	10.75

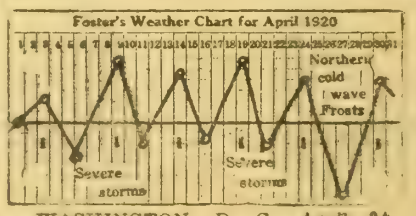
There is no denying the fact that beans are "picking up." The market has registered three advances of a total of $1 per hundred in the last two weeks and there is a strong feeling in the bean states that the long anticipated "boom" has arrived. It will not be wise to place too much credence in this belief, however. The antics of the bean market the last two years has taught us all to be moderate and cautious in our discussions on the subject, and the present strength may only be the result of another "speculation." We do not believe this is the case, but we are satisfied to "go easy" and note whether or not the advance is sustained.

A Los Angeles dispatch says, "The demand for beans is improving somewhat, and as beans are about the cheapest food on the market today, it is expected that the price will advance."

Our readers who have waited patiently for many months in hopes of better bean prices can get a ray of encouragement out of the latest developments, and we are anxiously awaiting further developments in the hope and belief that prices are soon to advance to a point where the farmers can make some money on the balance of their crop.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., April 24, 1920—Warm waves will reach Vancouver about April 27, May 2, 7, 12 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of April 28, May 3, 8, 13; plains sections April 29, May 4, 9, 14; meridian 90, upper great lakes, Ohio-Tennessee and lower Mississippi valleys April 30, May 5, 10, 15; great lower lakes and eastern sections May 1, 6, 11, 16, reaching vicinity of Newfoundland about May 2, 7, 12, 17. Storm waves will follow about one day behind warm waves, cool waves about one day behind warm waves.

These disturbances will control weather conditions of North America from about April 27 to May 16. Temperatures will average about normal and rainfall of these twenty days, in all sections, will average about same as for past two months. In sections where cropweather has not been satisfactory I see no hope of any material change during this period.

Most severe storms and most rain are expected during the week centering on May 13. These storms are not expected to be so dangerous as will be those of the next storm period, but they will require your attention.

A hopeful sign of the world's finance and business looms up in the great combination of bankers that has been formed for the purpose of furnishing raw materials to Austria, Germany, Roumania and other European States, in order that they may rebuild their broken down and ruined financial, mechanical and food facilities. The movement of these banker financiers promises success and a renewal of business in those badly broken countries. The interesting feature of this much needed effort is that it will enable those countries to secure our grain, cotton and other raw materials. This important announcement, published thruout the world, and the fact that weather extremes in our great winter wheat sections, aided by the hessian fly, are damaging, and promise more damage to this much demanded cereal, presses renewed interest in the on-coming cropweather for balance of the 1920 season.

W. T. Foster

POTATOES LOWER AND DULL

SPUDS PER CWT., APR. 20, 1920	Sacked	Bulk
Detroit	8.00	
Chicago	7.60	7.75
Pittsburg	6.17	6.10
New York	6.00	
PRICES ONE YEAR AGO		
Detroit	2.10	2.00
Pittsburg	2.25	2.20
New York	2.50	2.40
New York	2.25	2.20

The boycott that started in Detroit and is rapidly becoming national, turned up the toes in potatoes. Just when "King Spud" was getting to be an expert aviator along came this boycott and whipped the wind out of his sails but it took the "fair price board" to put the final touches to his downfall. The board ruled that he shall not fly above the \$3.60 per bushel limit, so the farmers who have their potatoes yet may be left to hold the bag.

There is a dull market reported at nearly all points and in Detroit in particular, as dealers there report that they cannot sell potatoes even at the "fair" price which would be at a loss to them as they claim to have paid more than \$3.60 a bushel for their present supply. We believe this to be true. Shippers are directing their cars to other points where the market is slightly better.

HAY

Pittsburg	34.50 @ 35	33.00 @ 34	31.00 @ 32
	No. 1 Light Mix.	No. 1 Clover Mix.	No. 1 Clover
Detroit	33.50 @ 34	32.50 @ 33	29.00 @ 30
Chicago	29.00 @ 30	27.00 @ 29	25.00 @ 27
New York	39.00 @ 40	37.00 @ 38	33.00 @ 33
Pittsburg	32.00 @ 33	33.00 @ 34	31.50 @ 32

There has been an improvement in the rail situation this week, especially in the west and although trade is far from normal at any point, the end of the trouble is in sight. The situation has been without precedent in the history of the hay trade and coming as it has after months of unusual weather conditions, and consequent slow deliveries, it has forced prices to record levels. When the strike is settled and weather conditions are propitious, hay will move to market in large quantities and values will fall rapidly; it is to the interest of shippers to market their available holdings as rapidly as possible, but to avoid taking on new stocks at present prices.

DETROIT PRODUCE MARKET

Supplies of farm produce are small and there is not much improvement in receipts, although it is said that the movement of cars is a little more active than it was last week and some vegetables are getting through. A few cars of potatoes have been received, but far from enough to put any pressure on the market and there is not much doing. It is the same in other vegetables, not enough coming in to make a market and prices largely nominal. The fruit trade is almost lifeless. Receipts are confined to a small movement of box apples and strawberries that reach the market by express. Poultry trading is dull and no change is noted in the price list. Both supply and demand are small. There is not much doing in dressed hogs or calves. Some of the latter are getting to market, but hogs are very scarce. Butter is dull and offered a little lower. Sales of eggs on the Detroit butter and egg board were at 41 3-4 cents for strictly fresh.

Apples—Western, boxes, \$4.50@5.50; Baldwin, \$3@3.50; Greening, \$3.25@3.50; Steele Reds, \$3.50@4 per bushel.

Popcorn—Shelled, 9c per lb.

Dressed hogs—Best, 25@26c; heavy, 20@22c per lb.

Calves—dressed, fancy, 24@25c; No. 2 18@22c per lb.

Live poultry—Spring chickens, best, 42@44c; leghorns, 42@44c; hens, 46@48c; small hens, 44@45; roosters, 25@27c; geese, 30@35c; ducks, 40@45c; turkeys, 44@45c per lb.

Hides—No. 1 cured calf, 55c; No. 1 green calf, 55c; No. 1 cured kip, 32c; No. 1 green kip 28c; No. 1 cured hides, 25 to 45 lbs., 30c; 5 lbs. and up, 29c; No. 1 green hides, 25 to 15 lbs., 27c; 45 lbs. and up, 17c; No. 1 green bulls, 20c; No. 1 cured bulls, 15c; No. 1 horsehides, \$9.50; No. 2 horsehides, \$8.50; Tallow: No. 1, 13c; No. 2 11c. Sheep pelts, 50c@3.50; No. 2 hides 1c and No. 2 kip and calf, 1 1-2c off.

BOSTON WOOL MARKET

The Commercial Bulletin says: The railroad strike has tied up transportation, the effect being to hold up wool buying again to a greater or lesser extent. There has been some business accomplished during the week, however, mainly on the part of those who had fine wools, especially staple lots, to offer at firm prices.

Some buying of the new clip is reported from Nevada at 50 to 54c, shearing at length having got started in this state. Elsewhere through the west there has been little or nothing doing.

Ohio and Pennsylvania fleeces—Delaine, unwashed, 97c@\$1; fine unwashed, 74@76c; half blood, combing, 83@85c; 3-8 blood combing, 69@70c; Michigan and New York fleeces, fine unwashed, 80@82c; 3-8 blood, unwashed, 67@68c; Wisconsin, Missouri and average New England, 1-2 blood, 72@75c; 3-8 blood, 63@65c; 1-4 blood, 60c.

Virginia, Kentucky and similar—1-2 blood, unwashed, 85@86c; 1-4 blood unwashed, 67@68c.

Scoured basis: Texas: Fine 12 months, \$1.90@1.95; fine 8 months \$1.65@1.70. California, northern, \$1.90@1.95; middle country, \$1.70@1.75; southern, \$1.50@1.60; Oregon eastern No 1 staple, \$2@2.10; eastern clothing, \$1.70@1.80; valley No. 1, \$1.70@1.75. Territory: Fine staple, \$2.05@2.15; 1-2 blood combing, \$1.85@1.95; 3-8 blood, combing, \$1.30; fine clothing, \$1.75@1.85; fine medium clothing, \$1.65@1.75.

Pulled: Delaine, \$2.05@2.15; AA \$1.80@1.90; A supers, \$1.65@1.75; Mohairs, best combing, 60@65c; best cardings, 55@60c.

LIVE STOCK MARKETS

DETROIT—Cattle: Market for canners steady; all others 50c lower than Friday's close, some going over unsold; best steers, \$13@13.25; best handy weight butcher steers, \$10.50@11.50; mixed steers and heifers, \$9.50@10.25; handy light butchers, \$8.75@9.25; light butchers, \$8.25@8.50; best cows, \$8.50@8.75; butcher cows, \$7@7.50; cutters, \$6@6.25; canners, \$5@5.50; best heavy bulls, \$8.50@9.50; bologna bulls, \$8; stock bulls, \$7@7.50; milkers and springers, \$65@125. Veal calves; market dull and \$1.50 lower; best, \$17.50@18; others, \$10@15. Sheep and lambs: market dull and much lower; quotations are for clipped stock, prices at the close were: Best lambs, \$15.50@16; fair lambs, \$13@14; light to common lambs, \$10@12.50; wool lambs, \$17; fair to good sheep, \$11@12; culls and common, \$5@7. Hogs market fairly active; pigs, \$16; heavy, \$16.25; mixed, \$16.75.

CHICAGO—Cattle: beef steers, 25 and 50c lower; top, \$15; bulk, \$12@14; she-stock 35c lower; bulk \$8.50@10.25; canners and cutters, mostly \$4.50@5; calves, 50@75c lower; bulk, \$15@16. Hogs: higher, advance of heavy hogs mostly lost; top, \$16.75; bulk \$15.15@16.50; heavy packing sows, \$13@13.50; pigs, \$14.50@15.50. Sheep; steady; 25c higher; top wooled lambs \$21.75; bulk, \$21@21.75; top shorn lambs, \$18.75; bulk, \$18.25@18.75; sheep steady.

EAST BUFFALO—Dunning & Stevens report: Cattle: steady. Hogs, strong, heavy, \$16.50@17.50; yorkers, \$18.25@19; pigs, \$18@18.50. Sheep: strong, clipped lambs, \$20@21.50; yearlings, \$16@18; wethers, \$15@16; ewes, \$13@14. Calves, \$7@22.50.

AUTO THIEF GIVEN THREE YEAR TERM

Automobile thieves who appear in federal court will be shown no leniency, Judge Arthur J. Tuttle intimated April 5th when Robert Edwards, first man in Michigan to plead guilty under the Dyer Act, was sentenced to three years in Leavenworth penitentiary for stealing a car in Detroit and transporting it to Toledo where he sold it. The federal law prohibits the transportation of stolen machines from one state to another.

Automobile owners have been the prey of the automobile thief and in many cases victims of exaggerated damage claims. People that are slightly injured pretend that they are seriously hurt and allege that they are injured in the back and spine, have headaches and cannot sleep.

Automobile owners are organizing to fight those unjust claims and excessive verdicts are now more often appealed. Every automobile owner should co-operate in punishing the automobile thief and to prevent the unjust and exaggerated damage claims.

WILL NOT RAISE A BEET

I want to thank you as a farmer for the good work you are doing for us farmers. If there were more men like you to work for our interests we would get a square deal. I am a beet grower but I will not raise a beet under the old contract although I live within one-half mile of the station. I favor Frank Lowden for president and Milo Campbell for governor. With the best wishes for you and your paper, I remain.—*Irving M. Vernon, Genesee County, Mich.*

Geographical Sisters

Miss Rose asked her eighth grade: "What are the sister states?"

Mabel answered: "I am not sure, but I should think they were Miss Ouri, Ida Ho, Mary Land, Callie Fornia, Louisa Anna, Della Ware, Minnie Sota, and Mrs. Sippi."

Sugar Beet Growers, Attention

The time is soon here to plant beets and over 10,000 organized growers have been asking in vain for a conference with the Sugar Trust. Will we b break? No we will stick, and to a man. Sure; we have our organization incorporated and are in shape to put this fight to the end.

We Will Build Our Own Sugar Factories

First we will get a petition to Congress for a special tariff on beans. We are having 1,000 copies printed and will get a few copies out to every one of our locals and to every elevator and to every Farm Bureau Local and have the Locals get all the farmers to sign, and when this is done we will call them in and bind them all together in one monster petition and send it on down to Washington with a couple of our members. We want not less than 75,000 signers on this petition. Talk this to your neighbor.

While this is going on plant beans, plant potatoes, plant corn, plant spring wheat, plant oats, plant barley, plant cabbage, plant cucumbers, and if you have any time left go fishing and plan on what you will say to your neighbor when he calls on you to go in and lend a portion of your credit to build your own sugar factory. Your association is gathering the plans and the data for the organization of farmer-owned sugar factories. These plans will be uniform and will soon be sent to all the local organizations to be handed out to all the members.

Get your neighbor to read
THE MICHIGAN BUSINESS FARMER
so that he also will be informed

Farmers let us arise from our knees and stand to our full height and dignity as business men. Let us unite with our brother farmer and loan our credit to our association and then we can go to any bank with the best security on earth and get all the money we want at the lowest rate of interest and secure all the profits of the domestic sugar business, for which we are now begging a mere crumb thereof at the present time on our bended knees.

Arise, brothers, arise! Why stand we here idle? Our brothers in the west are already in the game and will have one plant ready to slice beets this fall and think they will have two more ready for business this year. If you go west this year go to Fort Lupton and see what farmers can do and when you come back you will have a brighter view of life.

The farmer who fails to recognize or appreciate the rapid development of this movement is the fellow who is again going to be the one to let out an awful howl next spring. Why fuss and complain like an old scold and then appeal and implore a greedy and heartless corporation to be charitable, to you? Will you always be an object of charity to them in the future so long as you give them you notes at 7 per cent for the seed and labor and wait for your pay for your beets until they sell the sugar they make from them, and pocket half of the money is their profit. Think this over. Your note without interest will get you all the profit thru your association.

MICHIGAN SUGAR BEET GROWERS' ASS'N, C. E. ACKERMAN, Manager

The Farm Home
A Department for the Women

I gave a beggar from my little store a
wealth of gold;
He spent the shining ore, and came
again and yet again,
Still cold and hungry, as before.
I gave a thought and through that
thought of mine,
He found himself, the man supreme,
divine,
Fed, clothed and crowned with bless-
ings manifold,
And now he begs no more.

Edited by MABEL CLARE LADD

WHERE is the beggar who formerly asked for a piece of bread at our back door? The short hours and big pay have induced them to go to work and the further fact that even though they be crippled they can find lucrative positions has made the thread-bare excuse of their deformities of no account.

Here in the city there is a rainbow shop in which are sold the articles made by ex-soldiers who were taught this work through the occupational theraphy classes, and it was wonderful to see the useful articles offered for sale and at prices which competed with the factory made articles. There were wonderful baskets of all shapes and sizes and for all occasions. Baskets for fire wood stained a rich brown—baskets for fruit and baskets for flowers as well as the regular market baskets and the newer shopping bags woven of the same material but which hang on the arm and are stout enough to carry almost anything.

Then there were most wonderful woven rugs of rags—and they are so popular just now while it has been shown that men are often more adept at bead work than women and the beaded bags shown were works of art.

Some men who find themselves injured for life are not easily adaptable to this line of work and prefer to specialize in a business course which makes it possible for them to compete with the men who are physically sound at desks, while others prefer to work at piece work in the factories where they need not leave their bench to earn just as much as their fellow men.

It's all in the attitude. The man who wills can do anything and the relatives who encourage them in letting others earn their living are really doing them just as much injury as the woman who hands out bread and butter at her back door to the man who is just as able to work as the housewife or her men folks.

Statistics show that in Detroit alone twenty-nine blind persons and 45 cripples were placed in industrial plants in the last year and are now earning full wages on equal terms with normal workers. And the wonderful thing about this statement is that the placements were all made by a man who is totally blind himself and who was able when it was found necessary, to prove his arguments by actual demonstration.

We are glad to show another comfortable and attractive farm home this week—that of Mr. and Mrs. Frank Minks, of Pierson, Mich. Plenty of windows for sunshine and air and trees in the yard not only provide shade but form a dividing line between yard and fields.

RAISING BERRIES FOR PROFIT

BERRIES rank with small fruits in the matter of profits and they are more easily cultivated by the women of the farm than fruit. With present prices for small fruits more and more will they appeal to the women of the farm. And right now is the time for planting. We are fortunate in securing some expert advice for our readers on time of planting, manner of preparing the soil, etc., prepared by the Agricultural Department of the United States.

With the scarcity of help on the farm, more and more will the agriculturists resort to raising those crops which can be cared for by the family without outside help.

First let us consider the strawberry.

Time to plant—March and April.

Age of plants—One year old plants give the best results.

Preparation of soil—Strawberries grow in many kinds of soil. Any good, well drained garden soil, well prepared, will produce strawberries. A layer, 1 inch deep, of well-rotted manure should first be thoroughly spaded into the soil. Then finely ground bone meal at the rate of 1 pound to 25 square feet of space, and tobacco stems at the rate of 3 pounds to the same space should be carefully raked into the soil. Wood ashes spread over the soil just thick enough to be seen can be used in place of bone meal and tobacco stems.

Setting plants—The rows should be 2 feet apart and the plants 1 foot apart in the rows. The holes should be deep enough to place the plants at the same depth they were before and large enough to spread the roots out well. In transplanting the soil should be placed a little at a time around the roots and pressed down firmly. Care should be taken not to get any soil in the crown.

Care of the bed—Clean culture is of prime importance. The strawberry bed should be hoed frequently so as to keep the bed free of weeds and the upper two and one-half inches of soil loose and dustlike. Throughout the first summer all lower stems should be cut off. The cut should be made as close to the plant as possible. To prevent rain from spattering sand and soil on the fruit, a thin layer of straw or pine needles should be spread over and between the rows in December. This layer should be thin enough for the plants to grow through it the following spring.

Harvesting—A strawberry bed carefully prepared and cared for should produce at the rate of a quart of berries to the plant the following season.

Raspberries, Blackberries, Dewberries

Time of planting—March and April.

Location in the garden—The plants do well in a cool shady section of the garden. They could be planted next to the fence, or in corners not used for the growing of vegetable crops.

Preparation of the soil—Like the strawberry, these fruits grow best in well drained, carefully prepared garden soil.

Setting the plants—The rows should be 4 feet apart and the plants placed 3 feet apart in the rows. The plants grow rapidly and would soon crowd if placed closer together. The holes should be large enough to spread the roots out well and should contain rich mellow soil to induce new growth. Any bruised section of the root should be cut off as nearly horizontal as possible with a sharp knife. The plants should be set three to 4 inches deeper than they had previously been. The soil should be pressed firmly about the roots. As the new sprouts form the soil should be pulled toward the plant until the hole is completely filled.

Care of the patch—The patch should be hoed frequently to save moisture and to kill weeds. Shoots called suckers, which sprout from the roots of red raspberries and blackberries, must be kept under control, or the patch will in time become a dense thicket and the fruit wil decrease in quantity and quality and will be hard to pick. The rows should be kept 8 to 10 inches wide.

The patch should receive a light application of stable manure or commercial fertilizer each year. It is a mistake to think these berries require no fertilizer. Immediately after the fruit is gathered, the canes that have borne fruit should be cut out and burned. These old canes are of no value to the plant and are likely to harbor insects and fungous diseases. In the spring red raspberries are pruned as follows: The weak canes are cut out and the strong ones are cut back to 4 feet. During the early part of the summer black raspberries and blackberries are pruned as follows: The tops of the new canes are cut back 2 inches when the canes are 3 feet high. This is done to make the canes branch. A branched cane will produce more fruit than a straight cane. Since all the new canes will not reach the desired height at the same time, the patch must be gone over more than once. The canes should be thinned out to 5 canes to each plant. Very little pruning is required for dewberries.

Prapagating—Red raspberries and blackberries send up shoots from the horizontal roots. These shoots make new plants and can be transplanted into new rows in the garden in September. In digging up the plants care should be taken to remove a part of the horizontal root.

If the tips of the long canes of black raspberries and dewberries are covered with mellow soil the last of August, they will take root and produce new plants that could be transplanted into rows in the garden the following spring.

Diseases—These fruits have a number of diseases and insect enemies. These can be partially controlled by cutting out and burning all the old canes and any new canes that are diseases. Spraying with Bordeaux mixture is also practical. The first application should be made when the new canes are 6 inches high. A second and third application should be made at intervals of 10 to 14 days. "Control of garden insects" will tell how to make Bordeaux mixture.

Harvesting—Berry patches carefully cared for should bear for 10 to 15 years.

IRIS SCARF—This corner motif of the Iris is very graceful and attractive. It is suitable for scarfs, sofa pillows, tea cloths, chair backs. The flower is embroidered in long and short stitch, outline and leaves in satin stitch.

FOR THE BRIDAL SHOWER

GUESSING games galore have always been used for the amusement of the guests at a shower for the bride-to-be, but the other day we came across a new one. The happy bride-to-be has just finished high school and was very fond of literature and made a specialty of this study. The friends and classmates used the following game of "Questions and Answers to be Answered by the Titles of Shakespearian Plays," very successfully. If you do not know of a shower you will wish to attend in the immediate future, cut out and keep these suggestions and games and you will find your scrap book a very good friend when you wish to entertain.

QUESTIONS

1. Who were the lovers?
2. What was their courtship like?

3. What was her answer to his proposal of marriage?
4. At what time was the wedding?
5. Of whom did they buy their engagement ring?
6. Who were their best man and bridesmaid?
7. Who were the ushers?
8. Who gave the wedding reception?
9. In what kind of a place did they live?
10. Like what was her disposition?
11. What did they give each other?
12. What caused their quarrel?
13. What was told them that caused a chilly feeling?
14. What Roman ruler tried to effect a reconciliation between them?

ANSWERS

1. Romeo and Juliet.
2. Mid-Summer Nights' Dream.
3. As you like it.
4. Twelfth Night.
5. Merchant of Venice.
6. Anthony and Cleopatra.
7. Gentleman of Verona.
8. Merry Wives of Windsor.
9. Hamlet.
10. Tempest.
11. Measure for Measure.
12. Comedy of Errors.
13. Winter's Tale.
14. Juius Caesar.

SPRING APPETITES

NOW IS the time to increase the fruit ration, that craving for something different can be more easily satisfied in the spring with fruit than any other food.

Did you every try making a short cake by using canned peaches. Make the regular short cake, then use the canned peaches, without much juice and if you want it extra fine, use whipped cream also on the top. It makes a delicious dessert for spring.

Why not tempt the appetite with lamb or mutton instead of the regular beef and pork ration for a change. Mutton and lamb, the food products of sheep, provide a tasteful, nutritious meat than can be prepared in a large variety of ways for the table. Mutton broth is a time honored diet for the invalid, and to many a baby it has brought rosy cheeks. During convalescence broiled and stewed mutton and lamb bring back the lost ambition and banish the "tired feeling." The man with a delicate taste calls frequently for his broiled mutton chop, baked potato and pickled walnuts no does he forget the savory juices of the leg o'mutton with mint sauce and green peas.

Mutton is superior to lamb for use in broths because for its weight it contains more nutriments. As it is cheaper it is also more commonly used for stews. Almost every housewife is familiar with the method of making stew and of roasting, broiling and preparing in the ordinary way, but perhaps you will be glad of the following recipes for broth, sauce and jelly to serve with the lamb or mutton and ways of using the leftovers:

Mutton Broth.

3 pound of mutton from the neck.
2 quarts cold water.
3 tablespoons rice or barley.
1 teaspoon salt.

Cut the meat into small pieces, place in a kettle and cover with water. Heat gradually to the boiling point and season. Cook slowly until the meat is tender, strain and when cool remove the fat. Reheat to the boiling point, add the rice or barley and cook until tender. If barley is used soak over night in cold water.

Pot Pie.

Any stew may be converted into a pot pie by spreading over the stew a dough and baking for about ten minutes.

1 cup flour.
2 teaspoons baking powder.
2 level tablespoons shortening.
One-half teaspoon salt.
Cold water to make stiff batter.

Sift flour, salt and baking powder together. Then work in shortening and add water.

Casserole of Lamb.

Line a casserole slightly greased with steamed rice. Fill the center with finely chopped mutton, sseason highly with salt, pepper, celery salt and onion juice. Cover with rice. Cook in the oven with casserole covered. It may be browned at the last. If served in casserole water stock or gravy should be added when filling the dish.

Stuffed Biscuit.

Left-over lamb or mutton. Biscuit dough.
2 cups flour.
4 teaspoons baking powder.
1 teaspoon salt.
3 teaspoons fat.
3-4 cup of water or milk.

Combine the biscuit dough and roll on board half inch thick. Cut as for biscuit. Spread half of each biscuit with melted fat. Place a small amount of the meat, which has been ground and mixed with gravy and seasoning, on the biscuit. Fold over as for Parker House rolls. Bake and serve with gravy.

Mint Sauce and Mint Jelly.

1-4 cup finely chopped mint leaves.
1 tablespoon powdered sugar.
1-2 cup vinegar.
1-2 teaspoon salt.

Combine the ingredients and let the mixture stand in a warm place until the flavor of the mint has penetrated the liquid. Either the dry or the fresh mint or spearment may be used.

Mint jelly can be made by stiffening mint sauce with gelatin. One-half tablespoon of gelatin soaked in cold water enough to cover it is used with a cup of mint sauce made as described.

Dye Old, Faded Dress Material

"Diamond Dyes" Make Shabby Apparel Stylish and New—So Easy Too.

Don't worry about perfect results. Use "Diamond Dyes," guaranteed to give a new, rich, fadeless color to any fabric, whether wool, silk, linen, cotton or mixed goods,—dresses, blouses, stockings, skirts, children's coats, draperies,—everything!

A Direction Book is in package.

To match any material, have dealer show you "*Diamond Dye*" Color Card.

"HEARTS OF THREE"

(*Continued from page* 13)

But the stern leader shook his head.

"Here you were released. Our orders went no further. No further jurisdiction have we over you. We shall now bid farewell and depart."

"Hold on!" Francis cried, pulling out his check book and beginning to write. "Wait a moment. I must settle for this peon now. Next, before you depart, I have a favor to ask of you."

He passed the check to the haciendado, saying:

"I have allowed ten pesos for the exchange."

The haciendado glanced at the check, folded it away in his pocket, and placed the end of the rope around the wretched creature's neck in Francis' hand.

"The peon is now yours," he said.

Francis looked at the rope and laughed.

"Behold!" I now own a human chattel. Slave, you are mine, my property now, do you understand?"

"Yes, Senor," the peon muttered humbly. "It seems when I became mad for the woman I gave up my freedom for, that God destined me always afterward to be the property of some man. The Cruel Just One is right. It is God's punishment for mating outside my race."

"You made a slave of yourself for what the world has always considered the best of all causes, a woman," Francis observed, cutting the thongs that bound the peon's hands. "And so, I make a present of you to yourself." So saying, he placed the neck-rope in the peon's hand. "Henceforth, lead yourself, and put not that rope in any man's hand."

While the foregoing had been taking place, a lean old man, on foot, had noiselessly joined the circle. Maya Indian he was, pure-blooded, with ribs that corrugated plainly through his parchment-like skin. Only a breech-clout covered his nakedness. His unkempt hair hung in dirty-gray tangles about his face, which was high-cheeked and emanciated to cadaverousness. Strings of muscles showed for his calves and biceps. A few scattered snags of teeth were visible between his withered lips. The hollows under his cheek bones were prodigious. While his eyes, beads of black ,deep-sunk in their sockets, burned with the wild light of a patient in fever.

He slipped eel-like through the circle and clasped the peon in his skeleton-like arms.

"He is my father," proclaimed the peon proudly. "Look at him. He is pure Maya, and he knows the secrets of the Mayas."

And while the two reunited ones talked endless explanations, Francis preferred his request to the sack-cloth leader to find Enrico Solano and his two sons, wandering somewhere in the mountains, and to tell them that they were free of all claims of the law and to return home.

"They have done no wrong?" the leader demanded.

(*Continued next week*)

DE LAVAL
THE EVERLASTING CREAM SEPARATOR

There are thousands of voluntary letters in the De Laval Company's files similar to this letter from Mr. Watkinson, of Iowa, bearing out the statements made in connection with the long service of De Laval Cream Separators.

"My De Laval Separator has been in use about seventeen years and is doing just as good work today as when I bought it. I think it is good for ten years longer. With butter-fat at present prices no one can afford to use a cheap machine.

"When looking around to see what kind of a separator to buy I found that all the creameries in our vicinity were using the De Laval. The thought struck me, what is good enough for the creameryman is good enough for me, and my experience proves I made no mistake."

Ed. Watkinson

In fact, by averaging up the years of use, it has been found that the average life of a De Laval is more than 15 years; and that during that time they have required little attention or repairs, and have produced the highest possible quantity and quality of cream with the least time and effort.

That is why there are more DeLavals in use than all other makes combined. Sooner or later you will buy a De Laval.

The nearest De Laval agent will be glad to demonstrate a De Laval. If you do not know his name, write to nearest De Laval office.

The DeLaval Separator Co.

GUARANTEES CROWS WILL NOT PULL YOUR CORN

One Dollar Buys Enough to Treat One Bushel of Shelled Corn

References: Greenville State Bank, Greenville Commercial Bank

KRO-ENEMY is a compound made by a farmer to prevent crows from pulling up the growing corn. It is easily applied to seed corn and is ready for use twenty-four hours after treatment of seed. The corn can be used in any style planter and has been used successfully for the past three years.

If KRO-ENEMY is as good as we say it is you cannot afford to be without it.

If KRO-ENEMY would not do what we say it will, we could not afford to guarantee it.

Treat your corn as directed and if you are dissatisfied with results before June 20th, 1920, return the empty can and your money will be refunded.

The Children's Hour

DEAR CHILDREN: Received such a splendid drawing this week but it was in colors, so can't award a prize or publish it. Be sure and have the drawing which you submit for prizes in black and white only.

One little reader inquired how many subscribers it would take to secure the song "Star of the East." Only one, my little friend, one new one at one dollar. Send in your subscriber with the remittance and advise me that you wish this prize and I shall be very glad indeed to send it to you.

One little subscriber writes this week: "Talk about hikes, they're my hobby." It's a wonderful hobby for girls as well as boys to have. The boys have organized "hikes" through the work of the Boy Scout movement and the girls can organize themselves into a club for the study of wild flowers or wild birds, either of which will give them an excuse for tramping through wood and field—feeding mind and body at the same time. Be sure and take a sandwich and a cookie or two with you for you will want them. Personally I like to take some potatoes and roast them, eating them with green onions and my bread and butter sandwiches.

Here is a lovely little story of the wild flowers this week. Perhaps it is a bit early, but you can read it and I am sure it will encourage you to get out and get acquainted with the flowers just as soon as they bloom.—Affectionately yours, LADDIE.

Our All-The-Year-Round-Garden Family

(A story of two woods flowers; by Ellen Eddy Shaw)

THIS SPRING two new children were born into our All-The-Year-Round Garden family. One little boy belongs in the country, and the other little boy belongs in the city. If you look at the names of these two children you will know right straight off that Patty is the country boy and Holly, with his fancy name, must be a city lad.

If you are a country boy or girl, go out some fine spring day to a sunny little hillside, or slope in the woods and there you will find little Patty. Patty's whole name is hepatica.

When you are poking among the dead leaves, what you must look for first is a little plant with large, old tough leaves, reddish in color. Push these aside and down underneath are some tender, new little green leaves and Patty's head bent over, protected by those big, tough, last year's leaves.

Take up one or two hepatica plants carefully, also some of the wood soil, and when you get home plant them in a fish bowl or some other glass vessel, with the wood soil about them. Put the bowl in a sunny window, with perhaps a piece of glass over the top, and as the days go on you will see little Patty's head prick up, you will see the new leaves start, you will see one of the loveliest blossoms a little plant ever had, and lo and behold, there is Patty, your country boy!

Holly is a fern with bright leaves that look like Christmas holly leaves It is the best little fern for indoors, and will last better than almost any other fern.

Be sure you keep Holly very clean and nice. You must wash his face, washing both the front and back of the leaves, just as mother washes your face and behind your ears. Keep the soil in which Holly is planted moist but not wet and soggy. Give him a nice sunning every once and a while, and if there is a gentle spring rain, put little Holly boy outdoors and let the rain wash his face.

So Patty and Holly are our two little spring boys belong now in the same "All-theYear-Round Garden" family with little Marie Gold, our French orphan.

OUR BOYS AND GIRLS

Dear Laddie—I like "The Children's Hour" very much. I think your letters to the children's page are very interesting and the children also write fine letters. I will be 14 years old the 16th of April. I go to the Goodrich school and am taking the eighth grade. My hardest study is geography. My reading is the "Rhyme of The Ancient Mariner". There are two rooms in our school. The first ten grades are taught. I have three sisters. My little sister who was about two and a half years old passed away last fall. It is lonesome without a baby in the house. She had a pretty face and pretty brown curls. We live on a 140-acre farm. It is bounded on the south by Campbell's lake. Our house is on the south side of the road. On the northwest side of the house we have a pine grove. The tallest of our pine trees is about 8 feet. We girls have an organ. I have taken ten lessons on it and I intend to take ten more this summer. How many subscribers would it take to earn "The Star of the East" in sheet music? I am sending you a picture of two little girls on a teeter which I drew. My sister Bernice sent you a letter a few days ago. Your friend, Mary Clark, Walkerville, Mich.

Dear Laddie—We hope our friends will enjoy reading this letter, and that we win a prize. We are two friends living on adjoining farms. We read the 'Children's Hour" and think it is very interesting. We are in the 7th and 8th grade at school and in the same room. We have the best and most enjoyable friends in school. We saw the letters of our friends Henrietta Droste and Mary Gross in the M. B. F., and think they are good letter writers. We live 3-4 of a mile from the village of Westphalia, which is going to be a city some time, for they are going to have the railroad built through here soon. Hoping to see the letters of our friends and this letter in print, we remain, Mary Fedewa and Verena Martin, Westphalia, Mich.

Dear Laddie—I am a girl 10 years of age and am in the 4th grade. I live on a farm of 80 acres. We have 8 cows and 6 calves. For pets I have 2 rabbits, 2 cats and 1 dog. I go to the Arn school and have a mile and three-quarters to walk. We take the M. B. F. and like it fine. I like "The Children's Hour" page the best. Well I will close and leave room for some more.—Florence Rudell, Munger, Mich.

Dear Laddie—I am a little girl 8 years old and in the 3rd grade at school. My teacher is Miss Ames. I live on an 80-acre farm. We have 3 horses, 5 cows, 2 [illegible] I like to read the stories and letters in the M. B. F.—Lois L. Parks, Weidman, Mich.

Dear Laddie—My father takes the M. B. F. and likes it dandy. I am 14 years old and in the 8th grade. I read the letters from the boys and girls and like to hear their stories, what they write. We have 8 cows, 5 horses and 5 pigs. For pets I have a dog and 4 cats. We live on a 104 acre farm and keep about 50 swarms of bees and about an acre and a half of berries, grapes, plums, peaches and other fruits. As this letter is getting exceedingly long I will close, hoping to see my letter on "The Children's Hour" page.—Marie Blatt, Brown City, Mich.

Dear Laddie—I have been reading the children's page in the M. B. F. Papa takes your paper and likes it very much. This is the first time I have written to you. I am a girl 11 years old and in the 6th grade. I live on an 80-acre farm. We have three pigs and eight little pigs, three horses, six cows and about 75 chickens. For pets I have two cats and one dove. As my letter is getting long I will write a story, hoping I will win the prize. Dossia W. Barger, Butternut, Mich.

Dear Laddie—We take the M. B. F. and like it very much. I am a girl 12 years old and in the 7th grade at school. I have not been going this week because a cyclone tore down our school house. I have solved the puzzle in the M. B. F. I think the other animal is 'antelope". We have one cat and three kittens. The cat's name is Tabby. Well as my letter is getting long I will close, hoping to see it in print.—From Dorothy Trick, Assyria, Mich.

Dear Laddie—I am a girl 11 years old and in the 5th grade. There are about 100 pupils in our school. My teacher's name is Mrs. Grace Hulet and I like her very well. I live on a 150-acre farm. We have nine pigs, four cows, four calves and 50 chickens. I have two brothers. We take the M. B. F. and like it very well. I am interested in "The Children's Hour" and the boys and girls letters.—Yours very truly, Verena Leona Terry, Dryden, Mich.

Dear Laddie—I'm 12 years of age and in the 7th grade. We are having a spring vacation now. I live on an 80-acre farm. My father has three horses, four cows and two old pigs and ten little ones. I have three brothers and two sisters. My father has taken the M. B. F. for quite a while. I like to read the letters and stories that the children write. Hope some of the girls will write to me and that I will see my letter in print.—Hazel Holer, Plainwell, Mich., R. 1.

Dear Laddie—I am ten years old and in the 4th grade at school. My teacher's name is Miss. Olga Burg. I live on a 200 acre farm. We have seven head of horses and one little Shetland pony. We have eight head of cattle. I have two sisters and two brothers. We have two dogs, one is a Shepherd that goes after the cattle, and the other is a little water spaniel and the boys like to play with him. We have an Overland car.—Dorothy Rinehart, Scottsville, Mich.

Print in the names of two birds (reading downward.) Each bird's name must have six letters. If you use the right birds, you will also complete the names of six other birds which will read from left to right.

Answer to last week's puzzle: MAN plus DISH plus GONE plus A minus H minus CANE equals MADISON. LINE plus COAT minus TEA pus PLAN minus PA equals LINCOLN.

Dear Laddie—As I have never written to you before decided to do so. My brother wrote to you a long time ago and his letter was printed, so that encouraged me to write also. I am a girl 14 years old and in the 8th grade. I am planning to go down to my brother's this summer and take care of my little nephew. Upon taking two consecutive letters from each of the words in this week's puzzle I find the fifth animal to be an "antelope." I would like to get letters from some of the girls.—I remain a friend, Esther Sasterline, Marion, Mich, R. 2.

Dear Laddie—I have been reading the letters in the M. B. F. for some time, but I have never made an attempt to write myself. I am a girl 14 years old, five feet tall and weigh 108 pounds. I live on a 120 acre farm and we have four horses, 25 head of cattle, 19 pigs, about 50 chickens and three geese. We have a camera and I like to take pictures with it. I am taking music lessons. Well I must close now, hoping to see my letter in print.—Velma Bricker, Yale, Mich.

Dear Laddie—This is the first time I have written to you. I am 14 years of age and passed the 8th grade last year. I do not go to school now. My father takes the M. B. F. and we all like it very much. I have one sister and five brothers. I live on a 200-acre farm. We have lots of stock, over 100 chickens and one dog, his name is Browny. Will close, hoping to see my letter in print.—Helen Cook, Weidman, Mich., R. 2, Box 65.

Dear Laddie—This is the second time I have written to you. My father takes the M. B. F. and I like to read the letters in "The Children's Hour". I am a girl 13 years old and in the 6th grade. I live 3 3-4 miles from the school. My teacher is Sister Bertha. I have seven sisters and four brothers. I will close, hoping to see my letter in print.—Emilie Spitzley, Pewamo, Mich., R.1.

Dear Laddie—This is the first time I have written to the M. B. F. I am 13 years old and I am in the 8th grade. I go to Juhl school and my teacher's name is Miss Helen Juhl. She is my cousin. We have 24 cows and are milking 21 at present. We send our milk to the Borden's condensary. We have three horses and about 90 chickens. We have a Ford car. I have four brothers.—James Anton Juhl, Sandusky, R. 1.

Dear Laddie—This is the first time I have written to you. We live on a 110-acre farm. I am a girl 13 years old and in the 6th grade. We haven't had any sickness, but there has been a lot of it around here. I have a brother 12 years old and a sister Beulah and she is 11 years old, also two little sisters, Wilma is four years old and Margie is three. I will close for this time.—Beatrice Conley.

Dear Laddie—We take the M. B. F. and like it very much. I am a boy 8 years old and am in the 2nd grade at school. I have two brothers and two sisters. Their names are Leona 15, Bernice 10, Clarence 13, Orville 5. We have three cows and four calves. We have a dog, his name is Rover. My letter is getting long so I will close.—Mayne VanCamp, Rapid City, Mich.

Dear Laddie—My father takes the M. B. F. and he thinks it is a good paper. We live on a large farm about one mile from Trenton. I have two brothers, one is seven years old and the other is 11. I am 13 years old and in the 7th grade. My teacher is Florence I. Erving. I thing she is a very good teacher. Hoping to see my letter in print.—Hazel Newman, Trenton, Mich.

Dear Laddie—I am a girl 13 years old and in the 7th grade at school. I like to go to school. My father takes the M. B. F. and likes it fine. I like "The Children's Hour and the stories too. I have one brother and no sisters. We have a pet dog named Collie. I like to send in puzzles.—Myrtle Siver, Millington, Mich.

Dear Laddie—I live on a farm of 100 acres and have about 100 chickens, also have three horses, four cows and one calf. We take the M. B. F. I like to read the letters in it. I hope to see my letter among the rest.—Youre truly, Lucile Fouch, Traverse City, Mich.

Dear Laddie—I read the letters in your paper and throught I would write one. I am nine years old and in the 5th grade. My birthday is on the 13th of May. I have four sisters and four brothers. We have six cows and five horses. I am going to have a garden this summer.—Ethel Toner, Kinde, Mich.

According to Webster

A Swedish lad in a Kansas City school was told by his teacher to write a sentence containing the word poultice. He handed in this one:

"High school girls often write poultices."

"You are thinking of poetry instead of poultices, aren't you, Oscar?" smiling inquired the teacher.

"No, ma'am," replied Oscar, stoutly. "I looked it up in the dictionary, and this is what it says: 'Poultice—a soft composition.'"

Uncle Rube Spinach Says:

(Letters to Uncle Rube should be addressed care of The Michigan Business Farmer.)

HERE'N THERE AN' EV'RYTHING

WELL, WELL, would'ya believe it? at last there's been a cabinet meeting an' the president (himself) was there—in fact, accordin' to reports, he called the meetin' an' had all his, well I wuz goin' to say advisors but as the president (himself) takes no advice, I don't jest hardly know what to call these fellers that wuz called together by the president (himself.) But you know that fer some little time we've had no such thing as cabinet meetin's, the president wa'ant able to go, he wouldn't let the vice president act, Secretary Lansing tried to do a little somethin' an' lost his job an' seems like everythin' wuz kinda muddled up considerable. But now there's been a meetin' an' while they don't seem to've been much of anything done, we have the gratifying news that the president felt no bad effects from the meetin' and that he feels good.

Well we're darned glad that the president feels good whether the rest of the country does or not, now if he would act as good as he feels mebbe they might be somethin' done down at Washington that would help straighten things out a little.

When I git sick an' can't do my work, by gosh the company unfeelin'ly jest stops my pay—no work no pay with me an' darned if I have any one that's s'posed to take my place when I'm sick, like the president has. if I did have I'd tell him to go ahead an' manage things 'till I got on my feet agin.

But the president don't do business that way, he tells 'em to let business go to, well to hold things up 'till his head gits to workin' again, an' then he'll 'tend to it himself. That's what some evil minded persons might call one man gover'ment, anyway I jest like to ask what's th' use of payin' a vice president a quite a bunch of money when he ain't to be allowed to do anything in times like we've been passin' through since early last fall. What's the use of a vice president anyway? an' furthermore, what's the use of a congress or a senate or a cabinet when one man has got head enough to run the whole dum country an' is willin' an' anxious to do it?

An' there's another thing I'm worryin' considerable about an' that's that garden seeds an' sich. Congressmen ain't sending out many of 'em this year, there seems to be a kind of a shortage of 'em an' what's folks goin' to do?

You know it's been the custom of the government to buy hundreds of thousands of dollars worth of seeds an' turn 'em over to our congressmen to send to their constituents (guess that's what they call 'em but I could never jest git through my head what the word meant) well anyway they sent 'em with their compliments, which of course made 'em, the seeds, valuable, cost the government thousands of dollars more for mailin' of 'em an' ninety per cent of 'em were never planted an' ninety per cent of them that wuz planted wouldn't grow. but congressmen didn't care fer that, it wuz their way of making the people back home think they were bein' favored, or remembered by the great man they had elected to represent (or misrepresent mebbe would hit it closer) them in congress.

Well mebbe it's a darn good thing there's a shortage of seeds, it'll save expense, worry, the clutterin' up of the mails with a lot of useless stuff an' there won't be so many people fooled by the silly nonsense of receivin' a few little packets of worthless seeds which their congressman never saw an' knows nothin' about.

Ain't ya gettin' kinda sick an' tired of hearin' about strikes an' such? Gosh! First it's one bunch of fellers strikin' an' then another bunch of 'em'll bust loose an' every time there's a strike or even talk of a strike, up goes everything we have to buy an' down goes everything the farmer has to sell, can't ship the stuff an' there's no market for it except mebbe a small home demand, oh strikes sure is a wonderful invention, men and women by hundreds of thousands, perfectly satisfied with their jobs an' their wages, are thrown out of employment, hundreds of thousands of dollars in wages are lost every week, debts are incurred, sickness an' distress, poverty an' death follow in the wake of every big strike an' yet this great government that is able to send five million of the flower of our country into war, even into foreign countries, seems unable to cope with a thing that can and does bring disaster to the best country on the face of God's green earth.

Dont'cha kinda think that strikes an' their attendant evils are becomin' a little too darned common for the good of every class an' every trade an' every kind of business? Hadn't there ought to be some way provided to settle questions of wages, hours an' conditions between employers an' employees without tyin' up the whole country?

Should a few men, comparatively speakin' be allowed to throw hundreds of thousands of men who want to work, out of employment for even a day?

There's something wrong somewhere when conditions like the present are allowed to exist, men are selfish an' capital is heartless an' the nation suffers an' there seems no way out, but mark my words, the time's a comin' when there'll be a way, when strikes an' all their attendin' evils will be unknown, when neither labor nor capital can tie up the industries of the country an' believe me, that time is not far off. the people are gittin' tired of this darn foolishness. Cordially yours.—UNCLE RUBE.

NORTHERN MICHIGAN A RICH AGRICULTURAL EMPIRE

(*Continued from page 4*)

is concerned we believe the day of uncertainty is a thing of the past. There are several reasons why this is true. These are a uniform system of grading, a larger consumption on account of the growth of our cities, due to the fact that city laborers eat more potatoes because they have more money with which to buy, and a growing use for potatoes in making potato starch and flour for which there seems to be an unlimited demand by bakers. And farmers are learning that it costs money to grow potatoes, and they are no longer fooled by the dealer who in the past has told him 'there's money in spuds at twenty-five cents per bushel." He has learned by sad experience that he must have one dollar per bushel for his spuds "to make it pay," to grow spuds.

An enormous crop of spuds next year might make them cheap but we are not looking for cheap spuds, because we are not planning on working for nothing and we believe that a surplus will quickly be absorbed by starch and flour factories.

And we also know that as yet potato growers as a whole have not awakened to the fact that there are not many crops of potatoes in land and that they must either use fertilizer both stable and commercial or break a piece of new ground.

And so it appears to the writer that the new conditions are going to make the cut-over lands of northern Michigan both valuable and attractive for the soil, and climate are both well adapted to the growing of potatoes, and the remarkable fact that this great area has much good clay loam soil yet untouched, as well as lighter soils, insures a development which rightly fostered and directed will make it one of the richest agricultural districts in our country. And when we add to the potato industry the sugar beet industry it must be evident to the dullest mind that here are two great money crops which are absolutely essential for human food and which flourish abundantly in this territory once considered a barren, worthless waste. A neighbor of mine netted $140 per acre from his crop of beets, i. e., after paying for seed, fertilizer and labor at twenty-four dollars per acre. And then he had considerable cow feed from the tops. Some beet growers made nothing, but in Misaukee county the growers who had their lands ready for beets and who put them in early did well. Of course the potato growers did better, far better last year.

In Missaukee county this year, probably two thousand acres of beets will be grown, besides the usual large acreage of spuds and we believe that with these money crops, along with stock raising and dairying the cut-over lands of Michigan will be demonstrated to be increasingly desirable and valuable.

TESTS SHOW FEEDING VALUE OF SILAGE

(*Continued from page 5*)

the yield as high as 20 to 22 tons per acre. But, assuming, as above stated, that the yield of silage be ten tons to the acre, then the following figures can be worked out:

Wisconsin produced per acre of land corn lot, 230 pounds; silage lot, 499 pounds. Missouri produced per acre of land, corn lot, 376 lbs.; silage lot, 654 pounds; Iowa produced per acre of land, corn lot, 256 pounds; silage lot, 746 pounds; Kansas produced per acre of land, corn lot, 294 pounds, silage lot, 648 pounds.

The above figures mean, in composite, that the cattle that were fed corn, in fact what is commonly called the "corn belt" ration, show that the production of beef per acre of land is 290 pounds. A composite or average of the silage fed lots for the four states will show a production of 637 pounds of beef per acre. In other words viewing the matter from a "per acre" basis which we have an idea is the way the average cattle fattener would prefer to view it, by the use of a heavy silage ration the four experiment stations mentioned above have been able to produce over twice as many pounds of beef per acre of land. These figures mean that on the average farm that will grow corn, cane or kaffir corn, that it is possible to double the production of beef per acre of land by the intensive use of silage, according to the figures that prevail at the present time. In other words, they are not taken from experiment station records of some years ago but they are taken from experiment station records for 1919.

The experiment stations have done a wonderful work and deserve the greatest commendation for the clear manner in which they have presented the various feeding problems. After all, they have recognized that they are the servants of the public and that they are doing a work laid out for them to do. That is, they are doing a class of experimental work that the average farmer would not be able to undertake, and they are doing it in a careful, scientific and authorative manner.

It Does More and Goes Farther Than Any Product Known

Wise Stockmen Everywhere are **TIX-TON** Users

Tix-Ton ANTISEPTICS the year around keep stock healthy and free from disease germs, worms, and ticks. A $7.50 Drum makes $60.00 worth of medicated salt, or stock conditioner—saves you big money.

Send $3.00 for a box of "TIX TON-MIX" by parcel post. It will medicate a barrel of salt. For hogs, sheep, cattle, horses, and poultry.

TITLE TO JOINT PROPERTY

What part of a property can a woman demand or what will the law allow her if she leaves her husband? If the father of the woman gives the woman a cow about a year after they are married and the cow is kept and calves kept and used to supply the wants of general use for 25 or 30 years, and at that time there are living about 25 head of cattle on hand. I would like to know who the stock belongs to. If the man can sell them off and the woman have nothing to say? Now during all this time there has been cattle sold and used to pay taxes, buy horses and also for other purposes.—Subscriber, Schoolcraft County.

The law does not provide any specific amount to be paid to the wife if she leaves the husband with cause. Of course it would be understood that if she leaves him without cause that he would not be obliged to pay anything if he stands ready to take her back and provide properly for her. In order to obtain an order for the payment of any amount of money from the husband to the wife the wife would be obliged to ask the court for any allowance either in divorce proceedings or proceedings for separate maintenance and the judge would then make such order as he thought right and just in view of all the circumstances. It is a very great misfortune for one of an old married couple to so conduct themselves as to make life a burden for the other (for which the law has no adequate remedy) when their old age should be the crowning sheaf of well spent, happy life, blessed with children and sufficient means to be comfortable. It is the duty of each to bear with the faults of the others. If the wife contributed a cow to the common cause of the family at the beginning of their married life and it has been mingled with other stock it is doubtful if the law could recognize that as source of title to the whole or any part of the herd, but, the judge would undoubtedly take that into consideration in dividing the property, if he was obliged to make a division.—*W. E. Brown, legal editor.*

SPIKE-TOOTHING BEANS

Is it advisable to spike-tooth beans aftetr they have come up?—M. A. D., Gratiot County.

Owing to the tender nature of the young bean plant and its shallow rooted system during early grown, the practice of spike-toothing after the beams have come up is not to be geuerally advised. Under conditions where labor is not available to accomplish cultivation of a large field, spike-toothing, with teeth slanting slightly backward, would do more good to the crop than harm. A safer method would be to spend more than the usual amount of time and effort in preparing an excellent seed bed for beans, working the surface into condition as near garden tilth as possible before planting. Work spent in careful preparation of the seed bed with the disc and spring tooth will save considerable in time and labor necessary in later cultivation with the cultivator.—*J. F. Cox, Professor of Farm Crops, M. A. C.*

CONTRACT WOULD SPECIFY THE TERMS

We bought 120 acres of land on a contract May 1, 1919, for $1,500.00. We both signed the contract, but one of the parties that we bought from was absent and on account of his signature we haven't received contract yet. We have not paid anything on land yet. My husband died February 15, 1920, and I am in hard shape. Will I have to pay interest and taxes on said land? We have not lived on land, but worked about four acres.—Mrs. W. F., Alcona County.

It is probable that the contract provides that you shall pay the taxes but the contract would specify the terms. The interest would be in the same way. If you are unable to raise the money to pay the taxes and interest it is best that you sell the estate, but it would be best to talk to the Judge of Probate concerning it.—*W. E. Brown, legal editor.*

UNLAWFUL DRAINAGE

Has a farmer any right to tile ditch the drainage of his barnyard to the road in front of my house without any outlet? Also has the township any right to drain field and yard in front of farm house?—G. O. L.,Montcalm County.

From the facts related I would be of the opinion that drainage would be unlawful. I am not sure of the meaning of the last question. The township highway authorities have a right to drain the highway for the purpose of improving the road and may do so in front of a farm house. The highway authorities have no right to dig drains in the highway purely for the purpose of draining a farm.—*W. A. Brown, legal editor.*

GIVING NOTICE TO VACATE

I leased my farm in Michigan to an agent for one year. He leased it to another party for the same length of time. What is the law regarding notices to be given in order to be sure the place is vacated at end of lease? Any special form notice? To whom shall it be given—agent? If this party in place desired to move before expiration of lease could they be made to notify me in order that my insurance would hold good.—J. C., Auburn, Ill.

If the lease is for one year no notice is necessary to put the tenant off at the end of the year. If not vacated at the end of the term for which it was leased proceed against the tenant who holds beyond his term unless something in the lease requires otherwise. There is no requirements for his notifying you but if he abandons the place without giving you notice any damage that occurs he would be liable for. This is a question upon which it is very advisable to consult a good local attorney for details of practice in such proceedings.—*W. E. Brown, legal editor.*

RAISING WINTER VETCH

Is there a good market for winter vetch and how much does it yield per acre? Does the pea weevil work in this seed? What is the average paying price?—H. A. M., Saginaw County.

There is an excellent market for winter vetch seed. The supply during the past few seasons has been far short of the demand. Previous to the war considerable amount of winter vetch seed was imported from Russia, but it is not likely that normal trade conditions will be resumed for a long time. Winter vetch is not only in great demand in Michigan and other northern states, but is being used in increasing quantities in southern states for a fall planted forage and green manuring crop. Farmers received, during the past season, from 20 to 30c a pound for the seed, the retail price ranging from 30 to 40c per pound. The usual yield per acre is from 120 to 240 pounds, with from 12 to 16 bushels of rye. Twenty pounds per acre is generally planted with a bushel of rye. No reports have to my knowledge come to this station of injury from the pea weevil. A bulletin giving information in regard to the culture of this crop can be secured from the Michigan Agricultural College.—*J. F. Cox, Professor of Farm Crops, M. A. C.*

GETTING CLEAR TITLE

I bought a 40-acre farm, paid cash for it. The party that sold me the land said it was all clear. We had the deeds recorded, but found there were taxes due for two years. I paid these and got a clear title. I now understand there is a party holding a mortgage for $600.00 on this farm which will come due in April. Will I have to pay this mortgage? The man and wife I bought the farm from swore before a notary public the farm was all clear of debt.—A Subscriber, Van Buren County.

If the parties gave you a warranty deed and warranting the farm to be free and clear of all claims they would be liable for breach of warranty. If they gave you a quit claim it would be necessary to know all of the circumstances before I could pass on their liability. Never buy land without an abstract and have the same examined by a competent examiner.—*W. E. Brown, legal editor.*

TAXING LODGE HALL

Is a hall used for lodge purposes only taxable?—Subscriber, Muskegon County.

The fourth subdivision of section seven, of Act 331, P. A. 1919, p. 584, provides for the exemption from taxation of certain real estate therein numerated and then adds this proviso: "Provided, that such exemption shall no apply to fraternal or secret societies, but all charitable homes of such societies are exempt." —*W. E. Brown, legal editor.*

ANNULLING A MARRIAGE

What can a man do if his wife leaves him after they have been married 6 or 8 days, to go back after the rest of her clothes, and not hear from her again for six years; then he sees notice of a woman of same name being dead. Then he goes and marries another woman. After they have lived together for some time he finds that the first wife is still living, then parts with last wife. How is he to get untangled so as to get another wife?—S. G. B., Penfield.

It is advisable to file suit to annul the second marriage and a suit for divorce from the first one. It is advisable to have the suit to annul the second marriage to have a legal determination that it is void by reason of the former wife living not having been divorced. That is, the second marriage is void if the first wife was living and undivorced, but if she had a lawful divorce then the second marriage would be lawful. Under the facts related the court would enter a decree of annulment. The first wife having deserted for more than two years the court would enter a decree of divorce on the ground of desertion against the first wife. The party would then be free to contract a lawful marriage.—W. E. Brown, legal *editor.*

NOT LIABLE FOR HUSBAND'S DEBTS

My wife and I gave a joint second mortgage on our Michigan farm to Stark Bros. of Missouri, for trees to plant on our farm. Half the stock was worthless and I have refused to pay over half the price. They are suing on the notes. The farm will not sell for enough to pay the first mortgage and part of the second mortgage. Can they get anything out of any property that is owned by my wife? She has since come into possession of property by inheritance. An early reply will be appreciated. We were residents of Washington at time mortgage was given and are now.—F. N. C., Washigton, D. C.

The wife is not liable for a husband's debt. The fact she signed a mortgage and also signed the note would not bind her unless it was her debt. However, if a judgment should be taken against her her property would be liable for the judgment against her.—*W. E. Brown, legal editor.*

HOW TO TEST VINEGAR

I have four hundred gallons of vinegar I would like to sell. Will it have to be tested so I can sell it to the stores? If so, where will I have to send samples to have tested?—H. P. S., Shiawassee Co.

Send us one-half pint samples from each barrel of the vinegar in question. Send securely packed so that it will not break in transit and mark samples to indicate the barrels from which they come, and address to W.C. Geagley, State Analyst, care of this department. At the time of sending write Mr. Geagley that same is being sent at my request.—*Hon. Fred W. Woodworth, Commissioner of State Food and Drug Department.*

RENTING BY VERBAL CONTRACT

If A lets a farm to B on shares for one year and there is no written contract, only A states to B in the presence of C that he can have the place the same as the person the previous year had it and B asked for nothing different. Then the agreement under which the tenant operated was that B was to have 2-3 of corn, 2-3 of oats or other grain and 1-2 of the hay. We have a witness to prove this. Now he claims 2-3 of the hay and has forbidden me (A) taking more than 1-3 of the hay. B has no witnesses. Can't I hold half of the hay? Should I not take it and let him serve an injunction? I am A and owner of the farm.—Inquirer, Ingham Couty.

Under the circumstances related A is entitled to one half of the hay. It would be doubtful if any injunction proceedings could be sustained. A should take his share.—*W. E. Brown, legal editor.*

SELLING LIFE LEASED LAND

A has a farm of 40 acres and B decided to work the farm and pay the taxes and insurance and a life-lease of one person and the land was to be his after the person who holds the life lease dies, and now A wants to sell the farm and not to give B anything. Is there anything B could hold on it?—Subscriber, Huron County.

If the life lease is properly executed A can not give a clear title to the land without B joins in the deed. A can only sell his life estate. If there is an error in making of the life lease a court of chancery would have power to reform and correct it to conform to the agreement.—*W. E. Brown.*

Sense and Nonsense

He Had Boots on, Too

A gentleman from New York went out into the Jersey farm districts to hunt up a farmer by the name of Smith, whom he had some business with, but had never met. After driving some miles into the country he located the house as directed. The only person in sight, however, was a small boy very busy whittling.

"Young man, is your father in?"

"Yep," replied the boy.

"Well, I would like to see him; can you tell me where I will find him?"

"Sure," came the answer, "he's out back in the pigpen; you'll know him—he's got a hat on."

A Careful Giver

Patience—"You're engaged to Fred, arn't you?"

Patrice—"Yes; but I'm not happy."

"What's wrong?"

"I'm afraid he's selfish."

"Why so?"

"He asked me for my hand, and I gave it to him."

"Of course."

"Well, it wasn't until I had given my hand to him that he put a diamond ring on my finger."

"Of course not. But how does that show selfishness?"

"Why, it was his hand, wasn't it?"

Nearly Ruined, in Fact

The shadow of the arch-enemy next door appeared in the doorway of the humble kitchen.

"Mrs. Jones!" she exclaimed with folded arms, "let me tell you that that childs of yours is badly spoilt."

"Oh, get away with you!" snapped Mrs. Jones, testily scenting another complaint as to her young hopeful's conduct.

"Well," rejoined the aggravated neighbor, "if you don't believe me, just come and see for yourself what the steam-roller's done to him."

Leave it to the Irishman

Three men, an Irishman, a Swede and a Hebrew, were brought to court. The Hebrew was arrested for stealing a cow; the Swede for stealing a horse, and the Irishman for stealing a wagon.

"Well," said the judge, turning to the Hebrew, "where did you get the cow?"

"I've had it since it was a calf," was the reply.

"Where did you get the horse?" he asked the Swede.

"I've had it since it was a colt," replied the Swede.

"And, Patrick, where did you get the wagon?"

"Oh, your Honor, I've had it since it was a wheelbarrow."

It's Barely Possible

The brilliant wit of the bar looked at the moon-faced farm hand and winked at his friends.

"Have you never been married?" he began.

"Ye-e-es," stammered the farm hand, "onct."

"Whom did you marry?"

'A woman, sir—"

"Come my dear man," cut in the witty lawyer, "of course you married a woman. Did you ever hear of anyone marrying a man?"

"Ye-e-s sir. My sister did."

Deaf and Dumb Cook Wanted

Master of the house: "Why did you tell the mistress what time I came in this morning, after I expressly paid you and told you not to?"

The cook: "Sure, sir, an I didn't tell her. She asked me what time you got in, Oi tould her Oi was so busy getting the breakfast that Oi didn't look at the clock."

What the Neighbors Say

(Continued from page 15)

ily come after a war withh Austria. ithin a few months Bismark got apoleon III to promise to remain utral in case Prussia attacked Aus- ia. He also made a treaty with It- y which provided that Italy should in Prussia in war agains Austria if russia began the war within three onths for the sake of reforms in the erman confederation. Bismark im- ediately introduced into the Diet of rankfort the governing body of the erman confederation, a new plan for e federation of the German states. o keep his Italian treaty good he cked a quarrel with Austria over its lministration of Holstein; declared e old confederation dissolved; at- cked Austria, and called upon the her German states to do likewise. one of the more important states did and four of them sided with Aus- ia. Prussia, being prepared, defeat- Austria in seven weeks and all ermany was at the mercy of the russians.

Prussia now annexed the kingdom Hanover, four duchies and the free ty of Frankfort, bringing under the russian king practically all the peo- e along the north coast from the ussian border to Holland. Blood d iron had won much but not all ismark had hoped for, four southern ates being still outside the confeder- ion. Bismark believed war with rance would accomplish this. Read: agen's "Europe Since 1815," PP 289- 0. In his reminiscences Bismark ankly tells how he brought this out and planned it so that France ould declare war and Prussia ould pose before Europe as defend- g herself against a wanton aggress- .

Everything worked as Bismark had anned. France was quickly defeat- and the four German state joined ith Prussia. France was compelled give up Alsace and Loraine and to y Prussia the largest indemnity er exacted of any nation.

William II, now plain Bill, said on s accession to the throne in his eech, "The Soldier and the Army, t Parlimentary majorities have elded together the German Empire. y confidence is placed in the army." ater at the centenary of the firm of rupp at Essen the emperor said "The story of this army is a piece of Prus- an and German history. Krupp ns have been with the Prussian es and have thundered on the bat- fields which made ready the way to erman unity and won it at last."

William, not willing to be overshad- ved by the man who had made the mpire, broke with Bismark, but his lief in the policy of Blood and Iron as as great as Bismark's. He now gan building with feverish haste a ar machine of such magnitude that startled the whole world. He blus- red and shook his mailed fist until l nations began to look on Germany ith distrust.

When the Council at Hague was rmed to try to prevent wars and to ovide a means of settling disputes nong nations without recourse to ms Germany would have nothing to with it. German dreams of world minion were so apparent that at e outbreak of the world war Ger- any was practically isolated among e nations. She had, however, in- viduals like Mr. Bengal who thru es of blood or because their minds d been poisoned by German propa- nda were loyal to her and even now the hour of her degredation and de- at occasionally indulge in such "sob uff" as Bengal's letter. Poor, disil- sioned mortals! Fortunately, many the more dangerous types are in r federal prisons awaiting deporta- on.

I consider it an insult to the intel- gence of the American people to say ey entered the war because England icked us. We entered it because we uld no longer endure German in- lts and German aggression.

He asks what we gained by enter- g the war. We gained a conscious- ess that we did our duty in a trying our. We defended our honor; we id our debt to France; we saved the orld from black disaster.

We gained nothing in spoils; we ked nothing; we are content to wait the plaudits of future genera- ons. He ends by saying he is not pro-German. That he is ashamed of it counts for something. Let us hope he becomes 100 per cent American.—*S. W .Morrison, Tuscola County.*

THE FARM BUREAU

It has been said, and reasserted, numberless times that the farmers cannot, or will not, unite for their mutual benefit and make the union of effort a success.

The history of efforts, in the past, gives ground for the above assertion to be true, but the changed conditions of this present day give reasonable hope that the effort to unite the producing class, for mutual good is to result in a reasonable degree of success.

It is a well authenticated belief that the farmer does not receive his proportion of what the consumer of his products pays for the same, this because of the excess of the number of the so-called "middleman" each one of whom takes a big toll as the commodity passes through his "tote-house."

We farmers have been regarded, as to some extent, autocratic, and there may be grounds for this belief, but let it be remembered that the farmers calling is largely responsible for this as his determination in dealing with his domestic animals and with the soil which he cultivates, is near called in question and the very natural result is that he becomes somewhat unfitted to compromise his views with the views of his fellow-men and for this reason it is somewhat difficult for farmers to unify their efforts.

There is one other, and a far more potent cause, why farmers cannot unite closely and set the price of their food products and it is that if this be done the consumer of food, in many instances being unable to pay the price, would suffer from hunger, the price having been set too high. The farmers have food at "first hands" while our fellow-men of other callings must depend upon us for their food supply and if we, selfishly, should place the price too high, some might suffer from hunger, even to the extent that their "breast bone would scratch their back bone" as a public speaker expressed it, recently.

However, the present effort to unite the farmers for their mutual benefit is, we believe, a start in the right direction and is to result in bringing a benefit to the farming class of our citizens to which now is and has been for many years justly their due, and every farmer is, in duty bound to unite with the "Farm Bureau" and help this worthy cause.—*J. T. D., Clinton County.*

Yes, sir, times have changed. It wasn't so very long ago that every farmer instead of "going it alone", but now he won't stand still until he's hitched. All traditions about the jealousies and the 'splendid isolation" of farmers have been smashed to smithereens. And it is fair to assume that any legitimate movement, such as the Farm Bureau, which promises relief to agriculture, with the assistance of farmers working co-operatively, will get all the farmer support it needs.—Editor.

STRONG FOR CAMPBELL

I wrote sometime back and criticised Campbell a little and also sent in some information from Agricultural College on Lupines. Since I wrote I have learned considerable about both.

Milo Campbell spoke at our Grange "The East Casco Grange", and I can honestly say it was the best address I have ever heard, and I have heard Bryan, and he is some speaker.

I was talking to a German Smithy and he went on to tell about farming in the old country. He said they sowed Lupine in rye about the time the rye started to blossom, and it grew so rank by fall when they plowed it under one had to use a sort of a cart and chain they rigged up to put on the plow in order to plow it under. The next year they would get an enormous yield. I also wrote to Nungesser & Dickenson but they had no Lupine, but quoted Serredella at 15c per pound.

Most every one that has taken your paper admits it is dandy.

When we farmers get John C. Ketcham in Congress it will take a page to give us the national news. I will hustle around and get about twice as many new subscribers with no more effort.—*N. J. R., Kibbie, Mich*

If every farmer in Michigan could hear Milo Campbell there would be no question about his success at the polls. There ought not to be any question, as I believe the farmers will stick together just as loyally to elect a governor as they have on other matters. We hope the Agricultural College will be able to show that lupine and serradella are practical soil builders, and through them much of our light land may be reclaimed.—Editor.

Results

Just as you cannot tell whether or not tested seed corn is worth while until you have tried it and compared results, so you cannot realize the actual economy of Unicorn till you have measured the increase in milk produced.

READY TO FEED

Why Use *Tested* Seed Corn?

It costs more—but you know that it is really an *economy* because it gives better *results.*

So it is with a dairy ration.

Unicorn is *tested.* Thousands of dairymen have proved that it reduces the cost of milk production.

Tested seed corn is economical because of *growing* results—Unicorn is economical because of *milk results* twice-a-day.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or commissions. If you want to sell or trade your farm, send in your ad today. Don't just talk about it. Our Business Farmers' Exchange gets results. Address The Michigan Business Farmer, Adv. Dept., Mt. Clemens.

County Crop Reports

[illegible]—Farmers are busy [illegible] shearing sheep, trimming trees, hauling manure, building and repairing fences and doing road work. The weather has been cold and we had some snow during the first part of the week, but it is warmer now and farmers are able to get out their field work again. No oats have been put in yet but quite a few will be sown next week if the weather continues warm. Farmers are selling hay, livestock and some potatoes. Auction sales are not so plentiful now, although there are still quite a few sales billed for this month yet. Rye and wheat are not looking very good, and indications point to a very low yield this year. Farm help is very hard to get at any reasonable prices and most farmers are figuring on working what they can and leaving the rest lay idle. There will be an extreme shortage of most all crops this year with the possible exception of corn and potatoes.—C. W. S. The following prices were offered at Flint on April 15: Wheat, $2.65; corn, $1.75; oats, $1.10; rye, $1.85; buckwheat, $3; beans (C. H. P. Pea) $6.50; beans (red kidney) $11; hay, $27 @32; rye straw, wheat straw, oat straw $9@14; potatoes, $4.25@4.75; onions, $7, cabbage, $7 bbl.; cucumbers, $3 doz; hens, 35c; springers, 35c; ducks, 32@34c, geese, 30@34c; turkeys, 40@42c; butter, creamery 63@66c; dairy, 55@60c; butterfat, 68@70c; eggs, 43@45c; beef steers, $10.50@11.50; beef cows, $7.50@8.50; veal calves, $18@19; sheep, 10.50@12; lambs 18@20; hogs, $15@16.

HILLSDALE (S.)—Weather cool and windy, somewhat warmer. Not much plowing. Many public sales. Everything selling good, but horses are very cheap and good ones at $11 each. Oats will be drilled in late. Manures are being drawn to the fields, getting ready for the corn crop. Roads are in fairly good shape now since frost is out. Still have freezing nights. Not much garden made or plowed. Many farmers are quitting the farm and going to the cities for high wages in factories. Whose going to raise the farm crops when they all go? Somebody's going to starve by paying big prices for farm products, and the middlemen are going to get the farmer's prices. Let's cut out the middleman and send him over to Germany. Prices offered at the town of Jonesville: Potatoes, $3 bu; butter, 55 eggs, 35; wheat, $2.45; oats, 95; rye, $1.75; corn, $1.80. Hanover, Jackson county, always gives better prices for eggs and grain. Cream goes to Litchfield and North Adams Creameries.—V. V. H.

MONROE (N. E.)—We have our snow storms regular once a week and some very bad weather generally. Wheat has suffered in the last ten days and looks quite poor right now. Seeding about half done around this locality, will be some till can get on the ground to finish. Will be less spring grain sown this year than usual. Farmers are very uneasy generally; never saw or heard of so many dissatisfied with conditions as now. No building or scarcely any repairs of any kind being done. Every other farm for sale, however not many sales have been made. Market is very uncertain on account of the R. R strike.—G. L. S. Prices offered at Newport: Wheat, $2.32; corn, no market; oats, $1; hay, No. 1 timothy baled, $20; No. 1 light mixed, $24 @28 loose; potatoes, $4.10 bu; onions, 7; cabbage, 6; hens, 30; springers, 30; butter, 60; eggs 41; hogs 14 1-2; beef steers, 10; beef cows, 5@6; veal calves, dressed, 23.

OAKLAND (N)—It has been a long time since you had a report from here. We had nothing to report but snow and cold weather. It looks as if we have spring now. Very little plowing done. Most farmers have sown cloverseed, wheat comes out of winter looking good. Rye is doing well. The same with clover. Stock has done well and is looking fine. There is quite a call for hay and grain. Farm help is very scarce. Men all in factories or building roads. Potatoes about all gone to market. A good many farms sold here and a good many to be worked.—E. F. The following prices were offered at Clarkston on April 15: Wheat, $2.45; corn, $1.60; oats, $1; rye, $1.60; No. 1 timothy, $30; No. 1 light mixed, $28; beans (C. H. P. Pea) $6.00 per cwt.; potatoes, $3.75 to $6.00; butter, 60c; butterfat, 70c; eggs, 40c; hogs, $16.

MANISTEE—The farmers are plowing. Some are still cutting wood and attending sales. All around weather cool, not very much warm weather or rain, soil moist here. Farmers are not selling much of produce this week. Farmers, I presume, have sold most of crops raised last year especially potatoes, beans and rye. Getting ready for a new crop. Good contracting for cucumbers and pea beans. Fruit setting, fence building is being done here. Considerable buying at auction sales. Lots selling or renting farms, some from cities home since R. R strike. Potatoes have advanced to $5.50 per cwt. Beans remain at $5.25 per cwt. Rye is $1.65 per bushel, wheat $2.10 per bushel. Butter stays at 50c, eggs 36c, butterfat is 60c. Hogs are 13 1-2 on foot and 18c dressed; beef 5 to 8c alive; 10 to 13c dressed; veal 18c dressed; live chickens, 25c per lb.; hides, 18c per lb.—H. A.

MONTCALM (C)—Farmers are sowing spring wheat, and some are sowing oats. The following prices were paid at Lakeview this week: Wheat, $2.75; corn, $1.65; oats, $1.00; rye, $1.65; hay, $28; rye straw, $15; wheat-oats straw, $166; beans, $6.75; red kidney beans, $14; potatoes, $7; onions, $8; hens, 22; springers, 30; ducks, 18; geese, 20; turkeys, 35; butter 65; butterfat, 68; eggs, 38; sheep, 4-10; lambs, 14; hogs, 15; beef steers, 6; beef cows, 4; veal calves, 12-18.—G. B. W.

CALHOUN—Farmers have just started plowing for oats. The weather is cold and rainy. Soil is very cold and wet. There is not much selling now. The Gleaners held a meeting at the Penfield town hall Wednesday night, April 14th in behalf of a co-operative elevator in Battle Creek. Mr. Simpson addressed the meeting. The Calhoun County Farm Bureau held the first meeting at the town hall in Penfield.—C. E. B. The following prices were offered at Battle Creek on April 16: Wheat, $2.65@2.68; oats, 85c; rye, $1.50; potatoes, $3.75; butter, 50c; eggs, 40c; lambs, 14c; hogs 15c; beef steers, 10c; beef cows, 7c; veal calves, 10@14c.

JACKSON (N)—Farmers unable to make much headway on account of the bad weather. A few are finishing up marketing their grain. There is a drive on to secure members for the Farm Bureau. The centralized school system was voted down with not over half a dozen votes in its favor. It was tried in the adjoining township of Napoleon this year and there is so much dissatisfaction with the system that there is a demand for a vote, in some of the districts, to go back to the old system. The taxes are so high that farmers have begun to fight against anything that will tend to raise them. Quite an acreage will be put into popcorn this year, as it seems to be a paying crop. The weather has about discouraged the good contractors building county roads.—G. S.

MISSAUKEE (S)—Farmers are getting ready for spring work, getting wood and drawing what manure they can get. Weather is springlike, but a cold north wind most of the time, but cannot last much longer, as it is getting late. A few have potatoes and are selling them at $7.30 per cwt. The following prices were offered at Lake City this week: Oats, $1.25; rye, $1.65; hay, $37; potatoes, $7.30; hens, 30; butter, 55; butterfat, 65; eggs, 38; veal calves, 10 to 13; Apples, $2.—H. E. N.

GRAND TRAVERSE (East) — Are having nice weather only the wind continues to stay in the north. Farmers are plowing and hauling manure. Some hay being sold. Lots of farms will be idle this year. Thee following prices were paid at Traverse City this week: Wheat, $2.25; corn, $1.60; oats, 95; rye, $1.60; hay, $42; potatoes, $4 bushel; butter, 50; butterfat, 70; eggs, 37.—C. L. B.

ARENAC (East)—Farmers are getting $2.25 a bushel for No. 1 potatoes; 95c for oats; beans, no sale; corn $1.50; hay, $20 at barn, $28 baled; butterfat and eggs good. Farmers are complaining that their cows are not producing as well as last spring. Everything seems at an unrest, and hundreds from old Arenac are in the big towns. A hard spring on the sheep.—M. B. R.

MONROE—Another week of wet cold weather. It makes some of the farmers feel a little blue. We hope it will soon warm up, so farm work will move along more smoothly. Oat and wheat prices are going up out of sight, and the milk price is going the other way. Stock is looking fair for this time of the year, and high priced grain and feed.—W. H. L.

STATEMENT OF THE OWNERSHIP MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS, AUGUST 24, 1912.

of The Michigan Business Farmer, published at Mount Clemens, Mich., for April 1st, 1920.
State of Michigan, County of Macomb, ss.

Before me, a Notary Public in and for the state and county aforesaid, personally appeared Forrest Lord, who, having been duly sworn according to law, deposes and says that he is the editor of The Michigan Business Farmer and that the following is to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to-wit:

1. That the names and addresses of the publisher and editor are:
Publisher, Geo. M. Slocum, Mount Clemens, Michigan.
Editor, Forrest Lord, Mount Clemens, Michigan.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)
Rural Publishing Co., Mount Clemens.
Geo. M. Slocum, Mt. Clemens, Mich.
Grant Slocum, Mt. Clemens R. F. D. 4.
Forrest Lord, Mount Clemens, Michigan.
Lyda R. Hampton, Detroit, Mich.

3. That the known bondholders, mortgagees, and other security holders owning or holding bonds, mortgages or other securities are: (If there are none, so state.)
None.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also in cases where the stockholder, or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

5. That the average number of copies of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is: (This information is required from daily publications only.)

FORREST LORD, Editor.

Sworn to and subscribed before me this 14th day of April, 1920.

BERT V. NUNNELLY.
(My commission expires September 5th, 1920.

Dairymen Will Advertise Product

AT A SPECIAL meeting of the Michigan Milk Producers Ass'n, at the Board of Commerce in Detroit last week, a resolution was unanimously adopted instructing the State Association to collect 1 per cent of the amount received by farmers for their milk to create a fund for advertising milk and its products.

The meeting was attended by several hundred delegates and members and the vote for the resolution was unanimous. D. D. Aitken, who for the past several years has been trying to get the milk producers to see the wisdom of advertising their product, was present and gave a stirring talk upon the subject.

Mr. A. C. Anderson, acting as secretary of the Milk Commission, read a resolution that had been adopted by the Commission that morning, the resolution setting forth the fact that inasmuch as the Commission had offered to turn its affairs over to the Fair Price Board and stand dissolved and that the Board had made no acknowledgment of this offer but had on the contrary absolutely ignored the Commission's advances, the commission held that it was still in existence and set forth its judgment that the price of milk for April should continue the same as the price for March, vix, $4.05 per cwt.

It was explained that the fund which the producers might create for advertising purposes would be met with an equal sum by the distributors, and that probably a total of $40,000 to $50,000 would thereby be raised. Some questions were asked as to the money already expended for this purpose, and Pres. Hull said that a statement would be published giving the full information.

Board of Health to Assist

The Board of Health has agreed to assist the producers and distributing companies in acquainting the consumer with the food value of milk. In a statement upon the subject of milk as a food and the need for a constant supply of pure milk, Dr. Henry Vaughan, public health commissioner, said:

"The board of health has no interest in the price of milk as such, but we are vitally interested in the possible effects of an arbitrary lowering of the price to the producer. And I am fearful that the enforced reduction to 14 cents a quart will react against both quantity and quality.

"In 15 years of constant effort the board of health has succeeded by educating the producer in cleanliness and care, in making the milk coming into Detroit as clean as any in the United States. There will be, of course, no drop in this respect with the decrease in the return to the farmer, because with the average haul of five hours, the producer is under the necessity of keeping his milk clean and free from germs if he wishes to deliver it, fresh and usable in Detroit.

"But there is the question of butter fats. At the present time our Detroit milk supply contains something like 3.7 or 3.6 per cent butter fats. This is considerably higher than the state requirement and it has resulted along with the cleanliness of the milk in aiding materially in the reduction of the Detroit infant mortality figures by more than 80 per thousand of births in the past 10 years. That means, with a normal birth rate of 30,000 a year in Detroit, a saving of more than 2,400 lives per annum.

"I feel great apprehension that this record will be endangered by anything that makes it necessary to reduce the quality of our milk supply. And if the reduction in the price to be paid the producer reduces the quantity coming into Detroit that, too, would be a serious menace to the children."

The advertising campaign will be largely along educational lines. The Board of Health will issue signed statements as to the value of milk as a food and studies will be undertaken in all the schools and clubs of the cities. The campaign also contemplates the use of sign-boards and newspapers.

The resolution authorizing the expenditure of money for this purpose, follows:

WHEREAS, Michigan farm conditions are most critical. The heavy removal of people from the farms to the industrial centers owing to the attraction of high wages, has seriously threatened food production. Vacant farm houses, abandoned farms and reduced acreage is the report from all corners of the state; and

WHEREAS, the residents of our cities are seemingly asleep to the conditions that prevail in regard to food production. Carelessness, neglect, and even open hastility toward farmers are all too common in the minds of many city consumers. Many of our industrial leaders have lost sight of the fact that Michigan's prestige as a manufacturing center cannot be maintained unless those who produce food are likewise prosperous and progressive; and

WHEREAS, the Michigan Milk Producers' Association is especially concerned over the impending crisis in this important industry. Top prices in feeds and almost impossible farm labor conditions are driving many men out of the dairy business and unless immediate and drastic means are used to counteract we shall face in the summer months such a shortage of dairy products that actual want, if not famine, may stalk through our city streets and riot and ruin run their mad course; and

WHEREAS, the Michigan Milk Producers' Association would be recreant to its duty, to its members and to the consuming public did it not bend every energy to bring this critical situation of the milk industry to the people of the city and to invite their earnest co-operation in avoiding disastrous consequences to all concerned. Assistance must be given the dairymen to encourage increased production, to improve the quality of their product, and to guard against its contamination. City consumers must be enlightened as to the excellence of milk as a nutritive and to its comparative cheapness when its food value is considered.

THEREFORE, be it Resolved, that we show our good faith in meeting this critical situation by instructing the Board of Directors of the Michigan Milk Producers' Association to arrange for the collection of one per cent of the proceeds of our milk for the purpose of more effectively meeting the situation above described, through proper advertising, more intensive and such other means as may be found necessary and particular.

PRODUCE MARKETS IN APRIL

(By U. S. Bureau of Markets)

THE PRICE trend is upward, although considerable irregularity appears. During the past four weeks, apples, cabbage, sweet potatoes and tomatoes have kept rather closely to their levels of March 15, but celery, onions and potatoes have advanced, the last two mentioned, rather violently. Shipments in practically all lines have decreased, 6,629 cars moving during the second week in April compared with 8,416 cars during the corresponding period in March.

Potatoes Reach High Levels

The upward trend which started the middle of February carried prices of No. 1 sacked white potatoes to a range of $5.35 to $5.70 per 100 pounds in consuming markets by the middle of March. The advance continued during the past four weeks reaching $7.50 to $8.35. Prices at Minnesota shipping points also were about $2 higher f. o. b. at $7 to $7.30. New York round whites No. 1 gained about $2.50 to $3 advancing by the middle of April to a range of $7.50 to $8.65 sacked per 100 pounds. Maine Green Mountains in New York City were about $2.25 higher by April 15, bulk per 100 pounds. The majority of these price changes have taken place about the middle of April when supplies in the large cities were not sufficient to meet requirements. About one-half the present shipments are from Maine and the balance chiefly from the middle northwest. Total shipments of the late northern crop, 115,107 cars, compared with 114,726 to the middle of April last year.

Apples Steady

Demand has continued fairy active for barreled and boxed apples with few price changes. The markets were strong during the latter part of March. At New York shipping points Baldwins A 2 1-2 from cold storage sold at $8 to $8.25 per barrel f. o. b. The same stock in consuming markets ranged $8 to $9.50. Ben Davis sold at 7.50 to $8.25 in middlewestern markets. Northwestern boxed Winesaps, extra fancy, at Yakima and Wenatchee brought $3 to $3.25 f. o. b. Consuming markets ranged $3.50 to $4.25. The markets remained fairly steady during the first two weeks in April, but price ranges of both barreled and boxed stock were about 25c lower than during the last two weeks of March. Cold storage holdings on April 1 were 712,296 barrels, a decrease of 49 per cent from the 1,381,660 barrels in storage on March 1, but 46.4 per cent more than were held April 1 last year. Holdings of boxed apples on April 1 were 2, 951,394 boxes, a decrease of 43.5 per cent from the 5,232,320 boxes held March 1, but 109.3 per cent more than were in storage April 1 last year.

Onions Make Sharp Advance

Recent price gains have brought onions into about the same market position as potatoes. Supplies of both vegetables were too light to meet normal consumption, and the situation furnished a similar basis for higher prices. Eastern Yellow gained $2.25 to $2.50 in eastern markets reaching $8 to $9, sacked per 100 pounds. Middlewestern Yellow varieties were $2 to $2.25 higher at $8 to $9. The new onion crop has started to move from Texas. Acreage is estimated at 12,240 and the crop is said to be one of the finest that Texas has produced. Considerable difficulty has been experienced in securing crates. Also the movement has been retarded by recent railroad troubles. Yellow Bermudas No. 1 and 2 in standard crates sold at $3.50 to $4.25 f. o. b. shipping points. Consuming markets were at different levels. Philadelphia at $6.50 to $7, Chicago at $4.25 to $4.75 and Kansas City at $5.50 to $6. Shipments of Northern and Bermuda onions were 20.233 cars to date this season.

MAINE JERSEY MAKES WORLD'S RECORD

WHERE is the man who said an ordinary farmer, under everyday working conditions, cannot make a world's record with his cows?

Thrice within a year this theory has been contradicted by Jersey cows in working farmer's hands. First by Vive La France, an Oregon farmer's cow which made the four year old and breed record of 1031 pounds fat; then by Lulu Alphea of Ashburn, a yearling which made 800 pounds fat for her owner, who only two years before had graduated from grades to pure-breds.

The third and latest case is that of Plain Mary, a registered Jersey that found her way into the barn of two farmers who had decided to try their luck with pure breds. Their cow has made 15,255 pounds milk and 1,040 pounds of butterfat in one year and gained the title of World's Champion Jersey. She is now owned by F. M. Ayer of Bangor, Maine, who bought her at a fancy price from Kely and Cossar of Winn, Maine, the men who owned the cow until the sixth month of her present test, at which time Mr. Ayer bought her. She was sold on condition that she remain at the old home farm to finish her record and she will now be sent to her new home in Bangor.

Mary started her test at eight years and eleven months of age and during the first six months she averaged more than 100 pounds of butterfat per month. From then on she had a few reverses and did not make as large a record as was expected.

The country in which she lived is subject to severe extremes of weather and the setbacks were due to a weather variation of eighty-four degrees in one day in June and then in December she was subjected to forty-five degrees below zero in an unheated barn. The farm is located in an unprotected spot on the shores of the Penobscot River and Mary had the benefit of all the fresh air that blew across fields of ice and snow. In spite of her handicaps she finished strong and averaged twenty-eight pounds of milk a day during the last month of her record.

Plain Mary's record is more of a tribute to official test work than it is to breeding, as she does not belong to any particular strain. She reverts to St. Lambert blood chiefly, but no plan of breeding is brought out in her pedigree. As an individual she is much better looking than her picture. Cattle experts who have seen her say she is an almost perfect specimen of the producing dairy cow. She has plenty of barrel, strong constitution, good udder and teats, a very fine hide and every evidence of "dairy temperament," or willingness to work.

Plain Mary occupied one of the two box stalls built for Register of Merit cows in Kelly and Cossar's barn. There is a total of fifty-one animals in the barn, five of which are on Register of Merit test. All the work is attended to by Mr. Joe Cossar and his assistant Frank Baker.

Plain Mary was milked three times a day. Mr. Cossar did the night and morning milkings, while Frank Baker did the noon milking. Had she been milked four times a day as some animals are milked on large farms, she undoubtedly would have done even better.

Plain Mary's record was very closely supervised. There were 22 supervisions by official testers (each of whom stayed two days.) They represented five state agricultural colleges and every one was recognized as an expert in this line of work.

A notable feature of this record and of the other two mentioned in the first part of this article, is that al these animals carried calves during the greater part of their records, and Plain Mary is due to calve and qualify for class AA Register of Merit, which means a calf with each record. Plain Mary has two other official records to her credit one of 514 pounds fat and the other 828 pounds fat. She has also had six recorded calves and therefore is a great reproducer as well as a maker of large milk and butterfat records.

The figures given here show how Mary piled up her total of 1040 lbs. of fat by months.

Date	Milk—lbs.	Fat—lbs.
Feb. 28, 1919	42.5	2.75
March	1656.3	107.16

February 27	718.5	55.47
	15,255.9	1040.07

Plain Mary is the world's champion Jersey and has a record of 1040 pounds of butterfat in one year. She is owned by F. W. Ayer, Bangor, Maine.

The Feeding of Dairy Cows

IF DAIRY cows are to be fed for profitable production they must receive a liberal ration at all seasons. In summer, pasture generally is depended upon, but often it must be supplemented by soiling crops or silage, and sometimes by concentrates as well. For winter feeding, the ration usually is composed of hay, silage and a mixture of grains. In properly balancing the ration the grain mixture is compounded to fit the roughage with due consideration for cost, bulk, palatability, and physiological effect upon the cow. For best results, cows must be fed individually, salted regularly, and furnished with all the clean water they will drink.

A few simple guides for feeding may be summarized as follows:

1. Under most circumstances the cow should be fed all the roughage that she will eat up clean, and the grain ration should be adjusted to the milk production.

2. A grain mixture should be fed in the proportion of 1 pound to each 3 pints or pounds of milk produced daily by the cow, except in the case of a cow producing a flow of 40 pounds or more, when the ration may be 1 pound to each 3 1-2 or 4 pounds of milk. An even better rule is 1 pound of grain each day for every pound of butterfat that the cow produces during the week.

3. Feed all the cow will respond to in milk production. When she begins to put on flesh, cut down the grain. Farmers' Bulletin No. 743. Every dairyman may secure a copy of this valuable bulletin by writing the Division of Publications, U. S. Department of Agriculture, Washington, D. C.

MORE CORN ROUGHAGE IN THE DAIRY RATION

THE FEEDING value of corn silage, corn fodder, and corn stover in the dairy ration is not sufficiently appreciated, especially in those regions where legumes do not thrive, says a specialist of the Dairy Division, United States Department of Agriculture. A recent study of records from cow testing associations points to the conclusion that the growing of more corn roughage and less non-leguminous hay would increase the profitableness of the ration.

In all sections where legumes thrive it is, of course, advisable to grow them, as their value is well recognized for feeding dairy cattle. In fact, from a study of cow-testing association reports it would seem that even grain does not fully take the place of good legume roughage. It is in those sections where legumes do not thrive, however, that dairymen may well consider the growing of more corn roughage and less non-legume hay.

Cattle Thrive on Corn Alone

Few plants apparently contain all the substances required to nourish properly the animal body, but in the light of present knowledge the corn plant seems to be one of these. It is possible to balance a ration from corn products only that will enable the animals to thrive and reproduce with apparently no ill effects. This is not the case with many other crops. Corn, then, has unusual feeding properties.

Experimental work done at the South Carolina and Pennsylvania stations has shown that it is practical under some conditions to feed dairy cows on a ration of corn silage and grain without hay. Such a ration has been used successfully in feeding beef steers. Reports from one cow-testing association in a non-leguminous hay region having an unusually high income over cost of feed and large production per cow is in a district where the dairymen have practically discontinued the feeding of hay, but instead feed silage and corn fodder. In this association the grain ration is also composed largely of corn by-products.

More Roughage

No matter what other conclusions may be drawn from the evidence available showing the value of corn fodder and corn silage as dairy feeds, it seems certain that the corn plant provides an excellent roughage.

Hay is often damaged very much by becoming overripe. Storms damage it seriously. The feeding value of corn is not damaged by its becoming mature, and if it is properly shocked storms do little damage to it.

There are undoubtedly many dairymen who can well consider the wisdom of reducing the amount of non-leguminous hay produced of increasing their pasture, and of growing more leguminous feed, corn fodder and silage to feed their dary cows.

CHICAGO HORSE MARKET IS STRONG

Men experienced in market conditions state that there never before has been so strong a demand for good draft horses nor such high prices paid in the history of the Chicago horse market.

The demand is strong for all kinds but the preference is much in favor of drafters standing sixteen three hands and over, weighing 1,700 lbs. or more. Prices range from $275 to $450 depending on the merits of the animal. This condition has prevailed steadily for the past four weeks.

Buyers from Boston, New York Philadelphia and Pittsburg, state that the heavy storms in the east this winter which tied up all but horse traffic, influenced users to buy more horses.

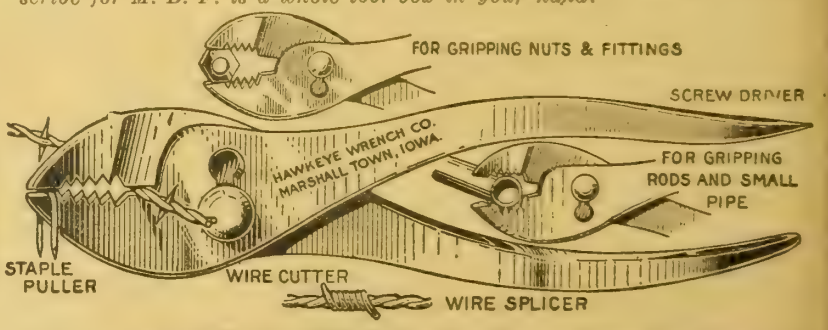
LET "THE BUSINESS FARMER" CLAIM YOUR DATE!

THE OLD FAVORITE

"The crocodile wrench you sent me for getting my neighbor to subscribe for M. B. F. is a whole tool box in your hand!"



THE "CROCODILE" WRENCH is drop forged from the finest tool steel and scientifically tempered. Every wrench is guaranteed against breakage. It is 8 1-2 inches long and weighs ten ounces. Teeth and dies are case-hardened in bone black, making them hard and keen. Requires no adjustment, never slips and is always ready for use.

DIES ALONE WOULD COST $1.50

and would be worth more than that to every farmer, as they would often save valuable time besides a trip to town for repairs.

SIX HANDY FARM TOOLS IN ONE

A pipe wrench, a nut wrench, a screw driver and three dies for cleaning up and re-threading rusted and battered threads, also for cutting threads on blank bolts.
The ideal tool to carry on a binder, reaper or mower.
Will work in closer quarters than any other wrench.
Light, strong, compact and easily carried in the hip pocket.
Dies will fit all bolts used on standard farm machinery.

—HOW TO GET YOUR CROCODILE!

Clip out this ad and mail it to us with the names of two new subscribers, with $2 to pay for them. The "Crocodile" wrench will be sent to you prepaid in the next mail. Remember, the subscribers must be NEW ones—not renewals.
(Don't forget to send your own name and address when sending the subscriptions.)
The Michigan Business Farmer, Mt. Clemens, Mich.

O. I. C. SOWS FOR SALE

ONE OF THE BEST HERDS IN MICHIGAN
Spring gilts and fall yearlings bred for March, April and May litters. I ship C. O. D., pay express and register in buyer's name. If you want a BIG TYPE sow, guaranteed right in every way, write me.
J. CARL JEWETT, R. 5, Mason, Michigan

Strong Stock for Strong Chicks

By AGNES HILCO

THERE is somewhat of a delusion among many farm poultry raisers as to what constitutes a strong healthy flock, and one that will give eggs strongly fertile and produce chicks that will have vitality enough to make a sturdy fight against disease. I have had several incidents come under my observation that has shown me this. Some farmers think their hens are extremely vigorous, when the eggs from them will prove poor from good—a large percentage being infertile and when the chicks hatch they show weakness right from the start.

Take them all in all I believe half the ordinary farm flocks where no special attention is given to breeding will not have the vigor that they should have. A friend of mine set eggs in a large incubator from three different farm flocks. One was good, and the chicks hatched were vigorous and grew off evenly and made broilers as short a time as could be expected. One other was not so good, and the chicks from this flock had but few ready broilers to sell with the other lot, while the last flock was so poor that what chicks were induced to live grew very unevenly and none were marketable with the first flock, and few with the second. Two of these flocks were orpingtons, one white and one buff, the first and second, while the last was barred rock. They should have come along together had they been of equally sturdy stock.

I can call to mind several flocks that I have known which were not vigorous enough to produce strong chicks, and invariably the chicks had been subject to disease at every chance to get it, and they never seemed to thrive as they should. Now there is no valid reason why anyone should have a flock of this kind. It is easy to get strong stock, and the most common causes of failure is in this respect is from inbreeding and keeping cockerels with serious faults. A big rooster is not always a strong one, and quite often we will keep a cockerel that is a brother to many of the pullets, and we continue to keep our own stock for a few years until our flock is degenerating. I do not believe there is anything that will sap the vigor quicker, even while it leaves the hens looking like good strong stock. I bought eggs one year for my incubator from a fine looking flock of barred rocks and nearly half of them were infertile and the germs in many others were so weak that they died in the shell before filling it. If I had these alone I might have blamed the incubator, but I could not get enough of her, so I bought some of her neighbor, and these showed good fertility and stronger chicks, though I had considered the other flock as finer. Both were on free farm range. Investigation showed that the infertile eggs came from a badly inbred flock, and though they were large fine looking fowls they were losing their vitality.

It is not always the case that a flock is lacking in vigor when the eggs are infertile, for it may be one or more of the males that are kept with them. Then many times the ration has somewhat to do with the fertility of the eggs and the vigor of the chicks. One thing I have found is almost always the case, and that is that eggs running heavily infertile will produce chicks that are hard to keep healthy. Statistics, too, show that the number fertile and the number that live after being hatched are very much in the same ratio. Fertile eggs produce chicks that are heardy, while infertile eggs produce chicks that are weak in constitution. I am speaking of the lots now, of course, for infertile eggs do not hatch at all, but a lot that has a big percentage infertile may hatch a percentage of those left, but the percentage is sure to be less than of those more strongly fertile, and those which do hatch are weaker. It pays to be sure the stock is vigorous.

THEFT!

Keep Your Car Locked

AUTOMOBILE and truck thieves have become so common in Michigan that no man who owns a car is safe to leave his machine unattended without the protection of a good lock.

There are many types of automobile locks on the market, some attach to the steering gear, some to the transmission lever, some fasten around the wheel and most of them do prevent much thievery

—but no lock has been invented which will absolulely guarantee the automobile owner against the possibility of having his car stolen, wrecked or misused!

CITIZENS' MUTUAL THEFT

FIRE, LIABILITY and COLLISION INSURANCE

alone stands between the automobile owner and his loss by theft or accident. Its cost is so low in comparison with the assurance of protection it gives the owner that no man can afford to drive an automobile which is not protected by this company.

We have in every section of Michigan a competent agent of this company who is not only present to write up your application but is your friend when trouble overtakes you in your automobile.

If you will tell us on a postal card the make and model of your car we will gladly quote you our lowest rates for protection and send you any other information gratis.

WM. E. ROBB, Secretary.

Views of Metropolitan Paper on "The Next President and the Farmers"

Philadelphia Public Ledger Characterizes Farm Board's Questionnaire, "A Fine, Practical, Courageous Plain Spoken Platform

THE QUESTIONNAIRE submitted by the National Board of Farm Organizations to presidential aspirants has met with a generally favorable response, although some farm leaders and editors disagree as to the wisdom or value of putting the candidates on record. The questionnaire will have at least one important effect. It will show the man who is to be the next president that the farmers are on the job, with both eyes open, and will insist that agriculture be given the recognition that is its due as the nation's basic industry—Editor.

NO ONE who is not blinded by fear, prejudice or mere party myopia can be in the smallest doubt that the farmers of the whole North American continent have entered politics with an entirely new and virile force. Conditions in Canada are very like our own in respect to the possibilities of the organized farmers in politics; and up there the farmer is the man of the moment. The government of Ontario, the leading province, is frankly a Farmers' government. The Farmers' party is the one party that the coalition government of the Dominion fears. The western provinces from Lake Superior to the Rockies are entirely "farm;" and the United Farmers' movement carries by-elections at practically every opportunity all through the East.

The American farmers, through the National Board of Farm Organizations, have just drafted a questionnaire for presidential aspirants about whose unalloyed authenticity there cannot be the smallest doubt. It was clearly drawn up by farmers who know "farm opinion." It is no academic or theoretical platform put together by phrase-makers who try to write what they think the farmer ought to think. It is "racy of the soil"

There isn't a word in it about the League of Nations or the balance of power or "imperialism" or tariff-making or any of the many lofty themes on which the farmers have as many opinions as anybody, with quite as much real information and sound judgment behind them, but with which they do not bother when they sit down to the serious business of making our already democratic institutions safe for and fair to our greatest single industry. The questions to be presented to the Presidential candidates go straight to the point. They want to know how these men stand on things whose right treatment will be felt daily and definitely in the life of the farm.

The first thing they want to do is to cut down the cost of marketing farm produce. This is, seen rightly, the dominant, paramount and most immediately pressing question of the day, for both the farmer and the consumer. Every city man who goes far enough into the country to meet the real farmer knows that there is a great gulf fixed between the price which the producer of the fruits of agriculture gets for his finished product, after he has labored the summer through in bringing it to perfection, and the price which the aforesaid city man must pay for much less attractive specimens of the aforesaid "fruits" as they are delivered at his kitchen door. A benevolent despot who should try sincerely and ruthlessly to reduce "the high cost of living" would fling away so ineffective an implement as a pruning knife, and, seizing a double headed axe, would slash right and left into the entanglement of middlemen's charges and profits precisely at this point.

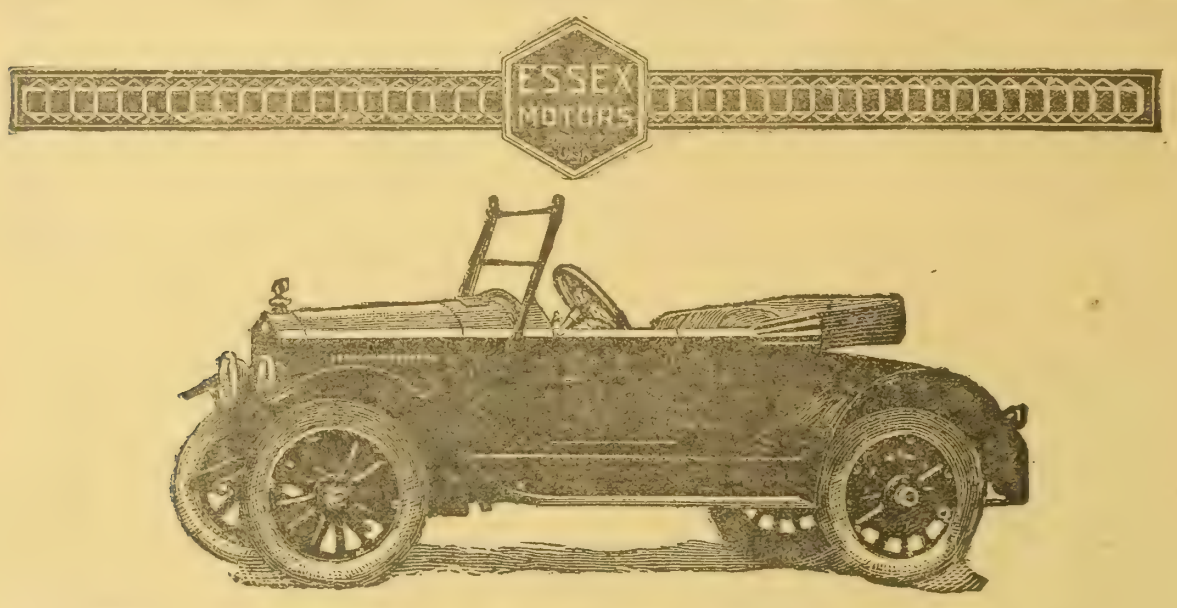
That is exactly where the farmers' questionnaire strikes first. It demands "such direct dealing between producer and consumer as will secure to the farmers a fair share of the wealth they create, reduce the cost of living to the consumer" and wipe out the profiteer. The farmers see clearly that the entire elimination of the intermediary is impossible in our ramified modern civilization. There is a legitimate service to be performed in carrying the fruits of the farm to the city and there selling them. But, after all, that service is only supplementary and a convenience. It should not get anything like the lion's share of the profits, as it so often does. It should be rigidly debarred by law from taking from these "fruits" which only pass through its hands the winnings of speculation, the levies of monopoly, the plain stealings of unproductive and often destructive manipulation. The two big men in the transaction are the producer (the farmer) and the consumer. The "delivery cart" activities between them should be more than a penny accommodation.

They want full right to buy and sell co-operatively. They are dead against that Old World incubus, "the great and growing evils of farm tenancy." They do not propose to permit the gradual creation of a tenant peasantry in America; and they are splendidly right. Nothing could more quickly or completely cripple our magnificent rural freedom, prosperity and upstanding manhood.

They want a Secretary of Agriculture "who knows actual farm conditions." This does not seem an unreasonable request—not to anybody but a party placeman who thinks that all government offices are kept up for the sole benefit of the politicians. They want this properly educated Secretary of Agriculture to use his departmental funds and staff to study farm production costs at home and abroad and to "publish the uncensored facts" for the benefit of the American farmers whom he is supposed to serve.

They want the next President to realize that private ownership of railways is still and always will be on trial. If it fails to make good, then they want the question raised again in two years. Some people may not quite relish this; but this is exactly what the "embattled farmers" are going to demand. They do not make the mistake of committing themselves to the proven folly of "public ownership." They only say that the railways must be well run, no matter who does it. The farmers want the war debt paid by those "best able to pay it." Undoubtedly they want the farmers to be put into that class if they are not there already. They want forest conservation. So do we. This article would be longer if we had it in the past, and so now had more print paper. They want government control of all great interstate combinations of capital. They want free speech and a free press.

It is a fine, practical, courageous, plain spoken platform. No man should be elected president who can not give clear and progressive answers to these questions.—*Philadelphia Public Ledger.*



The Roadster, Too, Has All the Noted Essex Qualities

Speed—Power—Endurance—Economy—Utility. It is an Ideal Car for Business as Well as Pleasure

The wide uses for which the Essex Roadster is adapted in farming activities are instantly apparent.

Besides fast, comfortable communication with the city, it has many valuable utilities. The carrying arrangements in the rear deck provide space for large crates, cases, boxes, etc. But no evidence of them is revealed when the Roadster is used as a pleasure car. Every line is smart, trim and graceful. It takes but a moment to make the change.

A World Endurance Record Proves Essex Dependability

A large class of Essex buyers are farmers. They choose it for utility and dependable transportation. It becomes, in fact, a part of their business system. It must be on the job, keep all engagements on time, and be as responsible as an engineer's watch.

These same qualities, with its rare good looks, make the roadster unsurpassed as a smart car for pleasure.

Economy, durability and train-like regularity are the standards set by Essex. These things have been shown in the hands of more than 30,000 owners.

It was more dramatically proved on the Cincinnati speedway when an Essex stock chassis set the world's long distance endurance record of 3,037 miles in 50 hours. The same car, in three separate tests traveled 5,870 miles at an average speed above a mile a minute. Another stock Essex set the world's 24-hour road mark of 1,061 miles over snow-covered Iowa roads.

Its endurance and riding ease make it ideal for those who must cover wide territory, quickly and frequently. Though not large, the Essex is commodious. There is plenty of room for passengers, and its special arrangements for carrying even bulky, heavy loads make it an unusual convenience in farm service.

Come see the Essex Roadster. Ride in it. Try its paces. Whether you want it for business or pleasure, you will appreciate why Essex in its first year set a new world's sales record.

Saginaw Farmers Vote to Abandon Sugar Beets

Twenty-Seven Locals Unanimously Decide to Plant Some Other Crop for 1920

THE MOST significant development of the sugar beet controversy was the adoption of a resolution by the Saginaw beet growers not to grow any beets for 1920. Twenty-seven locals participated in this action at a meeting at Saginaw last Saturday afternoon. The decision was unanimous, and virtually means that no beets will be grown in Saginaw county this year. The Saginaw growers also expressed themselves as ready to organize a farmer-controlled sugar beet company.

Last Chance for Manufacturers

C. E. Ackerman, manager of the Sugar Beet Growers' Ass'n, had a conference with W. H. Wallace, manager of the Michigan Sugar Company, last Saturday and explained to him in detail the scope of the beet growers' organization and the estimated number of acres that had been cancelled. It is the general belief among the growers that the manufacturers are not fully aware of the strength of their organization else they would have long ago recognized the futility of ignoring it. The manufacturers have been accustomed to dealing with the farmers in a certain way, and they stubbornly refuse to admit that there is any other way. When once convinced, however, that they must treat with the growers' accredited representatives or close their factories they will be glad to discard the old methods and adopt the new. But just as long as they think there is a remote chance of securing their acreage from individual farmers they will pay no attention to the organized farmers. It is the purpose of Manager Ackerman to impress upon the manufacturers at once the strength of the organization and if they refuse to recognize the cold facts, the farmers will abandon their fight this year and grow some other crop. It is self-evident that the farmers can better afford to grow beans or corn than the manufacturers to close their factories.

It was upon the suggestion of Mr. Wallace, who denies being spokesman for the manufacturers, that Mr. Ackerman addressed a letter this week to all sugar manufacturers in the state setting forth a summary of the situation and a plain statement of facts. This will positively be the manufacturers' last chance to meet with the growers in conference over the 1920 crop.

Growers Stand Firm

It is quite apparent that the manufacturers have been deceived as to the temper of the growers and the strength of their organization. We may conclude from the attitude of the manufacturers that they have believed all along that as soon as spring came the farmers would weaken and ask for their contracts back. According to the almanac spring has been with us for several weeks, but there has been no sign of weakening on the part of the farmers. This naturally puzzles the manufacturers and puts them in a position where they will have to make a quick decision. It ought to be plain to anyone that the testing time has only just arrived. It was natural that the manufacturers should refuse a conference so long as there was no particular advantage to them in calling one, and it has only been the past week that the manufacturers have realized the gravity of the situation.

With possibly one exception no sugar company concedes that it has all the acreage that it needs. As a matter of fact some very strenuous efforts are being made at this moment to get sufficient contracts to insure a season's run. It is reported that certain companies are offering farmers anywhere from $10 to $100 to accept a contract and get a number of their neighbors to do so. Counties in which the companies have never before solicited acreage are being canvassed, although fortunately with little success as the farmers of those counties have watched the progress of the sugar beet growers' fight and are in sympathy with it, and will not grow beets to the detriment of the principle involved, or the interests of other beet growers. The manager of the St. Louis Sugar Company recently approached the president of the Breckenridge beet growers' local and urged him to advise his members to accept the old contract. This the president flatly refused to do, stating that the members of his local were unanimously opposed to taking any action contrary to the wishes of the State Association. He, moveover, impressed upon the mind of the sugar representative that the farmers' would not grow beets under the old contract and were ready to plant other crops if they did not get a conference and a fair price for their beets.

"Plant Beans," Says Prof. Cox

IN SPITE of the competition of Japanese white beans and a large hold-over in the American crop, beans are still a good crop for the better Michigan growers, declares Prof. J. F. Cox, head of the farm crops department at M. A. C. It is reported on good authority that the Japanese acreage has not been expanded during the past year, owing to the fear that an effective tariff might be placed on beans by the United States Government.

"The Japanese have not competed heavily with Red Kidney beans," says Professor Cox. "These are in great demand, and it would appear that a considerably large acreage of Red Kidneys could be planted on the better soils of Michigan. As for white beans, Michigan's product is so well known for quality that it can stand very strong competition.

"All indications are that Michigan bean gorwers will find a better market next winter, (particularly late in the winter,) for Michigan grown beans than the pessimistic forecast of the past fall and winter indicated."

$100 Reward

THE MICHIGAN Business Farmer will pay $100 reward for the arrest and conviction of any person or persons found guilty of wilfully destroying or injuring the property of any Michigan beet sugar company, providing such person or persons are members of or inspired by members of the Michigan Sugar Beet Growers' Ass'n.—Forrest Lord, Editor.

(Note: The above announcement was prompted by the burning of some beet helpers' shanties in the Thumb, the deed being laid to the door of the beet growers, by the sugar manufacturers. Manager Ackerman says: "We want it distinctly understood that our association does not countenance any such tactics and we do not believe that a member of our association would do such a thing." The Business Farmer has explicit faith in the beet growers' respect for the property of others and announces this reward as an evidence of that faith.)

A Reminder for Those Who Have Signed

It is, of course, to be expected that some farmers will grow beets under the old contract. Why they will do so when the contract is so one-sided and when nine-tenths of their brother farmers are standing unitedly for the sake of a principle and a fair price, it is not for us to determine. But there are some things, Manager Ackerman reminds us, which these farmers should bear in mind. Farmers today have a community interest. Each is more or less dependent upon the other. For instance, Farmer Smith must rely upon the good right arm of Farmer Jones to help with the threshing, and Farmer Doe must call in Farmer Brown when the silo is to be filled. Now if Farmer Smith and Farmer Doe sign beet contracts to the injury of Farmer Jones and Brown who are members of the Beet Growers' Ass'n and are standing out for a fair price, what are Jones and Brown going to say when Smith and Doe come around at threshing and silo-filling time? We leave the answer to the reader.

But a more important point to be borne in mind by those who have signed contracts is whether the manufacturers will accept the beets grown under the contract if it is not to their advantage to do so. If the manufacturers do not secure the acreage usually planted by the farmers who are members of the Beet Growers Ass'n, their acreage will run far short of what is necessary for an average season's run. Should the crop be a poor one, the amount of beets would scarcely be enough to warrant the factories operating and every farmer should consider what the manufacturers would do in this case. That the manufacturers have no compunction in cancelling contracts, is clearly shown by the recent action of the Owosso Sugar Company in returning contracts to 100 beet growers of Shiawassee county as late as April 20th, after the company had discovered that it was not to its advantage to enforce the contracts. ((See story of this action on page 6.)

A Plausible Explanation

The sugar manufacturers have persistently claimed that they do not profit from the high cost of sugar. They allege that the bulk of their sugar is sold during the months for which the price to the farmer is determined, (October, November, December and January.) A BUSINESS FARMER reader, Mr. R. R. Cook, of Chesaning, throws some light upon this subject and we are glad to publish his letter herewith:

"Editor Business Farmer: Mr. Wallace says the sugar company does not own a pound of sugar, and Mr. Symons, a Saginaw merchant, says he heard that the speculators had got all the sugar.

"Now it may be that the sugar company has put over a trick like the Union Pacific R. R. did. When that road was built the government gave the R. R. Co. each alternate section of land in a strip twenty miles wide on both sides of the R. R. But Congress stipulated in order to prevent holding the land for high prices, that if it was not sold before a certain date the land should revert to the government, so before that date arrived the R. R. Co. organized among themselves what they called a national land company and transferred the land to that company and so continued to hold the land for higher prices.

Now it may be the sugar company transferred the sugar to speculators the speculators being a part of the companies, so if government agents should come to investigate they could say nothing doing, sugar is all gone, we don't own a pound.

I once heard of an old lady who thought the hired man was eating too much butter so she transferred the butter dish from the table to her lap and exclaimed 'the butter is all gone.'

"I don't think the sugar company is so green as to let speculators take out of their hands the chance for such immense profits."

"By ways that are queer,
And tricks that are vain,
The trusts can steer,
Their business for gain."

Can You Beat It?

The Sugar Situation

Today the consumer is paying 20 to 25c per pound for sugar for which the farmer received 6c. The Michigan Beet Growers' Ass'n contends that this is not a fair division of the consumer's dollar, and claims that a less price than that which the growers now ask will mean a loss to many producers while the manufacturers are reaping the largest profits in the history of the industry. The sugar situation and the probabiliy of higher prices is graphically described in a recent issue of "Facts About Sugar," as follows:

"Never within the memory of the present generation of sugar traders has there been such a scramble for refined sugar as was the case during the past week. Demand has become desperate appeal, with price a secondary consideration among buyers.

"Reports of the shortage in the Cuban crop and of the rapid rise of prices in the raw market have spread to very corner of the country with

(*Continued on page* 6)

Macomb County Boy Wins State Corn Cup

Raymond Buckman of Warren Receives Cup of Merit for Best Acre of Corn Grown in 1919

THE SCENE of our story is laid in the Montfort school, Warren township, Macomb county, Michigan.

The characters are Ray Turner, state leader of Boys' and Girls' Club Work; W. J. Murphy, county agricultural agent; a few visitors; and a roomful of bright-eyed boys and girls and their teachers.

The occasion is the presentation of the State Bankers' Association corn cup to the winner of the 1919 championship in the corn growing contest conducted annually by the Boys' and Girls' Club department at the M. A. C.

This explains why among the fifty or more boys and girls there was one whose eyes shown a little brighter and whose face wore a look of anxious anticipation. It is not to be wondered at that he became a little restless while the Club Leader told of what the boys' and girls' club work was accomplishing, how the work had been the means of giving the boys and girls of the country a new interest in school; and of the records that the girls in other schools had made in their canning clubs and the boys in their corn clubs and of all the other activities that come within the scope of this most practical department of the college.

A not very good photograpn of a very good corn grower. Raymond Buckman, winner of state championship contest.

But finally the talk was over, and Club Leader Turner lifted to the view of all the handsome cup of brass, copper and ebony, with the names of the champion corn growers beautifully engraved upon its side. The last name was that of Raymond Buckman, winner of the 1919 championship, student at the Montfort school. And as Mr. Turner made his little speech of presentation and congratulated Raymond on his achievement, a smile of satisfaction swept over the entire school. It was an honor of which every boy and girl of the Montfort school was proud.

Cup given by State Bankers' Association to winner of State Corn Growing Contest.

Raymond Buckman is the son of Mr. and Mrs. Wm. Buckman, who own a thirty acre farm, within a stone's throw of the Montfort school. Raymond is 12 years old, and was one of five boys of the Monfort school who persisted throughout the summer of 1919, harvested their crop, and exhibited it in the local contest. Raymond's corn took first honors in the school, first honors in the country corn show and first honors at the state corn show.

The soil upon which the corn was grown is a clay loam. In telling of his work, Raymond says: "The work was easy and I enjoyed it. It made my pocket-book fat. I followed my father's advice on nearly everything. The variety I used was Pickett's Yellow Dent. It shelled out better than any of the varieties grown around here. I tested my corn before planting and my crop showed that it paid to do so."

Raymond raised one hundred and sixteen bushels of corn on his acre of ground and the entire cost was only sixteen dollars and thirty-five cents. The cost included his own time, fitting of ground, planting, cultivating, gathering, rent of land, commercial fertilizer, barnyard manure, seed corn and also the marketing of his seed corn.

After taking out all expenses Raymond had one hundred and seventy-five dollars and twenty-five cents clear profit.

After sorting and testing his corn he has kept ten bushels for seed and the boys in that corn club this year are thinking of purchasing their corn to plant this year of Raymond and most of this corn on the cob is from ten to twelve inches long.

"This year," he said, "I am going to be more careful and make many improvements."

In addition to the cup, Raymond wins other honors, the most prized perhaps being a scholarship at the M. A. C.; his expenses to attend the Boys' and Girls' club week at the M. A. C., on June 3rd; and enough corn to plant an acre and a half-bushel of pedigreed oats from the Michigan Crop Improvement Ass'n.

Corn Club for 1920

Raymond's success has encouraged other boys of the Montfort school to take up the work this year, and following the presentation of the cup, the boys organized their club for 1919, in a real business-like fashion. Nominations were made and seconded, motion were presented and voted upon exactly in the same manner as their fathers used to vote at town meeting. There were two candidates for each office, but after the balloting was over it was found that the following received the majority of votes and were declared elected:

President, Quentin Friedhoff;; vice president, Raymond Buckman; secretary, Paul Schoenherr.

Resolutions were adopted to hold meetings of the club regularly each Friday night at the school house.

The Montfort school club will have ten to fifteen active members this year, and even the smallest contestant eagerly proclaimed that he could plow the land and care for the crop.

Girls' Canning Club

The girls of Montfort school are not going to let the boys have all the honor so they have decided to organize a canning club. Members of a canning club are required to can at least thirty cans of fruits, vegetables and greens, but many of them can a great deal more. Mr. Turner told the girls of the achievements of an Osceola county girl who canned more than a thousand quarts and sold them to local hotels. This young miss held the State Canning champion for the state. She hunted greens, canned them and sold them to these local hotels for four years to pay her way through High School. This girl taught school in her home county last year and she organized a canning club in her school. One of her girls canned over twelve hundred quarts. Mr. Turner says "I believe this girl is going to bring the National Canning championship to Michigan." He told of other girls who had exceeded the required number of cans several times over ,and urged the girls not to be satisfied with canning only the smallest number required. The girls of the Montfort school act as if they were going to take up the work in earnest and you need not be surprised if the canning championship for 1920 comes to Montfort school, Macomb County.

Practical Education

WHEN THE editor of the Business Farmer attended the country school the only thing that he remembers in the nature of a "club" was the hickory stick that rested in the corner when it wasn't busy. "There's a reason" why he remembers it so vividly. Beading and 'riting and 'rithmetic were dry subjects, and perhaps it isn't to be wondered at that the boys and girls amused themselves by making "faces" at the teacher or throwing paper-wads or playing "hooky" in the woods when the nuts were falling. Honestly, there wasn't very much about the old district school to make anyone really ENJOY school life. But times have changed immeasureably. I was present at the Montfort school when Club Leader Turner presented the corn cup to Raymond Buckman, and I could just feel the pride that must have welled up in that boy's heart on receiving so splendid a tribute to his skill and perseverance. I couldn't help envying him and wishing that the boys and girls of my time had had corn clubs and such things for giving them a real heart-interest in their school work. I am thankful that our educators are supplying this need at the present time through the boys and girls club departments of the agricultural college, and I cannot urge too strongly upon the fathers and mothers to encourage their children to take up this work and assist them in every way possible to secure the best results.—Editor.

Million Dollars in Excess Profits Yet Due Growers of 1918 Wool Clip

Department of Agriculture Announces Progress is Being Made in Auditing Accounts and Settlement Will be Made

FOR THE "steenth" time the Department of Agriculture has announced that "progress is being made in collecting excess profits on the 1918 wool clip." The amount to be collected and distributed back to the growers is estimated at one million dollars. For nearly two years the Department has been engaged in the task of securing and auditing reports from dealers. We can appreciate the enormous amount of work connected with this job but it does seem as if ample time has elapsed in which to make a settlement. Since E. T. Meredith has taken hold of the reins of the department, we rather expect a speedy completion of this work, so Mr. Wool Grower, be prepared for the shock if some day you receive a check on the U. S. treasury for the amount still due you on your wool.—Editor.

THE DEPARTMENT of Agriculture announced the results of a hearing in Washington, called by the Secretary of Agriculture, on matters pertaining to the valuation and handling of the 1918 wool clip. The hearing was granted in response, primarily, to numerous requests by Texas wool growers but it developed into a consideration both of territory wool and fleece wool. Territory wool is produced west of the Missouri River and the eastern bounary of Texas and practically all of it in 1918 was shipped on a consignment basis to government distributing centers. Fleece wool, produced east of that line, was largely purchased in small lots through a large number of country dealers. The points at issue in the hearing, therefore, were different for the two classes of wool.

The facts developed showed that nearly all the questions at issue so far as the Texas growers are concerned can be handled only by the War Department and arrangements are being made for adjudication by the proper authorities in that department. The complaint of the Texas growers, primarily, is that too large deductions for dirt and other impurities were made in valuing Texas wool and that, therefore, the growers received too little for their wool.

The questions that were related to fleece wool come under the jurisdiction of the Department of Agriculture, the wool division of the War Industries Board having been transferred to the Bureau of Markets of the Department of Agriculture by executive order, December 31, 1918.

Reports Collecting of Excess Profits

The Bureau of Markets made a report, covering the period since the transfer, showing the work of securing sworn reports, auditing them and collecting excess profits which will be returned to the growers. It was shown that, in addition to the 3,600 country dealers to whom permits were issued by the War Industries Board, the Bureau of Markets has discovered about 800 country dealers who operated without permits. The late discovery of many of the names operated to delay the work, but reports will be secured from practically all of these unlicensed dealers.

The bureau has secured reports from all of the large central dealers and has nearly completed its audits. Many of these large dealers, however, have been holding excess profits amounting to about $533,000 pending decision of the Treasury Department as to whether or not income tax will be collected on these sums. The Commissioner of Internal Revenue ruled, on April 9, that payment of income tax on excess profits on 1918 wool will not be insisted on where payment is made to the Bureau of Markets according to the regulations governing the 1918 clip.

The report showed a total of over $1,000,000 in excess profits to be collected and distributed to growers. This showing is on the face of reports submitted by the dealers themselves, so the Bureau of Markets has not audited the books of the dealers.

Government Officials at Conference

In addition to the Secretary of Agriculture, officials of the Bureau of Markets and representatives of the wool growers, there were in attendance at the hearing Bernard M. Baruch, former chairman of the War Industries Board; Lewis Penwell, former chief of the wool section; Judge Edwin B. Parker, a former member of the board; Charles J. Nichols, formerly wool administrator for the War Department; representatives of the Quartermaster General's office; and a number of members of Congress. All of these exhibited the keenest interest in the collection of excess wool profits and pledged full support to the Department of Agriculture in enforcing the regulations. Members of congress requested the department to advise them as to any further legislation that may be necessary to accomplish this end. Secretary Meredith spoke the determination of the Department of Agriculture to press the work of collecting and distributing excess profits as vigorously as possible with the limited funds and personnel available.

The point was brought out that it is not necessary at this time for individual wool growers to file claims for refunds of excess profits.

Interchurch Movement and the Rural Church

Protestant Evangelical Churches Undertake Great Co-operative Movement to Increase Church's Value to Community

By DR. EARL R. NORTH
Field Secretary of the Interchurch World Movement.

WHAT HAS been the outstanding characteristics of the Protestant church of America?

Has the tendency gone along with the trend of the times or has the church as a whole tried to go against the current of modern co-operation?

Has the church reached anything of its full effectiveness?

It is seldom indeed the church men discuss these questions frankly. It is still more seldom that they take any action which will indicate to the laity that they believe that serious faults have grown up in the church program.

The time has come, however, when the church faces its greatest task. The war has taught the nation to do big things in a big way. And the leaders of the modern Church—the Protestant evangelical churches—have begun a systematic study of what has been their greatest fault and how they may remedy it. They have come to the conclusion that the greatest fault is the lack of co-operation.

Farmers have had this doctrine preached at them for years. Now that truth has reached the church itself.

This is the true meaning of the Interchurch World Movement, the largest and most daring church program which has ever been undertaken. It is, if you please, something of a League of Nations idea as applying to the evangelical world.

The Interchurch World Movement does not propose a union of churches. There is no ONE BIG CHURCH idea in it.

It does propose that the thirty Protestant evangelical churches which are co-operating in it shall enter into a program of greater co-operation, with a full knowledge and purpose that this degree of co-operation and mutual understanding shall constantly increase.

It is like the League of Nations in another way in that there is no coercion at the head of it. It is proposed that the national organization of the thirty participating churches shall appoint members of a national interdenominational board. This board meeting annually or more often, will survey the whole field of Christian effort and endeavor to organize it on an orderly basis.

Suppose that in a certain county in Michigan there are far too few rural churches. Suppose that in the next county, due possibly to a shifting of population, there are a great number of small, struggling churches, none of which are highly effective.

There are such cases in Michigan—many such cases. One of the leading Methodist authorities in Michigan said recently that he knew of a little neighborhood which had three Protestant Evangelical churches. They are of different denominations, but, as he said, "there is not enough difference in their fundamental faith to make a good strong cup of tea." He added that it would not worry him at all if the three churches should burn down.

ONE REASON WHY THE INTERCHURCH WORLD MOVEMENT CALLS FOR $336,777,572 THIS YEAR

Where some districts are plainly over-churched and neighboring districts are plainly under-churched the Interchurch World Movement proposes to point out all the facts to the denominations affected. Then these general church bodies may do with the facts as they please. But inasmuch as there is much more church work to be done than the present denominations can handle, it is the opinion of the men engaged in the movement that the churches in most cases certainly will follow the facts and will choose to move into new fields rather than continue in those which are already overburdened with competition.

DR. S. EARL TAYLOR
General Secretary of the Interchurch World Movement

There is a still greater opportunity in the foreign mission activities. Church workers and church leaders have known for years that certain mission districts of the world are not cared for at all, and that certain other districts, generally regarded as more promising fields, have a considerable number of competitive, if not conflicting, mission facilities. It is said that many Orientals are unable to grasp the idea that some Christians may be Presbyterian, some Methodist, some Congregationalists, and yet all of one religious faith.

But it is not alone business efficiency and a general co-operative spirit that animates the Interchurch world.

Bringing the church to an orderly method of conducting its great crusade is indeed considerable of a task, but the Interchurch World Movement proposes something in addition.

There is for instance the educational program. We should find upon examination that all of our ministers, and practically all of our teachers and social workers, in fact a great proportion of men and women in every sacrificial occupation, are the graduates or products of the so-called denominational colleges. The Christian colleges of America are in a sorry financial plight. If they are not given aid they will be unable much longer to maintain a standard of education which will justify parents in sending their children to them. The great state-supported colleges are able constantly to obtain larger appropriations. The Interchurch World Movement realizes that unless the most determined steps are taken the Christian schools may be forced to suspend and the very fountain head of the supply of the Christian workers will dry up.

The Interchurch World Movement proposes moreover to conduct an active campaign, which it knows as its Life Enlistment Campaign, to induce young men and women to enter the ministry and similar professions. It seems that the stream has turned definitely against these occupations, and a determined campaign must be waged to correct it.

All told, the thirty denominations which are co-operating in the Interchurch World Movement are asking from members and the general public over $336,777,572. It should be understood that the Interchurch World Movement itself asks for nothing. It neither receives money nor spends it. The third of a billion which it will collect is simply the total sum which the thirty denomination in it would have asked separately. After the work of collection, the Interchurch World Movement will turn all of this money over to the denominations.

A third of a million may see large, but not only is it the total askings for all of the denominations involved, but it compares as follows with some of the luxury spendings of the American people:

Confectionery, $365,000,000 annually.

Moving pictures, $400,000,000 annually.

Jewelry, $800,000,000 annually.

Tobacco, $1,000,000,000 annually.

Automobiles, $1,500,000,000 annually.

The trouble with the church has been not that it has asked too much, but that it has not asked enough. It has seemed to many men that an activity which needed so little really could not amount to much.

The financial part of the Interchurch World Movement will soon be ended. But its real work will not. That work is not the obtaining of large sums of money but rather the development of a sentiment of unity among all Christian workers. What is sought is a greater evangelistic and Christian spirit in all America. That attained, the campaign will be a success, regardless of financial results.

Let us quote one example.

In Los Angeles a few years ago there was a congregation which called itself "The Church of God." It it was only a very small church at best.

But, as is often the case in such churches, a quarrel developed and a considerable proportion of the membership withdrew. They formed the "True Church of God."

In due course of time another dispute arose and a portion of the members of The True Church of God withdrew and formed The Only True Church of God.

This spirit of division must cease. The Allies won the war when they began to co-operate under one general head. Each army maintained its nationality, and each marched under its own leaders, and under its own banner, but the general co-operation was what finally turned the day.

The church has learned that lesson from the war.

* * *

"With but few scattered exceptions, says the Literary Digest, the International World Movement is warmly indorsed by the religious press,and the secular papers regard its program with hopeful eye. The Central Christian Advocate (Methodist) proclaims the movement as 'a normal development, pure and simple; it is a perfectly hormonious symbol of this age.' In an address before a representative body of business men participating in the campaign, John D. Rockefeller, Jr., vice-chairman of the General Committee, declared that 'the time has come for Christian men and women in the church to cease fighting among themselves and jointly fight against sin and evil,' and that there must be established a 'brotherhood of men and nations, based upon the Fatherhood of God.' Characteristic of the general attitude of the secular press toward the movement, the New York Evening World, referring to the fear on the part of some that the joint effort of the churches may result in denominational suicide, remarks: 'It is too much to hope that the Interchurch Movement will abolish denominationalism immediately. There does seem to be evidence that it is weakening denominational prejudice, paving the way for a combination of spiritual forces in co-operation rather than in rivalry.' The Rochester (N. Y.) Post Express says the movement', makes the impression that it is a carefully thought-out, well-planned ,and business-like effort to unify and redeploy the force of Protestantism for the task of Christianizing civilization."

Saginaw Farmers Vote to Abandon Beets for 1920--To Build Own Factory

(*Continued on page* 3)

the result that consumers and retailers, as well as manufacturers and jobbers, are clamoring in the primary markets for sugar in any quantity and on any terms.

"One large refinery reports receiving scores of letters from stockholders in the company urging it to sell them one or more barrels of sugar. The company consistently refused to sell to individuals, much to the indignation of some of the applicants. Every large refinery and distributing company reports similar experiences.

"Until the public lets up in its demands prices are not going to be any better," said an official of a leading refining company. "If we were to let our stockholders have the barrels of sugar they are asking for they would not use it, but would store it away and go out and try to buy sugar elsewhere and the result would merely aggravate the situation."

"The rise in prices does not seem to have stemmed the tide of demand in the slightest degree and many close observers express the opinion that much higher levels will have to be attained before consumption can be abated with the present standard of wages and the present scale of general expenditure.

"Toll granulated sugar was sold in the middle of the week at 25 cents and over, ex refinery. Bids of 28 cents for shipments in cars were not uncommon, but could not be accepted owing to the traffic situation.

"The demand became so desperate finally that buyers were offering 25 cents for refined sugar, agreeing to send their own motor trucks from points as far distant as Boston and Batlimore to take delivery from the refineries in New York.

"The call for sugar was not confined to the east by any means, but covered the whole country. Telegrams from Chicago and other points in Central states territory offered two or three cents premium over New York quoted prices. Brokers in New York were flooded with inquiries from firms with whom they had not previously done business and who apparently had given up hope of obtaining sugar through their accustomed channels. During the course of the week scores of telegrams were received by *Facts About Sugar* from wholesalers, retailers and manufacturers asking to be put in touch with brokers who could quote prices to them.

"Refined sugar was not on the market more than an hour on the average before it was bought, and prices were constantly rising. So rapid was the advance that brokers were unable to quote prices to their customers, but were obliged to call for open orders, prices changing so quickly that in many instances an advance was noted or a sale made before brokers had time to get in touch with their buyers by telegraph or telephone."

Another Scrap of Paper

Portion of contract cancelled by Owosso Sugar Company and copy of letter accompanying same.

Owosso, Mich., April 16, 1920.

Dear Sir:

As the time for planting crops is drawing near and the matter of the continued operation of the West Haven Spur track has not been decided we feel that we would be doing you an injustice if we held your beet contract any longer.

We are accordingly returning your contract herewith so that you can plant some other crop if you desire to do so.

The Michigan Public Utilities Commission should render a decision within the next two weeks as to whether the track will be taken up or operated.

If you still wish to grow beets under the same contract please see Mr. H. S. Hickie or phone him at 691 Hiach.

Yours very truly,

Owosso Sugar Company,

DUPLICATE

Owosso Sugar Company

BEET CONTRACT

CAMPAIGN OF 1920

THE UNDERSIGNED, hereinafter called the grower, hereby agrees to plant, cultivate, harvest and deliver during the year commencing with the Spring of 1920 to the Owosso Sugar Company, hereinafter called Company..... acres of Sugar Beets on the following described lands, to-wit: ..... in Section..... Township of..... in the County of..... State of Michigan.

At least 18 pounds of seed per acre shall be planted; which seed shall be furnished by the Company at 18 cents per pound, and the cost of same is to be deducted from the first payment made for beets delivered.

...together the prices of beet sugar so quoted for the working days of the said period and dividing the total by the number of days quoted.

Payment of the additional compensation shall be made by the Company on February 15th, 1921, and the grower will be given a report showing the computation of the average

...wagons used in hauling and delivering of beets under ...it must have boxes with tight sides and bottoms, ...no holes and cracks of any kind. ...19

Owosso Company Cancels Contract

Mr. Wallace claims that the beet growers are violating their moral obligations when they cancel their contracts as a result of the increasing cost of producing the beets. "The Michigan Sugar Company has never returned more than a dozen contracts," says Mr. Wallace.

That not all the manufacturers are so scrupulous of their moral obligations may be readily seen by an examination of the letter and contract shown herewith. The letter was written by the Owosso Sugar Company to about 100 beet growers in New Haven township, Shiawassee county, as a result of the discontinuance of rail service on a spur track over which the Company expected to haul the farmers' beets. Although these farmers signed the contract in good faith and expected to grow beets, the Sugar Company at the last minute returned their contracts rather than to abide by their agreement to accept the acreage and pay the slight additional sum necessary to transport the beets by trucks. Note that the company has mutilated the contract by cutting off one corner.

This action bears out the statement made in the April 3rd issue that the reason why the Michigan Sugar Company and other companies have never canceled contracts is because it has never been to their advantage to do so, but that they would not hesitate to do so when their interests were best served by such action.

A Review of Milk Prices in the United States for the Year 1919

By U. S. DEPARTMENT OF AGRICULTURE, Bureau of Markets.

COMPARISONS of the yearly average market milk prices made by milk marketing specialists in the U. S. Bureau of Markets for the year 1919, show that the weighted average price paid to producers by market milk dealers supplying more than one hundred of the larger cities of the United States, was 35 cents per hundredweight more than the weighted average yearly price by the majority of condensed milk manufacturers of this country. The average market milk price paid to producers was approximately 50 cents more per hundredweight of whole milk testing 3.5 per cent of butterfat than the estimated returns of producers who marketed only butter fat thru co-operative creameries and fed the skim milk to livestock on their farm. Compared with the estimated returns for 3.5 per cent milk marketed thru co-operative cheese factories, the average of market milk prices was approximately 45 cents per hundredweight higher. The average of prices paid by the condensaries, on the other hand, was but 15 and 10 cents higher, respectively, than the estimated returns for milk of the same butterfat test marketed through creameries and cheese factories.

The relationship of prices paid by cheese factories, creameries, condenseries and milk dealers varies considerably with the seasonable changes in the market supply. In February there was a difference of 99 cents per cwt. between the average price of market milk and the estimated returns for 3.5 per cent milk marketed through co-operative creameries; in the month of April this differential had declined to 15 cents. In the case of the estimated monthly returns of co-operative cheese factories and market milk prices, the differentials varied from $1.07 in February to $0.02 in July. In other words, for the country as a whole, market milk producers received but little more during July than did the patrons of co-operative cheese factories; and for the months of March, April, May and June, the estimated returns of both creamery and cheese factory patrons were equal to or higher than the average price paid by condensaries.

The allowance of 75 cents per cwt. of whole milk for skim is an estimate of the value for 1919 of skim milk used in feeding live stock on the farm. It may be that skimmed milk fed to live stock during the past year did not actually yield such returns to farmers; but experiments have demonstrated that one hundred pounds of skim milk have a feeding value equal to 30 pounds of shorts, corn or grain; and it is believed that the 1919 market prices of shorts and grains of all kinds justify an allowance of 75 cents per cwt. of whole milk for the feeding value of skim. Moreover, reports of milk dealers to the Bureau of Markets showed that in a number of places farmers actually paid as much as $1 per hundredweight of skim milk. The allowance of 15 cents per hundredweight of whole milk for whey is somewhat lower than the prevailing estimate of its feeding value on the farm. This estimate is the same, however, as that arrived at by a milk producers' marketing association in adopting a cheese market quotation as a basis for its monthly fluid milk price demands.

Reasons for Higher Prices Received by Market Milk Producers

Wherever there is active competition between fluid milk dealers and manufacturers of milk products, it is usually necessary for fluid milk dealers to pay prices considerably higher than those paid by manufacturers of cheese and condensed milk. This is so mainly because it is necessary to take extra precautions to insure a clean and wholesome product in the case of milk that has to be consumed in its natural state. Most of the larger manufacturers of condensed milk also insist upon getting milk of high quality. On the whole, however, the production and delivery of milk and cream by producers supplying condensaries, cheese factories and creameries, is not subjected to such rigorous inspection as that required in case of milk for consumption in cities. In many mar-

(*Continued on page* 9)

Factors In Wheat Situation Presented by Department of Agriculture

TO GIVE farmers in the spring wheat states the benefit of information on the general wheat situation, in order that they may be better able to decide whether to increase plantings of spring wheat, because of a low production of the winter crop indicated by conditions April 1, the United States Department of Agriculture today issued a statement calculated to throw some light on the situation.

The department points out that the estimated production of 483,617,000 bushels of winter wheat this year, based on April 1 conditions, as against 731,636,000 bushels last year may be still further reduced by a further abandonment of winter-killed fields. Information gathered by the department also indicates that Hessian fly infestation will be unusually severe over large areas and that the grasshopper menace is serious in a large part of the Great Plains. The department further explains that apparently a large carry-over of 150,000,000 bushels from last year's crop is principally winter wheat of low milling quality and therefore figures in the equation as a much lower amount. Stocks on hand in the three principal spring wheat states are only about half as large as a year ago. The carry-over during the war ranged from 163,000,000 in 1916 to, the highest on record, to 28,000,000 in 1918, the lowest recorded. Prior to the war, the normal carry-over was around 75,000,000.

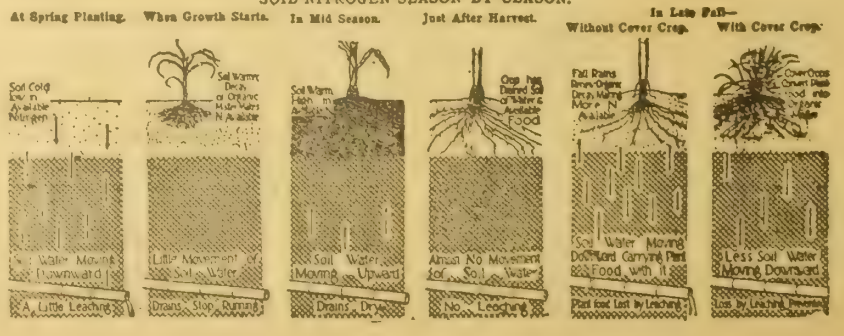
Reports from the spring wheat region indicate that many farmers are likely to reduce their acreage of this crop. Weather conditions have not favored spring work, and the serious shortage of farm labor has also affected planting. The supply of hired farm labor in the country is only about 72 per cent of the normal supply, compared with approximately 84 per cent of the normal supply a year ago.

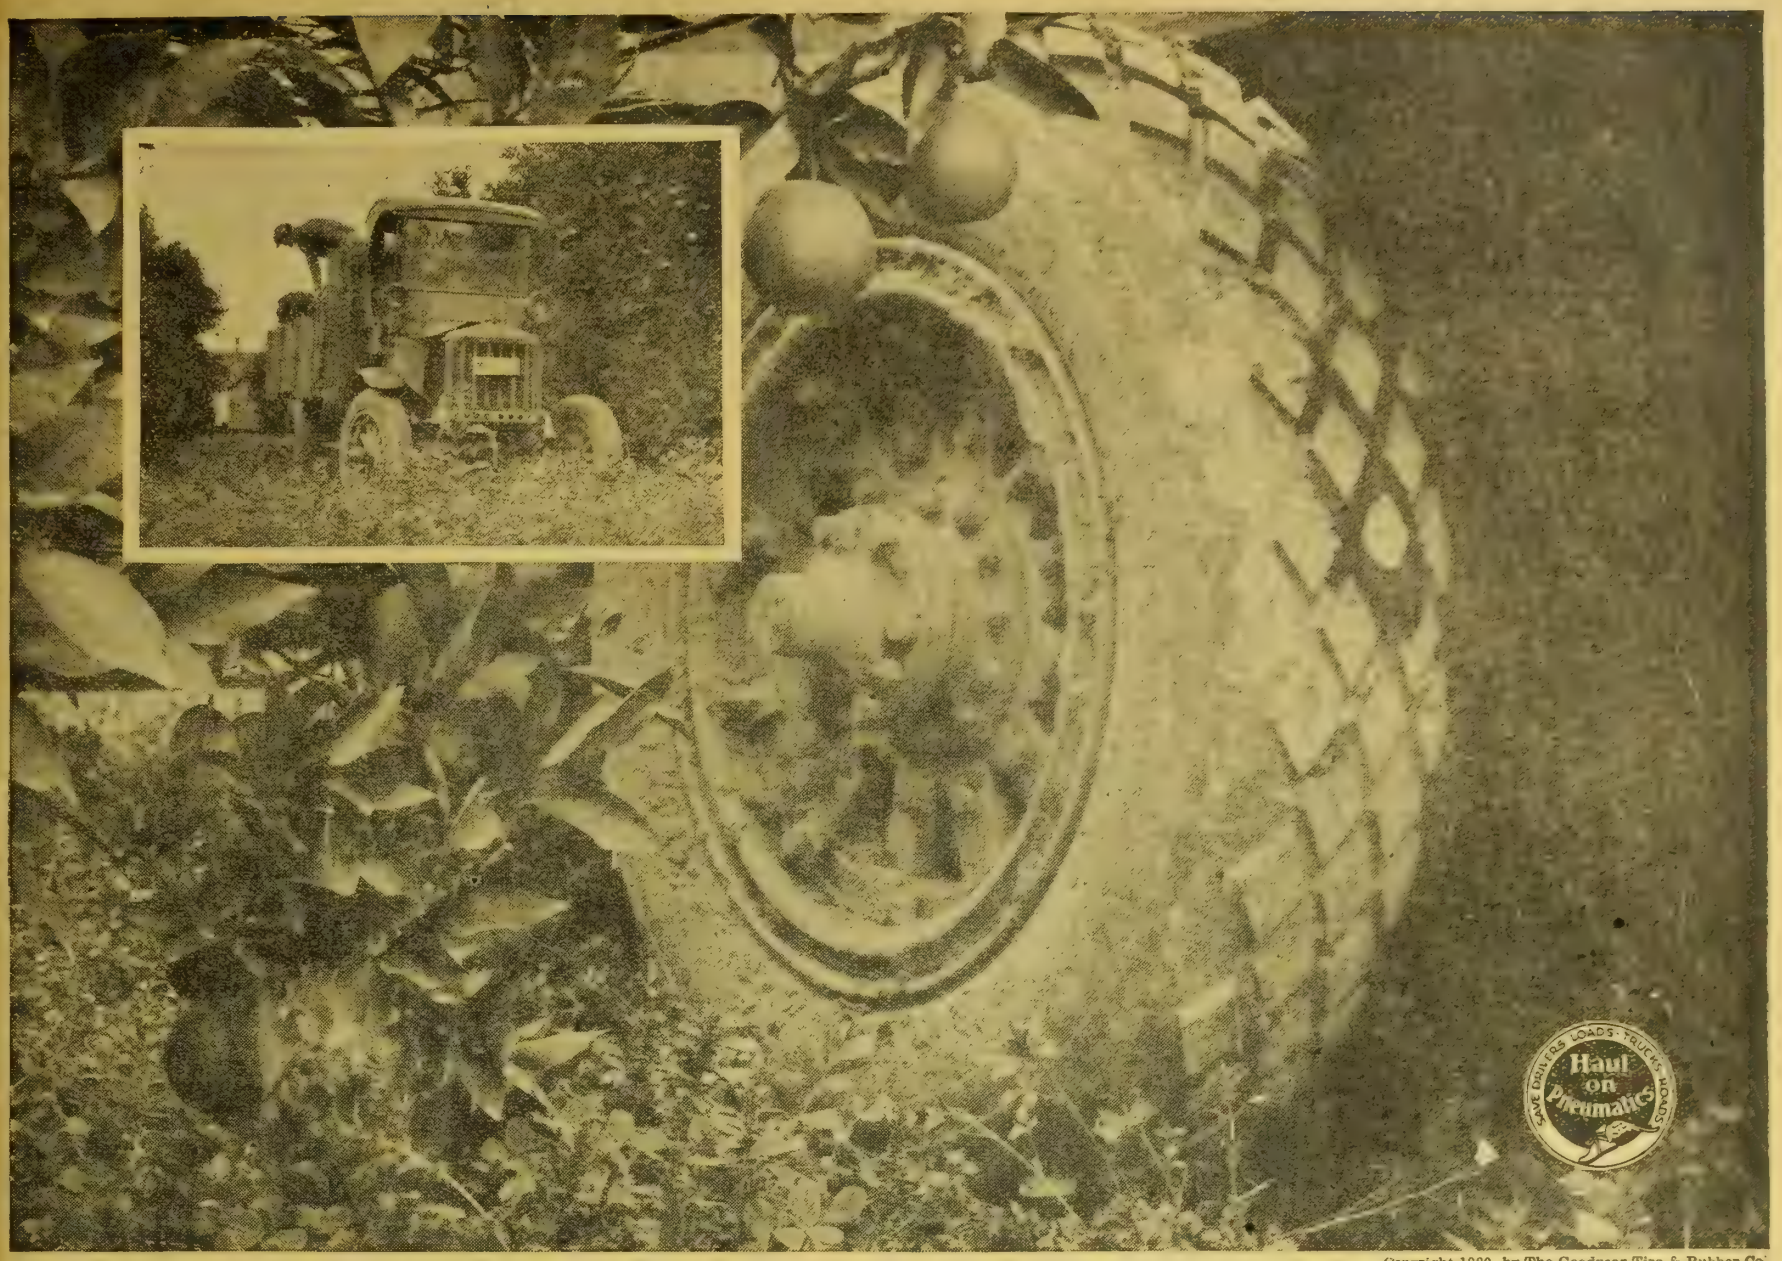
The poor condition of the winter wheat crop, together with the apparently continuing world demand for wheat may justify farmers in the spring wheat belt in revising their plans in order to increase plantings of the spring crop in spite of difficulties.

The normal wheat requirements of the United States for consumption and export are about 800,000,000 bushels. Of this only 483,617,000 bushels is indicated from the winter wheat crop. World conditions do not indicate a falling off in demand, although southern Russia is reported to have 55,000,000 bushels for export this year. There is some question, however, as to whether Russia can export because of the disorganized condition of transportation facilities. Australia has a short crop and probably will have no wheat for export during the next two years. Owners of old wheat in storage are not now permitted to ship it out of Australia. The Argentine crop appears to be fair.

While there are many factors yet undetermined which are likely to affect the production this year, the existing shortage of spring wheat of satisfactory milling quality indicates probability of continued active demand for high grade spring wheat from the new crop.

SOIL NITROGEN SEASON BY SEASON.





Copyright 1920, by The Goodyear Tire & Rubber Co.

"It is of distinct advantage for us to use Goodyear Cord Tires instead of solid tires on our trucks hauling from orchards, because these big pneumatics track nicely through loose soil or plowed ground and do not really pack it. Solid-tired trucks are assessed $10 a ton here—pneumatic-tired trucks are assessed only $5 a ton because they save roads."—A. M. Edwards, of Edwards & Patillo, Fruit Growers and Truckmen, Fullerton, California

THE gripping and agile qualities of Goodyear Cord Tires on trucks have won for them many significant rural endorsements like the one presented above.

Whether an orchard lies in soft soil, or fencing is to be done in a grassy field, or a mud-bottomed hollow separates the back acres, the big Goodyear Cord Tires go through quickly.

So today farmers frequently point to the tracks of these tires in miry hog lots, soggy meadows and acres strewn with fertilizer, where they have made short cuts and saved time many times.

In all parts of the country, the observer can note crop loads, cushioned on the husky Goodyear Cord Tires, being hauled through sand and bogs, across furrowed earth and up slippery hillsides with impressive ease.

This intense serviceability of the pneumatic truck tire, founded on the supple toughness of Goodyear Cord construction, has been built out of that ceaseless endeavor to improve, which protects our good name.

Now a large amount of information, supplied by farmers and describing the advantages of pneumatic truck tires, can be obtained by writing to The Goodyear Tire & Rubber Company, Akron, Ohio.

WEEKLY TRADE AND MARKET REVIEW

The trade situation of the past week was characterized by a tightening up of credit and a higher rate for loans. The financial interests of not only the United States but of Europe as well are determined to bring an end to the constantly increasing inflation of values and to this end are withdrawing the credit of their institutions. The first class of people to feel the effects of this money stringency are the speculators whose operations are more or less gauged by the ability with which they can secure cheap and ready money. Speculation has had considerable to do with the present high cost of living and it will be well for the world in general when it is discouraged.

Although the switchmen's strike has not been fully settled the majority of the men have returned to work and production and transportation are slowly gaining speed once more. The demands of the switchmen for $1 per hour wages has had the effect of a contagion, and from all over the country now we hear demands from other classes of workmen for $1 per hour. The most recent to ask these wages are the street railway employes of Detroit, who threaten to strike by May first providing their demands are not granted. The question naturally arises how this great increase of wages to unskilled workmen is going to affect the general scale of wages and salaries, for it may be assumed that others will follow suit, and sooner or later eventually all classes and conditions of people will demand higher wages and higher prices for their products. The industrial situation is such as to require the closest attention on the part of the farmers, for every wage increase eventually is borne in part by them. It is common knowledge that the price of nearly all commodities have advanced in greater proportion the past three years than the price of farm products, and it is not safe to let this condition continue. If agriculture is to compete in the open market for labor and supplies it must be assured of as great a percentage of increase in the prices of its products as in the price of labor and other commodities.

All the grains showed substantial strength at the close of the past week and the opening of the present week. Supplies are still inadequate to the demands and scarcely enough trading is being done to say so. However, the feeling is generally one of confidence and there is yet no indication that prices of grains are to be lower for some time to come.

Crop condtions are described as follows by the *Price Current Grain Reporter*:

"Agricultural conditions in the west cannot be regarded as extremely promising at the present time. Wet and cold weather has prevailed and the seeding of oats has been delayed much beyond the proper time. The acreage to this grain, in consequence confidentially expected to be smaller than looked for earlier in the season, although it may exceed last year's. Any decrease in oats should go into corn so that the acreage of the latter may be somewhat larger than the trade in general have been figuring on. The seeding of spring wheat in the American and Canadian northwest has also been delayed, and from both sections come reports of a reduction in the area. This serves to intensify the bullish feeling in regard to the future of wheat prices in this country, although financial conditions will have almost as much to do with the price as the size of the crop. Transportation is also a factor. Nothing has been heard of late regarding a resumption of trading in wheat futures, but there is still plenty of time for that. A liberal carry-over into the new crop is expected, probably 150,000,000 bushels, but the amount will depend to a great extent on whether foreign countries are able to get the grain out of America."

LAST MINUTE WIRES

DETROIT—Market strong. Wheat, corn, rye and oats higher. Hay scarce and in demand. Beans and potatoes dull.

CHICAGO—All grains make big advance. Hogs in demand. Provisions averaged higher.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

"There is no great shortage of professional farm labor, although the public press continually make efforts to have it appear so. There is a shortage of floating labor, however, such as many farmers have been in the habit of securing each spring. What effect this shortage will have on the acreage cannot be determined but judging from the reports it would seem that the total for the country under grain will not show a heavy reduction when everything is considered. There has been a large area put back into grass and clover, crop rotation having been interrupted by the war, when the demand was for wheat and lots of it."

WHEAT IN ACTIVE DEMAND

WHEAT PRICES PER BU., APR. 27, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.87	3.05	3.07
No. 2 White	2.85		3.04
No. 2 Mixed	2.85		3.04
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.70	2.50	2.51
No. 2 White	2.68	2.47	2.48
No. 2 Mixed	2.68	2.47	2.48

In spite of the strenuous efforts of the consumer to bring down the high cost of living and in spite of recent advances in the retail price of bread, the wheat market continues to soar. The principal reason for the present strength in the market is the export demand, buyers for export trade being in evidence on nearly all markets and taking up supplies as rapidly as they are received and buying for future deliveries. Prices being paid today for export business are the highest of the season, some exporters paying as high at $3 per bushel, f. o. b. New York. The demand for wheat naturally strengthens the demand for other grains and we may assume will be the controlling factor for many months to come.

CORN MAINTAINS POSITION

Last week there was a considerable flurry in the corn market due to a panicky feeling which overcame the holders of corn, as a result of de-

CORN PRICES PER BU., APR. 27, 1920

No. 4 Yellow	1.71	1.68	1.81

velopments in the general financial situation. For a time it looked as if a general stampede in the corn market was in order but such supplies as were thrown on the market were scarcely a drop in the bucket to what the market could absorb, and although the prices ranged generally lower for a day or two they quickly recovered, and this week the authorities say there is nothing bearish about this market. There is one influence, however, which has a draggy effect on the corn market and that is the present low price of pork. Farmers cannot afford to pay $1.75 per bushel for corn to feed $15 hogs, and this fact naturally closes a market for corn, which in average years exerts the largest influence on the demand and price. However, there are many other uses for corn besides hog feed and the demand has been sufficient to keep the price up and is predicted will continue to be so.

OATS ARE STEADY

OAT PRICES PER BU., APR. 27, 1920

Standard	.76	.74½	.81
No. 3 White	.75½	.73½	.80
No. 4 White	.74½	.72½	.78

Oats have taken a slight drop from their high level of the past week due undoubtedly to the slump in corn. This grain, however, is recovering its former strength along with corn and will undoubtedly rule steady for some time to come. In view of the shortage of this grain and the present crop outlook it is impossible to see lower prices in the immediate future.

It might be supposed that the middle west grain states would plant a large acreage to oats this spring because of the scarcity of the 1919 crop and the high prices that have that have prevailed. However, two factors will prevent any appreciable increase. One of them over which the farmer has no control is the late spring. Farmers all over the oat sections of the United States are complaining of the lateness of the season and seeding is already two or three weeks behind time in a good many sections. Such oats as have been planted are reported to be in very poor condition.

RYE HIGHER

After taking a slight drop the early part of the past week, the rye market again turned and advanced to $2.20 per cwt. for No. 2.

This grain is very active, due to the foreign demand and it is believed that it will continue upward for some time.

BEANS FIRM

BEAN PRICES PER CWT., APR. 27, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.50	7.50	7.50
Red Kidneys		13.00	15.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25	7.50	8.00
Prime	6.50	7.00	7.25
Red Kidneys	10.25	11.00	10.75

There has been no material change in the bean situation over last week. The market holds firm at $7.50 to $7.75, but with little trading going on. The opinion prevails rather generally that prices are to be higher. Prof. Cox of the Agricultural College has recently made an interesting statement in which he advocates the planting of a normal acreage of beans. It is his belief that future prices are to be good and that the farmer does not take a very long chance in going in for beans this year. He reminds us that beans may be planted safely as late as June 20th, although the first of that month is preferable and safer.

POTATOES WEAKER

SPUDS PER CWT., APR. 27, 1920		
	Sacked	Bulk
Detroit	8.00	
Chicago	7.50	7.25
Pittsburg	7.67	
New York	6.00	
PRICES ONE YEAR AGO		
Detroit	2.30	2.20
Chicago	2.15	2.05
Pittsburg	2.50	2.30
New York	2.50	2.32

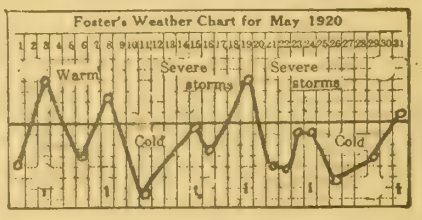
The Bureau of Markets reports nearly all potato markets in a weakened condition and prices generally are slightly lower. This is due to several causes, the principal one being the boycott of the consumer and the freight embargoes. It is not due to an oversupply of potatoes, with the possible exception of Boston which is reported to have ample supplies for some time. In nearly all other cities the supplies are scarcely large enough to meet the demand which is not active owing to the agitation against the high cost of spuds.

Several new factors are about to enter the potato situation. One of them are new potatoes which are due in quantities from the south about May 10th. Despite early damage to the crop, the southern yield is reported as good and the quantity to be shipped north will reach close to the normal movement.

Danish potatoes are now being received also in quantities. Three vessels having already discharged their cargoes and more on the way. It is reported, however, that dealers in Danish spuds have been frightened by the threat of the Department of Justice to investigate and punish "potato profiteering," and have diverted shipments due for this country to England and Cuba. Canadian potatoes are still a factor on the market, a large portion of the potatoes being sold and consumed in Detroit having come across the river

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., May 1, 1920 —Warm waves will reach Vancouver about May 5, 12, 16, 20 and temperatures will rise on all the Pacific slope. They will cross the crest of Rockies by close of May 6, 13, 17, 21; plains sections 7, 14, 18, 22; meridian 90, great upper lakes, lower Mississippi and Ohio-Tennessee valleys 8, 15, 19, 23; great lower lakes and eastern seections 9, 16, 20, 24, reaching vicinity of Newfoundland about May 10, 17, 21, 25. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These disturbances will control cropweather of North America from near May 6 to near May 25 and include the most important period of 1920. The storms to cross meridian 90 near May 15 will be more severe than usual and will cause very considerable rains in the middle Mississippi valleys and about both the upper and lower great lakes. The storm to cross meridian 90 near May 23 will cause great floods in some parts of the sections mentioned for heavy rains following May 15. These will be dangerous floods.

During the weeks centering on May 15 and 25 I expect very considerable damage by hail in some of the places where hail storms sometimes occur in May. I particularly warn everybody in the sections mentioned that there is great danger of tornadoes during these great storms. Don't go out on the lakes or ocean waters during these great storms; if you do you may never come back.

My new and improved system of forecasting makes a few changes in the May temperature line, differing somewhat from the published chart for May. Temperatures are now expected to go to the top near May 8, then fluctuate downward till May 24 and then progress upward again.

No material changes in precipitation are expected in any of the sections before June 1, about which time a very important change will occur in all sections east of the Rockies. A low temperature wave is expected to drift across the continent May 24 to 28; another from June 2 to 6. These will carry frosts further south than usual and tender plants will be in danger where killing frosts sometimes occur.

W. T. Foster

from Canada. But not even the combined competition of southern Danish and Canadian potatoes has been sufficient to knock the bottom out of the market or even bring about an appreciable lowering in the price.

The potato situation in Detroit has been more or less demoralized for several weeks as a result of the action of the Fair Price Board in fixing the price to the consumer at $3.60 per bushel. While it is probably true that a good many thousand bushels of potatoes which were purchased as low as $1 to $2 per bushel have been held in storage in Detroit for higher prices, it is also true that a good many commission houses have paid more than the "fair price" for some of their spuds and are consequently forced to ship them to other points.

Fears are expressed in some quarters that potato production will suffer in 1920 as a result of the scarcity of seed. We have no fears on this point. We recall very well the fancy prices that were paid for seed in the spring of 1917. Everyone planted potatoes and the harvest showed the result. We expect that the farmers of the country will follow their usual tradition and will pay $4 per bushel this year for seed to produce $1 potatoes. Although the labor situation may prevent an abnormally large acreage being planted we rather expect to see at least a normal acreage.

Hay markets everywhere have been thoroughly disorganized by the railroad strike, and so long as that misfortune continues there is very little to be said. Prices, of course, are extremely high on everything that can be delivered, but it is the concensus of opinion everywhere that as soon as the strike is broken and actually comes to an end and the hay already in transit begins to be delivered, there will be a very decided falling off in prices. The new crop is coming on but slowly, but it is expected that the May 1 showing of hay still on the farms by the Bureau of Crop Estimates will indicate a very generous supply.—*Price Current Grain Reporter.*

LIVE STOCK MARKETS

EAST BUFFALO—Cattle, dull; Calves, 50c hgher; $16@17.50. Hogs—25c lower; heavy, $15@15.50; mxed, $15.75@16; yorkers, $16@16.10; light do and pigs, $16; roughs $12.50@13; stags, $8@10. Sheep and lambs; lambs 50c lower; wool lambs, $13@21.50; yearlings, $12@16.50; clipped, $12@19.50.

CHICAGO—United States Bureau of Markets report. Cattle: mostly steady; beef steers ,$11@12.20; calf trade a big dollar decline; mostly $13. Compared with a week ago: Beef steers mostly $1 to $1.50 lower; butcher stock 50c to $1 lower; canners and cutters, 25c to 50c lower; calves, $2.50 lower; feeders unevenly lower. Hogs—steady to 15 cents higher, top, $15.25; bulk light, $15@15.25; bulk 250 pounds up $13.35@14.25; good many held off the market at owners' request; pigs, steady. Sheep—no trading. Compared with a week ago: Wooled lambs 25c to 50c lower; shorn lambs 25c to 50c higher; sheep steady.

DETROIT PRODUCE MARKET

The market for farm produce is not active. The tone is firm owing to scarcity of offerings in all lines excepting poultry. These are abundant and easy. Hens and chickens are quoted lower and buyers are not interested. Potatoes are not moving with much activity. Michigan is not shipping to Detroit. Scarcity is the rule in various vegetable lines. Fruits are in small supply and inactive. Trade in butter and eggs is moderate and conditions of supply and demand show little alteration. Buying of eggs is active.

Apples—Western, boxes, $4.50@$5.50; Baldwin, $3@3.50; Greening, $3.25@3.50; Steele Reds, $3.50@4 per bushel.

Popcorn—Shelled, 9c per lb.

Dressed hogs—Light, 19@21c, heavy, 17@19c per lb.

Dressed calves—best, 20@22c; No. 2, 16 @18cper lb.

Live Poultry—Spring chickens, best 38@40c; leghorns, 37@38c; hens, 38@40c; small hens, 37@38c; roosters, 23@25c; geese, 30@35c; ducks, 40@45; turkeys, 44@45c per lb.

REVIEW OF MILK PRICES IN U. S. FOR THE YEAR 1919

(*Continued from page* 6)

kets ,the costs of production of milk satisfactory for city distribution are higher than those applying to milk sold for use in manufactured milk products.

In comparing returns received by producers marketing only butter fat to creameries, and feeding skim milk to live stock on the farm, it is important to note that the cost of transportation from farm to creamery or point of shipment is much less than when market milk is sold. Producers selling butter fat to the creameries commonly make two to four deliveries of cream per week and where neighbors co-operate by taking turns in the delivery the costs of delivery amount to comparatively little.

Another important reason for the prevailing differences in the net returns obtained by producers from the marketing of milk and cream, either to market milk dealers or to concerns that convert it into manufactured milk products, is to be found in the fact that many dairymen are not informed regarding the returns that might be realized by them if they were to divert their milk supply to a different market outlet. Farm bureaus and producers' marketing organizations, however, are rapidly overcoming this handicap of producers.

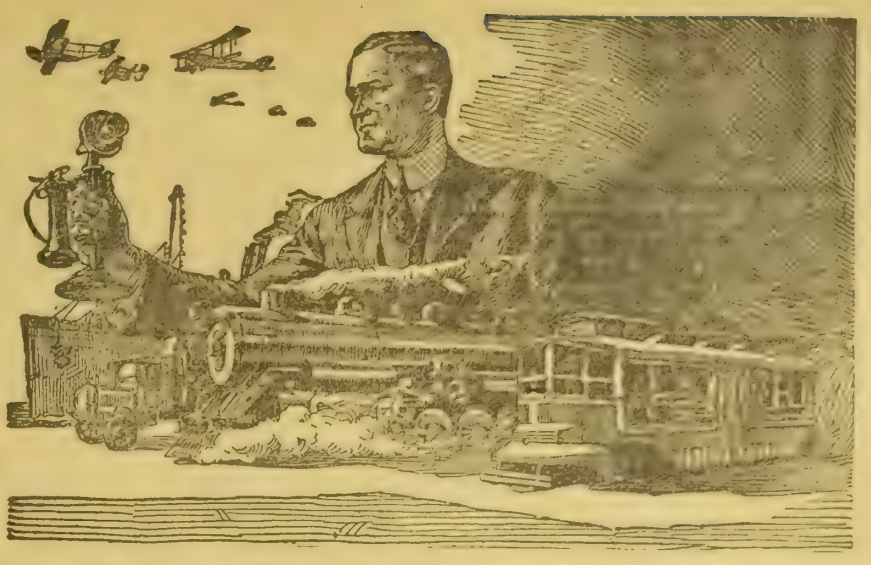
It should not be inferred from the foregoing that the net returns of producers supplying creameries, cheese factories, condensaries, or city milk distributors, are ever likely to converge to a common level. The market outlet for fresh whole milk is necessarily confined to either factories or cities which are comparatively near the sources of their supply. Whole milk is too bulky and perishable of nature to permit of economical transportation for distances much farther than 300 or 400 miles. Except in the case of New York, Boston, Philadelphia, Detroit and Chicago, comparatively small quantities of the natural supply of milk of cities are obtained from points beyond the 100 mile shipping zone. For this reason alone, in many markets the prices of market milk are likely to continue higher than the prices paid for milk that is converted into manufactured dairy products.

SPREADING LIME WITH A MANURE SPREADER

With the increased use of lime in Michigan we have received many inquiries from our users asking if their manure spreader could be used to spread lime. said J. C. Welty, Michigan manager of the New Idea Spreader Company, at Jackson, to a representative of THE BUSINESS FARMER.

"I have told these users that the use of the spreader was entirely feasible and explained how to go about it. No changes on the machine are necessary. Simply spread a layer of horse manure under the drawing bars and if pulverized lime is used, it may be well to mix a little barnyard manure with it, so that the distribution may be evenly spread over the entire field."

Simply spread a layer of horse manure or straw in the bottom of the machine then add the desired amount of lime to be used. The manure or straw underneath the lime will eliminate the use of a lime pan, by adding a quantity of manure on top of the lime, a more thorough and even distribution is insured.



The Measure of Progress

The progress of the past, as well as that of the future, is measured by criticism—for criticism exists only where there also exists faith in ability to improve.

We do not criticise an ox cart or condemn the tallow dip, for the simple reason that they are obsolete. During the reconstruction period through which our country is now passing, if the public does not criticise any public utility or other form of service, it is because there seems to be but little hope for improvement.

The intricate mechanism of telephone service is, under the most favorable conditions, subject to criticism, for the reason that it is by far the most intimate of all personal services.

The accomplishment of the telephone in the past fixed the quality of service demanded today; a still greater accomplishment in quality and scope of service will set new standards for the future.

Boys! Girls! This School Outfit YOURS for a LITTLE Extra Work

During the past 60 days more than 100 "LIVE WIRE" boys and girls have secured this dandy outfit which consists of 3 pencils, 1 pen holder, 1 combination pen and pencil, 12 pen points and holder, 1 pencil cap, 1 ink and pencil eraser and 1 drinking cup, all packed in a beautiful box, without it costing a penny.

HOW THEY DID IT

They simply called on two of their friends who were not taking The Michigan Business Farmer had them look over one or two recent copies and explained just what this weekly has done and is doing for the farmers of Michigan and convinced them that they ought to be taking M. B. F. if they expected to keep abreast of the times and derive the same benefit over 70,000 farmers are now enjoying. Then they explained that they were working for a school outfiit. That settled it, their friends subscribed and now the School Outfit is theirs.

HERE'S YOUR CHANCE

All you have to do to win this outfit is to call on two of your friends who are not now taking M. B. F. and ask them to help you win the outfit by giving you their subscription to M. B. F. for one year at $1.00 each. Send us the $2.00 with their names and address plainly written and the outfit will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

Premium Manager Mt. Clemens, Mich.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL9

NORTON BECOMES FIELD SEC'Y STATE HOLSTEIN ASS'N

The Michigan Holstein Friesian Association has secured the services of H. W. Norton, Jr., as field secretary to begin about May 1st. The drive for memberships in Michigan has so far resulted in about 1,800 memberships being paid in with two or three meetings yet to be held.

Michigan breeders generally are much elated at their good fortune in being able to enlist the services of a man so thoroughly conversant with their needs and so well and favorably known to breeders throughout the entire country as Mr. Norton.

The son of one of the veteran breeders of Black and Whites in Livingston county, he has had a life long experience in matters pertaining to Holstein cattle and knows the problems of the breeder of purebred cattle from every angle.

After graduation from Michigan Agricultural College, Mr. Norton spent six years in livestock experimental and instruction work at that institution. Leaving the college in 1909 he returned to the home farm and in his own community he was always found in the lead in managing high class sales, boosting for better sires, healthier herds and in fact any progressive movement in livestock circles found him one of the moving spirits. Since 1917 he has been assisting Dean Shaw in his work at the M. A. C. Last summer he was elected one of the directors of the National Holstein Friesian Association.

His work as chairman of the sale committee that handled the Michigan Holstein breeders first annual sale last January needs little comment. An inspection of the results of the sale when 73 head brought $60,980 or an average of $835 per head, surely confirms the belief that Holstein matters are his special province.

Now with an opportunity to devote his entire time to the welfare of Michigan breeders and herds we think results are bound to come and congratulations seem entirely in order for Michigan breeders.

Mr. Norton will be located in Lansing, Michigan, where he may be found after May 1st in the old State Block. Plans have already been made for promoting high class sales semi-annually in May and October, at various points within the state.

The executive committee in session at Lansing, Mich., elected the following officers, president, Dudley E. Waters, Grand Rapids; vice president, Dr. T. C. Tiedbohl, Coloma, Geo. L. Suillane, Flint and R. J. Bird, Ypsilanti; secretary Albert E. Jenkins, Eagle; Treasurer, Silas H. Munsell, Howell.

SISAL FIBRE PRICES GOING UP

Prices going down? "No, there ain't no such thing;" that seems to be true with sisal fibre also, from which the binder twine is made. Some time ago when the Commission Reguladora of Mexico blew up and left American and Canadian bankers holding the sack with the large quantity of fibre as security, it seemed as though prices would go down and remain down, in fact sisal fibre dropped to 7 cents, but the bankers got a bunch of money together and went to Mexico. They returned last week and at the same time fibre jumped to 8 and 8 1-4 cents which is perfectly natural as somebody had to pay for that trip to Mexico and Mr. Farmer, being handy, was at once unanimously chosen to be the goat. Higher fibre, of course, means higher prices on binder twine and it would not be at all surprising to see twine go up another cent or two. The wise farmer will take no chances, but will see that he gets his supplies now while the prices are low and deliveries can be made promptly. —*Organized Farmer.*

CO-OP. OF FRANCE BEATS THE PROFITEER

The father of French co-operation was the great philosopher Fourier, who dreamed of a "City of God upon earth." Today the backbone of it is Jean Jacques ,the sturdy peasant proprietor.

The most characteristic figure of it it is the blue-bloused co-operative workman, the member of a self-governing, profit-sharing workshop.

And the fairy godmother of it all since its first tiny beginnings in 1836 has been the French government.

Organized in 15,000 societies, 1,000,000 peasant farmers conduct their cheese-making, butter churning, wine production, oil pressing, threshing, banking, insurance, sales, purchases and export in common paying toll to none.

Of self-governing profit sharing workshops, using their own pooled savings or capital borrowed from the trades unions, there are more than 600 chiefly, engaged in the production of leather goods, jewelry, fabrics, glassware and chemicals for the co-operative trade. At the outbreak of the war these workshops were doing a business of $80,000,000 a year.

The French Wholesale society with its chain of 3,000 stores, 2,000 rural banks, six factories and more than a dozen large warehouses, had a turnover, in 1917, of $42,000,000, affecting a direct saving to its consumers of $700,000 and steadying the whole retail market.

When the war broke out the French co-operative, population of 6,000,000 persons, unreservedly offered its services to the government.

In large areas, especially in the war zone, it took over the entire distribution of coal, milk, meat and scarce commodities. In the cities it organized co-operative restaurants for munition workers, and municipal kitchens for the struggling of the "poilus."

TWO GRAND LEDGE ELEVATORS SOLD

Within a few weeks the local association of farmers, known as the Grand Ledge Produce & Supply Co., will be doing actual business.

The association closed the deals for the purchase of the elevators of W. L. Ireland & Co., and Doty & Doty, and will take possession of the last named on May 1st.

The company will buy practically everything that is raised on the farm and will continue the business as in the past, including the handling of coal. They will also sell binder twine.

The Grand Ledge Produce & Supply Co. is organized under a new act and is conducted on the membership plan. The cost of membership is $6 and in addition members will loan the concern $100 each and take in exchange a note for the amount at 6 per cent interest. After paying this interest and laying aside 10 per cent of the indebtedness as a sinking fund the profits, if any, will be divided among the members according to the amount of business done by each of them.

The new company is entirely apart from the Co-operative Association, which is under the management of Claud H. Barton, and which, by the way, did $100,000 live stock business during the first three months of this year.

THE "SAVE MONEY ON MEAT" CAMPAIGN AND THE FARMER

Producers everywhere have watched with interest the campaign being conducted by the Department of Justice to teach consumers how to save money on meat by utilizing the inexpensive cuts.

Utilization by a majority of consumers of only loin and rib cuts, which constitute approximately one-fourth of the animal carcass, had brought about a situation where the return from the one-fourth of the animal in demand equalled or exceeded the sum realized from the sale of the remaining three-fourths. This was a harmful condition for both producer and consumer. The consumer lost in buying meat which possibly had borne some of the burden of the meat which he did not buy and the producer suffered from lack of a stable market for all parts of his meat animal. Lack of demand for a large part of the carcass occasioned slow distribution, and that in turn caused loss through waste, shrinkage, and increased overhead expenses. It was a condition that could be remedied only by effecting sufficient change in the meat eating habits of thousands of people to bring about a more even consumption of the farmer's meat animal.

A number of livestock associations and producers' organizations saw the movement in the proper light and from the first gave their vigorous support, offering in the case of the California Cattlemen's Association to take complete charge of the campaign in their state.

Gray Silver, Washington representative of the American Farm Bureau Federation, writes regarding the campaign: "I desire to say that in my judgment the work you have begun in advocating a greater use of what has been considered the less desirable cuts of meat is certainly commendable. The consuming public has unconsciously grown into the habit of buying largely from the hind quarter of beef, losing sight of the fact that many of the forequarter cuts are fully as nutritious and just as desirable when properly prepared.

The Cattle Raisers' Association of Texas, the Arizona Cattle Growers' Association the Colorado Stockgrowers' Association, the Kentucky Beef Cattle Association, and J. F. McArdle, President of the Nebraska State Board of Agriculture, also have endorsed the campaign.

Dorr D. Buell Becomes Marketing Director of State Farm Bureau

Dorr D. Buell

DORR D. BUELL, who for the last two years has been president of the Michigan Potato Growers' Exchange, has accepted the position of director of the marketing department of the Michigan State Farm Bureau and will take up his duties early in May.

The commercial operations of the Farm Bureau will be placed under Mr. Buell's direction and his successful development of the Cadillac exchange, from a local community institution into an establishment linking up 100 community co-operative associations and doing hundreds of thousands of dollars of business annually, is expected to guarantee the development of an elaborate marketing and purchasing program for the thousands of Farm Bureau members in the state.

Mr. Buell will be located at Lansing, where the headquarters of the State Farm Bureau will be in May, moving there from Birmingham.

Well Qualified for Job

Mr. Buell scarcely needs an introduction to the readers of the BUSINESS FARMER as most of them are acquainted with his achievements as the active head of the Potato Growers' Exchange which in its two years' existence has become recognized as one of the most successful farmers' co-operative associations in the United States.

It is, of course, a matter of pride that the editor of the BUSINESS FARMER claims a long acquaintance and warm personal friendship with Mr. Buell, extending back over a dozen years when Mr. Buell was just a "plain farmer," and it has been his pleasure to record the successes that Mr. Buell has attained in the field of co-operative marketing.

Mr. Buell's farming experience began as a boy on the old Buell farm in Branch county. As a very young man, and he is still a young man,—Mr. Buell became the owner of a section of land in the northwest corner of Antrim county, and soon showed himself to be a progressive and a successful farmer. For a number of years he raised the best crops of alfalfa, potatoes and beans produced anywhere in Northern Michigan, and his pure bred Percherons, Holsteins and Duroc-Jerseys formed the foundation for many another pure-bred herd in Northern Michigan.

Mr. Buell's farming experience was broadened by a business experience gained through the banking business in Elmira. Mr. Buell is still interested in both bank and farm, and he confides to us that he hopes some day to relinquish his public activities and go back to the farm.

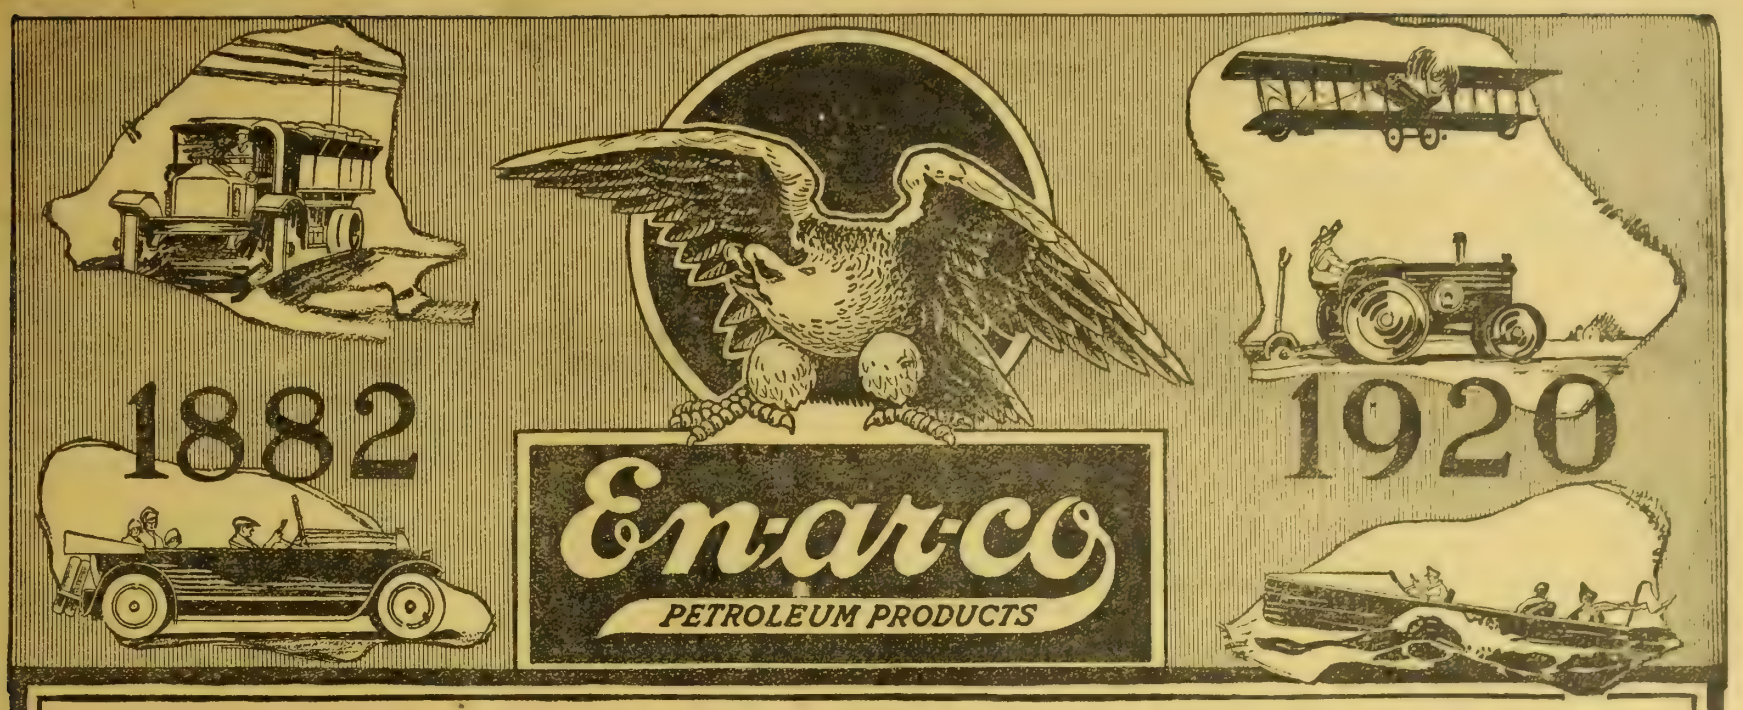
His new job is a whopper, we'll all have to admit, but with the earnest co-operation of all Farm Bureau members and officers, we predict success for the Bureau's marketing department in the hands of Mr. Buell.

New home of the Michigan State Farm Bureau at 221 No. Cedar Street, Lansing.

New Headquarters

On this page is a picture of the State Farm Bureau's new home at 221 North Cedar street, Lansing, which was occupied by the executive offices on April 30th. It is stated that wool is already arriving in generous quantities at the warehouse, being hauled in by truck from Clinton, Eaton and other nearby counties. The railroad shipments are reported starting from several places.

J. P. Powers, assistant secretary of the Bureau, says: "We are judging by this preliminary receipt of wool that the pool is proving a mighty attractive proposition to the farmers over the state and possibly our expectation of handling about 2,000,000 pounds this year will be exceeded. Already the pool has been of benefit to farmers in several sections where the arrangements have been advertised extensively. The local buyers' price has been shot up to close to an average of 10 cents more than it was a few weeks ago. However the buyers are not going to sit quiet. We can expect considerable opposition and probably through their efforts to buy up the high grades so that they can talk generous prices, will attempt to discourage the farmers co-operating in the pool."



38 Years' Scientific Refining Experience

Behind En-ar-co Motor Oil

Thirty-eight years' scientific refining experience and thousands of dollars spent in laboratory experiments have made possible the unvarying high quality of En-ar-co Motor Oil.

We were not content merely to produce a good oil. We wanted En-ar-co to be the best—not only for one year, but year after year.

The tremendous increase in En-ar-co sales is, we believe, the best proof that we have achieved our goal.

Then we went a step farther. Different makes of automobiles, trucks and types of farm machinery require different kinds of oil. So we studied them all. It took years. And thousands of dollars. But we knew it worth while.

So we are now able to offer you the right oil for every make of motor car or farm machine.

Today there are over a hundred thousand En-ar-co users. Each one is a delighted user, one who, year after year, uses only En-ar-co, and who advertises this better oil to his friends.

En-ar-co Motor Oil

Why En-ar-co Is Better

En-ar-co superiority is due to our scientific method of refining. Not only do we free En-ar-co from all residue-forming impurities, but its high quality never varies. Year after year it gives the same perfect results.

First we vaporize the selected crude oil by heating it to a high temperature. The vapor is then caught, condensed into a liquid and put through a refrigerating process. Then the oil flows into stills where it is reduced to the proper consistency. Finally it is filtered again and again until a laboratory test shows all impurities are removed.

Get full power from your car. Keep it free from carbon. Eliminate friction. Keep your repair costs to the minimum. The only SURE way is to use En-ar-co Motor Oil. Try it once and be convinced.

All En-ar-co Products Excel

There are many other En-ar-co products. All excel as does En-ar-co Motor Oil.

White Rose Gasoline—clean, uniform, powerful. National Light Oil for Tractor fuel, also best for lamps, oil stoves and incubators. Black Beauty Axle Grease for wagons. Always look for the En-ar-co trade-mark!

Auto Tour Game FREE!

This coupon will bring you FREE the fascinating En-ar-co Auto Tour Game, in which autos compete in a cross country race (not a road map). Grown folks as well as children will enjoy this game. Two, three or four can play it. Send in the coupon NOW.

The Fair Price Board

MEMBERS of the Federal Fair Price Board are very much put out over the decision of Judge Arthur J. Tuttle which prevents them from running other people's business along with their own. They are reported as saying that the decision leaves the profiteers and gougers free to prey upon the public as they please.

We are fair sick of the word "profiteer". It came into popular use during the war when a few conscientiousless wretches made capital of the war's demands to make themselves rich. They have been enjoying their blood money ever since without molestation by either the Attorney General or the tax collector.

Darling, the famous New York artist, published a cartoon several weeks ago depicting the nation-wide pursuit of the profiteer. Every last inhabitant of the United States was among the pursuers, leaving none to be pursued. Round and round they weent tracking their own footsteps, but not a profiteer did they find. The theory is that everyone, except thou and I, are profiteers and even thou wouldst profiteer if thou hadst the chance.

It is said that "it takes a scoundrel to catch a scoundrel". Perhaps that is one reason why the "fair price boards" of the country are made up of people engaged in lines of business which charge the public as much as they please for their services or product. It is not our purpose to claim that any member of any fair price board is using illegal or unmoral methods to make money, but it is our purpose to point out the absurdity of fair price decisions which are not respected by those who make them.

We cannot see how justice will permit the establishment of a rule of conduct for one class of business or profession which others are not forced to follow. All business is more or less correlated. The high cost of conducting one industry eventually increases the loss of conducting another. An automomile manufacturer, for instance, may sit upon a fair price board and rule that a farmer or merchant may charge only a certain price for his product. Shortly thereafter the automobile manufacturer may increase the cost of his product and the farmer or merchant forced to buy an automobile in order to carry on his business. Yet he is bound by the very decision of that manufacturer from advancing the price of his own commodity to meet the increased cost of the automobile which he must purchase. The same truth would apply in the purchase of any commodity or professional service.

It is the very essence of injustice and autocracy to regulate the selling price of one commodity unless all commodities are similarly regulated. The practices employed in making and selling commodities should properly be watched and kept within the confines of recognized business ethics and good morals. Efforts to throttle competition, or destroy or withhold products from the market for the purpose of profiteering should be prosecuted, but if an article is honestly produced and honestly placed upon the market, the law of supply and demand should regulate its selling price. Any attempt to legislate against the prices of farm products while any other single commodity is left unhampered will be resented in no uncertain manner by the farmers and all who have their interests at heart.

Helping Others.

IT IS often observed that the people of the cities are indifferent to the welfare of their neighbors. In a measure this is true, and there is a very good reason for it. The reason lies in the old adage, "familiarity breeds contempt".

We can appreciate the truth of this saying within our immediate family circles which are often the last refuge of courtesy, kindness and helpfulness. No member of the average American family would think of treating friends in the same thoughtless, and oftentimes, harsh manner in which he treats others of his immediate household. Nor is this due to any lack of love for them or solicitation for their well-being. The mother who, burdened with cares, scolds her fretful child, is the first to soften into tenderness and gather the little one in her arms when it is hurt or ill. The father who in an angry mood chastises his children looks down upon them with moist, repentant eyes when they are tucked away in bed. And even the brothers and sisters who one moment quarrel over trifles make up the next and show an affection for each other that is too dear to bestow upon mere friends.

The Breaking Plow

I am the plow that turns the sod
That has lain for a thousand years;
Where the prairie's wind-tossed flowers nod
And the wolf her wild cub rears,
I come, and in my wake, like rain,
Is scattered the golden seed;
I change the leagues of lonely plain
To fruitful gardens and fields of grain
For men and their hungry breed.

I greet the earth in its rosy morn,
I am the first to stir the soil,
I bring the glory of wheat and corn
For the crowning of those who toil;
I am civilization's seal and sign,
Yea, I am the mighty pen
That writes the sod with a pledge divine
A promise to pay with bread and wine
For the sweat of honest men.

I am the end of things that were
And the birth of things to be;
My coming makes the earth to stir
With a new and strange decree.
After its slumbers, deep and long,
I waken the drowsy sod,
And sow my furrows with lifts of song
To glad the heart of the mighty throng,
Slow feeling the way to God.

A thousand summers the prairie rose
Has gladdened the hermit bee;
A thousand winters the drifting snows
Have whitened the glassy sea.
Before me curls the weavering smoke
Of the Indians' smouldering fire;
Behind me rise—was it God who spoke?
At the toil-enchanted hammer's stroke,
The town and the glittering spire.

I give the soil to the one who does,
For the joy of him and his;
I rouse the slumbering world that was
To the diligent world that is.
Oh, seer, with vision that looks away
A thousand years from now,
The marvelous nation your eyes survey
Was born of the purpose that here today,
Is guiding the breaking plow.

—Nixon Waterman in National Magazine.

This perhaps explains why the people of the cities become hardened to the troubles of others. Every way they turn they encounter other people, all with about the same troubles and the same problems. They are fed up with each other, so to speak, and become so accustomed to each other's presence that they reach a point where they pay no more attention to other human beings than to the buildings which they pass to and from their work.

There are exceptions to the rule, but they are scarce. We have encountered people in the city who by sheer character have fought off the crust of indifference which encases their neighbors. They are courteous, kind, and ever ready to help another. They are the people who keep alive the soul of the cities.

The almost universal hospitality and friendliness of the people of the country are perfectly natural results of the environment. Folks who live on farms see very little of strangers. They hunger for the sight of a new face, and when a stranger stops by their doorway, they are usually eager to assist him.

Here is another rule that has its exceptions, we are sorry to say. Fortunately these exceptions are extremely rare. There are only two or three occasions which we can remember during our many travels through the country when a farmer did not give us our share of the road, or did not courteously point us out the direction, or willingly fetch us some water for the radiator, or do any or all the numerous acts of kindness which the traveler is frequently obliged to solicit.

Which brings to mind Wm. Penn's motto, with which most of you are probably familiar: "I shall pass through this world but once; any good thing, therefore, that I can do, or any kindness that I can show to any human being let me do it now; let me not defer or neglect it, for I shall not pass this way again".

Inviting Disaster.

THE SUGAR manufacturers of Michigan are inviting disaster to their business, but they are seemingly unaware of it. Their indifference to the sugar beet growers is closely akin to an insult, and no self-respecting man will let another insult him and get away with it.

Since time began the progress of the world has been hampered by small-visioned men who tried to believe that conditions were as changeless as the hills and the heavens. But the winds of unrest have blown up the waves of reform and engulfed them. Napoleon said his armies were invincible and he knew he spoke not the truth. The Czar of Russia called his iron-driven subjects, "my children", but he knew that they hated him and there was murder in their hearts. The Kaiser proclaimed himself the chosen son of God, and perhaps he was a conceited enough ass to believe it, but he fooled nobody but himself. So we encounter them all the way down the paths of history,—men who declared that because this or that has for ages presented an impenetrable front to the processes of evolution that they will always remain unchanged.

Among the more modern gentlemen of this type we give the honor of front rank to the sugar men of Michigan. Since the inception of the industry in this state they have dictated the conditions and the terms of the beet growers' contract, and have actually made themselves believe that there is no other way in which the beet sugar industry can prosper. The sugar manufacturers of the west, having the broader western view and living in an environment of constant change, have recognized the necessity of granting the beet growers a voice in the making of the contract. But the sugar men of Michigan, cursed with the stand-pattism of the east, stubbornly refuse to surrender to the inevitable, and are laying themselves open to utter annihilation.

The patience of the sugar beet growers is nearly gone. They have waited five months for the manufacturers to give them a conference. They have exhausted every peaceful method to win the manufacturers over to their viewpoint and settle the sugar beet controversy in friendly arbitration. But the manufacturers have refused this. More than that, they have spurned the beet growers, and now the farmers must take up different weapons. Heretofore they have fought with arguments and solicitation. Now they will take up the two-edged sword of competition.

It is our prediction that a large portion of the beets grown in this state in 1922 will be sliced in a farmer-owned factory. It will not matter what concessions the manufacturers make on this or next year's contract. The manufacturers have carried their bluff a bit too far. They have not only convinced some growers that they will make no concessions on the 1920 contract, but they have succeeded, quite without intent perhaps, in revealing their utter contempt for the growers and showing then that they will dictate the contract in 1921 and all the years to follow as they have done in the past. Thus convinced of the fruitlessness of attempting to secure a voice in the making of the sugar beet contract, a good many growers are ready to lend financial assistance to a farmer-owned or controlled factory. Then there will be no further arguments about the beet price and contract.

What the Neighbors Say

ADVOCATES MILITARY TRAINING

In the otherwise admirable article on page 16, issue of April 3, which defines the attributes needed in a president of this republic, occurs a sentence which to my mind shows either a prejudice aroused by the term military or failure to apply the usual broad-mindedness of the writer. My own experience in military life was confined to over four years service in the medical department during the civil war. Observation then no credence to a militaristic taint among the thousands who served during that time. The short period and since as a city medical man gives of military exercises proposed has in it elements of education now not offered. Fealty to the United States above all as a duty. The tendency of the times is to eulogize ones own class of employment, forgetting all others. Military training would emphasize the community spirit and give opportunity to a large majority of our youth who now have no lessons in fraternity to recognize all men as equally entitled to respect and opportunity to develop as another. Our college athletic clubs show the advantage of physical training and fraternal help but it is special and not universal. Without a general plan of education which embraces all of one youth many must lack.

The animus which seems to be almost universally adopted at present is "get money honestly if you can, but get money," is one of individual tendency and is forgetful of the maxim "Do unto others as ye would have them do unto you," which an ideal republic should inculcate.

The claim that the four or five months of military exercises would take too much of a young man's time seems to me preposterous. The young men of the civil war, who spent years and those of the late war who spent months away, show no indication of having lost interest in their former employments and many recognize that they are better equipped to enjoy a larger view of life than before.

Enlargement of ideas which comes from travel and association necessarily lessen individual selfishness and recognizes the rights of others as equally important as ones own, is what is needed. Many believe that universal training in company of others and dubbed military would have this effect.—*A. H. (M.D.), Plainwell, Mich.*

At a convention of agricultural editors which I attended in Chicago, there appeared a gentleman representing the Universal Military Training League who presented arguments to the assembled editors in favor of compulsory training. Dr. Spillman, formerly chief of the Bureau of Farm Management, U. S. Department of Agriculture, asked the speaker why the desired physical training and military discipline could not be taught in the public schools. The answer was, 'that most boys leave school before arriving at the desired age." Dr. Spillman then asked why since the military training advocates propose to compel boys to attend military training camps they could not force them to attend the public school, and if the boys and their parents would not prefer a plan which keeps the boys in their local surroundings to one who would take them away from home for months at a time. The speaker's answer to this was merely, "that it wasn't practical".

Volumes could be written in approval of some of your statements, and in disapproval of others. Experiences of our soldiers in the last war are varied. Without exception every soldier to whom I have talked has either acknowledged an entire change of thot and habit for the worse rather than for the better, or a vague dissatisfaction over his return to civil life. I do not say this is true of all. I merely cite my own observations. It seems to me that the outcome of the primary election in which an advocate of military training ran 50,000 votes behind an opponent shows that not all soldiers think alike on the advantages of military camp life.—Editor

THE MILK SITUATION

I wish you would take up the milk question for the milk producers of the Detroit area in your paper. There are three things that are very important and not one has been ironed out yet. First, the testing which is very unsatisfactory. Second, having to finance the milk dealers business as they keep 1-2 month's pay in their hands all the time. Third, there is nothing being done by our state officials along organization lines. There never was a time when the farmers were more ready than now to join hands and assert their rights, and yet not one thing is being done. They are collecting money every month for the purpose of building us up and why not have something done? I wrote Mr. Reed about these three things mentioned and he practically made no reply to the questions.

Now in regard to the present milk prices our state officials met with the State Commission and established prices for January, February and March. The price was to be $4.05 delivered Detroit. February they cut out our 5 per cent and March I see they are going to cut us 15 per cent on the pretext of a surplus. What good does it do to establish prices if they do not live up to them? If there is a surplus of milk now what will it be in the month of June?—*A Milk Producer, Highland Park, Mich.*

Thee above letter was received prior to the recent developments and discussions on the milk situation. Unquestionably there is much yet to be done to strengthen the Producers' Ass'n and put it in a position where it can cope with any emergency. Nor is this said with any intention to belittle the splendid work that has already been done. But the foundation has been completed, and the time seems to have come for a permanent structure to be built, a structure that will protect the milk producers of the Detroit area from any situation that might arise.—Editor.

THE CONSUMER SPEAKS

Referring to your letter to the "Editor of the News" published in last night's paper, beg to say that I, as a consumer, fully agree with you. I think, however, that the price of 14c is all right, perhaps still too high, but the reduction should not come out of the dairymen, but out of the distributor. The farmers in the Detroit district should own and operate the creameries, and make all of the by-products from the milk. If the Detroit creameries don't want to sell at a reasonable figure, let the farmer start his own milk warehouse here in Detroit and sell it to the grocer, who would be glad to deliver it to his customer, or have a given district in which he delivers if he got one-half what the distributor claims it costs him to deliver milk. And, we would have better milk, people would buy more milk if they got it direct from the farmer with all the butterfat in it, which is now taken out by the creameries, and enough left in to "come within the law". The creameries charge up all of the expense of the by-products to the cost and delivery of the milk, and all they make out of the by-products is velvet. Is that right or fair? The profits made out of their entire business should be taken into consideration and not only the cost of delivery to the customer. When you figure the price for butter, cheese, (cream or cottage) ice cream, etc., which all have to come out of milk, and none of the profit is distributed to delivery of milk, that this cost of delivery must be out of all proportion. Let the creameries place their cards on the table, and show the profit they make out of milk they buy from the dairyman, at so much per 100 lbs. butterfat, and distribute at so much per pint or quart to the consumer. I would like to know what the average butterfat is in milk delivered by the dairymen in the Detroit district, to see how much the creamery man takes out before it goes to the consumer. What are the facts about powdered milk the distributor uses. If it is true what I heard about it, I think the Fair Price Commission should look into this as well as the entire profits made by the distributors, and then turn the facts over to the prosecuting attorney.—*F. W. Biederman, 517 Garland Ave., Detroit, Mich.*

The above letter was received as a result of a communication published in a recent issue of the Detroit News in which I endeavored to present the farmer's side of the case to the consumer. It is gratifying to note that there is at least one consumer in the city of Detroit who seems to understand the position the farmer holds and realizes that the reason for the high cost of milk is because of the wasteful method of distributing it. It is interesting to note that this consumer believes a farmer-owned distributing plant to be the solution of the high price of milk problem in Detroit. How many farmers agree with him.—Editor.

OUCH!

In regard to your letter, I wish to say I have wrote you folks a letter and explained to you about this paper, when my subscription expired and asked you to stop it at once. The editor is too gosh d—— dry, and self-religious. He surely has not won many friends in this part of the country, or in fact, anywhere. Where I found this paper in the home and inquired about it, they said they will be glad when its time has run out. I wish to say once more I want you to stop ot coming in my mail box as I am ashamed of this paper. Remember I will not pay for it any more.—*August Baerwolf, Sandusky, Mich.*

Thank goodness, the sun was shining when this letter came! All right, friend Baerwolf, your name is OFF. We can't change your views and you can't change ours, so we'll go our separate ways. Some day when you are in Mount Clemens come in and get better acquainted.—Editor.

PUBLISHING THE LAWS

The M. B. F. is all O. K. It is the paper for the farmer. They talk about the high cost of living, but I think the cost of law is a great deal higher. I think our laws ought to be sorted out and all that have been repealed leeft out, and have the rest printed in good common sense language and sent to the attorneys and justices as soon as they are printed. Then the people would have a chance to know what our laws are. We, the taxpayers pay for them. Why should we not have them?—*G. E. J., Osceola County.*

Your idea while not new, is good. There are too many laws which the average man knows about to say nothing of the hundreds which he has never dreamed are on the statute books. If any reader wants to spend an interesting hour our advice would be to secure a copy of the Michigan Compiled laws and look them through. He'll probably discover before proceeding far that he has broken more laws than he thought were in existence. Yes, there's room for plenty of reform in law making.—Editor.

OLEOMARGARINE FOR FARMER

In the *Michigan Farmer* of April 10th is an editorial, "Killing the Goose", to which a number of neighbors and myself take an exception. Why is it a disgrace for us to use oleomargarine when we can save 30 cents on a pound, yes and more than that if we bought creamery butter?

The average family uses 4 pounds of butter per week. If we do not save that $1.20 per week no one saves it for us. We believe that we have as much right to buy where and what we want to eat as any merchant has to buy of a house that sells an article a little cheaper than the house he has been dealing with.

We cannot get along without the M. B. F., just renewed as you requested, and sent along a new name as a gift. Here's to the M. B. F. Long may it live and short may the lives of its enemies be.—*Mrs. B. P., Gratiot County, Mich.*

Now isn't it a bit singular that the day before the above letter arrived we should have received the following letter upon exactly the same subject?

I believe you are doing more for the farmers of Michigan than all other papers combined. In my part of the county at least one third of all the farmers are using oleo. I think they are knocking their own market for butter and milk. Do you think it would do any good to bring it to their attention?—*O. A., Kent County, Mich.*

I always used to wonder whether Henry Ford rode in a Ford or a Packard. I found out. He doesn't ride in a Ford. Now there may be any number of good reason why Henry Ford should ride in some automobile rather than the make which bears his name, but I must confess to a certain lessening of faith in the Ford car when I learned that its maker employed some other car for the use of himself and family. I cite this little comparison to draw out the moral of what I am about to say. I do NOT think that any farmer, particularly the dairy farmer, should have oleomargarine served on his table when dairy or creamery butter is available. The highest authorities in the land tell us that a certain amount of dairy products in the human ration is necessary for growth. The more of these products man consumes the more healthful, intelligent and strong he becomes. This fact dairy farmers' associations are now trying to impress upon the public, for unless the public increases its consumption of dairy products, the surplus will increase, farmers will have to dispose of their dairy cattle for beef, and those who now eat oleo from choice may some day have to eat it from necessity. Think how ludicrous the farmer's argument for increased consumption of dairy products would appear to the consumer if he knew that the farmer was practicing the opposite of what he preaches. Oleomargarine is the enemy of butter. Every new oleo eater is one less butter eater. We MUST increase the consumption of dairy products and the place to begin is right at home. If every farmer's family would eat plenty of butter and drink plenty of milk the surplus would soon disappear and the price would advance high enough to make up the difference between the cost of butter and the cost of oleo. Let's hear from others on this subject.—Editor

IN DEFENSE OF THE PRESIDENT

Please find enclosed my choice for next president. I am now past my 82nd birthday, and have voted many times for president. I believe Wilson as good as we have ever had. He has had on his shoulders more than any other and has stood as much abuse if not more trouble than any others, and I am for him. I have two boys who are against Wilson and I am sorry it is so.—*J. S. H., Traverse City.* P. S.: If you should happen to come to Traverse City this summer and have time come and take dinner with us. We are just at the city limits, two miles from the state bank. Have 20 acres of land. We have always farmed more or less and have much yet to learn, but have done better than some.

Well, ol' timer, you're going to have a guest some time this summer. Usually when I travel about the state to get better acquainted with the agricultural conditions I have to depend upon the towns for my meals and lodging, or in a pinch, stop at a farm house and say to the lady of the house, "Please, mum, will you give a poor fellow a bite to eat?" It's a treat to visit Grand Traverse County in the summer time, and it will be a double treat this summer because of your invitation. Expect us any time during July and August, and we'll drop in some day with a nice large appetite.—Editor

The Week's Editorial

LEST WE FORGET

THE RAILROADS have now been back in private hands one month to the satisfaction of the owners and the already rising doubt of a great many of tose who clamored for their return.

Complaints of producers and shippers, now are flooding the agriculture, interior and other government departments. Most complaints are from millers, manufacturers, farmers and coal mine operators. The car shortage is blamed in part for rising living costs.

At the agriculture department officials fear a shortage of regrigerator c will delay prompt movement of many perishable foods due at market beginning about May 1.

Coal mines are now closed 30 per cent of the time on account of the car shortage and other transportation delays, according to reports to the United States geological survey of the interior department.

Also on the Milwaukee road switchmen are striking and there are several more strikes likely to be pulled off in the near future.

Maybe the people, big and little, dupes alike, will awaken to the fact that they acted but the part of the catspaw to get the chestnut out of the fire for others.—*Orgnaized Farmer.*

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, a New York millionaire, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis,' to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. Francis explores another island where he meets a young man who gives his names as Henry Morgan and proves to be a relative of Francis.' He is also hunting for the treasure. They form a partnership. Francis learns that Henry is the lover of the girl he met and that her name is Leoncia Solano. Francis returns to the first island where he is captured by Torres and the Jefe Politico of San Antonio. They proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang him when Henry appears. They release Francis and throw Henry into prison. The Solanos and Francis release Henry and they escape to the boat that Francis has chartered. They are pursued by Torres and the Jefe with his soldiers. They land on an island where they procure horses and start through the hills with the Jefe and his gang in pursuit. Torres with the Jefe and his gendarmes succeed in capturing the Morgans and their friends, but as they are about to torture Henry and Francis they are surrounded by a band of men. These men are followers of a blind-man, called "The Cruel Just One," who lives in the hills. The men take their captives before their leader who passes judgment on them. The Morgans and Solanos are freed. A price is put on the Jefe's heid, which Francis pays, then the Jefe, Torres and their soldiers are freed also.

"NO THEY have done no wrong," Francis assured him. "Then it is well. I promise you to find them immediately, for we know the direction of their wandering, and to send them down to the coast to join you."

"And in the meantime you shall be my guests while you wait," the haciendado invited eagerly. "There is a freight schooner at anchor in Juchitan Inlet now off my plantation, and sailing for San Antonio. I can hold her until the noble Enrico and his sons come down from the Cordilleras."

"And Francis will pay the demurrange, of course," Henry interpolated with a sly sting that Leoncia caught, although it missed Francis who cried joyously:

"Of course I will. And it proves my contention that a checkbook is pretty good to have anywhere."

To their surprise when they had parted from the sackcloth men, the peon and his Indian father attachcd themselves to the Morgans, and journeyed down through the burning oil-fields to the plantation which had been the scene of the peon's slavery. Both father and son were unremitting in their devotion, first of all to Francis, and, next to Leoncia and Henry. More than once they noted father and son in long and earnest conversations; and, after Enrico and his sons had arrived, when the party went down to the beach to board the waiting schooner, the peon and his Maya parent followed along. Francis essayed to say farewell to them on the beach, but the peon stated that the pair of them were likewise journeying on the schooner.

"I have told you that I was not a poor man," the peon explained, after they had drawn the party aside from the waiting sailors. "This is true. The hidden treasure of the Mayas, which the conquistadores and the priests of the Inquisition could never find, is in my keeping. Or, to be very true, is in my father's keeping. He is the descendant, in the straight line, from the ancient high priest of the Mayas. He is the last high priest. He and I have talked much and long. And we are agreed that riches do not make life. You bought me for two hundred and fifty pesos, yet you made me free, gave me back to myself. The gift of a man's life is greater than all the treasure in the world. So are we agreed, my father and I. And so, since it is the way of Gringos and Spaniards to desire treasure, we will lead you to the Maya treasure, my father and I, my father knowing the way. And the way into the mountains begins from San Antonio and not from Juchitan."

"Does your father know the location of the treasure?—just where it is?" Henry demanded, with an aside to Francis that this was the very Maya treasure that had led him to abandon the quest for Morgan's gold on the Calf and to take to the mainland.

The peon shook his head.

"My father has never been to it. He was not interested in it, caring not for wealth for himself. Father, bring forth the tale written in our ancient language, which you alone of living Mayas can read."

From within his loin-cloth the old man drew forth a dirty and much-fraved canvas bag. Out of this he pulled what looked like a snarl of knotted strings. But the strings weer twisted sennit of some fibrous forest bark, so ancient that they threatened to crumble as he handled them, while from under the touch and manipulation of his fingers a fine powder of decay arose. Muttering and mumbling prayers in the ancient Maya tongue, he held up the snarl of knots, and bowed reverently before it ere he shook it out.

"The knot writing, the lost written language of the Mayas," Henry breathed softly. "This is the real thing if only the old geezer hasn't forgotten how to read it."

All heads bent curiously toward it as it was handed to Francis. It was in the form of a crude tassel, composed of many thin, long strings. Not alone were the knots, and various kinds of knots, tied at irregular intervals in the strings, but the strings themselves were of varying lengths and diameters. He ran them through his fingers, mumbling and muttering.

"He read!" cried the peon triumphantly. "All our old language is there in those knots, and he reads them as any man may read a book."

Bending closer to observe, Francis and Leoncia's hair touched, and, in the thrill of the immediately broken contact, their eyes met, producing the second thrill as they separated. But Henry, all eagerness, did not observe. He had eyes only for the mystic tassel.

"What d'you say, Francis?" he murmured. "It's big! It's big!"

"But New York is beginning to call," Francis demurred. "Oh, not its people and its fun, but its business," he added hastily, as he sensed Leoncia's unuttered reproach and hurt. "Don't forget, I'm mixed up in Tampico Petroleum and the stock market, and I hate to think how many millions are involved."

"Hell's bells!" Henry ejaculated. "The Maya treasure if a tithe of what they say about its immensity be true, could be cut three ways between Enrico, you and me, and make each of us richer than you are now."

Still Francis was undecided, and, while Enrico expanded on the authenticity of the treasure, Leoncia managed to query in an undertone in Francis' ear:

"Have you so soon tired of . . . of treasure hunting?"

He looked at her keenly, and down at her engagement ring, as he answered in the same low tones:

"How can I stay longer in this country, loving you as I do, while you love Henry?"

It was the first time he had openly avowed his love, and Leoncia knew the swift surge of joy, followed by the no less swift surge of mantling shame that she, a woman who had always esteemed herself good, could love two men at the same time. She glanced at Henry, as if to verify her heart, and her heart answered yes. As truly did she love Henry as she did Francis, and the emotion seemed similar where the two were similar, different where they were different.

"I'm afraid I'll have to connect up with the Angelique, most likely at Bocas del Toro, and get away," Francis told Henry. "You and Enrico can find the treasure and split it two ways."

But the peon, having heard, broke into quick speech with his father, and next, with Henry.

"You hear what he says, Francis," the latter said, holding up the sacred tassel. "You've got to go with us. It is you he feels grateful to for his son. He isn't giving the treasure to us but to you. And if you don't go, he won't read a knot of the writing."

But it was Leoncia, looking at Francis with quiet wistfulness of pleading, seeming all but to say, "please, for my sake," who really caused Francis to reverse his decision.

CHAPTER XIII

A WEEK later, out of San Antonio on a single day, three separate expeditions started for the Cordilleras. The first, mounted on mules was composed of Henry, Francis, the peon and his ancient parent, and of several of the Solano peons, each leading a pack mule, burdened with supplies and outfit. Old Enrico Solano, at the last moment, had been prevented from accompanying the party because of the bursting open of an old wound received in the revolutionary fighting of his youth.

Up the main street of San Antonio the cavalcade proceeded, passing the jail, the wall of which Francis had dynamited, and which was only even then being tardily rebuilt by the Jefe's prisoners. Torres, sauntering down the street, the latest wire from Regan tucked in his pocket, saw the Morgan outfit with surprise.

"Whither away, senors?" he called.

So spontaneous that it might have been rehearsed, Francis pointed to the sky ,Henry straight down at the earth, the peon to the right and his father to the left. The curse from Torres at such impoliteness, caused all to burst into laughter, in which the mule peons joined as they rode along.

Within the morning, at the time of the siesta hour, while all the town slept, Torres received a second surprise. This time it was the sight of Leoncia and her youngest brother, Ricardo, on mules, leading a third that was evidently loaded with a camping outfit.

The third expedition was Torres' own, neither more or less meagre than Leoncia's, for it was composed only of himself and one, Jose Mancheno, a notorious murdered of the place whom Torres, for private reasons, had saved from the buzzards of San Juan. But Torres' plans, in the matter of an expedition, were more ambitious than they appeared. Not far up the slopes of the Cordilleras dwelt the strange tribe of the Caroos. Originally founded by runaway negro slaves of Africa and Carib slaves of the Mosquito Coast, the renegades had perpetuated themselves with stolen women of the tierra caliente and fled with women slaves like themselves. Between the Mayas beyond, and the government of the coast, this unique colony had maintained itself in semi-independence. Added to, in later days, by run-away Spanish prisoners, the Caroos had become a hotchpotch of bloods and breeds, possessing a name and a taint so bad that the then governing power of Colombia, had it not been too occupied with its own particular political grafts, would have sent armies to destroy the pest hole. And in this pest hole of the Caroos Jose Mancheno, had been born of a Spanish-murdered father and a mestiza-murderess mother. And to this pest hole Jose Mancheno was leading Torres in order that the command of Thomas Regan of Wall Street might be carried out.

"Lucky we found him when we did," Francis told Henry, as they rode at the rear of the last Maya priest.

"He's pretty senile," Henry nodded. "Look at him."

The old man, as he led the way, was forever pulling out the sacred tassel and mumbling and muttering as he fingered it.

"Hope the old gentleman doesn't wear it out," was Henry's fervent wish. "You'd think he'd read the directions once and remember them for a little while instead of continually pawing them over."

They rode out through the jungle into a clear space that looked as if at some time man had hewn down the jungle and fought it back. Beyond by the vista afforded by the clearing, the mountain called Blanco Rovalo towered high in the sunny sky. The old Maya halted his mule, ran over certain strings in the tassel pointed at the mountain and spoke in broken Spanish:

"It says: In the footsteps of the God wait till the eyes of Chia flash."

He indicated the particular knots of a particular string as the source of his information.

"Where are the footsteps, old priest?" Henry demanded, staring about him at the unbroken sward.

But the old man started his mule, and, with a tattoo of bare heels on the creature's ribs, hastened it on across the clearing and into the jungle beyond.

"He's like a hound on the scent, and it looks as if the scent is getting hot," Francis remarked.

At the end of half a mile, where the jungle turned to grass land on swift rising slopes the old man forced his mule into a gallop which he maintained until he reached a natural depression in the ground. Three feet or more in depth, of area sufficient to accommodate a dozen persons in comfort, its form was strikingly like that which some colossal human foot could have made.

"The foot steps of the God," the old priest proclaimed solemnly, ere he slid off his mule and prostrated himself in prayer. "In the foot-step of the God must we wait till the eyes of Chia flash—so say the sacred knots."

"Pretty good place for a meal," Henry vouchsafed, looking down into the depression. While waiting for the mumbo-jumbo foolery to come off, we might as well stay our stomachs."

"If Chia doesn't object," laughed Francis.

And Chia did not object, at least the old priest could not find any objection written in the knots.

While the mules were being tethered on the edge of the first break of woods, water was fetched from a nearby spring and a fire built in the foot-step. The old Maya seemed oblivious of everything, as he mumbled endless prayers and ran the knots over and over.

"If only he doesn't blow up," Francis said.

"I thought he was wild-eyed the first day we met him up in Juchitan," concurred Henry. "But it's nothing to the way his eyes are now."

Here spoke the peon, who, unable to understand a word of their English nevertheless sensed the drift of it.

"This is very religious, very dangerous, to have anything to do with the old Maya sacred things. It is the death road. My father knows. Many men have died. The deaths are sudden and horrible. Even Maya priests have died. My father's father so died. He, too, loved a woman of the tierra caliente. And for the love of her, for gold, he sold the Maya secret and by the knot writing led tierra caliente men to the treasure. He died. They all died. My father does not like the women of the tierra caliente now that he is old. He liked them too well in his youth, which was his sin. And he knows the danger of leading you to the treasure. Many men have sought during the centuries. Of those who found it, not one came back. It is said that even conquistadores and pirates of the English Morgan have won to the hiding place and decorated it with their bones."

"And when your father dies," Francis queried, "then, being his son, you will be the Maya high priest?"

"No, senor," the peon shook his head. "I am only half-Maya. I cannot read the knots. My father did not teach me because I was not of the pure Maya blood."

"And if he should die, right now, is there any other Maya who can read the knots?"

"No, senor. My father is the last living man who knows that ancient language."

But the conversation was broken in upon by Leoncia and Ricardo, who, having tethered their mules with the others, were gazing sheepishly down from the rim of the depression. The faces of Henry and Francis lighted with joy at the sight of Leoncia.

while their mouths opened and their tongues articulated censure and scolding. Also, they insisted on her returning with Ricardo.

"But you cannot send me away before giving me something to eat," she persisted, slipping down the slope of the depression with pure feminine cunning in order to place the discussion on a closer and more intimate basis.

Aroused by their voices, the old Maya came out of a trance of prayer and observed her with wrath. And in wrath he burst upon her, intermingling occasional Spanish words and phrases with the flood of deunciation in Maya.

"He says that women are no good," the peon interpreted in the first pause. "He says women bring quarrels among men, the quick steel, the sudden death. Bad luck and God's wrath are ever upon them. Their ways are not God's ways, and they lead men to destruction. He says women are the eternal enemy of God and man, forever keeping God and man apart. He says women have ever cluttered the footsteps of God and have kept men away from traveling the path of God to God. He says this woman must go back."

With laughing eyes, Francis whistled his appreciation of the diatribe, while Henry said:

"Now will you be good, Leoncia? You see what a Maya thinks of your sex. This is no place for you. California's the place. Women vote there."

"The trouble is that the old man is remembering the woman who brought misfortune upon him in the heyday of his youth," Francis said. He turned to the peon. "Ask your father to read the knot writing and see what it says for or against women traveling in the footsteps of God."

In vain the ancient high priest fumbled the sacred writing. There was not to be found the slightest authorative objection to woman.

"He's fixing his own experiences up with his mythology," Francis grinned triumphantly. "So I guess it's pretty near all right, Leoncia for you to stay for a bite to eat. The coffee's made. After that . . . "

But "after that" came before. Scarcely had they seated themselves on the ground and begun to eat, when Francis, standing up to serve Leoncia with tortillas, had his hat knocked off.

"My word !" he said, sitting down. "That was sudden. Henry, take a squint and see who tried to pot shot me."

The next moment, save for the peon's father, all eyes were peeping across the rim of the footstep. What they saw, creeping upon them from every side was a nondescript and bizarrely clad horde of men who seemed members of no particular race but composed of all races. The breeds of the entire human family seemed to have moulded their lineaments and vari-colored their skins.

"The mangiest bunch I ever laid eyes on," was Francis' comment.

"They are the Caroos," the peon muttered, betraying fear.

"And who in——" Francis began. Instantly he amended. "And who in Paradise are the Caroos?"

"They come from hell," was the peon's answer. "They are more savage than the Spaniard, more terrible than the Maya. They neither give nor take in marriage, nor does a priest reside among them. They are the devil's own spawn, and their ways are the devil's ways, only worse."

Here the Maya rose, and, with accusing finger, denounced Leoncia for being the cause of this latest trouble. A bullet creased his shoulder and half whirled him about.

"Drag him down !" Henry shouted to Francis. "He's the only man who knows the knot language; and the eyes of Chia, whatever that may mean, have not yet flashed."

Francis obeyed, with an out-reach of arm to the old fellow's legs, jerking him down in a crumpled, skeleton-like fall.

Henry loosed his rifle, and elicited a fusillade in response. Next, Ricardo, Francis, and the peon joined in. But the old man, still running his knots fixed his gaze across the far rim of the foot-step upon a rugged wall of mountain beyond.

"Hold on !" shouted Francis, in a vain attempt to make himself heard above the shooting.

He was compelled to crawl from one to another and shake them into ceasing from firing. And to each, separately, he had to explain that all their ammunition was with the mules, and that they must be sparing with the little they had in their magazines and belts.

"And don't let them hit you," warned Henry. "They've got old muskets and blunderbuses that will drive holes through you the size of dinner plates."

An hour later, the last cartridge, save several in Francis' automatic pistol, was gone; and to the irregular firing of the Caroos the pit replied with silence. Jose Mancheno was the first to guess the situation. He cautiously crept up to the edge of the pit to make sure, then signaled to the Caroos that the ammunition of the besieged was exhausted and to come on.

"Nicely trapped, senors," he exulted down at the defenders, while from all around the rim laughter arose from the Caroos.

But the next moment the change that came over the situation was as astounding as a transformation scent in a pantomime. With wild cries of terror the Caroos were fleeing. Such was their disorder and haste that numbers of them dropped their muskets and machetes.

"Anyway, I'll get you, Senor Buzzard," Francis pleasantly assured Mancheno, at the same time flourishing his pistol at him.

He leveled his weapon as Mancheno fled, but reconsidered and did not draw the trigger.

"I've only three shots left," he explained to Henry, half in apology. "And in this country one can never tell when three shots will come in handiest, as I've found out, beyond a doubt."

"Look !" the peon cried, pointing to his father and to the distant mountainside. "That is why they ran away. They have learned the peril of the sacred think of Maya."

The old priest, running over the knots of the tassel in an ectasy that was almost trance-like, was gazing fixedly at the distant mountain, from which, side by side and close together, two bright flashes of light were repeating themselves.

"Twin mirrors could do that in the hands of a man," was Henry's comment.

"They are the eyes of Chia," the peon repeated. "It is so written in the knots as you have heard my father say. Wait in the foot-steps of the God till the eyes of Chia flash."

The old man rose to his feet and wildly proclaimed: "To find the treasure we must find the eyes."

"All right, old top," Henry soothed him, as, with his small traveler's compass he took the bearings of the flashes.

"He's got a compass inside his head," Henry remarked an hour later of the old priest, who led on the foremost mule. "I check him by the compass, and, no matter how the natural obstacles compel him to deviate, he comes back to the course as if he were himself a magnetic needle."

Not since leaving the foot-step, had the flashings been visible. Only from that one spot, evidently, did the rugged landscape permit the seeing of them. Rugged the country was, and broken into arroyos and cliffs, interspersed with forest patches and stretches of sand and of volcanic ash.

At last the way became impassable for their mounts, and Ricardo was left behind to keep charge of the mules and mule-peons and to make a camp. The remainder of the party continued on, scaling the jungle-clad steep that blocked their way by hoisting themselves and one another up from root to root. The old Maya, still leading was oblivious to Leoncia's presence.

Suddenly, half a mile farther on, he halted and shrank back af if stung by a viper. Francis laughed and across the wild landscape came back a discordant, mocking echo. The last priest of the Mayas ran the knots hurriedly, picking out a particular string, ran its knots twice, and then announced:

"When the God laughs, beware!—so say the knots."

For Land Clearing

Just punch a hole under the stump or boulder you want to remove and load in it two or more cartridges of

DU PONT

Red Cross Dynamite

Light the fuse, walk quickly away, and watch that stump or boulder shoot up out of the ground!

Red Cross will clear land with one-tenth the labor of grubbing or stump pulling. It is equally effective for ditch digging and tree planting and is economical and safe.

Put this Giant Farm Hand to work for you. If your project warrants, we will send a demonstrator to how you the easiest and cheapest way of doing your work.

See your Dealer. In any case, find out what Red Cross can do for you—and how. Write for "Handbook of Explosives" today.

E. I. du Pont de Nemours & Company, Inc.
Sales Dept.: Explosives Division
WILMINGTON, DELAWARE

Only $2 DOWN ONE YEAR TO PAY

For any Size—Direct from Factory

You can now get one of these splendid money-making, labor-saving machines on a plan whereby it will earn its own cost and more before you pay. You won't feel the cost at all.

New BUTTERFLY Separator

$44 No. 2½ Junior—a light-running, easy-cleaning, close-skimming, durable, fully guaranteed separator. Skims 120 quarts per hour. We also make four other sizes up to our big 800 lb. capacity machine shown here—all sold at similar low prices and on our liberal terms of **only $2 down and a year to pay.**

EASY TO CLEAN

30 DAYS' FREE TRIAL! GUARANTEED A LIFETIME
Against Defects in Material and Workmanship

You can have 30 days' free trial and see for yourself how easily one of these splendid machines will earn its own cost and more before you pay. Try it alongside of any separator you wish. Keep it if pleased. If not, you can return it at our expense and we will refund your $2 deposit and pay the freight charges both ways. You won't be out one penny. You take no risk. Postal brings Free Catalog Folder and direct-from-factory offer. Buy from the manufacturers and save money. Write TODAY.

ALBAUGH-DOVER COMPANY, 2260 Marshall Blvd., Chicago, Ill.

Over 175,000 New Butterfly Separators Now in Use.

BUG PROOFED BINDER TWINE 14 3-4c

For Standard 500 foot, carlots, f. o. b. Chicago, on credit

GUARANTEED EQUAL TO THE BEST MAKES

TERMS—Settlement by note without interest payable September 1st or October 1st.

CASH DISCOUNTS—If paid in April the net price will be $13.50 per 100 lbs., May $13.59, June $13.68.

Edited by MABEL CLARE LADD

THE INTERCHURCH Word Movement of North America has begun to make itself felt throughout the land, although the organization was only started a short time ago. And the reason is that for the first time we are applying business rules to religion—are realizing the tremendous responsibilities of our country; realizing that if our country is to stay in the lead, is going to be in truth the "Promised Land" we must "Do unto others as we would that they should do unto us."

And at last we have awakened to the fact that we must pay the price. If we go to church when we wish to —if we contribute toward the upkeep when we feel so inclined or have the extra money—we can't expect religion to give us much in return. For we must realize that everything worth having in this world has a price tag on it. No more are we satisfied with the old time minister who preaches to us that "we must be good if we would be happy." We want an up-to-date man who has studied conditions in Europe and can advise us relative to our position with other countries—a man who knows the needs of the people of his community in a material way—a man who can tell our young people what to read—who can advise the men on state and national questions as well as the women—and if we hire that kind of a preacher—we must pay the price for an educated man—BUT it's worth it. Very few would care to move to a country where there was no church, but after a church is once planted in their community, some feel that if they attend on state occasions, they had done their duty by their families for they have provided a Sunday school for the children. But we are coming to realize, because it is being pointed out to us that religion is for every member of the family.

We pay for health—we pay for wealth. If we are to be healthy we have to observe the laws of hygiene —we abstain from harmful habits and foods—for wealth we work—pay with brain and brawn.

Mr. Rockefeller, Jr., is giving his time to further this movement as he realizes the benefit to our country to be derived from getting every one interested in the church—everyone working in the church. The following is a statement made by him in a recent meeting:

"As men and women, weary pilgrims, wend up the mountain side, gradually and inevitably they come closed and closer together, for on the mountain top all paths meet. So may all Christian men and women meet at the mountain top, standing side by side on the broad foundation of God's love and Christ's life in a great unending warfare against moral wrong."

The mothers of the land agree that the children should attend moving pictures which have an educational value and pictures whose story is clean. Then in order to be sure they are properly censured it has come to be the general custom in many churches to have an entertainment evening once each week, right in the church. A good reel is run which gives the dramatized story in a few minutes. And the very best stories in the world are being brought to the silver screen. Then there is a comedy, not the cheap slap stick variety but some good clean wholesome fun that every member of the family can enjoy, there are the timely topics and either a short nature picture or a picture showing some industry at work. Membership in the church entitles the member of the family to entrance tickets. Of course the members of the church must pay the price, but how much better than to pay for the ordinary amusement.

Then on Sunday afternoons when the young people are won't to go for a walk goodness knows where, the churches are now availing themselves of the opportunity to have the young people's social hour when the young folks gather to have a little visit and then sing. This is followed by light refreshments. Of course some one must give up some time and money. Some one must supervise these social hours, must provide some sort of entertainment and must make the cocoa and sandwiches and wash the dishes. The larger churches are finding it profitable to hire some one outright for this work —a social secretary who knows her job assisted by a woman to care for the lunch, while the smaller churches elect committees to serve each week.

Attractive farm home of Mr. and Mrs. W. J. Buffington, of Rushton, R 2, Mich.

The old time idea of a service has passed away, the younger generation demand something different, so the up-to-date church has good music, a trained choir and those who are interested in singing and have any talent can join the choir, but they must pay the price of regular attendance for the choir leader is hired and they cannot miss choir practice and stay in the choir any more than the boys can miss their school lessons and stay on the foot ball team.

And then the newest, most far-reaching movement in connection with the whole scheme is the reading of the bible. Oh yes, we all have our bibles, but we read them periodically, or at least most of us have done so. Perhaps we read a chapter today and then don't read one again for a week if we are very busy. But in this new scheme of things we know that we actually get value received just as we apply ourselves. But we are such busy people, we rush to work and we rush home to eat and dress for some social engagement for the evening, and we forget. So the Alexanders, those great singing evangelists, have devised the scheme of the Pocket Testament League. The only requirement in joining the League is that you promise to carry with you, "wherever you go," the little pocket testament which fits into a man's pocket or a woman's either for that matter if she has one, but if not, will even slip into the purse. For if we have it with us, sometimes each day we will find time to read the one chapter. And in so doing we are resting our bodies while relaxed, we are resting our minds from the cares that surround us, we are finding things in the bible that we never knew were there and incidentally we are a little more inclined to be charitable to our neighbors, if we have a pocket testament in our pockets than if we didn't. It isn't quite so easy to gossip—it isn't quite so easy to drive a bargain quite to closely for personal gain.

Many Sunday schools are buying the cheaper edition of these testaments for their whole Sunday Schools. No one gets one who doesn't sign the card promising to read the chapter each day, but in this way the child who can't afford to buy one is provided with one free of charge through the church and what a wonderful investment for any church while every member who is able financially, contributes toward the testament fund which is used to pay for the little testaments. Of course they who are able buy their own, and there are lovely little leather bound ones which are very thin and which will stand the wear of constant use for years.

The beauty of the Testament League is that it is interdenominational, we are all striving for the same end, some believe in one creed and some in another, but all believe in the bible and all can unite in this movement. If you are interested in this league and would like to learn more of it, would like a sample of the card which is signed, or the prices of the testaments and the place where you can secure them, just remember our Shopping Service Bureau will be glad to give you full information.

Have you ever noticed when you became interested in a subject how everyone else seemed to be interested in th same subject and how you just couldn't pick up a magazine or paper without reading something about that very subject, and didn't yoyu wonder how they happened to be thinking of the same thing you were? Since I decided to write this little article I have found so many good things on the same subject. The one which I am copying seems to fit so into my little thought of value received for value given that I must pass it right on.

It Pays to Read the Bible

The fact that the Standard Oil Co. has discovered oil and is operating wells in Egypt is generally known, but its reason for going to than ancient land to look for oil is probably not so well known. It is asserted that the attention of someone connected with the company was attracted by the statement in Exodus 2:3 that the ark of bulrushes that the mother of Moses made for her child was "daubed with slime and with pitch." Reasoning that where there was pitch there was oil and if there ever was oil in Egypt it was probably still there, the company sent out Charles Whitshott, its geologist and oil expert, to make investigations, with the result that oil was discovered. Three wells are now in operation and others are to be opened.—*The Lamp.*

Weekly Cheer

Build for yourself a strong box,
Fashion each part with care;
Fit it with hasp and padlock,
Put all your troubles there.
Hide therein all your failures,
And each bitter cup you quaff,
Lock all your heartaches within it,
Then—sit on the lid and laugh.

Tell no one its contents;
Never its secrets share;
Drop in your cares and worries,
Keep them for ever there,
Hide them from sight so completely,
The world will never dream half,
Fasten the top down securely,
Then—sit on the lid and laugh.

OUR READERS OWN COLUMN

DEAR Miss Ladd: I wish the lady who wrote relative to the lamp shades in the issue of April 10 would give directions for making the lamp shades. I would like very much to have her idea in detail. I have been planning to make a floor lamp and shade myself and her ideas may prove helpful to me.—Mrs. W. Y.

Dear Editor Women's Department: We just began to take THE BUSINESS FARMER and have only just received the first issue and I noticed your offer to help the readers. Now I have a good navy blue raincoat, also a medium blue winter coat which I would like to sell. The winter coat is out of date but there is plenty of material in it to make a girl 12 or 14 years old a good coat. Can you give me the address of people who handle such clothing.—Mrs. F.

Dear Mrs. F.: There are two ways by which you can dispose of these garments. The first is through an ad in the paper in your own locality so that those who are prospective buyers may see the articles and the other is through the second hand store. The first is much the better way as the second hand stores will not buy until they see and examine the goods and then they pay such a small price that it hardly pays one for the trouble. Of course there is the possibility that some one of our readers who has small children would care to correspond with you relative to the same. If so and they write me, I shall be glad to send them your name and address.

Dear Miss Ladd: One of my girl friends just returned from the city and told me of a new song she heard entitled "That Old Fashioned Mother of Mine." Now I teach school and would like so much to get that song to be used in my Mother's Day exercises. Can you purchase it for me and what is the cost.—E. L.

Dear Miss E.: Certainly I can secure the music you desire and shall be glad to do so if you will send me 30c—the cost of the music and 2c postage. It is a real pleasure to me to know that our readers are deriving actual good from this department.

COMBINE MEAT AND VEGETABLES INTO CHOWDER

VEGETABLE chowders offer another way of using vegetables and also skim milk. They differ little from milk-vegetable soups, except that less liquid is used and vegetables are usually cut into small pieces instead of being chopped finely. For this reason chowders seem more substantial. As in the case of the vegetable soups, it is a mistake to be confined to any definite recipe, for under those circumstances materials are often wasted which should be used. The following typical recipe is therefore only suggestive.

1-4 pound salt pork or bacon.
1 onion.
6 medium sized tomatoes or 1 pint stewed tomatoes.
1 green pepper.
4 medium sized potatoes.
3 carrots.
2 cups skim milk.
2 tablespoonsful flour.
2 teaspoons salt.

Put the bacon or pork, onion, and pepper through the meat chopper and cook carefully about five minutes. Add the water and tomatoes and cook until the vegetables are tender. Cut the potatoes and carrots into small pieces and cook in water until tender, drain, and add with the skim milk to the other ingredients. Thicken with the flour mixed with a little cold milk.

NATIONAL QUESTIONS

What nation created fear and terror? Consternation.

What nation is given over the destruction? Ruination.

What nation has produced the most kings? Coronation.

What nation prepared most men for the ministry? Ordination.

What nation is always behindhand? Procrastination.

What nation is famous for its lighting system? Illumination.

What nation is immune from smallpox? Vaccination.

What nation is most murderous? Assassination.

What nation produces the most charming people? Fascination.

The Children's Hour

DEAR CHILDREN: The first prize for the best story of a "hike" was awarded to Ross Cheadle of Lake, and his story is printed elsewhere on this page.

One of our little correspondents inquires relative to prizes for guessing the puzzle each week. We have discontinued giving prizes for these answers as there are always so many which are perfect, but the puzzles will be printed each week and I am sure you will find much interest in guessing them. Prizes will be awarded however for the best original drawings and the best original stories as well as for subscriptions so there is plenty of opportunity for every ambitious boy and girl to win a prize.

Just for a change in contests, we are going to have an expression from all of my little correspondents as to their favorite author and the story which you like the best written by that author; the name of your favorite poet and the poem he wrote which you like best and the name of your favorite song and the name of the author of the words of that song. I will keep all the names that come in for one month and at the end of that time, I will publish the name of the author, the poet and the song writer who receive the largest number of votes and also the pictures of the three who receive the largest number of votes. And if in writing you can tell me why you like them best, and something of their lives, all in a very few words, we can make this a very interesting contest of favorites. Affectionately yours.—LADDIE.

OUR BOYS AND GIRLS

Dear Laddie—I saw your request in the M. B. F and thought I would tell about my hike Easter Sunday. Three others and myself went for a hike. We went to a creek and found a good place to camp. It was on a little island covered with pine trees. There was a good spring near. We could not get away from our camp without getting our feet wet. So I built a little bridge of poles. We boiled our eggs and roasted some bread. We found some cowslips and boiled them with our eggs. It made the eggs green. We built a tent of brush and poles, and went home. I am a boy 13 years old. I live on a 40-acre farm. We have cattle and horses and sheep. We have 49 head of stock all together. Will close.—Ross Cheadle.

Dear Laddie—Do you give a prize for the puzzle given in the paper each week? If so please send one to me as I will give the answer to the scrambled proverb at the bottom of my letter. I am going to New York this year if nothing happens. I take music lessons as my school is out. I suppose your little boys and girls think it is funny, but I will tell you it is because we only had six months of school (another funny thing). It is because there are not enough people in the district to pay school taxes. My music teacher is Miss Bennett. She is real nice. My teacher's name was Mrs. J. B. Masters. She is nice also. My school teachers were Miss Russell, Miss Sewell, Mis Pierce, Mrs. H. Schnepp, and my last teacher, Mrs. J. B. Masters. I am eleven years old and in the 7th grade next year. I started to school at the age of six years. I passed three grades in one year. That's a pretty good record. We aren't going to get a car this spring if we go to New York. I think the Doo Dads very funny little people and am sorry they got rich, as I don't think they will come for less wages. I do quite a lot of work around the farm of 80 acres. For the work I do I have a wagon to play with after the work is done. On the farm are two horses, two calves and three cows. We also have a pig and 35 chickens. For pets I have three cats named Tabby, Ringneck and Blacknose. I am 5 3-4 feet high, have dark brown hair and blue eyes. I hope to see my letter in print although it is long. This letter is from Grand Traverse county, as you may not be able to find Summit City, Mich.—Miss Jennie Yule.

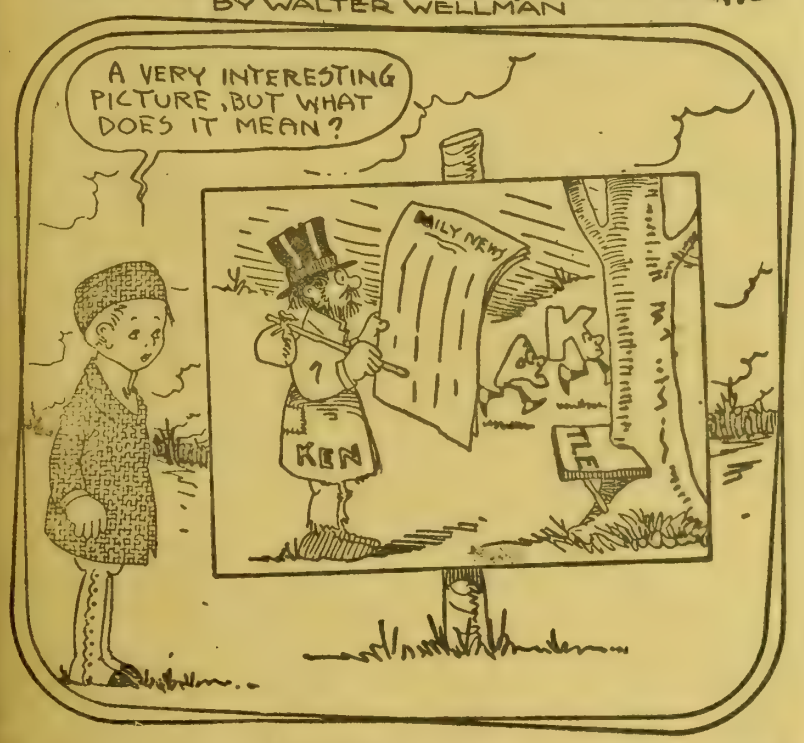
Dear Laddie—I am a girl 12 years old and in the 5th grade at school. My teacher's name is Miss Mary O'Brien, and to be sure she is a good one. She has taught 16 years in Matherton. My mother went to her three years. I have three little sisters. My father takes the M. B. F. I enjoy reading the girls and boys letters. I live on a 120 acre farm. We have 2 horses, 7 cows, 4 calves, 2 sheep, 2 hogs and 12 little ones. We also have 70 chickens. In the summer I enjoy going fishing and I also love going boat riding and carrying my dinner and eating in the woods with some of my girl friends.—Veda Dick, Muir, Mich., R. 2.

Dear Laddie—My papa is sending a renewal for M. B. F. and I will write you a letter and send it with it. We can't get along without it. I am a girl 14 years old but am so small I would pass for a girl 8 years old, and I thought I had a right to write in the children's hour. I have two sisters. We all go to school but Frank, and he is going this fall. Our teacher is Clara Manink. We live on an 80-acre farm. We have 3 horses, 1 colt, 3 cows, 3 calves, 2 yearling heifers, 11 hogs, 65 chickens, 26 little chicks and we also have the incubator running. Will be glad to have some of the girls write to me, and I will answer all letters.—Chloe Davis, Lakeview, Mich.

Dear Laddie—I am a girl 9 years old and in the 5th grade at school. I have one brother, William, but is always called Pat, and one sister, Lucille. For pets I have two dogs, Collie and Trixie, one cat, Mousie, and two rabbits, Jack and Beauty. Well as my letter is getting long I will close hoping to see it in print.—Margorie Vandercook, Howell, Mich.

FOUR LARGE CITIES

BY WALTER WELLMAN



...esented the names of four large cities in the United States. One is in New Jersey, one in Pennsylvania, one in Washington and one in Ohio. What are they?

Answer to last week's puzzle: The two birds' names are ORIOLE and LINNET.

ROUGE REX
(RED KING)

FOR THE MAN WHO WORKS

Men used to wear hob-nailed shoes because they wanted long wear. They got it but lost comfort and neat appearances.

This Hirth-Krause shoe will outwear the hobnails and will never pinch the foot nor appear clumsy.

They are made from leather, scientifically prepared in a Hirth-Krause Tannery, are moisture and acid proof, with double vamp and full counter covering.

The man who works will appreciate the advantage of manufacturing as we do, complete "from hide to shoe".

Go see the Hirth-Krause dealer. Let him show you this aristocrat among shoes with the mileage guarantee.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for reply.)

STANDARDIZATION OF SLEIGHS

—I wish to express my views thru M. B. F. in regard to the act passed by our last legislature that is in regard to the standardizing of all sleighs. I want to ask what is going to be done with the thousands of dollars worth of such vehicles that are now owned by farmers? Are they to be thrown on the junk pile, many of them new this winter? They are of such construction that they can't be made over and I contend that to throw them away would be a criminal waste. I believe the men who enacted that law are those who own no sleighs, or have any use for them. In my mind there should be an amendment to that law permitting the use of those in use at present time until worn out.—H. C., Cressy, Mich.

This act expressly exempts such sleighs as are already in use in Michigan. That portion of the act is as follows: "The people of the State of Michigan enact: Section 1. On and after the first day of January, nineteen hundred twenty-one, the standard guage for all vehicles to be used on the public highways of this State shall be fifty-six inches from center to center of tread and it shall thereafter be unlawful to use on any of the public highways of this States or to manufacture, sell or offer for sale, for use on any of the public highways of this State any vehicle of other than standard gauge except such vehicles as are used for extraordinary purposes . For the purpose of construing this act, motor trucks, moving vans, logging sleighs, with a wider draft than above standard gauge, cuters and light delivery sleighs shall be conclusively presumed to be vehicles used for extraordinary purposes: Provided however, that nothing in this act contained shall be construed to prohibit the use or sale of any vehicle owned in this State at the time this law goes into effect."—*Editor.*

SENATOR JOHNSON'S RELIGION

Could you inform me to what church Senator Hiram Johnson, candidate for president, belongs? I would be very glad if you could publish his denomination in your next issue.—A. E. E., Almont, Mich.

I am informed by Mr. E. P. Mitchell, member of the California State Board of Agriculture, that the Senator is a Protestant and a patron if not a member of the Congregational Church.—*Editor.*

POWER DAM MACHINERY

We are planning on organizing a stock company of farmers to build a power dam to produce power for to run an electric light plant. We have an A-1 location for such a dam which would furnish cheap power, only we don't know to proceed with such a plant. Could you give us the name of any firm or company that has the necessary machinery to sell, and who could send a representative to look the grounds over and give us information. Electric lights for the farm is one great step to better farm conditions. —W. H. C., Muskegon County.

"I would suggest that you get in touch with Holland, Ackerman & Holland, Ann Arbor, who are Consulting Hydraulic Engineers. They do not sell equipment, but if this proposition is of sufficient size, would make the necessary surveys and designs for the dam, as well as write specifications for the machinery. It would be far safer for you to employ a reputable Consulting Engineer than to attempt to do the engineering yourselves.

As far as water wheels and generators are concerned, if you just wish to get the price of equipment, take the matter up with the Allis-Chalmers Co., Ford Bldg., Detroit."—*Coon-DeVisse Company, Detroit, Mich.*

REFUSING COAL TO FARMERS

If a coal dealer has a carload of soft coal and won't let a farmer have any of it when his family is sick in bed and no fuel, but will let others in town have two and three tons, what can be done? I have left my order but he says every time it is all ordered. What can I do about it, and to whom should I go or write to?—R. A. J., Monroe County.

I think you are without any remedy. A coal dealer has the right to select his customers and to sell to them only. I do not know of any one who can help you unless you can get some friend to buy the coal for you. —*W. E. Brown, legal editor.*

SEEDING FOR COW PASTURE

I would like to know what I should sow for cow pasture for July and August. Something that when it is eaten off will still continue to grow good pasture, on sandy soil. Would millet be a good pasture and produce rich milk?—O. A. C., Ogemaw County.

We would suggest sowing, at three different dates, preferably a week or ten days apart, the following mixture: Oats, 1 bushel; peas, 1 bushel; sweet clover, 6 pounds; rape, 4 pounds. This mixture should be sown as early this spring as the seed beed can be prepared.—*C. R. Megee, assistant professor of farm crops, M. A. C.*

BLOODY MILK

We have one cow that gives bloody milk. What causes it? Can anything be done for it?—J. V., Boyne, Mich.

Kindly write me the history of this case, stating how long standing, When she freshened, etc.—*W. A. Ewalt, Veterinary Editor.*

RIDDING CALVES OF LICE

What can I do to rid my calves of blue lice?—D. S., Johannesburg, Mich.

Corrosive sublimate one to two thousand solution will destroy lice, wash around eyes and ears first to prevent the lice from hiding; it will be necessary to thoroughly wash the stable in which these calves are kept, with a stronger solution, say, one in one thousand solution. The bedding should be burned, all cracks, crevices, ceiling, sidewalls and floors must be washed for here is where the nits are laid, as the nits hatch every three days, it will be necessary to repeat the above every three days for about three applications. Corrosive sublimate is very poison and great care should be used in handling it. Kreso Dip (P. D. & Co.) will also kill lice, when used according to directions, as will also Creolin, however, it is absolutely necessary to wash the stables as stated above, also apply three applications. three days apart.—*W. A. Ewalt, Veterinary Editor.*

JOINT DEED

I would like to know what share, if any, the wife has in a joint deed with husband. Is she entitled to a share in the crops?—A Subscriber, Newaygo Co.

The husband has control of the land held by husband and wife in their joint names during his life. She has an interest in the crops so they could not be levied upon upon a judgment against the husband alone, but the husband has a right to sell and dispose of the crops as in his judgment he thinks best for the joint interest of the husband and wife. Upon death of either the survivor takes absolute title to the real estate and one-half of the personal held in joint name.—*W. E. Brown, legal editor.*

BUYING AT STATE TAX SALE

Would like to know just what title to real estate a party would acquire who bids in property at a State Tax Sale and acquires a State Tax Deed. Does it give him after period of redemption an absolute title against all previous warranty deeds and mortgages held by others?—Subscriber, Montcalm County.

If all the steps in levying the tax and other steps up to and including the deed are in accordance with the law and the notice has been properly served upon the owned and no redemption has occurred, the tax deed gives a good title. If there are fatal defects in the proceedings so that the court holds the title not good then the State returns the money.—*W. E. Brown, legal editor.*

Sense and Nonsense

Ireland Wins

"Talking of hens," remarked the American visitor, "reminds me of an old hen my dad once had. She would hatch out anything from a tennis ball to a lemon. Why, one day she sat on a piece of ice and hatched out two quarts of hat water."

"That doesn't come up to a club-footed hen my mother once had," remarked the Irishman. "They had been feeding her by mistake on sawdust instead of oatmeal. Well, sor, she laid twelve eggs and sat on them, and when they hatched eleven of the chickens had wooden legs and the twelfth was a woodpecker!"

A Husky Sorrow

Merry One—"Cheer up old man, why don't you drown your sorrow?"

Sad One—"She's bigger than I am, and besides it would be murder."

Professional Appreciation

First Actress (behind the scenes) —"Did you hear the way the public wept during my death scene?"

Second Actress—"Yes; it must have been because they realized that it was only acted!"

Father's Violence

Jack—"Was her father violent when you asked for her hand?"

Tom—"Was he? Great Scott! I thought he would shake my arm off."

A Martyr

Wife—Do you expect to get to heaven by hanging on to my skirts?

Hub—No; but I might by showing St. Peter the bills for them.—Boston Transcript.

LUCKY

Knife—I hear you narrowly escaped a bad accident.

Razor—Yes, I had a very close shave.

Where Was the U. S. Senate?

"This ought to make life easy from now on," remarked Noah as the ark landed.

"To what do you refer?" inquired Japhet.

"Our monopoly of eggs, butter, milk, beef, etc., with not a soul on earth to start an investigation."

Compliments All Around

"I desire no remuneration for this poem," remarked the long-haired poet, as he drifted into the editorial sanotum. "I merely submit it as a compliment."

"Then, my dear fellow, permit me to return the compliment," replied the editor, with true journalistic courtesy.

Obliging Indeed

Little Sara Brown, on her way to school fell into a pool of water, with the result that she had to turn homewards again, all dripping wet. The next day her mother sent the following note to the teacher:

"Please excuse Sara, as she fell in the mud. By doing same you will greatly oblige."

County Crop Reports

GENESEE (South)—We are having rainy weather all this week and farmers on the heavier soils are unable to do any field work, while those on the sandy soils are able to do a little work between showers. Farmers are shearing sheep, building fences and doing road work while waiting until the fields get dry enough for working again. A few oats were put in before this wet weather and several were about ready to put them in. If the rain had only held off until the later part of the week a large per cent of the oats would have been in, but now it is hard to tell when we will get them in. Not much spring wheat being put in this spring and indications point to a shortage of wheat this year. Farmers are selling some hay, seed potatoes and seed corn, and are buying alfalfa seed, fencing and fence posts, binder twine and also fertilizers, if they can get it. There will be an extreme shortage of most all crops this year if this weather continues and if the farm labor situation does not improve.—C. W. S. Prices iffered at Flint: Wheat, $2.70; corn, $1.75; oats, $1.10; rye, 90; buckwheat, $3 cwt; beans (C. H. P.) $6.50; reed kidney, $11 cwt; hay, $25@30; straw, $10@15; potatoes, $2.75@3.50; onions, $8; cabbage, 6c lb; cucumbers, $3.25 doz; hens, 35; springers, 35; ducks, 32; geese, 32; turkeys, 40; butter, 65@68; dairy, 58@63; butterfat, 68; eggs, 43; beef steers, $10.50@11.50; beef cows, $7.50@8.50; veal calves, $17@18; sheeep, $10@11.50; lambs, $18@19; hogs, $15@15.50.

MANISTEE—The farmers are plowing, dragging and doing other farm work. Some have begun fence repairing. Weather is getting warmer now. Rained the other night. Farmers are selling some rye and beans. Not much building or buying being done. Most crops have been sold for the year. Trees are beginning to leaf or bud, the prospect for a good fruit crop being good. Been a cold long spring, ice yet on the lakes.—H. A. Market at Bear Lake: The strike on the railroads has stopped the movement of potatoes. Retail prices in the cities have reached unprecedented figures because of the shortage. Local buyers are still paying $5.50 per cwt. for the spuds and storing them and are showing good courage in doing so. New potatoes from the south have already began to make their appearance on the city marketes but the southern crop is reported to be short on account of frosts and it is hard to predict what effect they will have on the prices, or what will happen when cars begin to move again. Beans have gone up to $5.75 per cwt. and rye to $1.75 per bushel; butter, 50; eggs, 35; cream, 64; beef, 7@8c on foot, 12@13 dressed; pork, 18@20 dressed; veal 15@18 dressed; chickens, alive, 25; hides, 15c.

ST. CLAIR—Farmers just starting their seeding. Some oats have been sown, but the weather has been wet and cold the past ten days, which has retarded work in that line. The weather is looking fine now and if it holds good for a few days seeding will go ahead with a rush. Most of the hay is out of farmer's hands. Butterfat and eggs are about all the farmers have to sell at present. Not much building this spring. The roads are in fair condition. Some auction sales yet, but they are narrowing off as the season advances.—I. J. Prices offered at Smith's Creek: Wheat, $2.60; corn, $1.50; oats, $1.05; rye, $1.65; hay, No. 1 timothy, $33; No. 1 light mixed, $32.50; rye straw, $13@14; beans (C.H.P.) $5.50; potatoes, $5; hens, 25; springers, 30; butter, 55@65; butterfat, 63; eggs, 33; sheep, $10@12; lambs, $12@16; hogs, $15@16; beef steers, $10@14; beef cows, $8@12;

MONROE (W.)—The farmers are not doing much for a day or two on account of the heavy rain the first of the week. Not very many oats sown yet. Wheat is looking better after the rain. New seedings and pasture has started the last few days. Help is very scarce in this part of the county. Several of the large farmers have installed milking machines to help and save time in doing the chores. Machinery will have to take the place of extra help on some of the farms.—W. H. L.

MASON (Central)—Spring work has begun in earnest. The oat fields are being rapidly prepared. Weather moderate. Showery. Soil a trifle wet. Crops about all sold. Seeds for spring planting are being bought. Help scarce and high priced. At a meeting April 17th the members of the Mason County Cooperative Association voted to buy the warehouse, elevator and other property now owned by the Gleaners. There was but one opposing vote.—B. M.

MECOSTA—Not much doing in the line of farming, weather has been very cold. Frost is not all out of the ground yet. Heavy ground is too wet to work. Fall grain is looking good. The Gleaner Clearing House Ass'n is selling stock for elevators in Evart and Herse.—L. M.

The Autobiography of a Stump

MORE than one hundred and eighty years ago, I pushed up through the surface of the earth into a very strange world. The sun smiled upon me and the rain quenched my thirst. As the years passed and I grew into a stately young pine.

Few men came into our forest home. Occasionally an Indian sneaked by in search of game; sometimes he tarried long enough to fell a birch from which he made a canoe.

One day word came that lumberjacks had arrived with axes and saws and were already making great inroads in our forest. In the distance we could hear them chopping. Our consternation heightened when we actually beheld them.

The maple whispered to the shuddering hemlock ,"Look They're cutting down Father oak. We are liable to be next."

All too soon I saw my friends cut down—some in the prime of life, others in their old age, and ruthlessly hauled away like captives. While all of us were loath to surrender our beautiful foliage and graceful limbs, I believe I dreaded the operation less than my comrades. The sacrifice seemed to justify itself. Had I not heard the wood cutters say that out of my trunk would come the boards with which houses would be sealed, thus protecting man from the biting cold.

Finally my day came. I overheard one lumber jack remark as he pushed his way toward me, "We'll get the big white pine today."

Hastily I bade farewell to my friends. Already the axes were hurled into my sides. To my disgust no effort was made to hew me near the ground. Wood was plentiful them—cheaper than labor.

To the world I had given the best of myself. All that remained was about three and a half feet of my trunk above ground and my immense roots beneath. Nothing beautiful, apparently nothing useful.

Winters came and went, bringing with them no change other than deterioration and decay. I, alone of all the stumps about me, remained practically intact. Just as I was despairing of ever becoming serviceable, there appeared in our midst a farmer and his team. Studiously he went about clearing the land, employing in the work a simply constructed stump puller. The extracted stumps he piled together and burned. Was this to be my fate? One night of dazzling beauty and then—nothingness.

But the stump puller utterly failed to tear me from the earth. Thereafter I was to learn that instead of being simply useless I was postively obnoxious. That fall the farmer planted my old forest home to wheat. Not only did I occupy considerable space (the diameter of my trunk measured some three or four feet) but I caused not a little inconvenience in tilling the soil.

That I was of some significance was attested by the presence months later of several hundred men who had gathered to see me extracted. The seemingly impossible was performed by a number of experts in land clearing, who accomplished the result by the use of a powerful stump puller and a team of horses. As I was gradually raised from the ground uprooting the earth for yards around me, I noticed the men rushing nearer and one of them photographed my roots.

Lying thus on my side I was more unwieldly than formerly. Something must be done to remove me. After a consultation holes were bored in my body and dynamite placed therein. Suddenly the men began running in every direction. The next moment I attempted to follow them. When my scattered parts were gathered together I learned that I measured about eight cords of fire-wood.

Eight cords ! When I discovered my ultimate fate I wished it were eight times eight. I, the once obnoxious pine stump, had been transferred to Mrs. John Riley's back yard and while Mr. John Riley fought for his country, I warmed his wife and babies. When the blue and yellow flames play around my old roots and the children hover near with outstretched hands, contentme n t spreads over my soul. I am both useful and beautiful.

FRANCO

POCKET ELECTRIC .....FLASH LIGHT FREE

For Two NEW Subscribers to M. B. F.

Every man, woman or child in the country ought to carry an electric flash-light at night and here is the handiest size of all. Flat, just-a-hand-full yet throws a powerful light, brighter than a clumsy lantern. We have secured a limited number of these lamps from one of the best makers in America. They are never sold at retail for less than $1.50. some dealers charge $2. but until our supply runs out we will send one complete flash-light, including nitrogen bulb and Franco battery for only two NEW subscribers to The Michigan Business Farmer at $1 each. Send $2, two new names and the lamp will come by prepaid parcel post. Address, Premium Manager, the Michigan Business Farmer, Mt. Clemens, Mich.

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.
——it tells you when and where to get the best prices for what you raise!
——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!
——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all! ONE YEAR.....$1 THREE YEARS...$2 FIVE YEARS.....$3

No Premiums, No free-list, but worth more than we ask.

"Save Your Thresh Bill" From the Stack

You will save enough of your time and grain from the straw stack to pay your thresh bill, when you hire the thresherman with a

Red River Special

This is the thresher with the famous "Man Behind the Gun"—the device that *beats out* the grain instead of waiting for it to drop out.

Saves the grain that others must let go through the machine. The result of years of study and experience in building threshing machinery exclusively.

I. S. Baker and 15 others of Holton, Ind., say:

"The Red River Special is surely a friend of the farmers. It's the fastest and cleanest outfit that ever worked for us."

Wait for the man with the Red River Special and *save* your grain this year.

If you want a thresher for your own use, ask about "Junior" Red River Special.

Uncle Rube Spinach Says:

(Letters to Uncle Rube should be addressed care of The Michigan Business Farmer.)

DISGUSTED

MOST every mornin' when the weather's fine I take a trip around town to see what I can see an' hear what I can hear, and I have jest got back from my mornin' trip, an' to say I'm disgusted with it all is putting it purty durn mild—yes I'd say pretty mild.

First thing I run up ag'in was a farmer with a load of potatoes; the merchants would offer him only four dollars a bushel for 'em, and he wanted four an' a quarter, but finally said he'd take $4.10. "Nope," said the merchant, "four dollars is the top price this mornin', an' that's all I c'n pay". This was at the back door of the store, an' bein' anxious to learn I slipped round to the front door, walked in an' sez to the clerk, "how you sellin' taters this mornin'?" "one thirty-five a peck" he sez. "Is that the lowest price," I sez to him. "Oh my, yes! an' they'll be higher 'fore the week's out, too," he sez. "How comes", sez I. "Oh you know the strike has tied things up so we can't get 'em don't you know!" "Well, mebbe so on some things, but the farmers round here must have taters an' sich, ain't they," I sez. "Yes, they've got 'em", he sez, "an' they got a lot of other things to sell, too, but the d—— farmers wants so much for everything we can't deal with 'em a tall", he sez. "Oh I d'n'no", I sez, "at $1.35 you'd ort to be willin' to pay four an' a half or $4.75 a bushel for 'em, hadn't you?"

Well he didn't answer me a tall, but the look he give me give me a good guess of what he thought of my judgment. Well I went from there over to my brother's meat market an' was talkin' with him when a feller that buys stock for another market dropped in an' he an' my brother got to talkin' about some cattle this guy bought last week an' slaughtered for their own trade. "How much do you think that bunch of stuff cost me?" the feller sez to my brother. "I don'no how much?" my brother sez. "Well that wuz a mighty fine bunch of cattle", the feller sez. "Fifteen head, all from one man, and they cost me less than eight cents a pound", he sez. An' then he said he had some hogs in today an' tomorrow he'd have another bunch of cattle an' "they're all bought right, too", he sez.

I had heard an' seen about all I wanted for one day, for I knew these guys wuz sellin' that meat at prices rangin' from 18 to 42 cents a pound an' preachin' strike an' the high price of hogs an' cattle an' everything, to any customer who had the grit to stand up an' tell 'em the different kind of pirates an' profiteers the hull darned caboodle of 'em had come to be.

An' this brings to my mind the question of N. E. H. of St. Clair county, in regard to his 35 1-2 lbs. of wheat. He sez he sold his wheat for $2.10 a bushel an' paid $2 for 24 1-2 lbs. of flour, an' wonders who got the other 35 1-2 lbs. out of his 60 lbs. of wheat. Well now, realy its hard to say who got that 35 1-2 lbs. of wheat, but N. E. H. got 24 1-2 lbs. of flour an' had 10 cents left an' seems to me he got out purty lucky—everything considered.

I wuz readin' just a few days ago of a farmer who took a beef hide to town an' sold it for eleven dollars an' ninety cents. His son wanted a pair of shoes, had to have 'em; dress shoes you know, so the ol' man put ten cents with the money he got for the beef hide an' took home a pair of shoes for the boy. Now where did the beef hide go? Does it take more'n one beef hide to make a pair of shoes, do you think?

While ol' Captain Kidd is dead, has been for several years, for that matter, by gosh he must a left a lot of descendants or else there's a lot of fellers takin' up his callin' an' doin' a gib business at it, too, an' they don't foller the sea, either—they're dry land pirates, an' they come out an' work in the open, an' are so darn smooth about it that they'll make you think they're a doin' you a favor while they're just a skinnin' an' a gougein' you right an' left.

An' these same darn scalawags will set up an awful howl about the farmers—"just see how much money they're a makin'," they yell. "Why lots of 'em's got automobiles an' money in the bank, an' everything—they're gettin' rich hand over fist."

This can be heard from almost any merchant or business man in almost any city an' the laborin' people have heard it so often they're comin' to believe it themselves. They can't be made to see that the men who are robbin' them an' also robbin' the farmer wants to shift the blame onto somebody—wants to appear pious an' honest themselves an' so they set up this awful howl about the farmer, an' they try to shift the blame on him.

It's true that lots of farmers own cars—Ford cars—which by thrift an' prudence they have been able to buy, because they have learned that quick transportation has become a necessity with them, an' they buy Fords an' are jest as happy an' enjoy them just as much as the profiteers who ride in their thirty-five hundred dollar cars enjoy theirs. For the farmer knows that he has got his car by honest toil, that he has robbed no poor widow, nor fatherless child, to get the wher-with to buy his car—a business and pleasure car combined, an' he recognizes the rights of others to the streets an' highways, an' conducts himself as an honest man should. But the big bugs, the profiteers, the dry land pirates who would not condescend to look at a Ford car, who will buy none that costs less than eighteen hundred to thirty-five hundred dollars, who howl about the "stingy an' unscrupulous farmer, think they own the whole earth, an' that common folks ort not to clutter up the streets an' the highways when they're takin' their spin"—oh gosh it disgusts me to think about it, an' a darn sight more to write about it, but facts are facts, an' I'll stick to 'em as long as I'm able, an' there's one thought out of it all that always gives me pleasure. In the next world the farmers an' the profiteers won't have to mix, an' where the pirates an' the profiteers'll be, its goin' to be so durn hot they won't do no automobilin' nor robbin' either, by ginger!—*Cordially yours Uncle Rube*

Denies Horse is a "Back Number"

WHEN a concern can express an opinion as to the economic merits of the horse for city hauling based on 1,350 years of accumulated experience, that opinion ought to count for something, oughtn't it? The United States Trucking Corporation of Thompson and Canal street, New York City was formed only last December, but it represents the merging of twenty-seven formerly independent concerns which have been in business for periods ranging from twenty to eighty years; that makes an average of fifty years per firm, or a total age for the twenty-seven of 1,350 years!

Joking aside, however, this corporation represents not only the result of one of the most significant events of recent years in the distribution field, but also probably the most important single factor in the trucking business in Greater New York. For the combined companies are conceded to handle about eighty per cent of all the heavy trucking done in that metropolis exclusive of household furniture, office furniture and fixtures, and retail coal.

To do this they operate something less than 300 auto trucks and 3,200 horses, which fact in itself is a pretty good indication of what the corporation thinks of the relative usefulness of horse driven and motor driven vehicles for its line of work. But it has some further, definite opinion to back up its action.

"'All this talk about the 'passing of the horse' is wholly without foundation," says President J. J. Riordan, whose acceptance of his election as a director of the Horse Association of America, Inc., has recently been received at the national headquarters of that organization in New York. "We use motor trucks in our business, of course, for our suburban and other long distance hauling, but our idea is to use the horse wherever it can be used to best advantage. That is certainly the case in a large percentage of the work we do here, and I firmly believe that the horse will not only continue to be used here and in every city where more or less similar conditions prevail, but will also be used to an increasing extent wherever short hauls and frequent delays en route are bound to be features of the day's work.

"We are now at work on accurate systems for determining the itemized cost of operation for horse drawn teams and auto trucks under all kinds of conditions, and as soon as these are perfected we shall put them into operation. Our experience since any of the 27 firms that now are one began using trucks, however, justifies us in figuring the maintenance and operating cost of a truck as one third more than the corresponding cost for a horse drawn vehicle of equal capacity.

"That refers to normal conditions. Since this corporation was formed in December, conditions have been anything but normal for the greater part of the time; and during the entire winter with all its blizzards and demoralized traffic the horse has come through with flying colors. While the February storm was at its height, and for days afterwards while the city was struggling to free itself of its blanket of ice and snow, all our work was done by horses; our trucks were simply laid up until conditions were such as to permit them to operate.

A NEW 40-POUND BUTTER COW

Admirers of the great "black and white" breed and those who are interested in pure bred dairy cattle will read with much satisfaction the announcement that Sadie Gerben Hengerveld De Kol, a purebred, registered Holstin-Friesian cow owned by R. M. Harriman of Appleton, Wisconsin, has added her name to the roll of milk and butterfat producers of remarkable achievement.

This superb cow, according to the preliminary report sent out from the office of the Superintendent of Advanced Registery for The Holstein-Friesian Association of America, has been reported to have given under official A. R. O. test, in 7 days 781 pounds of milk of an average butterfat test of 4.09 per cent. This expressed in terms of butter would equal 40.04 pounds. She was continued on test and reports show her to have produced 3,247.5 pounds of milk, which if converted into butter would make 157.54 pounds.

At the time of freshening, January 23, Sadie Gerben Hengerveld De Kol was 8 years, 2 months and 22 days old. This official test began February 5 and was supervised by five different supervisors in addition to Mr. Harris, the Superintendent of official testing for the Holstein Association in Wisconsin, who was present part of the time.

Sadie Gerben Hengerveld De Kol is, according to Mr. Harriman, her breeder and owner, a large, strong animal, weighing 1,750 pounds, and the only four-generation cow in the world, each of which four generations have milked 103 pounds or more of milk in one day, and averaged 106.8 pounds of milk in one day, and 744.3 pounds of milk and 32.43 pounds of butter in 7 days.

This new 40-pound cow, now in the limelight of public interest, was fed a grain mixture of bran, oats, oil meal, unicorn, cottonseed meal and distillers' grain. Besides this she was fed 3 pounds of molasses, 5 pounds of dried beet pulp (previously soaked in water), and about 30 to 40 pounds of mangels. Her roughage consisted of timothy, there being no ensilage, alfalfa or clover hay available. Salt and drinking water were within her reach at all times.

She was started on 14 pounds of the grain mixture daily, fed in four parts, one-quarter of the amount at each feed, and this was gradually increased until she was receiving a daily ration of 28 pounds. This was gradually reduced to 26 pounds daily.

The performance of this remarkable purebred Holstein-Friesian cow, noteworthy in itself, still further emphasizes the uniform high production of purebred Holstein-Friesian cows everywhere.

Suggestions for Farmers Who Would Prepare and Market Own Wool

A FEW suggestions that if rigidly-followed will eventually bring profitable results and bring commendation to the industry are:

Shear the sheep when the wool is absolutely dry, never when there is any moisture in the fleece.

The sheep should be shorn only on a smooth dry surface, preferably a planed board flooring, never on the dirt.

Care should be taken to keep the fleece intact. Avoid second cuts, which reduces the average length of the staple.

Clip all locks from each fleece and pack separately. Never permit them to remain in the fleece.

Fleeces should be prepared with the flesh side out, never the weather side.

Fold, roll, or use fleece box for preparing the fleece.

Tie each fleece separately. Never tie two fleeces together, nor pack and market untied wool.

Use only enough twine to tie the fleece securely.

Paper or hard glazed surface twine should be used. Never use sisal nor binder twine.

Never permit the fleece to come into contact with chaff, hay, dust, nor any other foreign material.

Place the tied fleeces in regulation wool sacks or cover them with canvas or new burlap.

Select a clean dry place for storing the wool until sold. Never permit the wool to lie upon the ground nor store it in a basement.

Keep the white and black wool separate. Never permit any portion of black wool to be mixed through the white.

Divide the burry, seedy, cotted, dead black and gray fleeces from the clean, white, well-grown wool, and pack separately. Never pack all grades together indiscriminately.

Essential Points in Marketing Wool Co-operatively

Under certain conditions some definite form of co-operation may seem desirable. In its simplest form it may operate merely in the collection and disposition of the wool. The wool may be collected at some central point and sold privately or by auction sale or by sealed bids; or a local representative may handle wool from a certain community for the growers, or the wool may be consigned to a wool merchant in some market center. The latter method as the initial step, requires less actual time, experience, expense, and labor. It will, no doubt, prove more satisfactory than individual marketing.

When farmers of a community decide to consign their wool some one grower should be designated to act as an informal manager. He should make arrangements with all the growers to deliver their wool at a certain shipping point on a certain day, to watch the grading, if that has been provided for, to load the wool and ship it. This provides a nucleus for a permanent organization. It may be possible to make arrangements with a local banker or the concern to whom the wool is consigned for a reasonable advance to each grower. This method is one of the first steps in a more efficient system for marketing wool and the experience gained by one year's operations is often sufficient to warrant the establishment of a permanent co-operative marketing association.

When members desire a loan on their wool arrangements should be made with a local banker to advance to the association a sufficient amount to cover such loans. Each member should be assessed a certain amount per pound to cover the expense of loading and shipping, this amount to be deducted at time of final settlement. Funds thus provided may be used for such expenses as labor for handling the wool, fire insurance, rental for warehouse, postage, printing, telephone calls and other incidental expenses. In fixing a date for delivery of the wool, it should be understood that in case of rain the collecting will be postponed until the first clear day.

The co-operative selling and grading of wool affords the producer an opportunity to learn whether his wool grades choice, average, or poor. As a rule he will receive payment according to the value of the product, and while some may be disappointed with their returns, many will be surprised and pleased with the premiums they receive in reward for their efforts.

When forming a more or less permaent wool marketing association it may be advisable to incorporate, as this gives the organization a distinct legal status which cannot be had otherwise. (See Department of Agriculture Bulletin No. 541, "Co-operative Organization By-Laws.") More specific advice on co-operative organization may be had by writing direct to the Bureau of Markets, U. S. Department of Agriculture, Washington, D. C.

Grading

Where a sufficient quantity of wool is pooled or centralized, secure the services of a wool classer or grader, and, if possible, grade each lot separately. In lieu of definite fixed standards for grades of wool, permit the classer to grade into the generally accepted commercial grades. Keep accurate record of each farmer's clip, issue a statement to him showing the number of fleeces, and net weight of each grade. Make it known that a moisture shrinkage will occur, and that each grower will be compelled to stand his share of the loss. Request each grower to be present when his wool is graded. Explain to each wool producer that when a fleece is placed in the rejection class it means a loss of 20 to 35 per cent. A few actual demonstrations of this kind impress the grower and will create an incentive to produce wool which will not grade as rejections.

The cost of grading will vary depending upon the location of the warehouse, the qualifications and experience of the wool grader, the length of time his services are required and the facilities provided by the Association for the grading, handling and packing of the wool. Some wool graders may be engaged upon a piece basis, (a stipulated amount per piece,) but the weekly or monthly basis is preferable, especially where the grader is requested to explain the grades and spinning properties of various fleeces. If possible, arrange for the sale of wool while the grader is present, so that he may represent the growers, and explain in an intelligent way to the buyers the merits of the different grades. As a rule the wool growers have no definite knowledge concerning grade shrinkage, spinning properties, or value of their wool, while the buyers, at least most of them, are familiar not only with the points already mentioned but have accurate information concerning market conditions and the attitude of the manufacturers toward the purchase of wool and particularly the demand for certain grades. It is obvious, therefore, that the grader would act as an advisor and offer sound advice to the manager, salesman, or sales committee.

To the Unorganized Farmer

THE ACCOMPANYING article prepared by the U. S. Department of Agriculture will be of value to farmers who are not members of the State Farm Bureau or other organizations that are pooling the wool of their members, or who for various reasons may not desire to ship through their organization. There is no reason why any farmer should pay a heavy toll to the local dealer for doing something which he, acting with his neighbors, may do for himself. The article tells how to prepare, grade and market wool co-operatively.—Editor.

Your Rail-less Railroad

YOUR live stock and the produce from your fields, carried in freight trains to the cities, thunder past countless danger-signs with the warning, "Look Out for the Cars!" Each one of these marks the crossing-place of a country road—a road without rails, leading to railroad and town. Each one marks a farmer's right-of-way.

Since your farm is a 1920 enterprise, probably it is fitted with most of the following modern equipment—the telephone, good lighting and heating, a silo, a manure spreader, a cream separator, an automobile, an engine, a tractor.

But have your hauling problems found their proper solution? Are the time-losses and difficulties of a decade ago still impeding your endless carrying of farm loads?

Government statistics show that in 1918 alone, 350,000,000 tons of farm produce were transported to local shipping centers in motor trucks. The same national figures prove also that American farmers are the greatest users of motor trucks—among all industries. No progressive farmer can afford to overlook impressive *facts* like these.

Your name and address mailed to our office at Chicago will bring you descriptive folders that will prove interesting and instructive. Put an *International Motor Truck* at work on your farm and on the roads which are your right-of-way. Handle all your miscellaneous farm hauling with railway efficiency. The nine *International Motor Truck* sizes range from ¾ ton to 3½ ton. Keep in mind that these trucks have been made for years by the makers of good and trusted farm machines.

$200,000 to Advertise Michigan Navy Beans

Michigan and California Bean Jobbers Will Spend Huge Sum to Increase Consumption of Beans

IF THE PLANS of the Michigan and California bean jobbers go through the navy bean will be restored to the place of honor at the American table. Time was when beans were the favorite American dish, but it fell into evil hands during the war and lost favor with the consumer.

The result of foreign competition upon the American bean has been discussed at length in these columns. It has been definitely established that wholesale and retail grocery firms have sought to popularize the pinto and Japanese beans, and because of the lower prices of those varieties, their efforts have borne fruit among the less discriminating consumers.

Canning Companies Aid Foreign Bean

One of the most important reasons for the lessened demand for American grown beans has just come to light in a suit which the United States government has instituted against the Van Camp Company. Everyone is acquainted with Van Camp's pork and beans. For years the name Van Camp has stood for quality products and business integrity. But this company is now charged with having canned huge quantities of Japanese cranberry beans and advertising and selling them as American grown kidney beans. The government discovered the deception, seized 200,000 cases of the beans, and started suit against the Van Camp company for misrepresenting their product. It is believed that hundreds of thousands of cases of these beans have been sold to the consumer under the guise of an American name. Moreover, it is alleged that thousands of bushels of Kotenashi beans have been sold by certain jobbers here in Michigan as well as other states, as Michigan pea beans. If these charges are true the American bean industry has suffered another grevious wrong.

But the damage has been done and nothing is gained by crying over spilt milk. The practical thing to do is to set to work to repair the damage. There is a way to do this providing the government wins its suit and forces the Van Camp company to label Japanese beans as such and make it necessary for them to buy American grown beans for such of their customers who demand domestic varieties. There are many consumers who would not buy Japanese beans if they could procure the American product, but when the foreign bean is placed before them under an American label they will naturally purchase it, until they tire of it as they surely will, for none of the foreign beans have the taste nor nourishment to which the consumer has become accustomed in the navy or pea bean.

There is still another important reason why consumption of beans has decreased. It is found in the unprecedented prosperity of the country. Beans have always been considered the "poor man's" food. But the poor man no longer exists in the city. The high wages to the laboring classes and the prosperity of the middle classes have caused them to discard beans and the other cheap and homely foods for fancy, high-priced eatables.

It is plain to be seen that there is plenty of work to be done to re-instate beans on the menu of the American family. But this can be done. The wave of extravagance will be followed by a wave of economy. In fact, the wave of economy has already started, but it will be months before it reaches its crest. At present prices beans are absolutely the cheapest of all foods and contain food values that are not to be despised. Already the people of the cities are turning to cheaper foods. They have boycotted the potato; they have reduced their consumption of meat; but they cannot entirely eliminate these foods from their ration unless they buy something to take their place. That something, logically, is beans. The price of beans could double and they would still remain the cheapest article of food which the consumer can buy.

Educating the Consumer

But how get the facts to the consumer? "Advertising" is the answer. And that is the medium which the bean jobbers will use providing the government wins its suits against the Van Camp Company. And why is that necessary? Because it would be money thrown away to advertise a product, the name of which canning companies and dealers could use to label foreign goods, and sell them to a market created by such advertising.

It is understood that a few Michigan jobbers have agreed to underwrite the expense of a preliminary advertising compaign in forty of the leading daily papers of the middle west, with the expectation that the Bean Jobbers' Ass'n will reimburse them from the Association funds. If this campaign is a success a national advertising campaign will be undertaken jointly by the bean jobbers of Michigan and California. This campaign will involve an expenditure of $200,000.

What Will the Acreage Be?

THERE is no doubt about it,—the bean acreage for 1920 will be slashed to at least 50 per cent, and many claim to thirty-five per cent of normal. We do not mean the bean acreage for Michigan alone, but for New York, California and the Orient. Every bean producing section, including those already planted and those yet to be planted, reports an actual or estimated reduction varying from 50 to 80 per cent below last year's acreage. Prof. Cox of the M. A. C., tells us that the Japanese have reduced their acreage; and we all know what farmers are planning to do here in Michigan. But the key bean state now is California, which stands second only to Michigan and sometimes first, so we are interested in knowing what the California farmers have done about their acreage. We quote from Mr. M. M. Benchley, manager of the California Bean Growers' Ass'n, who was in Michigan a couple week ago, "California's bean acreage," he said, "will be cut 20 per cent of last year's acreage. This is no guess, either, for most of our crop is planted. We know now what to depend upon so far as our 1920 crop is concerned."

It ought not to be necessary to use any more words to convey to our readers the fact that the 1919 acreage will not produce enough beans to feed the nation, and that this ought to be a particularly good crop for Michigan bean and sugar beet growers.

Growers Will Benefit.

Naturally the first benefits of this campaign will be felt by the jobbers who have beans to sell. Then the elevators will feel the effect, and finally the grower will find a demand for what he has left. It may be thirty days; it may be sixty days or even longer before the farmers who are still holding their beans will get the benefit from this advertising campaign, but we are certain that long before another crop is on the market, the grower will be able to sell his holdings at a fair profit.

Some scoff at the value of advertising. But experience has proven that nearly all kinds of advertising pays big dividends. A campaign to advertise beans seems logical, and we believe it will bear fruit. Once induce the consumer to return to the use of beans; educate him to their food value and small cost; show him the difference between Japanese and American varieties and we predict that he will demand beans as a part of his daily menu.

Tariff Bill Still Pending

The House Ways and Means Committee is silent as Mars on the fate of the Osborne bean tariff bill. Whether the bill has been definitely chloroformed and consigned to an untimely grave or whether it still survives we are not informed. It would seem that the Michigan congressman who is chairman of the Committee, ought to have enough respect for his constituents to give them an explanation of the failure of his committee to report out this bill.

The need for such protection is becoming more apparent every day. Japanese beans are still flooding our market, and except for the growing scarcity of domestic beans and the certainty that the 1920 acreage will be greatly reduced, the market would undoubtedly be in a much worse shape. The following statement gives some idea of the enormous quantity of beans that were imported during 1919.

Imports of Beans and Lentils

"There were 4,972,456 bushels of beans and lentils, valued at $17,526,911, imported into the United States during the calendar year 1919, of which Japan furnished the greater portion. The countries shipping over 1,000 bushels each were as follows:

Countries*	Bushels	Value
France	60,410	$ 337,830
Italy	1,469	3,400
England	80,354	476,162
Canada	350,352	1,259,986
Panama	5,412	26,025
Mexico	3,047	10,067
Cuba	64,644	293,017
Dominican Republic	3,034	14,097
Argentina	30,006	116,724
Brazil	45,629	150,553
Chile	614,260	2,673,920
China	6,095	17,047
China leased territory—		
Japanese	19,871	43,938
Hong Kong	26,919	78,727
Japan	3,625,965	11,858,293
British So. Africa	26,919	135,097
Madagascar	5,615	19,454
Total	4,972,456	$17,526,911

*Fifteen countries not named here as shippers.

Prices of Market Milk in Certain Large Cities of the U. S. for 1919

Cities	Jan.	Feb	Mar.	Apr	May	June	July	Aug.	Sep.	Oct.	Nov.	Dec.

Fordney's Position Defended

A number of country weeklies owned by personal friends of Congressman Fordney, have taken the Business Farmer to task for criticizing Mr. Fordney's failure to get the bean tariff bill reported out of his committee. Instead of confining themselves to the merits of the case, these publishers seek to antagonize their Republican readers against the M. B. F. by claiming that the

The Final Step In Michigan's Dairy Industry

Have not the Milk Producers the Courage and Ability to Grapple with their Biggest Problem and Solve it Now and Forever?

By THE EDITOR

ARE THE milk producers who supply the city of Detroit with its most essential food product ready to take the final step in the perfection of their industry? We refer to the marketing of their product. If they are not ready to do this most obvious, logical and practical thing, when will they be ready? Or, if they are ready why do they not seize the opportunity that has been knocking at their door for months past? These are questions which find lodgment in the minds of many who view the Detroit milk situation through dispassionate eyes.

The dairy industry is the result of a tedious evolution. We say tedious, because the evolution has been unnecessarily slow. The progress of the industry has been needlessly deferred for a quarter of a century. The economies in milk production and the reforms in the marketing of milk could as well have been effected a decade ago as three years ago, had the milk producers the proper leadership and vision.

Early History of Dairy Industry

The first phase of the dairy industry covered many centuries of little or no progress. Farmers produced milk principally for their own uses. What they had left they sold to their neighbors who owned no cows. There were few large fine herds of high-producing cows. There were few highly-efficient farmers who produced milk primarily as a business to make money. But as the population of the country shifted from the rural districts to the cities, and the number of people owning cows became less in proportion to the increase in population, it became necessary and advantageous for the fewer farmers to own more cows in order to feed those who had become non-producers. In this manner, the dairy industry slowly developed from an individual and purposeless enterprise to a large and highly organized business.

The second phase of the dairy industry has to do with its development as a business. The producers of milk organized. At first, for productive purposes. Cow-testing associations came into being. Farmers learned how to distinguish between the good cows and the poor cows, and to weed out the low producers from their herds. With the assistance of the agricultural colleges they began also to weed out their old careless and inefficient methods of feeding, breeding, milking, etc., and to instill modern business methods into their business. But in spite of the painstaking efforts of the milk producers to make their business pay them returns equivalent to other branches of farming or industrial enterprises, they discovered that they were not receiving sufficient returns to pay them a fair wage for their investment and a fair profit.

So we enter the third phase of the dairy industry in which we now find ourselves. The dairymen of Michigan first felt the influence of this phase about five years ago. They began to see that they would have to receive more money for their product in order to maintain their business successfully year after year. The cost of producing milk was advancing, but the price received for the product stood still. For several years there was a more or less pronounced feeling on the part of the dairymen that some action should be taken to secure them a higher price. This feeling finally resulted in the organizing of the Michigan Milk Producers' Association, which at once became a powerful factor in the price controversies between the farmers and the middlemen who bought their milk. Gradually the price of milk has advanced, reaching the highest point in the history of Michigan's dairy industry during 1919. But cost of production kept pace, and the milk producer has not yet received a price which will cover every item of cost and give him the clear ten or twenty per cent profit to which he is entitled.

Milk Commission Appointed

Developments in this phase of the dairy industry included the appointment of the Detroit Milk Commission with the work of which the majority of our readers are acquainted. Perhaps the appointment of the Commission was a natural step in the evolution of the dairy industry. Certainly it was the means of securing for the milk producer the best price he ever received during a period in which he might otherwise have suffered through a price war with the distributors. Although perhaps a natural step it could not be accepted as providing the final solution to the marketing problem. Why? Because nobody was or is bound by its decisions. The distributing companies have appeared before the Commission and stated the minimum price at which they could afford to distribute the milk. The Commission has taken their word for it. What else could the Commission do? If the Commission set a price less than what the distributors wanted, the distributors would simply have called off the agreement and the Commission would have been powerless to enforce its decision. The farmers have appeared before the Commission and presented their cost figures. But to pay both the farmers and the distributors a price that would net a fair profit the Commission would have to fix a retail price which was more than the consumer would pay. Hence, by the very nature of things the consumer and the distributor got theirs at the expense of the farmer. It could not be otherwise and under the commission plan it cannot be otherwise. Farmers testifying before the Detroit Fair Price Board swore that they had never received a price through the Commission which had paid them cost of production plus a ten per cent profit. And so while we will concede the value of the Commission in patching up the differences between producers and distributors we will not concede that the Commission can ever be the means of permanently settling those differences.

Another Step to be Taken

There is another step to be taken in this third phase of the development of the dairy industry. That step is the actual distribution of milk by the farmers who produce it. This is a logical and legitimate function of the farmer to perform. No matter if the milk dealers of Detroit were distributing this milk at the lowest possible cost, it would still be a matter of protection for the farmer to take control of that end of the business, and settle for all time to come the question of "How much will they pay me for my product?" How much more advisable is it for the farmers to take this step in view of the fact that it costs almost exactly as much and during some months of the years more to get this milk from the railway station to the consumer's door than it does to put it through all the expensive and intricate processes of manufacture.

Cold Facts for May and June

DEAR EDITOR: You are right, when you believe, that the time is ripe, just now for the milk producers of the Detroit area, to have their own milk plant in Detroit.

According to the best authorities of the M. A. C., the cost of producing 100 quarts of milk is $8.40, without a cent profit to producer. With the price of milk for May and June fixed at $3.40 per hundred pounds F. O. B. Detroit and deducting 30 cents freight charges on a radius of 30 miles, farmers will receive $3.10 a hundred pounds of milk or $6.59 for 100 quarts; net loss to producer, $1.81.

Distributors for 100 qts. of milk will receive	$15.00
Producers for 100 quarts of milk will receive	6.59
Difference	$ 8.41

or consumer pays 228 per cent on price received by farmers or 128 per cent for distributing.

Distributors for 100 pints of milk will receive	$ 9.00
Producers for 100 pints of milk will receive	$ 3.30
Difference	$ 5.70

or consumer pays 272 per cent on price received by farmers or 172 per cent for distributing.

Risks of distributors are none, producers being obliged to wait one month for their money, with a two weeks supply back for next month's pay. With the amount of money derived from these two weeks back pay, don't you believe farmers will not get a nice milk plant in Detroit? Don't you believe they will not have a little more than $6.59 for 100 quarts or $3.30 for 100 pints of milk?—John J. Smith, Washtenaw County.

Shall the Milk Producers Market Their Own Product?

To the Reader:

Please use this coupon to express your views on the question, "Shall the Milk Producers market their own Product?" If you wish to write your views in greater detail, which we would prefer to have you do so, use a separate sheet of paper.

Question No. 1—Are you satisfied with the commission plan of fixing milk prices?..... (Please state opposition, if any.)

Question No. 2—Do you favor the Milk Producers' Ass'n distributing the milk of its members?.....

Question No. 3—Do you think the time is ripe for making plans toward this end?.....

Question No. 4—If you do not favor the actual distribution of milk by the producers, do you favor a central sales agency in Detroit where the milk may be received, weighed, tested and sold either to distributors or to the retail grocery trade?.....

Question No. 5—Are you a member of the Michigan Milk Producers' Ass'n?..... How many cows do you milk?.....

Do you consider you are making money at present prices?.....

(Please give such other information as will show clearly your attitude on the present milk situation.)

It is as true as gospel that the farmer is NOT receiving what he should for his milk. The consumer will pay only so much without complaint. The distributors do not want to charge more than that because it creates trouble and lowers consumption. The distributors must have a certain margin to conduct their own business, and so what is left of the consumer's dollar, they pay to the farmer. This they have always done and always will do, not because they are greedy, or unjust but because it is human nature for them to do so. We know that the distributor's margin is excessive. Our common sense tells us so. The distributors themselves have been frank enough to admit it. But under the present method of fixing the milk price, that margin cannot be made less. As a result the farmer must continue to suffer and the consumer must continue to pay high prices.

What's the Solution?

If a Saint Louis milk dealer can eliminate 70 out of 90 milk wagons of a competitor by consolidation how many wagons could the milk producers of the Detroit area eliminate in the city of Detroit by selling their milk through one concern owned or controlled by themselves? The useless expense attendant upon the maintaining of a score or more milk plants and delivery systems in Detroit is simply enormous. Why let it continue? Why not simplify the system and give some of the saving to the farmers? Why not follow in the footsteps of other farm organization, and now that the problem of production has been largely solved, tackle the bigger problem of marketing.

How Can This be Done?

The time is opportune for taking this step. The federal authorities seek legal power to destroy the Milk Commission and put the producers right back where they were four years ago. The consumer is waking up to the fact that he is paying several million dollars a year to perpetuate a system of milk distribution that benefits no one but those who have their dollars invested in the enterprise. The time is ripe NOW. Opportunity is knocking. The door is wide open. Why sit idle and refuse to enter the marketing field and take control once and for all of the most important branch of the dairy business.

The Michigan milk producers have able leaders, men in whom we all have confidence. The rank and file of the producers are themselves ready to take the step. At the meeting in Detroit several weeks ago there was an undisputed sentiment for creating a fund "for emergency's sake." Would anyone say that the emergency is not here? What emergency, what opportunity, could confront the milk producers which does not confront them today?

The thing can be done, friends. All the money that is necessary to establish a distributing plant in Detroit can be raised in sixty days, either in cash or credit equivalent to cash. As a reader suggests an offer should be presented to the biggest creamery company for his business. If the price is excessive or he refuses to sell, the milk producers should establish their own plant, hire the best manager in the United States advertise their product at one or two cents below the price charged by the other distributors and they would soon get the business.

This is a tremendously important subject and we would like to have an expression of our readers' views. For this purpose we are printing a coupon with the request that every milk producer fill it out and mail to us. If the officers of the Michigan Milk Producers' Ass'n could be assured that there is sufficient sentiment for the establishment of a farmer-owned distributing plant in Detroit, we are sure that they would take the matter up and provide the necessary machinery for translating these wishes into action.

Consolidated Schools an Aid to Rural Education

New School System Gives to Farm Boys and Girls All the Advantages of City Schools

Editor's note: The following article is the first of a series by Wilford L. Coffey upon the consolidated school. Much interest is being shown by rural parents in this system and we recommend a careful reading of these articles which will answer many questions you have raised about the consolidated schools. Pictures and stories will appear in later issues of some successful consolidated schools in this state, showing cost of maintaining, advantages, etc.—Editor.

By WILFORD L. COFFEY
Assistant Superintendent of Public Instruction

TO THE FRIENDS OF THE COUNTY SCHOOL: Rural school education is one of the big problems of today. The "little red schoolhouse" has played an important part in the history of Michigan and of the country as a whole, but with the development in other lines it is no longer adequate for present needs. The country boy and girl of today are not enjoying the same educational privileges as their more fortunate cousins in the city. This is unfair, especially in an agricultural state like Michigan. The remedy is to be found in large part in rural school consolidation. In the accompanying articles Assistant Superintendent Coffey has set forth in a convincing manner, advantages of a larger school, together with the facts concerning consolidation in Michigan. I commend these to all friends of the rural school.—T. E. Johnson, Superintendent of Public Instruction.

"MICHIGAN has no consolidated schools," is a remark I chanced to hear not long since. Michigan has according to the reports filed with the Dept. of Public Instruction one hundred ninety-three consolidated schools. Perhaps Michigan should be blamed for the remark that I heard. Perhaps she should have written bulletins as some of her sister states have done extolling the virtues of her fine consolidated schools, for it is doubtful whether, on the whole, any state can speak of a finer class of consolidated schools than those in Michigan. Most of her consolidated schools are located in the Upper Peninsula where they have been organized under a school organization in which the township is the unit. The Lower Peninsula, however, has made considerable progress during the past eight months in the consolidation of schools. They have been formed where it had seemed that the one-room school with its traditional equipment, instruction, and surroundings would continue to be the school for the future as it had been in the past.

Five years ago there was little or no call for people from the Department of Public Instruction to discuss the merits of country school consolidation; today the calls are so numerous that the Department finds it possible to respond to but a few of them. Formerly the calls for some one to discuss consolidation came from teachers and others concerned with the rural school problem from the standpoint of an educational policy; today the call is from the rural people who maintain the one-room schools. Formerly there was an indifferent attitude expressed by the few who attended a meeting at which consolidation was discussed; today a speaker is met by an audience that seeks information. There has seemed to be a decided change in the farmers' attitude towards the educational opportunities afforded by his one-room school.

Three main questions are apparently in the minds of the people when they are inquiring into the merits of the consolidated school:

Is it what we want?

Is it expensive?

Is transportation feasible and practicable?

Aside from the teacher two basic things are necessary for an efficient school—a body of students so that there may be a division of the labor of instruction and a large assessed valuation so that the financial burden imposed on the supporters of the school will not be excessive. The usual one-room school has neither a large body of students nor a large taxing arear. It is not, therefore, the type of school desired from the standpoint of these two factors alone. These are not, however, the only factors to be considered. Others are an opportunity for school education without leaving the farm, an increase in the number who shall finish the elementary school, an opportunity to teach vocational and industrial subjects, an opportunity to put into practice the knowledge gained from the purely academic work, an opportunity to make the community life function in a higher degree, and an opportunity to secure a better trained and experienced teaching force.

We do not have available a record of the number of boys and girls who complete a high school course after finishing the one-room school, but we know from a comparison of the number who pass the eighth grade with the number for whom tuition is paid that the number in high school is comparatively small. The one-room school is the finishing school for the greater part of the country boys and girls. Some of these boys and girls live near enough to some village or city school to enable them to go back and forth each day. If we were to take this number from the total number of country boys and girls who attend high school we should likely be amazed at the small number who are receiving high school education when the expense of board and room needs to be paid. The education of these boys and girls through high school is a charge upon the community where they live. It has not performed its full function for democracy and citizenship if it has failed to give this education. If the community is too small its territory should be extended to give the financial support. A study of the one-room schools of localities favorable for consolidation reveals interesting facts:

Number 1.—The following districts are favorably located for a consolidated school. They are in a southern county of the state which has a number of good high schools, good roads, good electric and steam railway facilities. They are, therefore, located so that high school facilities outside are accessible if parents wish to send their children away from home.

Number of districts considered, 10; total enrollment, 261; average daily attendance, 177; average number of months of school, 8.8; average per capita cost, $34.52; number of grades taught, 8; number of 8th grade graduates in four years, 71; number for whom high school tuition was paid last year, 11; total assessed valuation, $1,239,750.

In four years there have been but seventy-one eighth grade graduates and of that number but eleven are in high school, less than sixteen per cent.

Number 2.—The following districts in one of our southern counties noted for its agriculture are favorably located for a consolidated school. High schools outside of the districts are accessible if the parent wishes to send his children away from home to attend them.

Number of districts considered, 10; total enrollment, 312; average daily attendance, 239; average number of months of school, 8.8; average per capita cost, $43.04; number of grades taught, 8; number of 8th grade graduates in four years, 67; number for whom tuition was paid last year, 18; total assessed valuation, $2,498,395.

Out of an enrollment of three hundred twelve these ten districts have produced sixty-seven eighth grade graduates in four years and of this number but eighteen were in high school, about twenty-seven per cent.

* * * *

Number 5.—The following districts are sub-districts of a township unit school district. Five persons constitute the school board. Under the primary district system twenty-seven persons would be required to manage the nine schools which employ eleven teachers. Twenty-seven school officials to manage the school affairs of a territory that employs but eleven teachers! Compare this with any private corporation. Is it likely that there would be nearly three times as many directors of the corporation as there were persons employed?

This township will soon have completed seven miles of concrete road and many miles of gravel road. The roads will be in splendid condition for transportation of pupils. It has been organized as a single school district for several years, but as yet has done nothing except the paying of tuition to provide more than eight grades of education for its boys and girls. The wealth, the location, the agricultural prosperity of its people, and the opportunity for transportation makes this township ideal for a consolidated school. The law under which it is organized gives the people the right to provide a high school. They may also vote to come within the provisions of the Rural Agricultural law and receive the financial benefits which are obtainable under it.

Number of sub-districts considered, 9; total enrollment, 251; average daily attendance, 202; average number of months school, 9; average per capita cost, $34.07; number of grades taught, 8; number of eighth grade graduates in four years, 96; number for whom tuition was paid last year, 29; total assessed valuation, $1,450,000.

In four years there have been 96 eighth grade graduates and of that number but twenty-nine were in high school, approximately thirty per cent. There is no assurance that even the thirty per cent will continue through the four grades of the high school. Thirty per cent of their eighth grade graduates in high school, and at least four good high schools but a short distance away!

The statistics given in these examples reveal other interesting facts besides the number of eighth grade graduates who pursue a higher education, but space does not permit their discussion. Attention however, might be called to the percentage of attendance as compared with that of consolidated schools, which is usually above ninety per cent.

Compare the facts on high school attendance with those of the consolidated schools of Randolph county, Indiana.

Mr. George N. Otwell, Assistant Superintendent of Public Instruction of Michigan, visited Randolph county, Indiana, in July, 1919, for the purpose of investigating the merits of the consolidated schools of that county. He learned that before consolidation of schools in that county only four children had ever been graduated from high school. Since consolidation an average of eighty-one per cent of the eight grade graduates have been in high school.

Seventy per cent of the rural school pupils graduated from the 8th grade in the last six years have been graduated from high school!

One of the tests of the value of a thing is what is accomplishes—its product. The one-room school must be measured by what it produces. Last spring during the second Thursday and Friday of May more than seventeen thousand boys and girls from the rural schools took the 8th grade examination. These boys and girls wrote upon questions prepared by the Superintendent of Public Instruction. The questions were the same throughout the state. The same course of study had been followed in all the schools where these pupils had attended. According to the records for May, 1919, approximately sixty-five per cent of the boys and girls received eighth grade diplomas. Out of every hundred who came to write sixty-five went away entitled to diplomas and thirty-five went away failures. Sixty-five was the product. Thirty-five was the waste due to various reasons, the one-room school with its limitations being the principal offender. How do we know this? An investigation of several graded schools having a sufficient number of teachers to prevent any teacher from being required to teach more than two grades showed the percentage of those who sought promotion after doing the work of the eighth grade to be eighty and above. Out of every one hundred who asked for promotion from the eighth grade in the graded school, eighty were given diplomas, and 20 were failures. Sixty-five from the one-room school and 80 or more from the graded school is the

The American Library Association has undertaken a "Books for Everybody" campaign which will put the people of the remotest section in touch with good books. An article upon this subject will appear in an early issue.

Thumb Beet Growers Hold Big Mass Meetings

Final Wind-Up Shows Farmers More Determined than Ever to Stand out Against Autocracy of Manufacturers

A SCORE or more of mass meetings are being held this week throughout the sugar beet district, principally in the Thumb section. The purpose of these meetings is to make a final survey of the situation and discuss what further action shall be taken to settle the controversy and what crops it would be best to plan on the sugar beet land in case no compromise can be affected with the manufacture.

The loyalty of the farmers to the cause they have espoused is surprising, not only to the manufacturers, but to the local leaders in the campaign. The State Association knows of only six cases where growers have signed contracts after they agreed not to do so. In the majority of the locals the growers are standing like a stone wall against the pleas of the manufacturers that they take back their contracts. In only one section is there any sign of weakening, and this change of heart is attributed to a bare handful of farmers. The tenor of hundreds of letters received by the State Association, THE BUSINESS FARMER and others who are taking an active part in the campaign is, "We'll never give in."

Manufacturers Employ Questionable Tactics

The best evidence the growers have that the manufacturers are feeling the effect of the campaign is the nature of the tactics they are using to discredit the farmers before the public, and to frighten or coerce farmers into signing contracts or repudiating their association. It is popularly believed that the several "hunky shanties" which have burned to the ground were fired by agents of the manufacturers owning them. The cost of the shanties is trivial and is mighty cheap publicity for the manufacturers who are not slow, of course, at laying the deed at the door of the beet growers. We hold that the farmers have as clear a right and certainly as much evidence to connect the manufacturers with the crime as the manufacturers have to accuse the farmers.

Bear This Fact in Mind

THE SUGAR factory is absolutely dependent upon the beets which the farmer grows. But the farmer is not dependent upon beets. His "factory" will run just the same whether he grows beets or not. Or as Mr. Otto Pobanz of the Sebewaing local puts it, "Take away the beets and the factory will be worth about nil. Take away the factory and the farms will be worth just as much as ever." Bear this fact in mind. It is the only ammunition you need to get a square deal from the manufacturers.

Another rather despicable trick was played last Sunday by the Owosso Sugar Company against Manager C. E. Ackerman of the State Association. This company left some of their shanties on the Ackerman farm last fall with the intention of housing their beet help there in case Mr. Ackerman produced beets this year. After Mr. Ackerman had cancelled his contract, the company desired to move one of the shanties onto the farm of a neighbor, the only farmer in the immediate vicinity who will grow beets under the old contract. Mr. Ackerman learned that it was the intention of the sugar company to put this shanty in the field directly opposite his house and he accordingly entered a protest, showing the company that there were at least two other places on the neighbor's farm where the shanty could be placed to better advantage. He advised the company that if they persisted in putting the shanty square across from his farm residence, he would get out an injunction restraining them and forcing them to pay for the rent of the land which the shanty had occupied since last year. The company manager then promised that the shanty would be placed elsewhere, so Mr. Ackerman consented to its removal. On Sunday while Mr. Ackerman was attending church the sugar company sent its men to his farm and moved the shanty to the site square across the road in front of Mr. Ackerman's farm home. This constitutes one of the pettiest, meanest and under-handed tricks that has come to our attention in a long time, and Mr. Ackerman will not only be the only farmer to resent such tactics.

Watch For These Gentlemen

When the sugar manufacturers of the western states found they could not shake the farmers from their demands by ignoring them they hired farmers,—the kind who would sell their soul for gold,—to attend the meetings or talk with individual farmers and try to encourage them to drop the fight. They paid these farmers well. They could afford to. These farmers would tell their neighbors that the manufacturers had all the acreage they needed; that growing beets wasn't such a bad business after all; some years you made pretty good money out of it; that the leaders were agitators, etc. For a time this game worked and some farmers dropped out. But finally the mask was torn off of these false advisers, and all those who had dropped out got back in, and waged the fight more furiously than ever. The manufacturers finally had to yield. BUT bear in mind, Mr. Sugar Beet Grower, they did not yield until after they had played their last card. And they will not do so in Michigan.

Expect to find some farmers who will tell you about what a great blessing the sugar beet industry has been. Expect to find some who will show you what enormous profits the growers are making. Expect to find some who will sow the seed of uncertainty in your mind and try to induce you to desert your Association and your fellow beet-growers. If these fellows haven't already shown their face at your meetings or at your gate, be not disappointed. They will come along sooner or later. Just tell them that their arguments sound just like the arguments of the manufacturers, and in the majority of cases you will find that they are the arguments of the manufacturers, prepared by them, passed on to their agent and rehearsed many times over.

Will Plant Beans

While the growers have not abandoned their fight and are still convinced that the manufacturers need their acreage in order to run their factories to capacity, they are getting prepared for the worst,—or best, is it?—and are making plans for the planting of other crops. Word comes from all sections of the beet belt that farmers have been encouraged by the recent advances in the bean market to turn to that crop on a larger scale. Many of them have their own seed, held over from a year ago, or if they have not there is plenty of good seed available.

It is not expected that the growers will make any further attempts to gain a conference with the manufacturers. They have made all the advances and possible more than they should have made to these autocratic gentlemen. They have the satisfaction of knowing that right and justice is upon their side and with those weapons they will eventually win their fight. Perhaps after all the stubborness of the manufacturers will prove a good thing for the beet sugar industry and pave the way for farmer-owned sugar factories which will turn their profits back into the farming communities instead of into the pockets of Griswold and Wall Street financiers.

Attitude of Wisconsin Farmers Toward the Farm Bureau

By JAS. M. PIERCE

THE FOLLOWING article from the Wisconsin Farmer is reproduced herewith because of the great similarity between the views it expresses and those which have been held by The Business Farmer. The charge has been made that The Business Farmer is "opposed to the Farm Bureau." Nothing could be more ridiculous or distant from the truth. They who have made this criticism did not clearly understand the position we have taken on some aspects of the Farm Bureau movement. It is hoped that if the cobwebs have not already been cleared from their minds that the courageous presentation of the case by Mr. Jas. Pierce, the fearless publisher of the Iowa Homestead, will serve that purpose. Both Mr. Pierce and ourselves took almost exactly the same attitude without either knowing the position of the other. And it might be stated here that Mr. Pierce is publisher of three of the most influential farm journals of the west, and is highly respected for his fearless defense of the farmers' interests. —Editor.

THE question of whether or not Wisconsin shall be organized with farm bureaus is being agitated among the farmers of the state these days, and I have received many letters from subscribers asking my advice as to what should be their attitude toward this organization. In the first place, speaking generally, I would say that any movement toward organization of and by the farmers should be encouraged. No one organization can or should monopolize the field. The farmers' interests are so diverse, their needs so many, that no single organization can well serve the mall. To cite three different phases of farmers' organized activities. I would name the educational interest, for the study of the problems of production; the business interest, for the marketing for farm products co-operatively; and the political interest, for securing just laws without which his two other interests are handicapped. There are certain respects in which it is a gain to have these three interests kept separate, in distinct organizations, and even though there might be some overlapping and reduplication in the three sets of activities, there should be no conflict between them, but co-operation and support for each other, in their various phases of farmer activity. For the most part the three would dovetail splendidly, and each complement the others.

Speaking more definitely, the American Farm Bureau Federation, which is the national organization, through which the state and county farm bureaus function, has a membership of somewhere between half a million and a million members, and is now organized in 28 states. In Iowa, for example, it has over 100,000 members, and is rapidly growing in other states. It thus is one of the strong farmers' movements of the United States, and with large funds and an efficient organization, has wonderful possibilities for good to the farmers, not only of Wisconsin, but of the nation. I regard myself and the *Wisconsin Farmer* as the friend and supporter of every undertaking to organize the farmers of the nation along right lines, and should the attempt be made to organize Wisconsin for the farm bureau I would advise every subscriber to go into it. When I say this I am prefectly frank to state that there have been some things about the farm bureau organization which I have not approved. I have not liked its readiness, in some states, to admit men who were not farmers to membership. I believe that the membership of a farmers' organization should be confined strictly to actual farmers, I have not liked the closeness of the farm bureau's affiliation with commercial organizations in some localities, and I predict that it will cause them great embarrassment, when differences of viewpoint arise, as they must necessarily arise, between the farmers and the commercial interests. I can see grief ahead for the farm bureaus if their membership is not confined to actual farmers. I do not approve the position taken on some questions by the American Farm Bureau Federation, in its recent meeting at Chicago. I believe that some of its leaders are at heart reactionary, and would like to use this powerful organization for defeating any progressive movements which too seriously threaten big business interests. But these objections are incidental and not fundamental. They are concerned with temporary conditions. If any of the leaders of this movement are unworthy of their high calling; if the American Farm Bureau Federation tas taken up an unwise stand on any public questions; if, in certain localities it has tied up too closely with interests which may run counter to those of the farmers, these are things which can be corrected, provided the real farmers go into it in sufficient numbers to control it. They can turn out any leaders who may prove faithless, and they can dictate the policies of the organization, correcting any mistakes that may have been made. It would be wholly illogical for the most progressive, forward looking farmers whose hearts are right, to stay out of the organization and leave it wholly to the false leaders of the farmers who could then direct it at will, for ulterior purposes.

So I say, there is a bigger and broader ground to take than to oppose any such great agricultural movement, simply because we do not happen to approve some of the men or things connected with it. That would be true of any large farmers' organization. Let us all rather join in any such undertaking; let us take an active interest in it, supporting it when we can, and working from within rather than from without to correct or avoid mistakes. I have sufficient faith in the farmers of Wisconsin to believe that they will in time set right any organization which they control, as they could do the farm bureaus by joining them in sufficient numbers.

I do not see any reason why the farm bureaus should come into conflict with other Wisconsin farmers' organizations—why members of the Society of Equity, the Cheese Producers' Federation or any other body should not join in and support it, and I can see many reasons why they should do so. For my part I shall not hesitate to criticize the farm bureau and its leaders whenever I think they are working along wrong lines, which are inimical to the best interests of Wisconsin farmers, as I shall do with other farmers' organizations, but I shall do so as a friend, whose friendship is proven by frank, honest criticism and a desire for only that which is best for organized farmers' activities in the state and in the nation. In the main I can endorse the farm bureau movement to Wisconsin farmers.

Effects of Barnyard Manure Upon the Soil

The Applying of This Valuable By-Product of the Farm to The Various Crops Should be Carefully Attended to

By M. M. McCOOL
Professor of Soils, Michigan Agricultural College

EVERY farmer fully appreciates the fact that the proper use of stable manure greatly increases the yields of all crops. Regardless of this appreciation there is doubtless much to be learned concerning the most efficient methods of utilizing this valuable by-product of the farm. It seems before the most intelligent use can be made of manure in crop production an understanding of the ways in which it is beneficial, or what it does when applied to the soil is essential. Barnyard manure is beneficial to both the soil and the crop. In this article we shall first discuss the effects it has upon the soil and then the crop relationships and finally its use.

When coarse manure is applied to a sandy soil it may make it too loose and coarse for a time but after it has decayed somewhat or has become reduced to a finer state of division, it may result in the opposite condition, making it somewhat less porous and, therefore, in a more desirable structural condition. In the case of very fine textured soils, an open structure is desirable and, therefore, the coarser material may be more efficient in bringing about improvements. Yet manure in all stages of decay improves the tilth of such soils and, as will be shown subsequently, the residual effects may be obvious a number of years after application.

It was shown in an earlier article that manure increases the water retaining capacity of soils. In a dry season this may be of some importance in crop production although there is a tendency by some to discredit this action. This increase is greatest when it has decayed somewhat, otherwise it may make the soil too porous, and hence cause it to lose water quite rapidly. King, several years ago, showed that a soil which had received normal applications of stable manure contained higher water contents throughout the season than did adjacent untreated soils, and Russell of England, reports benefits in this direction.

Manure upon decaying furnishes plant-food directly to the soil, the amount, of course, depending upon its composition. In addition during the process of decay various substances are formed, notably carbon dioxide, and others which assist the soil moisture in dissolving the minerals present. The intestinal bacteria aid in the decay of the vegetable matter of the soil thus liberating additional plant food elements.

Manure applied to the soil in many cases increases the stem and leaf development of the crop to a remarkable degree. Usually the leaves are broader, longer, and deeper green in color where it is judiciously applied. The root development may be enormously increased by the presence of manure in the soil, thus, of course, increasing the amount of vegetable matter therein. If manure is applied in too large amounts, to soils that are high in vegetable matter and somewhat low in phosphorus, the results obtained are often undesirable, there being a tendency to lodge and the grain may not fill out as it should. If a great deal of leaf and stem development is looked for this condition is not so undesirable. There may be undesirable indirect effects, such as the introduction of troublesome weed seeds, insect pests, and plant diseases, in fact, there are on record numerous reports which show that quack grass, smart weed, thistle, and others have been introduced by bringing manure from outside sources, and that several plant diseases have been introduced in like manner.

Duration of the Beneficial Effects of Manure

The duration of the beneficial effects, or the residuary effects of applications of manure is certainly an important consideration in making the most intelligent disposal of it. Naturally, this depends upon such conditions as the amount of rainfall, the temperature, the nature of the soil, and the kind of crop grown, and also the composition of the manure applied.

Where the rainfall is very high, 45 inches or more annually, the effect upon plant growth the first year after application may be slight indeed on some soils, and is less if the temperature of the soil is high enough for rapid and continual bacterial activities. Under such conditions much of the material is leached away in the drainage waters. On the other hand, if the rainfall is more nearly normal, 30 to 35 inches annually, beneficial effects may be observed a number of seasons after its application.

Soil texture has much to do with the lasting effect, largely on account of the difference in the absorptive capacity, or the power to retain soluble substances, and the difference in the amount of water that passes through them. It is common knowledge that a normal application of manure to a poor sandy soil has less effect upon the crop growth the second or third seasons, but its beneficial effects may

Lime, manure and acid phosphate increased the yield of corn in this field from 35 bushels to 84.5 bushels per acre in 1919. On the right untreated, on the left fertilized.

be seen several years on a fine textured soil. It is exemplified from the results obtained from applying ten tons of manure per acre to a sandy and a clay loam soil respectively.

Soil	1st Crop	2nd Crop	3rd Crop	4th Crop	5th Crop
Clay loam manured	140	135	120	114	110
Clay lo'm unman'r'd	100	100	100	100	100
Sandy manured	180	120	110	105	100
Sandy unmanured	100	100	100	100	100

The composition of the manure, especially with respect to the form and the amount of the nitrogen is really important in this connection. It is doubtless true that the undigestible portions, of the solids of the manure voided by the animal are most resistant to the action of bacteria and, therefore, endure longer in the soil than the more easily digested portions. Urine is soon converted into available form for plant growth when added to the soil. If the animal is fed concentrates, as stated previously, the manure contains more easily decomposed material than if it is fed upon roots and hay, and the first year of application to the soil proves superior, but the second year the majority of the readily available material has been used up by the crop, escaped into the atmosphere, or has been lost to the drainage waters by leaching and the yields become about the same under both treatments. This is strikingly shown by results reported by Russell of England where manure from animals fed roots and hay on the one hand, and from animals fed on concentrates on the other, respectively, was applied to a loam soil and the yields recorded for a number of seasons.

Manure made by animals receiving	Yr of application	2nd crop	3rd crop	4th crop
Cake	173	138	120	113
No. cake	144	135	126	117
Unmanured	100	100	100	100

Voelecker and Hall of England consider that the compensation to be awarded a renter who has applied manure to the soil and then moves away should be based on the residuary effects.

The rate of decay of manure or left for the crops that follow. Of soils that are devoted to so-called "lighter feeders" there may be an appreciable amount of plant food course, the ensuing crops may be greatly benefitted but it seems that such benefits are mainly due to the effects upon the soil rather than the crops direct.

The best time to apply barnyard manure to the soil is rather difficult to determine, inasmuch as it is governed by such conditions as the labor problem, the nature of the climate, the character of soil, and the kind of crop grown. A distribution of the manure on the land as soon as a load is made is best under average farm conditions, inasmuch as there is less loss by leaching and volatilization in this manner than if it is carelessly exposed in a heap. Undoubtedly the ideal condition would be to incorporate it with the soil mass soon after it is applied.

Where the manure is to be applied to very fine textured soils it is desirable to apply it when the ground is fairly dry or frozen inasmuch as such soils may be injured greatly by hauling the manure when they are wet. Moreover, in the northern latitudes it may not be practicable to apply stable manure in the spring after the soils are in a condition to drive over them since the teams and laborers should be engaged in plowing the land on account of the short growing season. Again where the manure can be well cared for it may not be the best method to apply it as formed since the climate must be considered. It is generally true that where the annual rainfall is about 30 inches, a fall or winter application is desirable, but where the rainfall is about 45 inches spring applications, especially on the lighter soils often proves most profitable. In West Scotland where the rainfall is high, according to Russell, spring dressings gave a 50 to 60 per cent increase of potatoes and turnips over unmanured land, and the fall application gave only 25 per cent increase. On light sandy soils a spring application, especially during a dry year, may be very valuable. On the other hand, if the rainfall is heavy much soluble plant food may be leached away if the manure is applied in the autumn.

The best pace in the crop rotation for manure depends upon several conditions, the kind of crops grown, that it whether intensive or extensive, or grain systems of farming are followed, the nature of the soil, the amount of manure to be disposed of and the facilities for properly caring for it if stored.

Cultivated crops respond well to manuring. Corn demands large quantities of nitrogen early in the spring and can make use of the coarse material to advantage. Inasmuch as it usually follows a hay crop in the rotation it is possible to distribute the manure during the fall and winter. The potato is a spring crop of high cash value and usually follows a hay crop and can also make good use of manure. The manuring of land devoted to this crop is sound practice.

Top dressing of wheat with manure is widely and successfully practiced, indeed this procedure often ensures a catch of clover. Hay crops make good use of manure also and where this is a very important crop it is looked upon as being good practice. The results of thirty years experiments with manure applied to corn and oats and to clover at the Illinois Agricultural Experiment Station indicate the response of clover to manure. Where manure was used the yield of corn and oats was increased eleven per cent and clover ninety-two per cent, and where manure, lime and phosphate were added the corn and oats increased in yield thirty per cent and the clover one hundred and forty-one.

The manure spreader is a valuable farm implement. By its use manure can be spread more uniformly, more thinly, and more economically than by other methods. In fact this implement will soon pay for itself on a general farm.

It has been shown that manure is a so-called "unbalanced" fertilizer containing too little phosphorus for some crops, and too small an amount of potassium in proportion to nitrogen for other crops. The reports by several Experiment Stations, as well as the practical experience of many farmers show that manure is greatly increased in efficiency when properly supplemented by the addition of phosphorus, especially, and in some cases potassium. Phosphorus in the form of both acid phosphate and raw rock phosphate are extensively employed by farmers to increase the phosphorus content, while potash is made use of to increase this material in the manure.

The Ohio Experiment Station has contributed results of valuable experiments to show the effects of reinforcing manure by various substances. Eight tons of fresh manure were supplemented with the chemicals given in the table at the rate of 40 pounds of each per ton. The manure was added to the corn in a rotation of corn, wheat and hay.

The twenty-five year average shows that the acid phosphate increased the value of one ton of manure about seventy-three per cent, the raw rock phosphate increased it about forty per cent potash about twenty-six per cent, and calcium sulphate or gypsum about twenty per cent.

In some sections, notably western Michigan and others near Chicago and other cities, large quantities of stockyard manure have been shipped from the yards and applied in generous amounts to the soil for the production of high cash crops such as potatoes, onions, celery, cantaloupes ,and others. More recently the cost per ton has increased appreciably, due to higher wages and to other causes, and undoubtedly there are great possibilities in the use of smaller quantities of manure—in many instances one-fourth to one-half as much as is ordinarily used—and more phosphates and potash, and in some cases, nitrogen added.

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

We are entering what many people believe to be the most critical period since the close of the war. The finances of the country which have not been in a satisfactory condition for many months are becoming worse, and business of all kinds is beginning to feel the effects of tighter credit, higher rates on loans, and the still badly unbalanced condition of foreign exchange. This condition has been made more acute as a result of the recent strikes which tied up millions of dollars worth of raw material, shutting off production and prevented thousands of merchants from discounting their paper or paying their loans when due. If production should pick up all along the line, and everybody quit star-gazing and ease-loving for long enough to do a few hard days' work, it is possible that the present condition would soon be righted, or at least bettered.

Business may be ever so good; demand may be ever so great; wages ever so high; but inability to secure credit for loans when needed is a sign that there is something wrong in Denmark. All the industry of the nation is at the mercy of King Money. If he is generous, all will be well. But if he shuts down on those who need his aid, he throttles production and puts panic in the hearts of investors. We have never been able to see how the money stringency could become so great as to seriously interfere with the nation's industry. We believe the Federal Reserve system, which was designed to meet just such emergencies as we are now facing, will be equal to the task, and while those who wish to borrow money for needless or speculative purposes may be turned aside, it is our belief that there will be plenty of money for the purchase of raw materials to keep the factories going, to pay the men who work there, to finance the planting and harvesting of crops, and for all other productive purposes.

The money situation is raising hob with the markets just now, as a good deal of our products have been going to Europe who finds it increasingly difficult to pay for them. Futures in the grain market are made with great uncertainty, because none can foretell how soon or to what extent the foreign business may drop. Were the exchange situation anywhere near normal or stood in no danger of becoming worse, the prices of food products would soar far beyond anything we have ever seen. But fortunately for the consumer, if unfortunately for the farmer, there is a very definite limit to the amount of products which Europe can take. The prices of grain have been subject to wide fluctuations the past week or two, the prevailing uncertainty regarding the money market and foreign exchange being largely to blame. The dealers tell us that there has not been an oversupply of grains on the markets for many weeks, and the opinion has long since given way that with the drying up of the roads, the farmers would rush great quantities of supplies to the markets. If the farmers have the goods, which many doubt, they are wise enough to keep them and feed them to the public as needed, instead of loading them off on to speculators as they have done so often in the past.

Everything about the grain market is bullish. Supplies are light; demand is strong; and reports of the progress of the newly planted crops are most unfavorable. It would be contrary to all the laws of supply and demand if any of the grain markets took a slump before the harvesting of the new crops. Nothing short of an industrial cataclysm can prevent the grain markets from maintaining their present position or advancing to new high levels. After the crops are harvested we may see lower prices, although this is not conceded by all. It would be but natural, however, if prices readjusted themselves to a slightly lower level from which they would climb upward in case the new crop totals indicated a less than normal yield.

LAST MINUTE WIRES

DETROIT—Beans active and in demand. Wheat firm. Corn and oats higher. Potatoes dull.

CHICAGO—Grain market bullish. Provisions unsteady. Cattle and hogs lower.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT HIGHER

WHEAT PRICES PER BU., MAY 4, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.95		3.08
No. 2 White	2.93		3.05
No. 2 Mixed	2.93	2.85	3.06
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.70	2.50	2.36
No. 2 White	2.68	2.47	2.33
No. 2 Mixed	2.68	2.47	2.30

Wheat is attracting a great deal of attention and after a 7c advance in the past week is reported strong and in demand. All observers agree that the acreage in both spring and winter wheat is low and the outlook for even a normal crop is far from promising. However recent news from the winter wheat districts show this grain is making favorable progress and in better condition than a month ago but the turn for the better has come too late in the season to help and a light crop is certain.

The market is very active due to the milling demand in the west and northwest, and the continued buying by exporters at Atlantic ports. Flour has advanced $1 and upward per barrel in the past week. And dealers are predicting prices much above the present level.

The Modern Miller views the wheat crop outlook as follows: "Winter wheat has made progress in southwest, and stooling improvement generally noted. Sufficient moisture for time being. Increasing apprehension over Hession fly infestation throughout soft winter wheat territory. Winter killing also heavy in important districts. Cold, wet weather delaying seeding of spring wheat in northwest, and with labor shortage, prospects is for 10 to 15 per cent decrease in acreage. Considerable seeding has been done in Nebraska and Iowa.

CORN STRONG

There is a slightly bearish feeling in the corn market which is caused by the bankers refusing to extend loans to carry grain and the advance in federal loan bank discount but this bearish outlook is not enough to seriously depress corn values, there being such a scarcity of corn on nearly all markets. Some dealers who have had orders booked for delivery this month are using every means possible to weaken corn as they will lose considerable money if it does not suffer a decline, but they are not meeting with much success due to the fact that after they get the market lower the moment they start buying it advances again to a higher level than ever.

CORN PRICES PER BU., MAY 4, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.93	2.03
No. 3 Yellow	1.87		
No. 4 Yellow	1.82		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.86½
No. 3 Yellow	1.70	1.73	1.84
No. 4 Yellow	1.67	1.71	1.82

The high prices do not mean much to the farmer who does not live near enough to a large city to truck his produce in. The small town dealers being unable to pay these prices as they cannot ship and get the benefit himself and he dare not store it and take chances of a big drop later when transportation is back to its proper schedule.

OATS SLOW

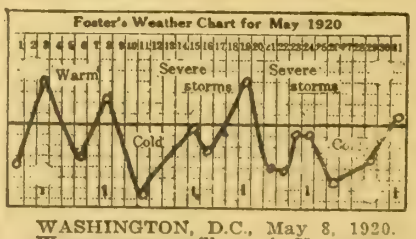
OAT PRICES PER BU., MAY 4, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.22	1.14½	1.38
No. 3 White	1.21	1.12¾	
No. 4 White	1.20		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.73½	.73¼	.80½
No. 3 White	.73	.72	.79
No. 4 White	.72	.71	.78

There is not much to say regarding the oat market this week. It is affected like corn, except that the pinch is greater in the cash deal, owing to feeding demands. Favorable weather and crop conditions are having very little depressive effect due, as in all grain, to the small supply at hand and poor prospects for any relief of importance for some time.

Wall Street, owing to the increasing demand for lower prices, predicts a downward trend to all markets in the near future but I do not believe the products of the farms will suffer to any great extent from the fact that so many farmers are leaving the farm that there will be a great shortage of all products coming from the country.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D.C., May 8, 1920. —Warm waves will reach Vancouver about May 12, 16, 20, 27 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of May 13, 17, 21, 28; plains sections 14, 18, 22, 29; meridian 90, upper great lakes, Ohio-Tennessee and lower Mississippi valleys 15, 19, 23, 30; lower great lakes and eastern sections 16, 20, 24, 31, reaching vicinity of Newfoundland about May 17, 21, 25 and June 1. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will control cropweather from near May 12 to near June 1 and will bring some of the most important weather events of the year. Severe storms are expected on Pacific slope, in middle Mississippi valleys and about the great upper and lower lakes, beginning not far from May 15 and continuing at intervals to end of month. These storms are expected to develop dangerous features and such heavy rains that destructive floods are expected.

These concentrations of moisture are expected to rob other sections, more to southward but east of Rockies, causing severe drouth, altogether making bad cropweather in many places. East of Rockies and further north there are strips of drouth extending east and west that will suffer from drouth while the floods are doing damage south of them. But these conditions will not long continue. I am promising, or predicting, a general cropweather change east of Rockies after first part of June.

BEANS UP

BEAN PRICES PER CWT., MAY 4, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.75	7.50	7.50
Red Kidneys		13.00	15.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	8.25	8.00	8.00
Prime	7.00	7.25	7.25
Red Kidneys	10.50	11.00	12.25

We are gratified to report another advance in the bean market, making a total of $1.25 per cwt., or 75c a bushel in the past three weeks. Certain grain trade papers report greater strength and higher prices on all markets and predict further advances.

RYE AND BARLEY

Rye and Barley have been showing more strength than other grains. Exporters own the bulk of the May rye in all markets. The situation closely resembles that in May wheat, 1917, when exporters bought more than could be delivered and the result was to force prices up. The supply of rye in this country is not inexhaustible, and we have already cleared over 16,000,000 bushels from July 1, 1919, to April 1, 1920. There is around 20,000,000 bushels or more sold for export now, and every day further business is reported. Further sales will take just that much more grain away from the domestic consumption, the one thing that the trade has overlooked so far. We have already exported more rye than ever before, and averaging better than 1,000,000 bushels per week. The visible would disappear over night, if transportation were available. Malsters own the May barley in Chicago. There is talk of bringing in Canadian to deliver on contracts, but it will not grade in the Chicago market. There has been little change in the rye market the past week as the railroad strike has slowed up transportation so the demands cannot be filled. The present supply on the market is small and is quoted at $2.20 for No. 2.

POTATOES DULL

SPUDS PER CWT., MAY 4, 1920		
	Sacked	Bulk
Detroit	7.23	7.10
Chicago	7.10	
Pittsburg	6.67	
New York	6.00	
PRICES ONE YEAR AGO		
Detroit	2.30	2.20
Chicago	2.15	2.05
Pittsburg	2.40	2.30
New York	2.70	2.60

The potato market has been affected by the boycott in Detroit more than at any other point according to reports. At the Detroit market potatoes are in fair supply but consumers are not buying. However, the local supply is mostly Canadian goods as Michigan buyers continue to ship to more active markets. Chicago dealers are experiencing a good demand, as high prices have not cut down the consumption as much as was expected. It has been easier to get shipments at Chicago than at the majority of the markets.

The scare that was precipitated by the announcement that great quantities of Danish potatoes would be shipped here has subsided, as the quantity actually received was far less than promised, and made scarcely a ripple on the market. Nor did they succeed in reducing the high cost of living a single penny. All the importers who were interested in Danish potatoes have dropped out altogether. Many of them who have potatoes afloat will try to market them in Cuba and it is most likely that American importers are going to bring no more potatoes here because of the stand the United States authorities have taken toward what they call profiteering. The risk is too great and there is too much trouble answering questions on how a legitimate business is conducted,

especially when these questions come from investigators, who by their actions, shows that they do not know a potato from an onion.

Although there is some improvement in the railroad situation, the congestion of freight incident to the strike can not be cleaned up in some time, even under the best conditions. Values continue high but the feeling is that markets are strained and heavier receipts will cause a decline. A firm feeling exists at present but it is due to the lack of arrivals. Buyers are holding off as much as possible because of the high values. Farm work and the shortage of labor on farms will retard the spring movement of hay this year, but until the balance of labor again favors the farm hay will be about the only crop the farmer can raise—*Hay Trade Journal.*

BOSTON WOOL MARKET

The Commercial Bulletin says: "The English government sale revealed a stronger demand for spot fine wools than it had been supposed existed, although trading in the market privately has been limited. Prices are ruling firm on all fine wools. In the west, also, even shorn fine wools are being taken on a parity with the seaboard markets. Medium to low wools are dull and easy. The goods market is unsettled, woolen mill trade being very dull so far as the wool market is concerned."

DETROIT PRODUCE MARKET

Prices high and a general feeling of dissatisfaction on the part of both buyer and seller. Vegetables and fruits were not in sufficient supply to satisfy buyers and the market is quoted firm. Consumers taking all the poultry, dressed hogs and calves in the market. Supplies of poultry are light. Buyers are taking eggs freely and the tone is firm. Butter is quiet and offerings are sufficient. The butter market is easy.

Apples—Western, boxes, $4.50@5.50; Baldwin, $4.50; Steele Reds, $4@5 per bu.

Popcorn—Shelled, 9c per lb.

Dressed hogs—light, 19@21c; heavy, 17@19c per lb.

Dressed calves—Best, 22@24c; No. 1, 20@21c per lb.

Maple sugar—Maple sugar, 45@48c per lb.; maple syrup, $3.50@3.75 per gallon.

Potatoes—Michigan, $11; Canadian, $10@10.50 per 150-lb. sack.

Live poultry—Spring chickens, best, 36@38c; leghorns; 34@35c; hens, 36@38c; small hens, 34@35c; roosters, 23@25c; geese, 30@35c; ducks, 40@45c; turkeys, 44@45c per lb.

Hides—No. 1 cured calf, 45c; No. 1 green calf, 40c; No. 1 cured kip, 35c; No. 1 green kip, 30c; No. 1 cured hides, 25 to 45 lbs., 32c; 45 lbs. and up, 22c; No. 1 green hides, 25 to 45 lbs., 23 c; No. 1 cured bulls, 18c; No. 1 horsehides, $10; No. 2 horsehides, $9; Tallow, No. 1, 13c; No. 2 10c; Sheep pelts 50c@3.50; No. 2 hides and No. 2 kip and calf, 1 1 -2c off.

LIVE STOCK MARKETS

DETROIT—Cattle: heavy steers, $11.50@12.75 1-2; best hand weight butcher steers, $10.50@11; mixed steers and heifers, $9@10.50; handy light butchers, $8@9; light butchers, $7.50@8.50; best cows, $8.50@9.25; butcher cows, $7@7.75; cutters, $6; canners, $5@5.50; best heavy bulls, $8.50@8.75; bologna bulls, $7.50@7.75; stock bulls, $7@7.50; milkers and springers, $60@110. Veal calves: market dull, 50c lower than last week's close; best, $13@14; others, $8@11. Sheep and lambs: market steady; best lambs, $16.50@16.75; fair lambs, $13@14; light to common lambs, $8@11; fair to good sheep, $10; culls and common, $5@7. Hogs: Market dull, especially so on pigs, for which there is no eastern outlet; pigs, $14; mixed hogs, $15.15. Nothing can be shipped out of here at present.

CHICAGO—Cattle: beef steers steady to strong; sales $10.50@13.75; bulls and calves weak, all other classes steady; compared with a week ago, beef steers 25 to 90c higher; she stock 75c higher; bulls and feeders 25 to 50c higher; vealers, $1 to 1.50 lower; heavy calves 50c lower. Hogs: market steady to strong; top, $15.50; bulk light, $15.25@15.50; bulk 150 lbs. and over, $13.85@14.65; pigs, market steady to 50c lower; bulk of desirable, 100 to 120-lb. pigs, $13.25@14.25. Sheep and lambs: Few sales around 25c higher; compared with week ago, lambs mostly $1 lower; sheep steady.

EUROPE COMMENCING TO FEEL LACK OF SUPPLIES

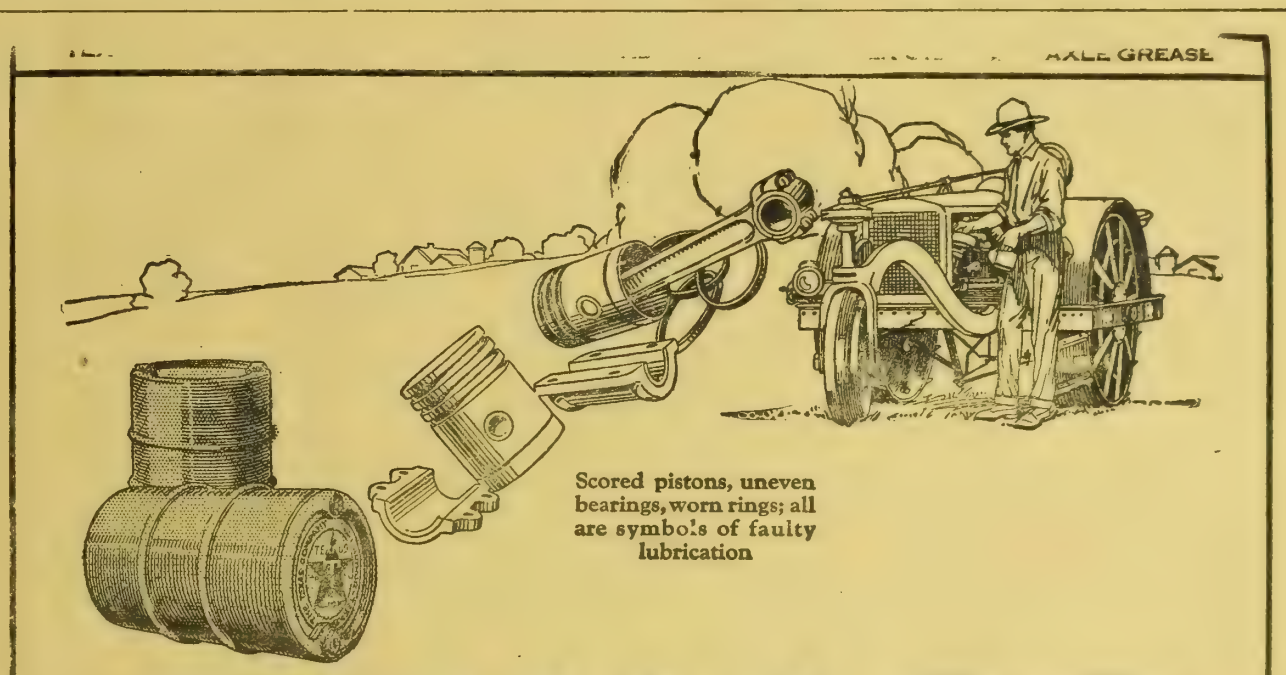
Europe is commencing to feel the pinch of lack of supplies of bread grains. The cables claiming that Argentina will embargo shipments of wheat by July 1st are becoming more insistent. Argentine wheat sold the past week 20@23c per bushel above what it would cost to lay down American wheat in European ports. The entire Argentine surplus of wheat will have been shipped by July 15th, if the present rate of exports is continued. From then until the new crop there and in Australia is harvested, Europe must either take wheat from North America or draw its belt tighter. It dare not allow reserves to get any smaller than at the present time. There is more than an outside change of a most sensational situation developing in bread grains. To be very frank, we can see wherein the greater part of Europe will have to go back to bread substitutes before long unless there is a marked change. A cold wet spring in the American and Canadian Northwest with a lack of fall and spring plowing is very favorable for the development of black rust. You have been reading about the poor prospect for the winter wheat crop for some time past. Just add a short spring wheat crop and where will the world get off?

Suppose this country raises around 750,000,000 bushels of wheat this season. Add 100,000,000 to 150,000,000 bushels as the carryover from the 1919 crop (we favor the inside figure) and combine with a short crop in Europe and you can easily see where higher prices than ever before could easily be secured. Last fall, the Department of Agriculture advised that less wheat be sown. It happened, by a big percentage. Now it has reversed its view and begs farmers to put in every acre possible. The Bureau of Markets representative at London has sent a most pessimistic view regarding the outlook for supplies for the United Kingdom. This theory of ours would probably work out all right were it not for the financial situation. The biggest business men in the country are playing their cards close against their vests and BUYING LIBERTY BONDS—*Rosenbaum Review.*

FROM THE BEET GROWERS' STANDPOINT

"I have read with much interest how the beet growers of Michigan are taking steps to protect themselves against the manufacturers of sugar who have profited and will continue to profit at the expense of the farmer if permitted to do so. And if they cannot be induced to deal squarely, why not a co-operative sugar factory owned and operated by the farmers? They have cooperative elevators and clearing houses, why not cooperative sugar factories? May your good efforts be justly rewarded.—*Frank Martin, Marquette County.*

"There are two kinds of farmers now days. The one that sticks to the beet organization is an American to work himself up, and the others—though only a few of 'em—who put in beets, are working to stay or go deeper in the hole every year, and are what you might call for short 'scab farmers'. Those are the kind who think they can do more alone than all the rest put together".—*Leon B., Reese, Mich.*



Scored pistons, uneven bearings, worn rings; all are symbols of faulty lubrication

TEXACO

TRACTOR OIL

The greatest foe of the tractor is friction. The toll it exacts is seen in the little scrap heaps that so peacefully repose in repair shops, against tool sheds, and in farm yards. Scored pistons, uneven bearings, worn rings; all are symbols of faulty lubrication. Surely, this is a high price to pay for the lack of a little care and it is all the more deplorable because a little judgment in the choice of oil and some "system" in using it will pay over and over again. Choose a quality oil like TEXACO and use the grade recommended for your type of tractor. Oil as often as your instruction book directs. Then you will be sure that a sturdy film of oil is amply protecting every working part. You are sure then that wear is kept down and power increased. TEXACO TRACTOR OIL is shipped in 55-gallon and 33-gallon steel drums, wooden barrels, half-barrels, and 5-gal. drums.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

NINE MILLIONS LOANED TO THE FARMERS IN MARCH

During the month of March, 1920, an aggregate of $9,703,290 was loaned to 2,436 farmers of the United States by the Federal Land Banks on long time first mortgages according to the monthly statements made to the Farm Loan Board. The Federal Land Bank of Omaha leads in the amount of loans closed, the same being $2,194,100, the Federal Land Bank of St. Louis following with $1,938,000. The other banks closed loans in March as follows: Louisville, $898,400; Houston, $879,215; New Orleans, $819,675; St. Paul, $780,700; Wichita, $506,100; Spokane, $470,100; Berkeley, $342,600; Springfield, $306,600; Columbia, $301,200; Baltimore, $266,600.

During March 2,269 applications were received by the twelve banks, asking for $8,209,499 and during the same month 2,676 loans were approved by them amounting to $7,480,342.

On March 31, 1920, there were operating in the United States 3,995 Farm Loan Associations, and the total mortgage loans made by the Federal Land Banks through these associations to 125,492 farmer-borrowers as of that date, amounted to $344,721,366. Deducting from this amount the loans paid off in full by grand total of loans in force as of borrowers to wit: $9,333,550 the March 31, 1920, is distributed within the Federal Land Bank Districts as follows.

St. Paul	$45,085,100
Omaha	44,607,640
Spokane	42,629,320
Houston	38,392,046
Wichita	27,522,600
St. Louis	27,049,130
Louisville	25,077,200
New Orleans	23,176,480
Columbia	17,972,905
Berkeley	16,948,200
Baltimore	13,462,800
Springfield	12,864,395

Up to March 31, 1920, matured interest and amortization payments due by borrowers to the Federal Land Banks amounted to $21,744,620.82. Of this amount all but $256,866.03 or 1.2 per cent had been paid, and of this sum $113,789.01 represents delinquent instalments maturing during the month.

WOOL CONSUMPTION HIGH IN MARCH

The amount of wool consumed in March exceeded the monthly average for 1918 and 1919, but fell below the high mark reached in January of this year, according to figures just released by the Bureau of Markets, United States Department of Agriculture.

On a grease basis, 67,900,000 pounds of wool were consumed, compared with 34,000,000 pounds in March, 1919, and 71,900,000 pounds in March, 1918. According to conditions as reported, the amounts consumed, in pounds, were: grease, 47,467,979; scoured, 8,905,370; pulled, 1,971,253. The percentages of the various grades used were: fine, 29.4; 1-2 blood, 18.2; 3-8 blood 20.1; 1-4 blood, 18.2; low, 3; and carpet, 10.8 per cent.

There was little change in the usual ranking of the states in the amounts consumed, Massachusetts being first with 24,540,957 pounds; Pennsylvania, 8,136,873 pounds; Rhode Island, 6,750,956 pounds; New Jersey, 5,584,958 pounds; and New York, 4,724,831 pounds; with Connecticut, New Hampshire, Ohio, and Maine following in the order named.

FARMERS' BULLETINS

The United States Department of Agriculture has issued two bulletins that should be of the utmost value to any man engaged in farming. They are, "The Hessian Fly," No. 1083, and "Fire on the Farm," No. 904.

The bulletin on the Hessian Fly explains how to prevent losses from this pest, which undoubtedly is the most injurious insect enemy of wheat in the United States. The annual damage done by this fly throughout the United States is estimated at $50,000,000.

"Fire on the Farm" contains information regarding preventation of fire and fire fighting, and is a very instructive booklet.

Another bulletin that farmers who are interested in the raising of sheep should have is "Equipment for Farm Sheep Raising," No. 810. It contains plans for building the sheep barn, arranging the feeding racks, building lambing pens, building dog-proof fence, and on last page is a list of free bulletins on the raising and diseases of sheep.

One or all of the bulletins can be obtained free of charge by writing the United States Department of Agriculture at Washington, D. C., stating the number or the numbers of Farmers' Bulletins you would like to receive.

CALLS ON MEN OF CITIES TO HELP FARMERS

With a shortage of hired farm labor, as acute as in 1918, threatening to curtail food production on American farms, E. T. Meredith, Secreary of Agriculture, has issued an appeal to city men, college students, and others to spend their vacations working on farms, particularly as helpers in harvest fields.

Reports secured by the Federal Department from its representatives in practically every state in the union show that the supply of hired farm labor in this country is only about 72 per cent of the normal supply, compared with approximately 84 per cent of a normal supply a year ago. This year's shortage is almost exactly the same as that of two years ago when large numbers of men were in military service.

The present shortage has arisen in spite of the fact that farm wages are 15 to 25 per cent higher than last year. The situation unremedied can not fail to have an unfavorable effect on production, according to the United States Department of Agriculture, and will tend to prevent any reduction in the prices of farm products. While the total acreage undoubtedly will be reduced as a result of the present situation, it will not be in as large proportion as the reduction in the labor supply, because the farmers with their families are exerting themselves to the utmost to overcome their handicap. Cultivation this year will be less intensive than formerly. More land will be put into grass and such other crops as require a minimum of labor, it is said, and the tilled fields will be less intensively cultivated.

Secretary Meredith calls on all business men and students to spend their summer holidays helping relieve the present situation and so aid in combating high living costs. In making this appeal it is recognized that, at the outset at least, such labor is not as efficient as experienced farm labor, but the excellent results secured in 1918, when city men in large numbers aided the farmers, leave no doubt as to the success of the present drive if the men will respond.

The United States Department of Agriculture was represented by Asher Hobson at the meeting of the National Farm Labor Conference held in Kansas City April 16, and the office of Farm Management, of which Mr. Hobson is assistant chief, is laying plans looking toward offering effective aid in dealing with the farm labor situation, particularly in the harvest season. It is expected that definite announcement regarding work along this line will be made in the near future. Until other provision has been made by the department all persons interested in finding work on farms should write to the directors of agricultural extension at the agricultural colleges in the various states. These directors are prepared to supply the names of county agents having farmers in their respective counties who need farm labor. By this method anyone desiring to help on a farm can get in direct communication with the farmer.

HOG CHOLERA IN STATE

Hog cholera has broken out in Branch county and local officials in co-operation with representatives of the state veterinarian's office, have vaccinated a large number of porkers in the past few days. The disease made its first appearance among a drove owned by the Union City Supply Company. Walter Smith, buyer for the firm, found five hogs dead when he went to the company's corral south of town and seven more died soon after. Forty-eight were found ill. The hogs that died weighed from 125 to 200 pounds each.

FARMERS' ELEVATORS INCREASE BUSINESS

Reports of the Minnesota railroad and warehouse commission show that in the last year farmer-owned local elevators, which comprised a little less than 25 per cent of the total number of local elevators in the state, handled 38.9 per cent of the grain.

During the crop year ending Aug. 31, 1919, the number of the elevators increased from 356 to 390. The line elevators averaged receipts of 76,652 bushels of grain and the farmer elevators 140,179 bushels, or nearly double.

ASK AID FOR FARM

Co-operation of city merchants and manufacturers with the farmers to insure the latter the labor needed to increase planting was urged by John I. Gibson, secretary of the Western Michigan Development bureau, in an address to the Grand Rapids Rotary club. He recommended temporary suspension of industries, if necessary to provide labor with which to cultivate and harvest crops.

GRANGES TO AID IN SHIP BY TRUCK WEEK

Directing the attention of more than one million farmers to the issues involved in highway transportation and good roads, Thomas C. Atkeson, Washington representative and moving spirit in the National Grange, Patrons of Husbandry, has addressed a letter to grange secretaries throughout the country enjoining their participation in National Ship by Truck, Good Roads Week to be observed May 17 to 22.

"In this connection," writes Mr. Atkeson, "I heartily approve of the general idea involved in Ship by Truck Good Roads Week and attention that will thereby be directed to the problems of highways transportation and distribution."

As a preface to his letter, Mr. Atkeson says:

"The national grange believes that the time has come when all national government highways should be unified in a single administrative department and that a national highway law should be worked out which will serve the welfare of the whole country and distribute the expense of highway construction equitably between the beneficiaries.

Expressing his belief that there is a place for the motor truck in agricultural pursuits, Mr. Atkeson continues:

"It is conceded that there is a place for the motor truck on the farm and most particularly does this apply to the economic use of the motor truck by farm associations. To secure the most satisfactory and beneficial use of the motor truck the nation, the state, the county must have suitable permanently constructed road beds to insure motor truck operations from the producer to the consumer. Not only is the necessity for permanent highways apparent in this instance, but an improved highway is a step toward the improvement and consolidation of rural schools and their use as rural social centers."

Mr. Atkeson requests the grange secretaries to bring the preparations for the week to the attention of farmer members. He says:

"In view, therefore, of the simultaneous discussion, study and attention on the part of the citizens of this nation, which will be directed to these problems by National Ship by Truck Good Roads Week, it is recommended that you bring this matter before your grange and take part so far as it is possible in the activities attendant on the success of the national week."

"It is evident, therefore, that the grange should be represented on committees and it is thought that because of this the grange will be able more intelligently to define the farmer's angle and arrange for farm participation than anyone else."

CHEESE FACTORY FOR REPUBLIC

The Cloverland Cheese Manufacturing association has been organized by farmers residing in the western part of Marquette county, and it is expected that it will not be long before the organization will have a factory in operation in Republic.

Equipment for the new plant has already been ordered and will be installed in a suitable building as soon as it reaches Republic. It is expected that the plant will be capable of turning out 600 pounds of cheese daily, which will mean that 6,000 pounds of milk will be required each day. The farmers will be paid the regular market price for butter fat and all milk will be thoroughly tested before accepted. Any profits accruing will be returned to the members of the association in direct proportion to the amount of milk furnished.

The officers of the Cloverland Cheese Manufacturing association are: George Starkey, president; Isaac Maki, vice president; Bert Barton, secretary and treasurer. Members of the executive board include John Hogan, John Maki, John Kostona and Emil Wahlstrom.

Farm Bureau Acts to Pool State Cherry Crop

To consider plans for pooling Michigan grown cherries and standardization of the growing and marketing conditions in the cherry districts of Michigan, Wisconsin and New York states, the Michigan State Farm Bureau has called a meeting of the cherry growers of these states at Frankfort, Mich., May 19. This action was taken at the request of the growers of Benzie, Manistee and Grand Tarverse counties.

In the past there has frequently been a conflict between the growers of these three states in the marketing of their products and as this condition has been disastrous to all the Michigan growers got in touch with those of the other two states and found sentiment ripe for co-operation.

In the formation of better marketing arrangements of Michigan cherries, the Michigan State Farm Bureau has been asked to take an active part and it is possible that in the near future representatives of the Cadillac Potato Growers' Exchange and the Fruit Growers' Exchange will be called together to consider plans of assisting in this movement.

The cherry crop in Michigan this year has excellent prospects. Estimates of the crop of the leading Michigan Cherry counties for this year are as follows:

Grand Traverse	175,000 cases
Benzie	100,000 cases
Manistee	30,000 cases
Mason	30,000 cases
Oceana	40,000 cases
Antrim	40,000 cases

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, a New York millionaire, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis,' to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. Francis explores another island where he meets a young man who gives his names as Henry Morgan and proves to be a relative of Francis.' He is also hunting for the treasure. They form a partnership. Francis learns that Henry is the lover of the girl he met and that her name is Leoncia Solano. Francis returns to the first island where he is captured by Torres and the Jefe Politico of San Antonio. They proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang him when Henry appears. They release Francis and throw Henry into prison. The Solanos and Francis release Henry and they escape to the boat that Francis has chartered. They are pursued by Torres and the Jefe with his soldiers. They land on an island where they procure horses and start through the hills with the Jefe and his gang in pursuit. Torres with the Jefe and his gendarmes succeed in capturing the Morgans and their friends, but as they are about to torture Henry and Francis they are surrounded by a band of men. These men are followers of a blind-man, called "The Cruel Just One," who lives in the hills. The men take their captives before their leader who passes judgment on them. The Morgans and Solanos are freed. A price is put on the Jefe's head, which Francis pays, then the Jefe, Torres and their soldiers are freed also. Francis protects a peon who to show his gratitude tells him that his father will lead them to a hidden treasure. The peon and his father with the Morgans start on a search for the treasure. Leoncia follows and at the end of the first day catches up with them. They are attacked by a band of strange men, but they drive them off.

FIFTEEN minutes were lost ere Henry and Francis succeeded in only partly convincing him by repeated trials of their voices that the thing was an echo.

Half an hour later they debouched on a series of abrupt rolling sand dunes. Again the old man shrank back. From the sand on which they strode, arose a clamor of noises. When they stood still, all was still. A single step, and all the sand about them became vocal.

"When the Gods laugh, beware!" the old Maya warned.

Drawing a circle in the sand with his finger, which shouted at him as he drew it, he sank down within it on his knees, and as his knees contacted on the sand arose a very screaming and trumpeting of sound. The peon joined his father inside the noisy circle, where, with his forefinger, the old man was tracing screeching cabalistic figures and designs.

Leoncia was overcome, and clung both to Henry and Francis. Even Francis was perturbed.

"The echo was an echo," he said. "But here is no echo. I don't understand it. Frankly, it gets my goat."

"Piffle!" Henry retorted, stirring the sand with his foot till it shouted again. "It's the barking sand. On the island of Kauai, down in the Hawaiian Islands, I have been across similar barking sands—quite a place for tourists, I assure you. Only this is a better speciment, and much nosier. The scientists have a score of high brow theories to account for the phenomenon. It occurs in several other places in the world, as I have heard. There is only one thing to do and that is to follow the compass bearing which leads straight across. Such sands do bark, but they have never been known to bite."

But the last of the priests could not be persuaded out of his circle, although they succeeded in disturbing him from his prayers long enough to spout a flood of impassioned Maya speech.

"He says," the son interpreted, "that we are bent on such sacrilege that the very sands cry out against us. He will go no nearer to the dread abode of Chia. Nor will I. His father died there, as is well known amongst the Mayas. He says he will not die there. He says he is not old enough to die."

"The miserabe octogenarian!" Francis laughted, and was startled by the ghostly, mocking laugh of the echo while all about them the sand dunes bayed in chorus. "Too youthful to die! How about you, Leoncia? Are you too young to die yet a while?"

"Say," she smiled back, moving her foot slightly so as to bring a moan of reproach from the sand beneath it. "On the contrary, I am too old to die just because the cliffs echo our laughter back at us and because the sand hills bark at us. Come, let us go on. We are very close to those flashings. Let the old man wait within his circle until we come back."

She cast off their hands and stepped forward, and as they followed, all the dunes became inarticulate, while one, near to them, down the sides of which ran a slide of sand, rumbled and thundered. Fortunately for them as they were soon to learn. Francis, at abandoning the mules, had equipped himself with a coil of thin, strong rope.

Once across the sands they encountered more echoes. On trials, they found their halloes distinctly repeated as often as six or eight times.

"Hell's bells," said Henry. "No wonder the native fight shy of such a locality!"

"Wasn't it Mark Twain who wrote about a man whose hobby was making a collection of echoes?" Francis queried.

"Never heard of him. But this is certainly some fine collection of Maya echoes. They chose the region wisely for a hiding place. Undoubtedly it was always sacred even before the Spaniards came. The old priests knew the natural causes of the mysteries, and passed them over to the herd as myster with a capital 'M' and supernatural in origin."

Not many minutes afterward they emerged on an open, level space, close under a crannied and ledge-ribbed cliff, and exchanged their single file mode of progression to three abreast. The ground was a hard, brittle crust of surface, so crystalline and dry all the way down. In an ebullition of spirits, desiring to keep both men on the equality of favor, Leoncia seized their hands and started them into a run. At the end of half a dozen strides the disaster happened. Simultaneously Henry and Francis broke through the crust, sinking to their thighs, and Leoncia was only a second behind them in breaking through and sinking almost as deep.

"Hells bells!" Henry muttered. "It's the very devil's own landscape."

And his low spoken words were whispered back to him from the near by cliffs on all sides and endlessly and sibilantly repeated.

Not at first did they fully realize their danger. It was when, by their struggles, they found themselves waist deep and steadily sinking, that the two men grasped the gravity of the situation. Leoncia still laughed at the predicament, for it seemed no more than that to her.

"Quicksand," Francis gasped.

"Quicksand!" all the lanscape gasped back at him, and continued to gasp it in fading ghostly whispers, repeating it and gossiping about it with gleeful unction.

"It's a pot hole filled with quicksand," Henry corroborated.

"Maybe the old boy was right in sticking back there on the barking sands," observed Francis.

The ghostly whispering redoubled upon itself and was a long time in dying away.

By this time they were midway between waist and arm-pits and sinking as methodically as ever.

"Well, somebody's got to get out of the scrape alive," Henry remarked.

And, even without discussing the choice, both men began to hoist Leoncia up, although the effort and her weight thrust them more quickly down. When she stood, free and clear, a foot on the nearest shoulder of each of the two men she loved, Francis said, though the landscape mocked him.

"Now Leoncia, we're going to toss you out of this. At the word 'Go!' let yourself go. And you must strike full length and softly on the crust. You'll slide a little. But don't let yourself stop. Keep on going. Crawl out to the solid land on your hands and knees. And, whatever you do, don't stand up until you reach the solid land—Ready, Henry?"

Between them, though it hastened their sinking, they swung her back and forth, free in the air, and the third swing, at Francis' "Go!" heaved her shoreward.

Her obedience to their instructions was implicit, and on hands and knees she gained the solid rocks of the shore.

"Now for the rope!" she called to them.

But by this time Francis was too deep to be able to remove the coil from around his neck and under one arm. Henry did it for him, and, though the exertion sank him to an equal deepness, managed to fling one end of the rope to Leoncia.

At first she pulled on it. Next, she fastened a turn around a boulder the size of a motor car, and let Henry pull. But it was in vain. The strain or purchase was so lateral that it seemed only to pull him deeper. The quicksand was sucking and rising over his shoulders when Leoncia cried out, precipitating a very bedlam of echoes:

"Wait! Stop pulling! I have an idea! Give me all the slack. Just save enough of the end to tie under your shoulders.

The next moment dragging the rope after her by the other end, she was scaling the cliff. Forty feet up, where a gnarled and dwarfed tree

USL
STORAGE BATTERY
SERVICE
The longer we make your present battery last, the surer we are of eventually selling you a new one.
USL BATTERY SERVICE

"There's a sign that tells the *truth*, John!"

"HOW do I know? Well, you saw how quick my starter got us going back there? The battery supplied the speed of course. Engine stiff, too, so it needed a *live* battery to do the job."

"You wouldn't think my battery was in bad shape four months ago — wouldn't start at all. I guessed I'd have to buy a new one. But I thought I'd see what those USL fellows would say. Had an idea they'd agree my battery was done for and offer to sell me a USL."

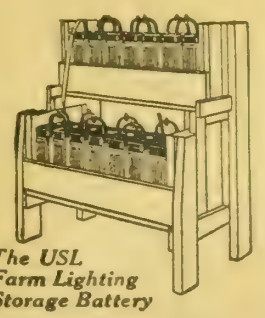
"But they wouldn't sell me a battery at all. Just took a few minutes to open up my old one, and showed me its plates were still too sound to justify the deal. Said they'd repair it and guarantee it for eight months."

"And that repaired battery has been as lively as a colt ever since. I can see it's going to last a lot longer than the guarantee period, too."

"And you can bet these USL fellows *will* sell me a USL when I *do* need a new battery. No wonder they're succeeding when they give people the kind of service they gave me."

Whatever your battery's brand, better drive in to the nearest USL Service Station and see what USL Golden Rule Service can do for you.

And when you *need* a new battery, your size of USL is ready for you. It has extra wear Machine-Pasted Plates. It comes "Dry-Charged," so you get it—not partly worn out—but *fresh*. It is guaranteed.



The USL Farm Lighting Storage Battery

U.S. Light & Heat Corporation, Niagara Falls, N.Y.

Likely there's one of our fifteen hundred service stations in your town. If there isn't, for the address of the handiest, just drop a post card to the nearest of the following distributors:

Entered as second-class matter, at post-office, Mt. Clemens, Mich.

Everybody's Doing It.

"WHERE'S my egg this morning", demands the hungry business man. "Oh, my dear", explains wifey, "we can't afford to eat eggs any more. They've gone up to sixty cents a dozen". Hubby grunts, eats his grape fruit, and departs for his work. A little later wifey goes down-town and buys a new $50 hat.

Hubby reaches the office, opens up a new box of 25-cent cigars and works furiously for a couple of hours. Then having an appointment with his tailor he goes to be measured for a new suit of clothes. He is not sure about the pattern he prefers. Here is one marked $150; another $200. He finally chooses the $150 suit because as he explains to the tailor, he "must economize on account of the high cost of living". Around the corner at a trifle less fashionable shop he could have purchased a good suit for $100.

By the time the measuring ordeal is over, it is time for lunch. He goes to a well-known cafe, and pays $2 for food and tips. As he pockets his change he grumbles something to a neighbor about what highway robbers the farmers are for charging so much for food. A block or so away he could have purchased all the food he needed without the tips for 50c.

He returns to work about 2 o'clock and whiles away the afternoon closing up a business deal, meeting with a committee from one of his several clubs, and placing his order for a new set of golf sticks and balls. He also phones the theater to reserve him two of the best seats in the house for the evening's entertainment. Advised that the price of these seats has just advanced $1, he says, "Oh, that's all right. We wouldn't miss that show for anything".

The afternoon's work over he starts for home. The gasoline is low in his machine so he must stop and have it replenished. Noting that the price has advanced one cent over the previous day's price, he makes some jocular remark about Mr. Rockefeller, and cheerfully pays for the gas. He drives home at a cost of 50 cents when he might have taken the street car at 5 cents and saved 90 cents on his morning and night trip.

Over the evening meal there is the customary discussion on the high cost of liviing. The paper says that the Fair Price Board has decided to fix maximum prices on food products. "It's about time", says Hubby "that the government was getting after the farmers and the food profiteers. The cost of food is getting something fierce". And wifey chimes her approval.

After dinner they go to the theater to see a show which they "wouldn't miss for anything". The comedian gets off a lot of witty remarks about a business man's wife breaking her bank account by purchasing a bushel of spuds. And a thousand hubbies and wifies in the audience applaud.

After the show they retire to a cafe where the better part of a ten dollar bill is squandered over a meal and music. They finally reach home and lie awake half the night figuring how to cut down the meat and grocery bill.

A Giant the Slave to a Pigmy.

THE COUNTRY is short of coal. Factories are running at half capacity and homes are heated at half temperature, all because there is no coal in the bin. But there is plenty of coal beneath the surface of the earth—enough coal the scientists tell us, to heat our hearths and fire our furnaces for thousands of years to come. But this coal—this great natural wealth which in theory at least belongs to all the people—is under lease to private corporations. If they will to mine the coal the coal is mined. If they will not to mine the coal the coal is not mined and there is suffering as a consequence. It is a case of the giant being slave to a pigmy.

The coal operators are willing to mine coal just now. The demand is great; the prices are high; the profits large. But they cannot get cars to move the coal, and some mines are running only one day out of seven. Of course, there are not enough cars in the country to move all the freight when it needs to be moved. The war has raised havoc with the railroads as it did every other industry. But there are enough cars to move necessaries, and necessaries should come first. Coal is a necessary, but the cars that ought to be moving coal are being used to transport automobiles and road building supplies. The rate on these is higher than on coal, we are told, which explains why the railroad companies divert cars to automobile factories and road supply stations which ought in the present emergency to go to the coal mines. The government, having relinquished control of the railroads, is powerless to act. It is another case of the giant being slave to a pigmy.

Faith in the Government.

THIS IS an age when every citizen feels it his privilege to criticize the government. We all concede that honest criticism on the part of those who are qualified to criticize is a good thing. It often acts as a danger signal to warn the ship of state off the rocks. But there is a good deal of criticism on the part of newspaper writers and platform speakers, to say nothing of the parlor car parasites, which is loose and destructive and is destroying people's faith in democracy.

It is undeniably true that there is graft and corruption; that scores of men are elected to state and national offices who have no business to be there; that there is waste and inefficiency in many departments of government; that great national issues are made the footballs of politics; and that many other evils exist which ought to be investigated and corrected. No government can be entirely free from these weaknesses.

The evils which are a part of every administration seem magnified and more numerous in the present administration. Perhaps this is the fault of the President; perhaps it is the fault of the bitter partisan enmity between the leaders of the two great political parties; perhaps it is merely a natural result of the extravagances and differences born of the war. No matter what the cause, the evils exist and there is widespread dissatisfaction over the way in which the affairs of the government are now being administered.

This condition lessens people's faith in a republican form of government. It puts ammunition into the hands of the government's enemies who hold up the shortcomings of the government as a terrible example of the insufficiency of the form of government. The inference is not justified. Laws and courts can neither be created nor set to functioning without men. The best laws that could be adopted would be useless or even harmful if the men selected to administer them were false to their duty. In every form of government the subjects of the government must rely upon human beings to perfect their government and make it render good service. When a government does not render the people maximum service at minimum cost, the fault is not with the machinery of the government itself, but with the men who operate the machinery.

If your hired man drove your horse nearly to death, you wouldn't kill the horse to reform the hired man, would you? No. You'd discharge the hired man. If your hired men in Congress do not run your government to your satisfaction, you would not logically destroy the government. On the contrary you would choose new and better men to manage the public affairs.

Let us have faith in our government. It may not be perfect. It may not always be just and impartial, but for all of that we would not exchange it for another government either of the past or present. If it has seemed to fail us the last few years let us be fair and concede that no government was ever confronted with greater problems than have piled up before our government during and since the war.

We are soon to hold another state and national election. We shall elect a President to guide our nation through four years of what may be the most trying period of our history. We shall elect congressmen to make our laws. In the state we shall elect a Governor and a legislature. Let us be wise in our choice. Let us cast no ballot that does not express a judgment based upon an intelligent and impartial conception of our needs. Let us lay entirely aside our partisan prejudices, our personal animosities and preferences and cast a ballot that our good, common Yankee sense tells us is for the men best qualified to serve not only our individual interests but the interests of the people of Michigan and of the United States.

The Late Spring

THE LATE spring will add to the difficulties of the farmer who is obliged to "go it alone" this summer. It means the bunching of work. It puts the plowing into the fitting time; the fitting into the seeding time; and the seeding almost into cultivating time. It puts a handicap on farming operations for the entire season.

The late spring is not peculiar to Michigan by all means. Indeed, from the reports that are given of the present condition of winter wheat and the delay in seeding of oats in the south central states, the situation is much worse in other states than in Michigan.

It is unfortunate not only for the farmer but for the nation that planting should be so delayed this year of all years. A good many farmers finding it impossible to get help have made up their minds to attempt their usual acreage and do the work alone, trusting to luck and good weather to get the crops through to harvest. Possibly with an early spring these farmers might have been able to carry out their program without help, but it is certain now that if they are to plant their usual acreage they must have help. Where the help is not available, they must cut their acreage.

How Collier's Would Help the Farmer.

IN A DOUBLE-page editorial Collier's Weekly makes the best diagnosis of the farmer's case and presents the best remedy that has yet come to our attention. Among the forceful and pungent paragraphs are the following:

"We want the distribution leech removed from the farmer by :

"1. Wise regulation of freight rates on farm products.

"2. Close supervision of commission houses and middlemen.

"3. State aid, or actual state distribution through public agencies, if necessary.

"4. Encouragement rather than adverse legislation for co-operative distribution by farmers and for co-operative buying by consumers."

Would it be out of place to inquire of the ivory-headed gentlemen in the last legislature who throttled the warehouse amendment on the grounds that it was "socialistic", if they would accuse Collier's Weekly of supporting that doctrine?

What the Neighbors Say

A FRIEND OF THE DOG

The imaginary article appearing in the M.— F.— April 3rd issue, under the heading "Protecting Michigan's Live Stock," would give a person with brains and a heart a pain. He tries to make it appear the dog is a curse and a menace to the state when as a matter of fact he is man's best friend, and the writer will try to prove it.

God created the dog the most intelligent and affectionate animal of all dumb creatures, and when you know of some of his deeds of intelligence and love you wonder if he is not almost human. Nearly every day you read of some noble deed he has done and saved some human beings life and quite often at the expense of his own. In my own neighborhood, last winter, a farmer's house caught fire in the night and they were awakened by the Collie dog upon their bed barking and hauling at them. They just had time to jump for their lives and get outdoors when the chimney fell in over their bed.

Another instance: A Mr. Rollings came home late at night, went to bed and asleep, and when he was awakened, his good dog Nero had him by his shirt collar trying to drag him out. He jumped for his life, rushed out the door, the dog following him. After Nero saw him safe he went back into the burning house to see if there was any more of the family and was overcome and burnt up.

The writer visited a watering place or a summer resort, a couple of years ago. Almost immediately my attention was taken up by a little tot of a girl playing along the waters edge, with no other protection than a big noble Newfoundland dog, who seemed never to take his eyes off of her and always stood between her and the water, and when she got too close, he would lean against her and crowd her away. Was that human? He was doing one of the things that God put him here for, but some men are not big enough to know it. Nearly all know of the noble dogs services on the battlefields of Europe. How many of our dear boys would never have been found alive and would have died for the want of care, had it not been for the dogs, who trailed them out and lead the stretcher bearers to their aid.

He says the dog drove out the sheep industry of the state; that is not true. It was fifteen cent wool and seventy-five cents to a dollar and a half sheep that drove the industry from the state. The writer raised sheep for many years, until wool and lambs got so cheap it was at a loss to keep them, and he never had one molested by dogs, and in the township the dog fund piled up so large we had to give it to the schools, and the dog tax was one dollar, enough and all it should be.

True, some dogs are like some men, narrow-minded and of a selfish disposition, not up to their calling. Some of the latter found their way into the legislature, there they have been a failure and a detriment to the state. And after creating unnecessary commissions and appropriating thousands of dollars of the taxpayers money to pay the salaries of the same, and in their selfish disposition dodged the warehouse amendment and refused to submit it to the people. Then they tinker with the dog law. And fix the tax at an outrageous fee, that will cause many a little boys' chum, and man's best friend to be destroyed, and bring back the sheep industry of the state. Then there will be no excuse if wool should go back to where it was once, at fifteen and eighteen cents a pound and lambs at seventy-five cents to one dollar and a half a piece.

The writer has owned a dog many years, sometimes two. Has one now he values higher than any dumb animal on the farm. And some of them have papers behind them. I do not lock a door. He stands guard while I am off duty to sleep. He is ever watchful of anything I might ask of him and if he thinks he has displeased me and I am cross at him, he will come to me and wag his tail and kiss my hands and do everything he can to have me forgive him. And when I say "Daile it is all right," he is satisfied. What a grand thing it would be and what a better world it would be to live in if the human race had that makeup. If they would be able to go to one another and ask forgiveness for each others wrongs, and to show more brotherly love for one another.—*J. M. S., Blaine, Mich.*

There is considerable complaint on the part of dog owners that the new dog license fee is unnecessarily high. It has never been satisfactorily explained why the stringent provisions of the dog law against letting dogs roam at night, etc., could not be as strictly enforced under a low license fee as under a high one. The aim of all laws should be prevention, rather than punishment. If dog owners would co-operate with the state to prevent sheep losses and if the state would deal severely with those who do not co-operate and whose dogs as a result kill sheep there would be far fewer sheep destroyed and far less need of a large sheep fund and a high license fee. —Editor.

LIBERATING THE FARMERS

To the Editor: I note in a recent issue of your paper that the sugar manufacturers of Michigan have refused the growers a conference, at the same time announcing that they have sufficient acres to conduct their plants successfully for the season of 1920. In other words if we may take their statements as true they have succeeded in breaking down the Farmers' organization and have forged the shackles which have bound the American Farmer so tightly in the past, just a little bit stronger.

It is becoming more evident every day that the new liberty for the establishment of which 2,000,000 American Farmer boys offered their lives and their fathers and brothers back home by incomparable energy and great sacrifice fed the Allied armies and made victory possible, is in imminent danger of becoming a myth and an idle dream. We beet growers of Michigan have stultified ourselves by beseeching the arrogant czars of the Sugar Interests in Michigan for a conference wherein we might lay our humble claims before their august majesties. Instead of giving us the consideration due free men and equals they replied indirectly by flooding the state with propaganda calculated to smash the Sugar Beet Growers' Association and at the same time chloroform any other organized effort on the part of the farmers.

Under the laws of our country all men are equal and entitled to equal protection and opportunities. The Beet Sugar Manufacturers have always acted in unison as one organization. Yet when the farmers attempt to act collectively the cry "agitators" is immediately raised. It may be that the truth of this matter will be kept for a time from the American people but truth crushed to earth will rise again and the men who are the real agitators and the enemies of justice and a square deal will be shown in their true colors.

I have no quarrel with the Sugar Beet Manufacturers personally. I know some of them and they have many fine qualities but by their stand in this sugar beet controversy they have given a clear demonstration that they are out of step with the times. They are living in that old age when a few men gained control of all the great resources of our country and ruled them with an iron hand.

Mr. Editor, you have proven yourself loyal to the farmers' interests to the last ditch. When the farmers go over the top for a square deal, wonderful credit will be your due for you have struck the keynote for the liberation of the American Farmer.

Candidates for the presidency are going up and down the country lamenting the deplorable condition in which American agriculture finds itself. They say the farmers must have more comforts, more conveniences, more machinery, good roads, etc. That kind of talk sounds nice, but unless the farmer is paid a living price for his produce it is an absolute travesty and utterly meaningless. The farmer is obliged to pay his share of the taxes for good roads and as for the comforts etc., the farmer doesn't have to have any one tell him what comforts he needs, he will see to that himself if he only has a few pennies left after he pays his taxes, his farm expenses and the interest on his mortgage. It matters not who is elected president the farmer will get the same old deal unless he organizes and acting as one man with the insuperable power of 40,000,000 united farmers in this country sees to it that from henceforth he will have a seat at the table where the prices on the products of his sweat and toil are fixed.

The harvest days will soon be here. The threshing machine whistle which has been immemorially the signal for all prices on farm produce to drop will soon be heard sending it's shrill sound over hill and down dale. Mr. Editor and fellow farmers, let us see for once if we can get the cost of production plus a wee bit of profit on our produce this fall.—*P. B. Lennon, Genesee County.*

This editorial is worth reading twice. I think our good friend Lennon has caught the true vision, and I am sure he is not alone. If I read the signs aright the American farmers almost to a man have awakened from their sleep of centuries and armed with the weapons of right and justice stand ready to battle for their legitimate place in the nation's business and political affairs. The day is not far distant when agriculture will strike off its shackles and rise to its full stature—a giant overtopping all other giants of industry—a force to be reckoned with and respected.—Editor.

SOME NEW NOTIONS

I agree with you that before we can build a party we must formulate a policy. To begin with we should rid ourselves of some superstitious notions. 1st, that the automatic action of the law of supply and demand is only safe regulation of prices. The fact is it always fixes prices either too high or too low, and is directly responsible for the present plight of the farming industry. By restricting production to fit the demand any industry can fix prices as high as it chooses, but we farmers not only lack organization—the nature of our business makes it difficult to restrict production without producing famine in unfavorable seasons. But other industries, better organized are hogging the labor supply and we can't help ourselves. This means exorbitant food prices in the near future, much higher than would suffice to make farming profitable under a sensible industrial system. And if we become efficiently organized some other industry will get pinched in the same way.

2nd.—That there exists a "general public" whose only interest in industrial problems is that of "ultimate consumers." Such people if they exist are mere cooties on the body politic.

3rd.—That industrial disputes should be arbitrated by "disinterested parties." No such animal exists in the United States. Directly or indirectly every one of us is interested in every such dispute. Most of us are willing to play fair if we can be sure the other fellow is doing the same, but our present industrial system gives us no such assurance. Not knowing the facts we naturally suspect the other fellow of lying for effect, especially if he is rich.

4th—That the possession of capital carries with it the right to boss any business in which it may be invested. Our chief quarrel with Bolshevism is the alleged fact that it lets ignorant brawn rule over intelligent brain. The rule of ignorant wealth is just as bad. Many a business has been crippled if not wrecked, because narrow minded directors intent only on immediate profits, muddled the plans of an intelligent manager. The possessor of capital has as good a right as any worker to a voice in the management of the industry that employs him. He also has a right to fair wages for whatever job he is best fitted whether carrying bricks, tending a machine or directing an industry. But the rights of capital, merely as capital, do not extend beyond security of investment and a fair interest rate.—*S. B., Lake Odessa, Mich.*

You've said a great deal in a few words. Let us have more of your opinions on these important subjects.—Editor.

APPROVES STAND ON MILK SITUATION

Send us your paper. Enclosed find check. Sample copies have been coming to us of late. We have not intended to subscribe for another farm paper but must say that any paper that will handle our farm problems and especially pertaining to the present milk situation in the manner you have, is worth having once a week. We have also noted that write-up of Forrest Lord's on the milk problem in one of Detroit's leading dailies and must confess you are doing fine work for the misunderstood milk producer. Your position is strong because you are right. Sincerely,*G. W. Wright & Sons, Livingston County.*

We appreciate your words of approval. You are everlastingly right when you say that the milk producer is misunderstood. So is every man who produces food from the soil. Talk about the heathen Chinese. Their ignorance of Christianity is not to be compared with the ignorance of some of our city brethren of the source of their food supply and the difficulties under which it is produced. I believe that the consumer must be educated in these matters, and that is one of the functions of the Business Farmer and its editor. We hope to be able to show in the near future some tangible results of our efforts along this line.—Editor.

The Week's Editorial

INTENSIVE FARMING

Farm areas to be worked this spring will not be so extensive as usual, if reports are accurate. The farmers cannot obtain help, and they are not sure enough of their profits in many cases to want to make any extra effort alone.

"I have a farm of 347 acres," says a rather typical farmer. "I cannot get anybody to help me—city wages too high. I can't work the way I used to, so this year will put only half the farm into cultivation." This seems to offer a gloomy outlook when the nation's food needs are considered, but after all it may work out better than the farmers themselves anticipate.

Most farmers, for generations, have worn themselves out trying to do too much. They have shortened their years of activity in strenuous efforts to increase production, and so their final percentage of gain and the gain to the public is probably no greater than if they had spread a smaller amount of work over a longer period. Also, in the attempt to farm too much they have handled each acre less efficiently than if they had tilled a smaller space. If the farmer who cannot work his entire farm successfully alone turns his strength, skill and experience upon a small portion of it, that portion should produce as it never did before.

The American farmer is used to thinking of America's broad spaces, and naturally thinks in big terms. For that very reason his tendency is to overlook the possibilities resulting from concentration of effort upon small areas. But there is good economic authority back of the "intensive" farmer. "Take heed," says the Bible, "that ye despise not the day of small things."—*State Journal.*

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

"CLEANLINESS IS NEXT TO GODLINESS"

THROUGHOUT the length and breadth of this land we hear the cry of the "Cleanup Compaign." It is scheduled to begin bright and early on the morning of May 17th and continue through the week and everyone is being urged to clean-up and paint-up during that week. There is no doubt but that in the congested city districts, in order that the right influence may be brought to bear on the foreign districts, this propaganda is needed and it is well to set a date for the task in order to get those interested who would not see its need were it not made a regular campaign.

There is no doubt that if we make a concentrated drive of it and interest young and old, mother will not have quite such a hard task, however personally we would sort of like to take a vacation and run away during that period of unsettled cleaning up. Tearing up everything at once has no attraction for us. Rather we prefer as the little House Cleaning song advises to begin early, take it easy and clean one room at a time.

Unless the weather man is kinder to us than he has been, it will be pretty early to take down the stoves and store them away for the summer at that time, and who wants to attempt to clean the rugs with the stoves down. However we can begin at the store rooms or bedrooms and make very good progress, starting on the upper floors first, and if need be and the weather happens to be bad can descend from the top floor to the basement and do the cleaning necessary there before coming to the main part of the house, reserving that work for the brightest days.

Brought to a realization at last of the amount we are wasting through such campaigns, the government is taking a hand in the advice which is being handed out to use and comes forward with the slogan, "Don't Waste Waste," and it is well to stop and consider what there may be which has served its days of usefulness with us but may be of some value. The following is the propaganda sent out by the government on the subject: "Don't waste waste," Secretary Alexander today urged the American housewife, calling attention to the possibility of utilizing much of the refuse which will be disclosed by the spring housecleaning. At least $450,000,000 worth of waste paper, rubber, metals and other articles sent to the rubbish heap each year can be reclaimed, the secretary said. "The lessons learned during the war should not be forgotten," Mr. Alexander said, "Turn the waste basket into the channels of commerce by selling odds and ends to junk dealers."

HOUSECLEANING HELPS

WASH the joints and bearings of the worn out sewing machine in gasoline to remove the dirt and oil wipe off thoroly and oil a-fresh. Run a few seconds wiping off superfluous oil with an old flannel or chamois.

Sponging the rugs with a strong solution of ammonia will brighten the colors and prevent moths.

Always sweep rugs and carpets the way of the grain. Brushing against the grain roughens the surface and it tends to brush the dust in instead of out.

An authority on Oriental rugs state that he never shakes his rugs as it tends to break the warp at the ends. Rather he beats them, and to do this he uses a piece of an old rubber hose as that does not cut the rugs anywhere. What is good for Oriental rugs which are so carefully made by hand should apply with equal if not more consideration to domestic rugs.

Should you discover moths in your rugs, spread a cloth which has been dampened over the part and press with a hot iron. Moths and eggs both will be killed by the hot steam.

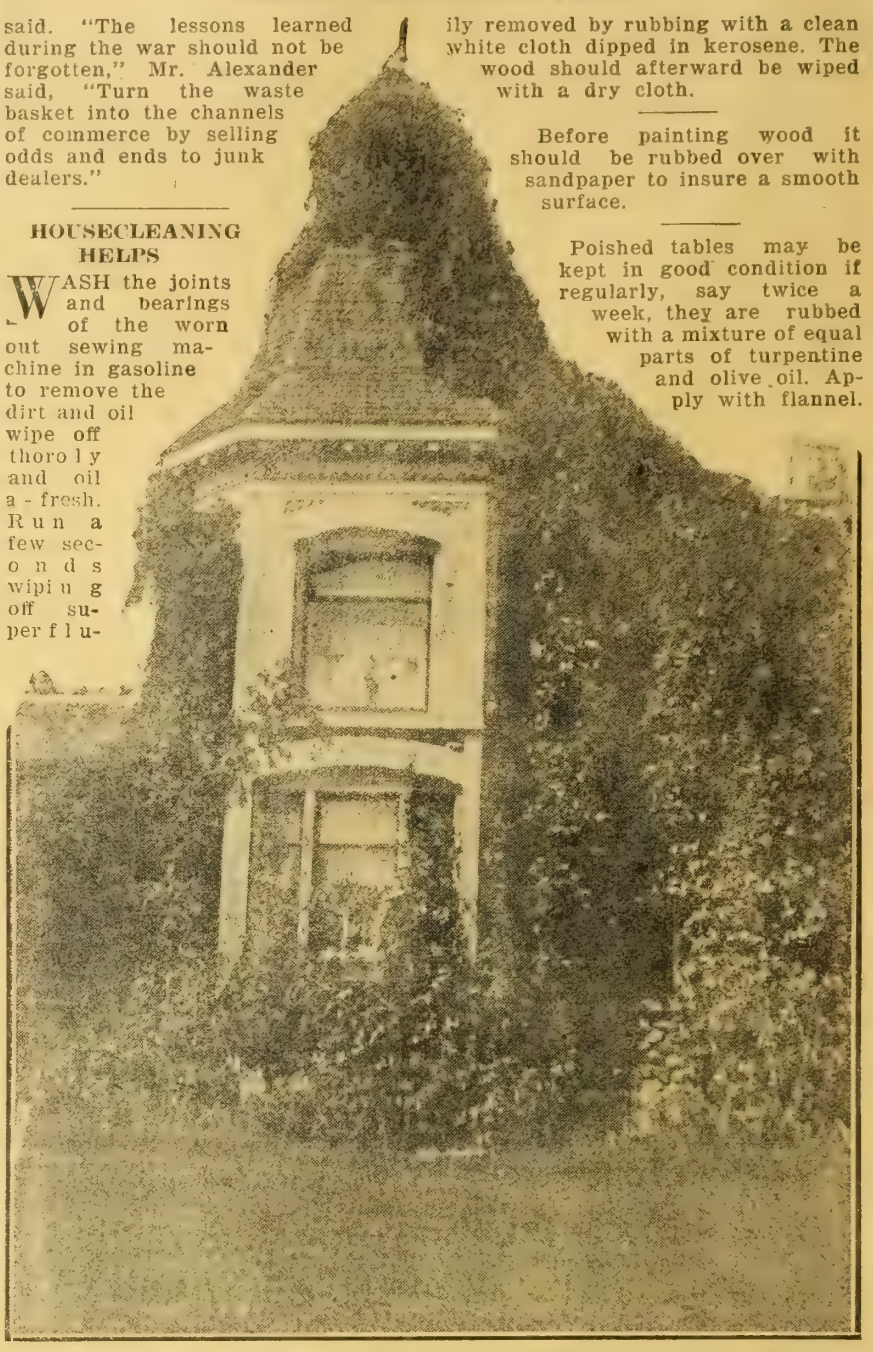
Before polishing the stove wash it off with vinegar. It removes all grease leaving the surface smooth, and keeps the blacking from burning off so quickly, saving much time and labor.

Finger marks on paint can be easily removed by rubbing with a clean white cloth dipped in kerosene. The wood should afterward be wiped with a dry cloth.

Before painting wood it should be rubbed over with sandpaper to insure a smooth surface.

Poished tables may be kept in good condition if regularly, say twice a week, they are rubbed with a mixture of equal parts of turpentine and olive oil. Apply with flannel.

Instead of hangers for the kitchen towels did you ever try making a button hole? This can't be torn off and will last as long as the towel.



Mrs. Ross Crane, of the Chicago Institute of ... says that for every $10 worth of shrubbery artistically planted about your home grounds, you can add $100 to the valuation of your property. We are sure that the beautiful home of Mr. and Mrs. Yuill, of Yale, has been increased in valuation many hundreds of dollars. And what a wonderful airy, sunny bedroom that corner bedroom must be. This is one of the winners in our picture contest.

OUR READERS' OWN COLUMN

DEAR Miss Ladd: In the last issue of THE BUSINESS FARMER I read the question from Mrs. S. E. about the creosote problem which confronts so many of us who burn air tight heaters.

I can not answer the question about removing the stains from her linen but do know a remedy that will positively stop creosote from forming. We were bothered with it to such an extent that it run down the chimney so fluently that it dropped to the floor between the studding and run out into the rooms in the crevices between the boards of the floor.

We came to the conclusion that there was need of a draught of air thru the pipe and chimney. My husband took the length of pipe off that contains the damper and placing a round piece of wood inside it, cut a hole about an inch square just above the damper. Leave it open at all times and your creosote troubles will cease. In 3 days time the cure will be complete. I am glad to pass this on and hope Mrs. S. E. will try it.—Mrs. C. B.

FRESH HOME GROWN RASPBERRIES ALL SUMMER

FRESH home-grown raspberries all summer long and until frost comes in the fall! That is the delightful prospect which the United States Department of Agriculture holds out to the gardener who will plant one or more of the autumn-fruiting varieties of raspberry plants which it recommends. The department points out that European gardeners have grown autumn-fruiting varieties for many years, and some of them are of highest quality. It is particularly important that the American gardener secure varieties that will survive in this country, since in many sections our climate is too severe for the European varieties.

American Autumn Fruiting Raspberries

Two good autumn fruiting varieties, the Ranere (St. Regis) and Erskine (Erskine Park) have originated in the United States and are now in the nursery trade. The Ranere was found near Hammonton, N. J., and was grown by the hundreds of acres on the sandy soils of southern New Jersey before being introduced into the trade. It is the principal commercial raspberry of New Jersey, and seems destined to become the leading sort along the Atlantic Coast states as far south as southern Georgia. The variety may be found fruiting freely throughout the fall months in Atlanta, Ga., and even farther south where other varieties do not succeed.

In the cooler parts of the northern states, the Ranere produces fruit of too small size and of too poor dessert quality to be of great value However, the berries borne on the young shoots in the autumn are larger in size and better in quality than those of early summer, and if pruned after the English system, where all the old canes are cut out in late autumn or early spring, it should be desirable in many northern gardens.

The Erskine raspberry, which was found a resident of Lee, Massachusetts, in a patch of the Marlboro, bears larger fruit than the Ranere. The fruit is also of better quality, and if it proves as hardy and bears as well throughout the northern states as it has under the care of the one who descovered it, it should be especially desirable. The Erskine seems to be a hybrid between the American and European raspberries, and should be tried wherever the Cuthbert and Marlboro succeed.

Varieties from European Countries

Among the varieties of autumn-fruiting raspberries grown in Eng-

The Early Fly

(By Walt Mason)

The early fly's the one to swat,
It comes before the weather's hot,
And sits around and files its legs,
And lays at least a million eggs,
And every egg will bring a fly
To drive us crazy by and by.
Oh, every fly that 'scapes our swatters
Will have a million sons and daughters,
And countless first and second cousins,
And aunts and uncles, scores of dozens,
And fifty-seven billion nieces;
So knock the blamed thing all to pieces.
And every niece and every aunt—
Unless we swat them so they can't—
Will lay enough dodgasted eggs
To fill up ten five-gallon kegs
And all these eggs, ere summer hies,
Will bring forth twenty trillion flies.
And thus it goes, an endless chain,
So all our swatting is in vain
Unless we do that swatting soon,
In May time and in early June.
So, men and brothers, let us rise,
Gird up our loins and swat the flies!
And sisters leave your cozy bowers
Where you have wasted golden hours;
With ardor in your souls and eyes,
Roll up your sleeves and swat the flies.

A House-Cleaning Song

Can you sing? Then sing
A house-cleaning song,
To make the house ring
When tempers go wrong;
Sing something bright,
Or say something funny,
For all will go right
When tempers are sunny.

Don't wear your worst gown,
Or tie up your head
Don't carry a frown—
A picture to dread;
House-cleaning is fun
If taken that way;
So let in the sun
And be merry and gay.

One room at a time—
Be not in a hurry;
Do not repine,
Nor get in a worry,
Scrub just as you please,
And in your own way—
It's nothing to you
What the neighbors may say.

Have a dinner that's nice,
And take time to eat—
To starve the whole household
Will not make them neat;
Have a good time,
Instead of a fit—
I'm penning this rhyme
While resting a bit.

—Annie A. Preston.

land are Alexandria, Belle de Fontenay, Hailsham, Merville de Rouge, November Abundance, October Red, October Yellow, Semper Fidelia, Surprise d'Automne and Yellow Four Seasons. Only two of these sorts, the Belle de Fontenay and the Hailsham are in the nursery trade in this country.

Two other European fall-fruiting sorts, which may perhaps be found in England, are in the nursery trade in this country, the La France and the Souvenir de Desire Bruenau. The La France has been grown in gardens in Connecticut for many years without a name, but has now been introduced under this name. Some winters it may survive without injury, but in other winters the canes kill back to the ground. The Souvenir de Desire Brueau is of recent introduction.

The experience of American fruit growers of the Eastern United States for the last hundred years has been that no variety of raspberry introduced from Europe succeeds in Eastern United States as a commercial sort. Introductions of European varieties have been made repeatedly, but none of them have yet succeeded under the rigorous eastern climate. Those who try thse autumn-fruiting European varieties ,therefore, should not expect them to be of value, evcept in the home garden. There, however, some of the hardier of these varieties may prove desirable. By removing most of the old canes and cutting those that remain to within one or two feet of the ground in late autumn or early spring a considerable quantity of fine-quality raspberries may be secured. The berries borne on the canes which are cut back will come after the season of the common sorts, and should last until the new shoots begin to bear.

European varieties are more likely to succeed in the mild humid sections of Oregon and Washington where the climate more nearly resembles that of parts of Europe than does that of the eastern states. Those interested in this group of raspberries probably will want to try the European sorts.

"HEARTS OF THREE"

(*Continued from page* 11)

rooted in the crevices, she paused. Passing the rope across the tree-trunk ,as over a hook, she drew in the slack and made fast to a boulder of several hundred-weight.

"Good for the girl !" Francis applauded to Henry.

Both men had grasped her plan, and success depended merely on her ability to dislodge the boulder and topple it off the ledge. Five precious minutes were lost, until she could find a dead branch of sufficient strength to serve as a crowbar. Attacking the boulder from behind and working with tense coolness while her two lovers continued to sink, she managed at the last to topple it over the brink.

As it fell, the rope tautened with a jerk that fetched an involuntary grunt from Henry's suddenly constricted chest. Slowly, he arose out of the quicksand, his progress being accompanied by loud sucking reports as the sand reluctantly released him. But, when he cleared the surface, the boulder so outweighed him that he shot shoreward across the crust until directly under the purchase above, when the boulder came to rest on the ground beside him.

Only Francis' head, arms and tops of shoulders were visible above the quicksand when the end of the rope was flung to him. And, when he stood beside them on terra firma, and when he shook his fist at the quicksand he had escaped by so narrow a shave, they joined with him in deriding it. And a myriad ghosts derided them back, and all the air about them was woven by whispering shuttles into an evil texture of mockery.

CHAPTER XIV.

"WE CAN'T be a million miles away from it," Henry said, as the trio came to a pause at the foot of a high steep cliff. "If it's any farther on, then the course lies right straight over the cliff, and, since we can't climb it and from the extent of it it must be miles around, the source of those flashes ought to be right here."

"Now could it have been a man with looking glasses?" Leoncia ventured.

"Most likely some natural phenomenon," Francis answered. "I'm strong on natural phenomena since those barking sands."

Leoncia, who chanced to be glancing along the face of the cliff farther on, suddenly stiffened with attention and cried, "Look !"

Their eyes followed hers, and rested on the same point. What they saw was no flash, but a steady persistence of white light that blazed and burned like the sun. Following the base of the cliff at a scramble, both men remarked, from the density of vegetation that there had been no travel of humans that way in many years. Breathless from their exertions they broke out thru the brush upon an open space where a not ancient slide of rock from the cliff precluded the growth of vegetable life.

Leoncia clapped her hands. There was no need for her to point. Thirty feet above, on the face of the cliff, were two huge eyes. Fully a fathom across was each of the eyes, their surfaces brazen with some white reflecting substance.

"The eyes of Chia !" she cried.

Henry scratched his head with sudden recollection.

"I've a shrewd suspicion I can tell you what they're composed of," he said. "I've never seen it before, but I've heard old timers mention it. It's an old Maya trick. My share of the treasure Francis, against a perforated dime, that I can tell you what the reflecting stuff is."

"Done !" cried Francis. "A man is a fool not to take odds like that even of it's a question of the multiplication table. Possibly millions of dollars against a positive dime ! I'd bet two times two made five on the chance that a miracle could prove it. Name it? What is it? The bet is on."

"Oysters," Henry smiled. "Oyster shells, or rather, pearl oyster shells. It's mother of pearl, cunningly mosaicked and cemented in so as to give a continuous reflecting surface. Now you have to prove me wrong, so climb up and see."

Beneath the eyes, extending a score of feet up and down the cliff was a curious, triangular out-jut of rock. Almost was it like an excrescence on the face of the cliff. The apex of it reached within a yard of the space that intervened between the eyes. Rough inequalities of surface ,and cat-like clinging on Francis' part, enabled him to ascend the ten feet to the base of the excrescence. Thence, up to the ridge of it, the way was easier. But a twenty-five foot fall and a broken arm or leg in the midst of such isolation was no pleasant thing to consider, and Leoncia, causing an involuntary jealous gleam to light Henry's eyes, called up:

"Oh, do be careful, Francis !"

Standing on the tip of the triangle he was gazing, now into one, and them into the other, of the eyes. He drew his hunting knife and began to dig and pry at the right hand eye.

"If the old gentleman were here he'd have a fit at such sacrilege," Henry commented.

"The perforated dime is yours," Francis called down, at the same time dropping into Henry's outstretched palm the fragment he had dug loose.

Mother of pearl is was, a flat piece cut with definite purpose to fit in with the many other pieces to form the eye.

(*Continued next week*)

Dye That Skirt, Coat or Blouse

"Diamond Dyes" Make Old, Shabby, Faded Apparel Just Like New.

Don't worry about perfect results. Use "Diamond Dyes," guaranteed to give a new, rich, fadeless color to any fabric, whether wool, silk, linen, cotton or mixed goods,—dresses, blouses, stockings, skirts, children's coats, draperies,—everything!

A Direction Book is in package.

To match any material, have dealer show you "*Diamond Dye*" Color Card.

Careful Inspection of Every Part

DE LAVAL

For Forty Years The World's Standard

Perfectly designed, with a staff of skilled engineer constantly striving to improve it, the De Laval is built of the best of materials, by the best of mechanics, and with the best of equipment—with forty years of experience behind it.

Every piece of material and every part is carefully inspected and tested. The limit of permissible variation in size of most of its parts is less than one-thousandth of an inch.

These are the basic reasons why the De Laval costs more, does better work, produces a better product, requires less attention, and lasts far longer than inferior separators.

Your local De Laval Agent will be glad to demonstrate the superiority of the De Laval. If you don't know him please simply address the nearest main office, as below.

BLACK FLAG

I.P. I.P.

Saves Turkey Poults

Head-lice kill young turkeys. Black Flag will save them. Blow Black Flag into feathers of setting hens and over poults once weekly after hatching and turkeys will be free of lice. Black Flag kills insects by inhalation. **Bugs don't eat it—they breathe it, and die.** Destroys flies, ants, fleas, roaches, bedbugs, some moths, and lice on animals, birds and plants. Harmless to people and animals. Look for BLACK FLAG trademark and red-and-yellow wrapper. At grocery, drug, department and hardware stores, or direct by mail on receipt of price.

U. S. Gov't (Bulletin 771, Agri. Dept.) shows that glass containers keep insect powder freshest. Buy Black Flag in SEALED GLASS BOTTLES instead of "insect powder", in paper bags or boxes.

Three sizes—15c, 40c, 75c.

Except West of Rockies

BLACK FLAG Baltimore, Md.

Sick Baby Chicks?

There is only one way to deal with baby chicks and that is to keep them well. Doctoring a hundred or more chicks is mighty discouraging work.

It's pure carelessness to lose more than 10 per cent of chicks, from hatching to full growth. Many lose 40 per cent to 60 per cent, and even more. No profit in that.

Our book, "Care of Baby Chicks" (free) and a package of Germozone is the best chick insurance. WITH BABY CHICKS YOU MUST PREVENT SICKNESS—NOT ATTEMPT TO CURE. "I never had a sick chick all last season"—C. O. Petrain, Moline, Ill. "Not a case of white diarrhoea in three years"—Ralph Wurst, Erie, Pa. "Have 600 chicks now 5 weeks old and not a single case of bowel trouble"—Mrs. Wm. Christiana, Olive Ridge, New York. "Two weeks after we started last spring we were a mighty discouraged pair. Every day from three to six chicks dead. A neighbor put us next to Germozone and we are now sure if we had had it at the start we would not have lost a single chick"—Wm. E. Shepherd, Scranton, Pa.

GERMOZONE is a wonder worker for chicks, chickens, pigeons, cats, dogs, rabbits or other pet or domestic stock. It is preventive as well as curative, which is ten times better. It is used most extensively for roup, bowel trouble, snuffles, gleet, canker, swelled head, sore head, sores, wounds, loss of fur or feathers. **25c, 75c, $1.50 pkgs. at dealers or postpaid.**

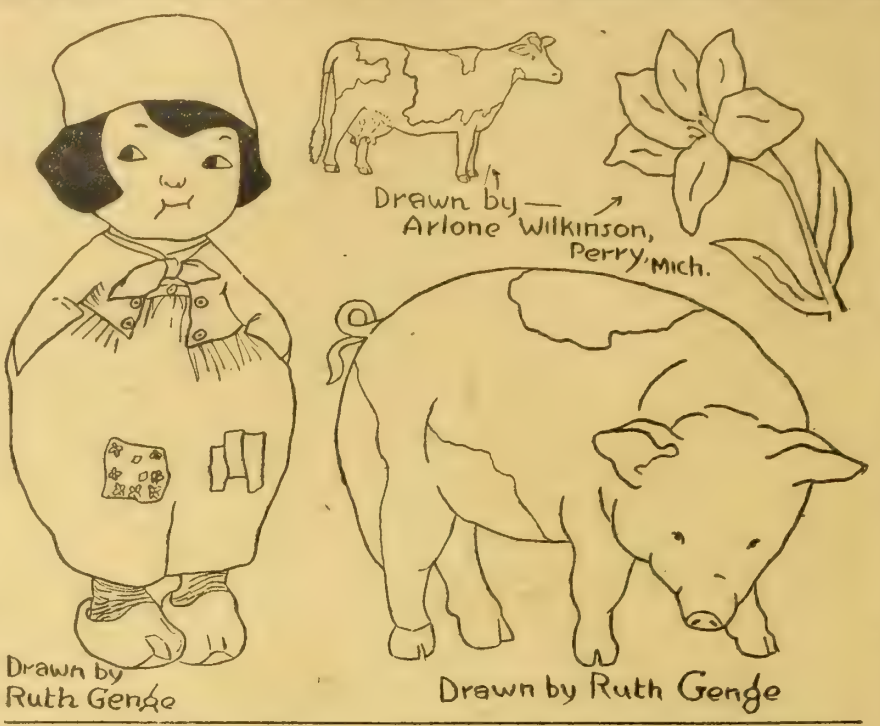
The Children's Hour

DEAR CHILDREN: Here we are again this week with what a number of you have been waiting for, another group of prize pictures. Every week now more and more pictures are being received and while of course all are not prize pictures, we have to creep before we can walk and it is the same way with drawing. If you have talent, it will be developed through patient practicising. The winners are Arlone Wilkinson and Ruth Genge. Somehow we have mislaid the address of Ruth, but if she will send it to me I will see that her prize is forwarded to her.

So many of you are new and have not learned our rules in this contest that I have asked our artist to advise you just how they should be prepared so that more of them will be acceptable for our page, and this is what he tells me you must do in order to stand a chance of winning one of the prizes and having your picture published:

First get a piece of smooth paper, without lines on it and carefully draw your picture with a pencil. After you have done this, take a pen with black ink and trace all of your pencil lines very carefully. Be sure you get black ink as no other color will print. You know much of our ink nawadays is blue-black. If you will follow these simple directions you will stand a much better chance of winning a prize. Affectionately yours—LADDIE.



OUR BOYS AND GIRLS

Dear Laddie—I have never written to you before, but I have enjoyed reading the letters others have written, also the stories in The Michigan Business Farmer. I am a girl 15 years old and about 5 feet 3 inches tall. I enjoy reading, but also like to play ball and ride horse back, although some people think of these games as boys' games. I live on a farm of 200 acres, and have one mile and a half to go to school. We milk 10 cows now, and have 3 wild ducks, the little ducks are very cunning I think. We have a woods on our farm where we go to gather wild flowers, and often times have lunch out there. I want to start ukelele lessons this summer. I haven't noticed any letters from Mason county lately, so I hope there is some chance of seeing this letter in print. I am president of one of our clubs, we have lots of fun. The boys are going to raise pickles this summer and I want to get a "job" of picking for them. I hope this escapes the waste paper basket. I would be very glad to hear from some of the boys and girls of the club.—Bessie Goings, Custer, Mich.

Dear Laddie—I am 12 years of age and in the 6th grade. My teacher's name is Mr. Sawell. I go to the Breckenridge school. I live three-quarters of a mile from the school. There are two teachers in one room, so there are four grades. I have four teachers altogether. Miss Knorpp, my music teacher, Miss Reed, my drawing teacher, Mr. Sawell, my common teacher and Mrs. Sawell. I have two pet lambs. I feed them ground feed, oats and silage every morning and night. I have four cats, one dog, 150 chickens, 6 horses—two of our horses died. One got kicked and the other was very old. I am taking music lessons. My teacher is Ruth, my sister. I have two sisters and one brother. I have eight dolls. I haven't names for all of them, but some of their names are Susie, Canneth, Violet, Blossom and Johnnie. At school we are making money to buy a piano to put in our room. I will be very glad when summer comes. We take the Business Farmer and like it very much. I wish some of the boys and girls of the M. B. F. would write to me.—Edna Baughn, Breckenridge, Mich.

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. and likes it very well. I am a little boy 11 years old and in the 6th grade at school which is one and one-half miles from home. My Daddy gave me a little Holstein calf and I named it Pansy. I have a little sister 10 years old and she helps me take care of my calf. We live on a 40-acre farm and keep 2 horses, 5 cows and 3 calves, and I milk two of the cows. My brother Walter lives on a farm in Livingston county, near Fowlerville, and he also takes the M. B. F. and I hope he will see my letter in print.—Erwin Horndorfer, New Boston, Mich.

Dear Laddie—This is the first time I have written to you. I am a girl 12 years old and in the 6th grade at school. My teacher's name is F. W. Neusus. We live on a 160 acre farm and have 13 cows, 6 horses, 3 geese and about 150 chickens. I have 3 sisters and 5 brothers. My mother's birthday is today; she is 45 years old. I will be 13 years old in December. My father won't raise sugar beets this year unless they raise the price. Tomorrow they will have a big sugar beet meeting at Bad Axe. I always read the letters from the boys and girls in The Michigan Business Farmer, but I think the girls write more letters than the boys. I once saw a letter from Elfrieda Storm in the M. B. F. I used to go to school with her. She is about as old as I am. I also have one brother in college. He will graduate next year. His name is Theodore. My big brother Walter helps my father run the farm. We have a Moline tractor, and a Buick car. My father and my brother run the car. My sisters are also trying. I have about four miles to walk to school. As my letter is getting long I will close and hope that it will escape the waste basket.—Hedwig Buckholz, Elkton, Mich.

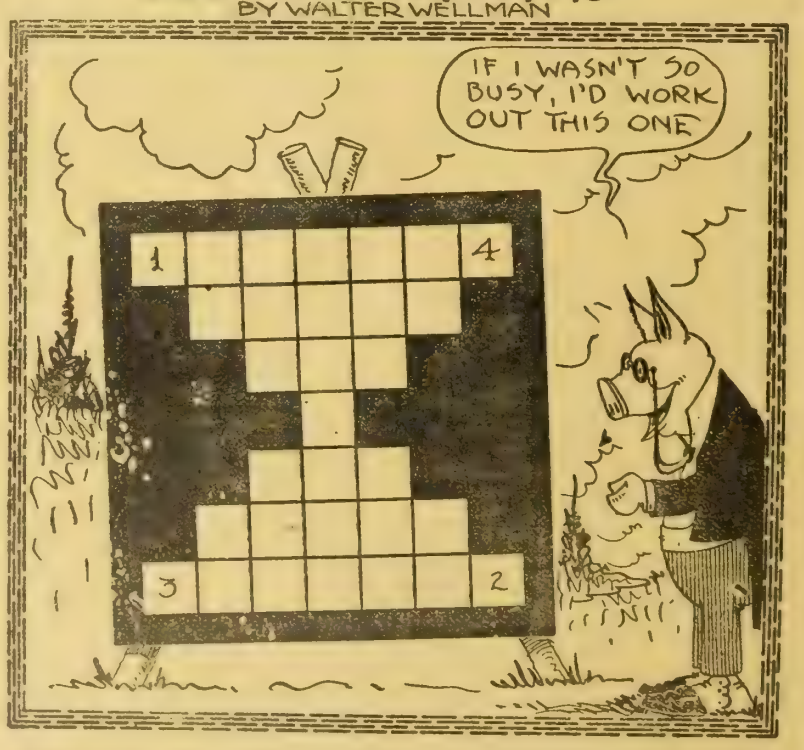
Dear Laddie—Just received the M. B. F. and the first thing I did was to try and solve the puzzle, and I believe that I have it right. The answer is Madison and Lincoln. I live on a farm and have been quite bus[y] today. This morning I burned some of the dead grass that is in our orchard. Then after dinner I went with my father up in the woods to buzz wood. While I was there I hunted for flowers but did not find any. We have a new horse and her name is Topsy. Also we have two little calves, their names are Reddy and Star. I expect to write on the 8th grade examination and am working real hard so I can get thru. This summer I expect to go visiting for about two weeks. Then after I get home I am going to raise some ducks. Well I will close because I have got to gather my eggs, we get about 30 from 50 hens.—Eloise Barrett, Carson City, Mich.

Dear Laddie—I am a girl 14 years old and am in the 8th grade. I am going to write the eighth grade examination this year. I live 1 3-4 miles from school I live on a 40-acre farm. We have 2 horses, 4 cows, 3 calves, 24 big chickens, 12 little chicks, 3 rabbits, 3 cats and 1 dog. Our little chickens began hatching the day after Easter.—Pauline Dunn, Alma, Mich.

Dear Laddie—This is my first letter to you. I am a girl 13 years of age and in the 7th grade. My teacher's name is Kathryn Bunyan and I like her. We have a 200-acre farm. My father takes the M. B. F. and liks it very much. I have 2 brothers, Russell age 11, and James age 7. For a pet I have a dog named Frank. We children have five sheep a piece. My father has 75 sheep. I will close in hopes to see my letter in print. I wish some of the girls and boys of the M. B. F. would write to me.—Marjorie Joslin, Holly, Mich., R. 3.

HOURGLASS

BY WALTER WELLMAN



Fill in the right words according to the definitions, and the diagonals, 1-2 and 3-4 will spell the names of animals. Here are the words: To print and offer for sale; a city in Nebraska; to permit; a vowel; "and so forth"; an animal said to laugh; satisfied. What are the diagonals?

Answer to last week's puzzle: Hoboken, N. J.; Reading, Pa.; Seattle, Wash.; Akron, Ohio.

Dear Laddie—I am a girl 11 years old and in the 6th grade. Last year our family went to Florida and we stayed at St. Petersburg. We went to Pass-a-grill and there we saw the Gulf of Mexico. We walked on the shore and picked up shells, they are certainly pretty. I took off my shoes and stockings and a ladies' hat came off and I went and got it. I also went to Washington, D. C., and went to the zoo and saw a mother monkey nursing her baby monkey. We went to the capitol building—the capitol of the United States. We also went to Mount Vernon and to George Washington's home. George Washington's home is on the Potomac river. I saw one rug that was there when George was. I saw the buggy he rode in. I hope my letter is in print.—Helen Wilson, Belding, Mich.

Dear Laddie— I have never written to you so I thought I would write and be with the rest of the children. I am a boy 13 years of age and in the 7th grade. We live on a 40-acre farm, have 16 head of cattle and 2 horses. I have 3 brothers and 6 sisters. Two of my sisters and one brother are in the Salvation Army. We used to live up north close to the lumber camps, but my father's health was so bad and it was so frosty we could not raise anything so we moved 100 miles down south. I have not missed a day or been late this year. I am the janitor of the school and get $3 a month. I sweep, build fires, clean erasers, dust the room and carry in the wood. I certainly have a fine teacher, her name is Florence Ponts. Well I guess I will close, hoping to see my letter in print.—Walter Lee Morris, LeRoy, Mich.

Dear Laddie—I wish to join your happy circle. I have been reading the childrens' letters and think they are nice, so I am going to ask you folks to move over and let a farmer girl in. I am 14 years old and weigh 133 pounds. I have brown hair, brown eyes and live on a 120-acre farm. We have 3 horses, also three cows and some sheep and little pigs. I have no sisters or brothers. For pets I have a dog named Trix, also a yellow cat named Buster. We live about 6 1-2 miles from Homer, it being the nearest town. Some of my friends are going to write Bernice White. Three cheers for the M. B. F.—Linnie Powers, Homer, Mich.

Dear Laddie—I am a girl 12 years old and am in the 7th grade. I am going to take physiology and geography exams at Springport this year. W have 8 or 9 horses including the 2 small colts Dick and Flora. We have another colt that has been driven a few times, it's name is George. I don't know how many head of cattle we have I live on a 270-acre farm. I am sending you a poem which I hope to see in print. I have never written to you before because I could not find your address. If some of the other girls would write to me I would be real glad to answer them.—Thelma Hubbell, Albion, Mich.

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. and likes it very well. I am a little girl 10 years old and in the 5th grade at school. I like our teacher very well. I have 3 sisters and 3 brothers. One of my brothers enlisted in the U. S. navy when the war started and will be home in July. The name of the boat he is on is U. S. S. Columbia. I have 3 pet kittens, one of them angora. We have a sheperd dog that is as old as I am, and he is my best friend. We like "The Children's Hour" very well. Hoping to see my letter in print.—Alma Horndorfer, New Boston, Mich.

Dear Laddie—I am a farmer's girl 12 years old and I'm in the 7th grade. We have 2 horses, 4 cows, 4 calves and 1 pig. My father takes the M. B. F. and likes it fine. My teacher's name is Norine Elder and I like her fine. Seven other girls and I have a club. The name of it is "The Blue Bird Poultry Club". I am president. We meet every two weeks on Thursday. I am trying to get a trip around the world on postcards. I hope I can get it. I guess this is all for this time and I will close.—Dorris L. Dewey, Bellaire, Mich.

Dear Laddie—This is the first time I have written to you. My mother and father take the M. B. F. and like it fine. I like to read the children's page. I am a girl 12 years old and in the 4th grade at school. I have just a half mile to go to school. We live on a 40-acre farm and have 4 cows, 1 pig, 3 horses, 2 mules and many chickens. We have an angora cat and 3 hens setting. I have 5 sisters and 1 brother. Hoping to see my letter in print.—Ella Johnston, Standish, Mich.

Dear Laddie—I have written to you before, but not seeing my letter in print thought I would try again. I am 14 years old and not going to school now. I am taking music lessons now for pastime. I tat, crochet and go to the woods quite a lot. I make wigwams out of brush and it is lots of fun. Will close for this time.—Velma Bricker, Yale, Mich.

Dear Laddie—I am a little boy 8 years old. I go to school every day and am in the 4th grade. I have 6 little rabbits. We have 2 horses, 3 cows, 90 chickens, 2 calves and 1 pig. We got 45 eggs today. I have two sisters and no brothers. I have 2 cats. I live on a 40-acre farm.—Peary Knowles, St. Charles, Mich.

County Crop Reports

SHIAWASSEE—The cold wet weather seriously hinders the planting of spring crops although on high gravely land some plowing is being done. Wheat is looking well and a fair crop seems to be the future outlook. Meadows generally coming on quite well but on lower land there is some complaint of having. The outlook for the sugar beet industry for the coming season is rather uncertain owing to the variance between the growers and the beet companies regarding the prices for this season. The auction fever has about subsided, yet there is an occasional outbreak. Real estate changes are somewhat on a decline but still are quite frequent. Farm hands are scarce and are demanding enormous wages by the year with house rent, garden, fuel, cow furnished and kept for and a hog fattened, all at the expense of the farm owner, and from sixty to eighty dollars per month. On account of uncertain shipping facilities, live stock is not much in demand and the market is dull. The Co-operative made a small shipment the past week but no certain price could be guaranteed by the manager to the shipper. The following prices were offered at Owosso: Wheat, $2.68@2.70; corn, $1.65; oats, $1; rye, $1.96; beans, (C. H. P.) $6.75 cwt.; hay, $20@23; potatoes, $4; onions, $5.40; hens, 32c; springers, 34c; butter, 38c; butterfat, 65@67c; eggs, 38c; apples, $7.40; veal calves, 5to 15c; lambs, subject to Detroit market, live, $14.50; dressed, $18.—D. H. M.

SANILAC (Central)—Well it has been rather a cold April so far and not much rain. We are having a good rain at present, April 22 to 26; it will do a lot of good. The grass does not seem to grow much. It has been a long time of feeding and has taken a lot of feed. It looks as though we would not bet much grass for pasture for a week or two unless the weather turns warm. There has been some seeding done, the ground seeming to work up pretty good. Some have been holding off for a rain, for sometimes where grain is sown and it comes a hard rain the grain does not come up very well. There was a farm changed hands last week. One good man died in Wheatland, north and west of Deckerville. He died the 11th of the month; a good christian man and a good neighbor. Most of the hay that was to spare has been bailed up and sold for about $25 a ton clear at the bailing. There does not seem to be much sickness around at present. Still some auction sales. Some are getting some wood buzzed up.—A. B. Prices offered at Sandusky: Wheat, $2.35; oats, 97; rye, $1.81; barley, $2.60; timothy hay, $26; lightmixed hay, $26; clover seed, $23; alsike, $24; beans, $6.60; butterfat, 63; eggs, 36.

GENESEE—We are having typical spring weather now, suitable for all sorts of farm work. The soils have dried, making ideal plowing conditions on all but the heaviest ground. The farmers are finishing shearing sheep and road work is nearly over. There will be a minimum acreage of oats on the clay lands as many farmers have become discouraged at the prospect of a good crop on account of the backward spring. There is little marketing done by the farmers at the present time. A few of the farmers have purchased tractors this spring. The following prices were offered at Flint on April 30: Wheat, $2.70; corn, $1.80; oats, $1.15; rye, $2; buckwheat, $3; beans (C. H. P.) $7; beans (red kidney) $11; hay, $25; rye straw, wheat straw, oat straw, $15@10; potatoes, $3.60; onions, $8; hens, 30c; springers, 26c; ducks, 32c; geese, 33c; turkeys, 42c; butter, 60c; butterfat, 68c; eggs, 36c; beef steers, $10.50; beef cows, $7.50; veal calves, $17; sheep $10@11; hogs,

MONTCALM—The farmers are sowing oats and spring wheat. The overseer has began his work on the roads. Lakeview have their new water plant most finished. The cold and wet weather has kept farmers back with their oats and wheat and some of the early sowed oats are gone. Seeds of all kinds are scarce and high. Large farmers in this neighborhood are selling their cows and doing their own work on account of wages. The following prices were offered at Lakeview on April 30: Wheat, $2.75; corn, $1.80; oats, $1; rye, $1.83; No. 1 timothy, $35; No. 1 light mixed, $30; rye straw, $18; wheat oat straw, $17; beans, (C. H. P. Pea) $6.50; red kidney, $13; potatoes, $7; onios 8c lb; hens, 24c; ducks, 18c; geese, 19c; turkeys, 24c; butter, 65c; butterfat, 68c; eggs, 34c; sheep, 4c; lambs, 9c; hogs, $15; beef steers, $7; beef cows, $4; veal calves, $8@19.—G. B. W.

MANISTEE—The farmers are doing farm work, sowing oats, spring grains and getting ground ready for corn crop, potatoes, early beans and cucumbers. Weather has been somewhat damp, but it is snowing today, April 28th. Soil moist. Farmers have sold most of the rye they had left. Not much building. Some are buying bushes and setting them out. We had a terrible rain storm not long ago—regular cloud burst. Some farmers are making maple sugar. Sugar has gone to 29 cents with fair prospects of going to about 33 cents soon. Prices on everything seem to be soaring.—H. A. Market prices at Bear Lake: Potatoes, $5.50 cwt. but buying has stopped at some of the buying stations because of shortage of cars; beans, $6.25 cwt; rye, $1.75 bu; butter, 50; eggs, 36; cream, 65; beef on foot, 7@9; dressed, 12@13; pork, 18@20 dressed; veal, 15@18 dressed; chickens, 25; hides, 15.

ALLEGAN—Very few oats have been sown as yet, the ground, in most cases still being too wet. Building fences and doing chores is about all we are able to do. Wheat in fair condition. Very little pasture yet.—W. F.

INGHAM—The spring is so backward there has not been many oats sown yet, some on the high and sandy lands have been put in. Help very scarce. Farmers will do what they can by changing and helping each other. Not much prospects of any sugar beet being grown here. Feed getting scarce and grass very slow in coming on. Farmers not selling much of anything. Many are losing their young pigs. Think they were chilled by the cold damp weather. —C. L. M. Prices offered at Mason: Wheat, $2.50@2.55; corn, $1.60; oats, $1; rye, $1.85; hay, $25; beans, $6.50; butter, 58; butterfat, 64; eggs, 37; lambs, 15, clipped; hogs, $15.50; beef steers, 11; beef cows, $7@8; veal, 16.

JACKSON (South)—Weather unsettled. Farmers are busy putting in what crops they can handle alone as hired help, if any could be found, demand wages that are prohibitive. The good roads contractors are offering $8 a day for men and teams, board themselves; $5 a day for man alone. The electric light company will soon begin work and will supply surrounding villages the power to generate electric lights to all who want them. The Farm Bureau has completed a successful drive. Few farmers are putting in beans. Everything points to underproduction. Clover seed has dropped to $32 a bushel.—G. S. Prices offered at Hanover: Hay, $30; no potatoes to sell; butterfat, 68; eggs, v7 cents.

HILLSDALE—Farm work is at a standstill at the present time. Not much plowing has been done on account of the soil being too wet to work. A few oats have been sown, some manure is being drawn and everything seems to be a little backward with the spring, roads also are in bad shape.—A. J. B. Prices at Hillsdale: Wheat, $2.50; oats, $1.10 (can't get any); rye, $1.90; hay, $30@40; potatoes, $3.75; hens, 22; springers, 32; butter, 40@45; eggs, 36@38; beef steers, $9@10.50; beef cows, $6.50@7; veal, $10@15; sheep, $5@10; lambs, $10@16; hogs, $14@15; seed oats, $1.25@1.60 bu.

TUSCOLA—Weather very wet and cold. Not many oats in yet as the ground is too wet to work. Not much going to market now on account of the strike. A lot of little pigs being sold at from $5.50 to $7 apiece. Some hay yet to sell. The following prices were offered at Caro: Wheat, $2.50; oats, $1; rye, $1.80; beans, C. H. P., $6.75 cwt.; hay, $28@30; hens, 27@30c; ducks, 27c; butter, 58c; eggs, 38c; beef, 6@9c; veal calves, 10@14c; sheep, 5@8c; lambs, 13@14c; hogs, 11@14c—R. B. C.

ST. JOSEPH—Farmers are plowing as fast as they can between the rains, cold and rainy most of the time. The sun is very welcome when seen. Drilling clovseed in wheat and rye but lots of farmers sow clover in their oats. Have held hogs and cattle because we couldn't ship them but are shipping the 29th again from Colon, the National Farm Bureau was organized lately in county with a good membership. Have had lots of wind this spring doing considerable damage in St .Joseph County.—W. W.

GRAND TRAVERSE—Are having nice weather again after a cold bad spell. Farmers are plowing and hauling manure. Some potatoes are being sold. Some more auction sales to be held in the near future. Two new families have moved in this neighborhood this week. The following prices were offered at Williamsburg on April 25: Wheat, $2.85; corn, $1.60; oats, $1; rye, $1.50; hay, No. 1 timothy, $35; potatoes, $4 per bu.; butter, 50c; butterfat, 70c; eggs, 38c—C. L. B.

VAN BUREN—This is a hustling time for grape growers, the cold wet weather has held them back with their work. A few vineyards not yet trimmed but most of them are trimmed and tied. Tanglefooting to keep cutworms off is the present job. Hubert E. Durkee, a very prominent and highly respected man passed away on the 26th. He has been manager of the Southern Michigan Fruit Association for a number of years.—V. G.

MIDLAND—Wheat, $2.65@2.70; corn, shelled, $1.65; oats, $1; rye, $1.72; buckwheat, $3; beans (C. H. P.) $7; peas, $4; barley, $3.—O. B. G. C.

$200,000 TO ADVERTISE MICHIGAN'S NAVY BEANS

(*Continued from page 3*)

BUSINESS FARMER is prompted by partisan designs against Mr. Fordney. But this charge will not hold water before those who have followed these discussions consistently. Nobody has yet satisfactorily explained why Mr. Fordney has enough influence to get bills through his committee providing special tariffs on certain manufactured products, but does not have the necessary influence to secure favorable consideration of the bean tariff. Until that question is answered we shall hold Mr. Fordney remiss in his duty to his constituents.

An up-state paper recently contained the following dispatch:

"Congressman Fordney is not doing much running around this spring even if political matters are beginning to warm up. Mr. Fordney has cancelled an engagement to speak at the Republican banquet in Owosso May 3, in order to be on hand in Washington when the fight for the soldier bonus bill comes up. Mr. Fordney as chairman of the Ways and Means committee, will take a leading part in the fight for its passage."

May we suggest, however, that there is another reason why Congressman Fordney does not appear in public in his own district? He might be asked a number of questions which would embarrass him to answer.

A Plain Statement to Our Readers

Dear Friends:

It would be obviously unfair to our many thousands of friends among the business farmers of Michigan, if we should be forced to increase the subscription price of this weekly without warning.

Yet every day sees some unavoidable increase in the cost of the raw materials or labor and the necessary expense which goes into the production of a publication like this.

The subscription prices today are the same as they were when the first issue of The Michigan Business Farmer went to press, i. e.:

One Year (52 copies) $1
Three Years (156 copies) $2
Five Years (260 copies) $3
Ten Years (520 copies) $5

and we are accepting subscriptions and renewals on this basis still, but how long we can continue to do so, remains a problem. We must however following this announcement to all of our readers, in this public way, retain the option of raising the present subscription price at any time without further notice.

LOOK AT YOUR ADDRESS LABEL ON THE FRONT COVER OF THIS ISSUE!

The date which follows your name thus:

John Jones	May20
Capac R 4 Mich	619

shows the month when your subscription expires and you can remit now at the above reduced rates and the three, five or ten years will be added to the date shown. We cannot guarantee to accept subscriptions at the old rates, now in effect, after the first of June, 1920, so if you want to be certain of making this saving, please remit at once.

In renewing it is always well to send the old address label, to avoid errors and possible duplication.

We certainly do not wish to increase our subsciption rates, but we take this means of giving the old and true friends of The Michigan Business Farmer a warning and a suggestion, which may prove timely.

At your service always,

Geo. W. Dunn

Publisher of Michigan's OWN Farm Weekly!

Mt. Clemens, May 8, 1920.

BUSINESS FARMERS' EXCHANGE

5 CENTS A WORD PER ISSUE. Minimum size ad accepted, 20 words. To maintain this low rate, we are compelled to eliminate all bookkeeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address The Michigan Business Farmer, Adv. Dep't, Mt. Clemens, Michigan.

LOCAL LIVE STOCK INSURANCE COMPANY

About three years ago we formed an association for the benefit of insuring live stock, firstly cows. The thing started out O. K. and we had a pretty good membership and everybody seemed to be enthusiastic about it. We had our by-laws adopted by all and we had them sealed by a notary, so it seemed to be a legal venture. Now one of the by-laws reads that the association is living with ten members. There is eleven paying members and two members that are not paying members, but are only members in name and so not responsible for any insurance to be paid out. The insurance payment has been $45 per cow drawn by assessments so much per cow insured. The farmers have been dropping one by one until those thirteen remain. Now they have divided in opinion as to the usefulness of the association and the faction that wants to kill it is stronger than the ones that want to keep it up. The point that I want to know is, can this association be broken up with the eleven of these thirteen members, when by-laws read that it is living with 10 members? There is some funds, about $125 in the banks and the faction that wants to break it up want to divide the money according to so much per dollar paid in.—R. H. T., Houghton County.

I am unable to determine from your statement whether you have a partnership arrangement or a corporation. I would be of the opinion that a majority would control the continuance or discontinuance of the association.—*W. E. Brown, legal editor.*

MUST SUPPORT WIFE

If a man has a public auction and sells his personal property, what share can the wife hold in this property? If a man separates from his wife, the wife having a complication of diseases, can the wife by law make the husband support her? What would the law give her?—M. L. S., Homer, Mich.

The wife would be entitled to no part of the proceeds of the sale of the husband's personal property. There is certain personal property that the wife might claim from a sale, but if sold she is not entitled to any part of the proceeds as her own individual property. A man is obliged to support his wife and may be compelled to do so. If he abandons her and neglects to provide for her he may be arrested and convicted and either compelled to support her or be locked up in jail.—*W. E. Brown, legal editor.*

NON-MEMBER

Is a neighbor, who has taken policy in fire insurance, a full Gleaner member with all its privileges, and can he ship eggs to the Clearing House? Does his taking out fire insurance entitle him to Gleaner privileges? I told him that I didn't think he was a Gleaner, and he insists he is.—C. W. W., North Vassar Arbor.

He is not a Gleaner by joining the fire insurance company, as any one may become a member of the fire insurance company. I think that the Clearing House would not be averse to handling his shipments upon the terms given to non-members of the association.—*W. E. Brown, legal editor.*

JOINT DEED

If a man and wife have a joint deed of their farm at the wife's death can the children hold her share? And at the man's death what share do the children hold? These being the parents of the children.—J. A. N., Montcalm County.

Upon the death of the wife the entire estate belongs to the husband and the children have no claim upon it. The husband and father thereafter may handle and dispose of as he sees fit and deed or will the same as he desires. If he does not deed or will the same in his life time it descends in equal shares to his children; and the child or children of deceased child would take the share of his or her parent would have received if living.—*W. E. Brown, legal editor.*

VERBAL AGREEMENT BINDING

Will you please send me an answer to the following question through the columns of The Business Farmer? I hired out to C for one year and he was to furnish me two hog, my milk and butter. C has furnished me one hog and refused to furnish the second hog. Now this was a verbal agreement between me and C, but I have witness to same and I want to know if I can hold C by law for the hog.—D. L. C., Calhoun County.

The verbal agreement is binding, and C is liable for the second hog or its value.—*W. E. Brown, legal editor.*

COLLECTING FULL AMOUNT OF CLAIM

I have an express claim of sixteen chickens killed by suffocation June 27, 1917. There was 100 pounds of them killed, valued at that time at $23.00 per hundred. We put this claim into two different lawyer's hands but they only kept putting us off and we have never had a cent out of it yet. We still have our paper showing our claim against the company. They wrote to me twice asking me to settle for half, but I would not accept, as I thought I should have it all.—C. D. H., Midland County.

It seems to be the almost universal custom of R. R. and express companies to stand out for a settlement at 50 per cent of the damage. I have repeatedly refused to settle upon such terms. Have notified them that they could pay the damage or I would bring suit forthwith and they have repeatedly paid the amount of the claim. I would advise you to start suit. Say to them once more that if the claim is not paid by a certain date you will bring suit, and if they do not pay then bring suit.—*W. E. Brown, legal editor.*

TROUT STREAM THROUGH FARM

What is the law in regards to fishing a trout stream where it crosses a man's farm which is enclosed with a fence.—O. H. N., Grand Traverse County.

The law provides that the public may fish in a navigable or meandering stream if it is one in which fish have been propogated by the state. This does not mean that they may trespass on the shore but in all such cases they would be liable for actual damages. If the stream is not navigable or meandering I am of the opinion no one would have the right there without the permission of the owner of the premises.—*W. E. Brown, legal editor.*

LAW REGARDING STRAY CATTLE

What is the law regarding cattle that come into my enclosure?—A Reader.

Your letter does not say which part of the law is desired nor whether it is for animals taken from the highway or that have come into your enclosure from adjoining premises. The whole law upon such subjects is too long for publication but you can find the steps concerning animals at large in the highway commencing at section 7285 and the following; and for injuring ones land see section 14782 of the Compiled Laws and following.—*W. E. Brown, legal editor.*

HARVESTING CROP AFTER THE LEASE EXPIRES

A rents farm for one year of B. Has A any right to put out rye or wheat without B's consent? Can A harvest the crop and take his share of the crop?—A Subscriber, Gratiot County.

A lease for one year expires entirely at the end of one year and the tenant would have no right to the farm or anything thereon unless permission was given him to do so. A would have no right to harvest any crop after his time expires without consent of the owner.—*W. E. Brown, legal editor.*

SELLING SHELLED POPCORN

I have several bushels of shelled popcorn. Am thinking of putting it up for the trade in small paste board boxes. Is there any law against doing so, or any rules governing the same? Would it be necessary to mark the number of ounces on the box?—A. R. C., Oakland County

I do not know of any such regulation and can see no objection to such a package providing no false statement was placed on the box, cover or package.—*W. E. Brown, legal editor.*

GEN. WOOD A PROTESTANT

The M. B. F. is the best paper ever printed. Can you tell me through your paper if Leonard Wood is a Catholic, for I hear he is.—M. H., Howard City.

General Leonard Wood is an Episcopalian. As you probably know he comes of New England Puritan stock. —*F. M. Alger, Detroit.*

Uncle Rube Spinach Says:

(Letters to Uncle Rube should be addressed care of The Michigan Business Farmer.)

JUST PLUMB FOOLISHNESS

OF COURSE, with so many presidential candidates runnin' at large an' with each one havin' some special hobby to howl about, we must expect to hear some strange an' unusual noises, noises that sound sensible an' noises that sound darn foolish. But when any man with a thimble full of brains starts out to make a noise like a saloon an' expects an enlightened American people to vote for him in sufficient numbers to land him in the presidential chair, why that man's actin' jest plumb foolish.

The majority of the people of these here United States has seen jest about all of the saloon business that they ever want to see, they have had more than a plenty of that sort of thing an' ain't a goin' to be hoodwinked into votin' saloons nor any other device for the dispensin' of liquor, back into this country, not by a darned sight they ain't.

But there comes a feller out of the east an' he sets up a mighty howl about deprivin' the people of their nat'ral born rights, deprivin' 'em of the right to git drunk an' raise h—l, of misusin' their families an' robbin' 'em of their right to happiness; deprivin' the American people of their rights to make brutes of themself an' disgrace the greatest nation on the face of the earth. This howl that the wise man from the east is a settin' up is new noise—not by a good deal it ain't—gosh, we've been hearin' this same noise for years, but in the past it ain't been comin' from no presidential candidate, there has never been one before—not to my knowledge at least, that has had the nerve even if he wanted to do it, to even make a faint sound like a saloon.

Heretofore this tremen'jus noise has come from the whiskey makers an' the whiskey sellers, an' slowly but jest as surely, the people have answered the noise an' have quieted the makers of it, by their votes—they have voted the whiskey as well as the places that sold it, out of existence an' its goin' to remain out regardless of any howl that can be let loose by any man or set of men, whether they come out of the east or out of the west.

There is no question but what there's liquor bein' sold in many places an' in many ways. There's also automobiles bein' stole an' murders bein' committed, there's crimes of all kinds takin' place in spite of the laws that have been or can be passed. But the men who commit these crimes are outlaws an' the men who make or sell booze in this country are right in the same class—they're criminals an' sooner or later they git what's a comin' to 'em same's any other criminal.

"Give the people back their rights," sez this wise man from the east, "elect me for president an' I'll see that you have your rights restored." Ain't that a grand thing to yelp about an' then ask intelligent people to help elect such a man to the highest office in the land?

How'd you like to have the saloon among us now durin' these unsettled times? Have you noticed the absence of lawlessness in all the strikes that have taken place durin' the months that have jest passed?

What do you suppose would have happened durin' the steel strike an' the coal strike, if saloons had been runnin' or liquor had been easy to get? With thousands of foreigners in those strikes, men to whom liquor gives the villianous an' criminal ideas, the desire to kill an' destroy, do you think the results would have been the same, that there would have been so little loss of life or destruction of property if those men could have got the liquor to fire their brain an' excite their passion?

You don't think so an' neither do I, but this great wise man from the east, Mr. Edwards, asks all lovers of liberty to help nominate him on a platform that would do every thing possible to put the ol' saloon, with all its attendant evils back in our midst, to give us our liberty, which means for every man an' every woman to do as they please, to give free rein to their unbridled appetites, to put him in the president's chair an' all will be well.

Well, as I sed in the beginnin' of this letter, we must expect to hear all kinds of noises, but by gosh we don't have to git foolish about it an' we ain't a goin' to git scairt about it 'cause we know where this noise has its origin, and what it amounts to an' jest what to do with it an' about it.

You know it ain't every day that the whiskey ring can git a man to do their hollerin' any more, —time wuz when men didn't care so much for their own reputation as they do now an' they would some of 'em, holler for most any thing if there wuz a little money an' plenty of drinks in it, but to think that any man who aspires to the high an' honorable office of president of the United States, would take to tootin' a horn for an outlawed business like the saloon an' booze thing, seems almost unbelieveable. But then, its hard tellin' what a man will do after he's once bitten by the turrible political bug an' the ones that bites presidential candidates seems about the hardiest biter of 'em all, what do you think?—Cordially yours, *Uncle Rube.*

Sense and Nonsense

The Fall

A widely known philanthropist in East London gave a slum child's version of the story of Eden. She was sitting with other children on the curb outside a public house in Shoreditch, and her version of the story proceeded:

"Eve ses: 'Adam, 'ave a bite? 'No,' ses Adams, 'I don't want a bit!' 'Garn!' ses Eve, 'go on 'have a bite!' 'I don't want a bite!' ses Adam. The child repeated this dialogue, her voice rising to a shrill shriek "An then 'Adam took a bit," she finished up. "An' the flaming angel came along wiv 'is sword an' 'e ses to 'em bof: 'Nah, then—ahtside!"

Revised Version

Little Susie had been attending Sunday school for some time so Uncle Jack asked what she had learned.

"I learned jus' lots," she replied vaguely.

"But tell me something," urged Uncle Jack. "What's the biggest thing you learned,"

"Well, God made the country in six days," she began solemnly. "then he made Adam out of dust an' he took a ribbon out of his side pocket and made Eve out of that!"

Inefficacious

"Did you ever try electricity for your rheumatism, Uncle Buck?" asked the schoolmaster.

"Yape!" replied old Buckley Baggett, of Straddle Ridge, Arkansas. "I've been struck by ordinary lightning twice, and drunk right smart of this yur bone-dry lickker they call white lightning, but all any of it done was to make me prance for the time being. Never really helped my rheumatiz none in the long run."

A Costly Interruption

A man with an impediment in his speech went into a store where second hand automobiles were sold and stopping in front of a car he said: "H-h-how m-m-much is th-this one?"

"I'll let you make me an offer," the dealer told him.

"I'll g-g-give you f-f-f—"

"Four hundred? I'll take it," interrupted the dealer.

"G-g-good!" said the stutterer. "I was tr-trying to say f-f-f-five hundred."

It All Depends

Ethel was surveying herself in the mirror with satisfaction. "I wonder how many men will be miserable when I marry?" she mused.

For Ditching

Inserting in holes in the ground a number of cartridges primed with electric blasting caps, connecting the cap wires with a blasting machine, thrusting down its handlebar and releasing the sudden strength of twice ten thousand men—that's ditching the modern way with

BOYS' AND GIRLS' CLUB WORK.

Boys' and Girls' Club Work is a success as a modern feature of our educational system.

Whatever may have been your thoughts up to the present concerning the benefits of Club Work for your boys' and girls,' you must admit this, and especially if your boy or girl has been a member of a real live organized club. All club activities indulged in by club members which leads to better social contact, broadens the vision for opportunity, instils the spirit of contentment, thrift and industry, and adds to their productive capacity during youth, is bound to make a better citizen body. Club Work can claim all of these merits, which more than justifies its existence as an institution well worth supporting. Club Work has paved the way for more than one girl or boy in this state in securing a better education, and has placed them in the proper niche of life with the least loss of time.

The very factor too often lacking in the lives and education of the farm young people is a proper social contact with their neighbors and friends. Club Work takes the young people early in life and aids in establishing a healthy relationship. At the club meetings, school and county fairs, district shows, international shows, the boys and girls meet in the interests of those things common to their group. Here they give and gain new ideas, broadening their appreciation for agricultural opportunities and service in the world. It keeps the boys and girls interested in the farm because the possession of a purebred Holstein, Jersey or Shorthorn calf, a pig, poultry, an acre of corn or other crops, centralizes their interest in the business affairs of the farm. This is but an outgrowth of a perfectly normal condition in the development of any boy or girl. Most every boy or girl will work untiringly to be responsible for something they can call their own. Give the boy an interest in farm life and he will not be liable to turn him attention to the factory quite so quick.

There comes a time in the life of every boy and girl when a demand is made upon the family pocket book for spending money. This is only natural and cannot be very well avoided. The boy who has had no part or interest whatever in earning one cent of his spending money, has not learned to appreciate the value of money, consequently he is liable to spend it foolishly, and then only call for more. Is it not far better and in keeping with the spirit of democracy to allow him to exercise his earning capacity to the extent that he may at least partially provide for his own needs? He soon learns the responsibility in spending it. He acquires the habit of thrift, industry, and service early in life. He becomes a productive saver and a help rather than a drain upon the family. At the same time the business side of his education is not being neglected.

It has been hinted that Club Work offers educationa advantages. It does if organized and conducted in proper spirit. It vitalizes class room experiences along many lines, and teachers should find it an asset in their agricultural teaching, for this subject like many others cannot be learned from books alone. Theory without practice is but half of what the boy or girl should get in their school years.

If there is not a Boys' and Girls' Club in your community now is the time to begin making plans for the organization of a club this spring. Teachers and parents, both in the city and rural communities should take the initiative and attempt to give every boy and girl the advantage of this work.—*Ernest F. Lyons, Washtenaw County Club Leader.*

CALHOUN COUNTY FARM BUREAU CONVENTION

The Calhoun County Farm Bureau held its first annual delegates' convention in Marshall this week. Each township in the county was represented by one delegate for each twenty-five members. The full delegation of ninety-nine men was present.

The constitution recommended by the Michigan State Farm Bureau was adopted section by section with only a few changes. The by-laws were changed to suit our local conditions.

The following officers were elected by ballot, nominations being made on the open floor:

President, A. J. Flint, Clarendon Twp.; vice president, F. B. Garratt, Pennfield Twp.; Two year directors, Elmer E. Ball, Albion Twp.; Gardner Smith, Marengo Twp.; Joe Carnes, Newton. One year directors, M. H. King, Homer; E. D. Bushness, Leroy; Guy Lininger, Clarence.

The officers chosen represent every section of the county and they are all good business farmers. The official nucleus which is started is expected to make a wonderful success of the Calhoun county unit of the great Farm Bureau organization.

The convention worked up a great deal of enthusiasm and these resolutions were passed:

This convention declares it to be its earnest desire and purpose to co-operate with the Michigan State Farm Bureau and with the National Federation of Farm Bureaus in efforts toward the improvement of agricultural conditions.

This convention urges that early action in the establishment of Farm Bureau local co-operative organizations in every market center in Calhoun county, where the need is sufficient to make such an organization an economical institution, and that each one of the so established co-operative associations be a part of the Farm Bureau, its managers and directors becoming part of the working staff of the Farm Bureau. It further urges that each of the co-operative organizations, now doing business in the county, work with the Farm Bureau in promoting the interests of the farmers.

(*Continued on page* 23)

Macomb's New Hustling County Agent

This aggressive looking young man—and he's as aggressive as he looks—is Wm. Murphy, Macomb County's new agricultural agent. His record runs as follows:

Graduated from Michigan Agricultural College, 1916. Night Chemist at the Owosso Sugar Beet Factory in Lansing three months during that year. January, February and March, 1917, spent as Extension Specialist in Soils for the M.A.C.; next six months, charge of the back yard and vacant lot garden work in Grand Rapids, Michigan. In the fall of 1917, employed by the Farm Crops Department of M. A. C. until June, 1918. Then joined the Marine Corps of the U. S., mustered out August 13, 1919. Went back on the job Farm Crops Extension Specialist, August 25th, where he remained until 24th day of March; from thence to Macomb County as County Agent, where he has already familiarized himself with the problems of that county and is helping crack them.

CATTLE

HOLSTEIN-FRIESIAN

Purebred Holstein Cattle Save Labor

Whatever the amount of milk or butterfat you wish to produce, is it not better policy to use large-yield cows than to feed and shelter the necessarily greater number of small-yield cows? Use Holsteins and you save, labor, feed, stable-room, equipment and risk. They are always healthy and ready for work. Choose cows according to their capacity for converting coarse feed into milk. That is the function of a dairy cow, and that is where the big Holstein excels.

Send for Free Illustrated Booklets. They contain valuable information for any Dairyman.

J. CARL JEWETT, **R. 5, Mason, Michigan**

How I Feed My Young Chicks

MANY thousands of chicks are killed annually by improper feeding during the first few days. This is the most critical time, for the digestive organs are not strong yet, and it takes little to throw them out of condition. Nature has provided for the first two days of the little chick's life with very little food from outside. If you will watch a mother hen you will see that she moves about very little for a couple of days, but spends much time hovering her brood. She scratches some and gives the little fellows exercise, and eats most of the catch herself, though she does give them a little to teach them to eat. She encourages them to pick at the sand and bits of sharp shell or crockery. By the time she feeds them much she has their crops filled with sand and they are ready to feed on anything she finds for them.

Sand and grit of the sharpest kind but small should be the first thing placed before them. I never feed at all until they have been out of the incubator twenty-four hours, which makes the youngest a day old at least, and the oldest usually two days old or a little more. The first food they get is the yolk of the infertile eggs and the eggs with dead germs in them, tested out the twelfth day, which I have boiled for ten minutes to get them well done and crumbly. After a couple of meals of this I give a little of the coarse oatmeal or rolled oats if I do not have the oatmeal. The chicks seem to like the oatmeal best. After feeding the oats a week I mix oats and chick feed and gradually decrease the oats and increase the chick feed until they have all chick feed. About this time I mix some kaffir corn with the chick feed until they eat the kaffir also, when I feed kaffir freely and feed the chick feed separately. It will not be long until they will prefer the kaffir.

On the farm we usually have plenty of milk, and I have always used milk for my chicks when I had it. I would set the sour milk on the back of the stove until it had heated just enough so the curd would separate but not enough to harden it. Then I would dip out the curd and give the chicks all they would eat of this all the time. I have always had a regular feeding place for the chicks where the larger fowls could not get at the food. Here I would place the curd, the feeder of bran which they were always enticed to eat as much as they wished, and a vessel of pure water. Usually I would have a supply of bone either finely granulated or ground, for unless chicks get many bugs they need this for building frames. With this feeding pen of good size and with a water tight roof a big flock will balance their ration and make the most rapid growth possible.

I do not feed wet mashes much but I do feed a mash moistened with warm water until it is just crumbly so they will learn to eat it if I ever need to feed them thus. I have boiled oats and wheat for them but think there is no real value in this except that they will eat it with a relish and thus it will be a benefit as a change. The more we can get the chicks to eat of a well balanced ration the faster they will develop. This we must ever keep in mind. It will never pay to stint the food even to make them hunt a larger part of their food. It is the nature of the chicken to hunt and they will not need any starving to induce them to keep busy. No other food is so relished as the insects they can gather fresh from their scratching, and you need not fear they will neglect this. My greatest trouble has been to get them to come up for their other food and not stint themselves in order to hunt bugs of which they could not get enough to satisfy their hunger or keep them growing to their maximum. Do anything you can to induce them to eat and your cockerels will make high-priced broilers and your pullets will mature in time for winter laying.

Some corn or corn chop can be fed but I would not feed much corn until I had separated the cockerels for fattening, and then I would shut these up and feed heavily of corn and sour milk or curd, giving all they will eat. It is best to use corn meal for this I believe, as they will eat more and it is quicker digested. They should be forced just as fast as possible until marketed, but it will not pay to feed more than two weeks thus, and some feed only ten days. They should be given close quarters so they cannot run off any of the fat. Kaffir is one of the very best grains for feeding poultry and I use it mostly except for fattening and broilers. Oats make excellent chicken feed but the oatmeal or rolled oats cost too much to use except at first, and the whole oats cannot be fed without steaming or boiling as they will not eat it well enough and it is hardly safe for them to do so if they would, as chicks have been killed by oats puncturing the crop or packing it from some cause not fully determined. I have never had any trouble with boiled oats and it is easy to put a new feed on the back of the stove when the old one has been fed.—*By Agnes Hilco.*

CONSOLIDATED SCHOOLS AN AID TO RURAL EDUCATION

(*Continued from page* 5)

comparison. The consolidated school has the same advantages as the graded school in so far as instruction is concerned. Is is worth while to adopt a school organization that will change fifteen failures out of every one hundred, the difference between the product of the graded and one-room school, to successes? If it is, consolidation offers a solution.

Seven one-room rura schools of one of the counties of the northern part of the lower peninsula, with a total enrollment of one hundred twelve and adjacent to a village school with an enrollment of one hundred twelve were invited to consolidate with the village school. An examination of the records showed that these seven rural districts had had in the past four years thirty-three applicants for promotion to the ninth grade. Of this number only eight had been promoted. The village school during the same period had had forty-two applicants for promotion to the ninth grade. Of this number thirty-four were promoted, eighty per cent of the pupils from the graded school as compared with twenty-six per cent from the seven rural districts with a total enrollment exactly the same as that of the village school. It would be a good investment, whatever the cost might be, for these seven districts to unite with the village school. The boys and girls of Michigan are our best product. They deserve better consideration than is shown by th inequality stated above.

(*Continued next week*)

CALHOUN COUNTY FARM BUREAU CONVENTION

(*Continued from page* 20)

This convention urges all farmers in Calhoun county who raise sheep to take advantage of the offer made the Farm Bureau and pool their wool.

This convention favors the adoption of the school district plan of organizing our township farm bureaus and urges the township officers to take immediate action in appointing chairmen in each district.

This convention favors the adoption of central standard time in Calhoun county and throughout the state and urges that local option on the daylight saving law be done away with.

This convention favors the plan of giving all the members of the Calhoun county farm bureau whose major financial interests are in the farming business the privilege to act as officers of the organization.—*Paul C. Jamieson, County Agricultural Agent.*

Hatch as many chickens as you possibly can this year. The egg storage interests are determined to store this year at a low figure, and the present downward trend of eggs is the evidence. Hatch more chicks and sell fewer eggs to the regular collectors; your chicken meat will more than make up the difference.

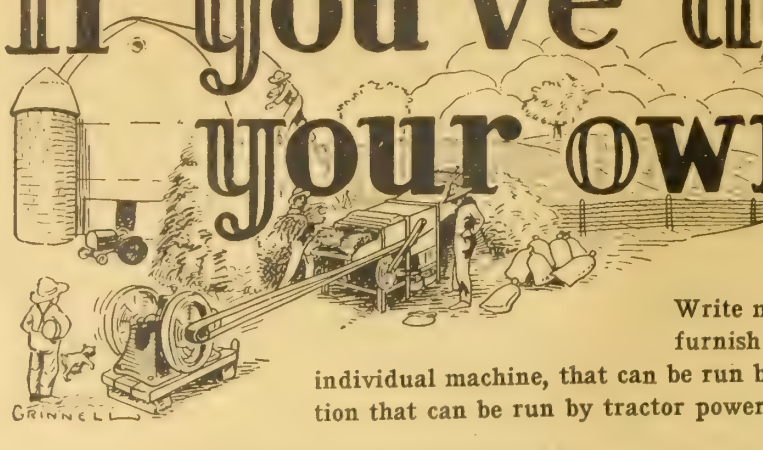
If you've decided to do your own threshing



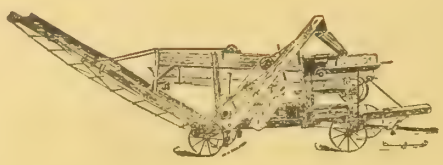
Write me at once, because we are better prepared than any house in Michigan to furnish you with the kind of a threshing outfit you need, whether it is a small individual machine, that can be run by any power from 3 h.p. up, or a larger outfit for your threshing association that can be run by tractor power.

Altho the machines we recommend exactly meet every requirement here in Michigan today, they are neither new nor untried. We have handled both lines for years.. They are made by old reputable down-East manufacturers who build on honor and we are proud to put our name and reputation back of their product.

I have twelve men constantly traveling for me, men who know how to help you if you are planning on buying a small rig or of getting up an association of your neighbors. Write me and see how quickly I can help you solve this threshing problem for yourself and your neighbors.

(Signed) J. M. PRESTON, President.

For Individual Use



Ellis Champion

From $200 Up

Here is a line of small machines that will meet every need of the farmer of 160 acres or more. Many of them have been sold in Michigan during the past five years and every one has proven a money-maker for its owner, allowing him not only to thresh when he wanted to, in the field if necessary, but to do work for his nearest neighbors when his own threshing was over.

Few realize that so small and still so practical a machine has been on the market for years and it is only now that the big demand from individual farmers has been created. No farmer who owns power from three horse up should be without a small threshing rig that will give him not only good service but service right when he wants it.

If you are interested in an individual machine write me for the Ellis Champion catalog and let me help you solve one of your big problems.

Bidwell Threshing Machinery

For Threshing Associations

ESPECIALLY BUILT FOR BEANS AND PEAS, HANDLES GRAIN AS WELL.

No line of machines could be better adapted for Michigan business farmers, threshing associations, or companies than the Bidwell line which has for so many years been favorably known. A variety of sizes are offered which will meet the needs of any association and the power equipment, which we do not sell, is optional with the buyer.

Any medium sized tractor will handle the Bidwell and thus where a group of farmers own one for plowing, a threshing machine completes the triangle and makes an outfit that will pay for itself practically in a singie year.

IF YOU ARE TALKING AN ASSOCIATION IN YOUR NEIGHBORHOOD.

Write me, perhaps we can help you and you need not feel under any obligation to buy from us, unless we prove that we can sell you a better machine for your needs at an equal or lower price than any other house in Michigan.

We have entered into the threshing problem in earnest this year. We want to be of genuine help to the business farmers of our state and you can feel free to write us or call on us for any help because we will make it our business to see that you get prompt attention.

If you live near Lansing telephone us when you are coming to see us and we will meet you with an automobile at any station at the time you arrive.

Of course, you know us best as the sole manufacturers of the famous PRESTON-LANSING vitrified Tile Silos, which have been erected in every state in the Union.

Write us today.

Produce More Food

INCREASE your production of beef and dairy products with a

Preston Lansing Vitrified Tile Silo

—the silo that lasts indefinitely without upkeep expense. Never needs painting—never affected by weather conditions. Built with patented "ship-lap" blocks, reinforced with twisted steel. Steel hip roof—steel chute—fireproof. Get your silo now—beautify your farm—and be ready for your silage crop. Write for catalog.

BUSINESS FARMER

An Independent
Farmer's Weekly Owned and
Edited in Michigan

Vol. VII, No. 36 MT. CLEMENS, SATURDAY, MAY 15, 1920 $1 PER YEAR

One of the finest consolidated schools in the Upper Peninsula. It is located in Iron River township, Iron County.

The Advantages of Consolidated Schools

By WILFORD L. COFFEY
Assistant Superintendent of Public Instruction

THE CONSOLIDATED school is no longer an experiment. It is found in nearly every state of the Union. It is the country child's opportunity for education beyond the traditional eight grades. Its comparative value has been variously stated. It, however, surpasses the one-room school for at least the following reasons:

1. It gives an opportunity for a four year high school course for every child in the school district.

2. It makes it possible for parents to have the direct care and supervision of their children who are pursuing high school work during the critical years of their life, when the formation of moral and social habits are so easily affected by environment.

3. It provides for a course of study that may include agricultural sewing, cooking, manual training, music and drawing.

4. It makes possible the securing of better trained and experienced teachers.

5. It insures a higher percentage of school attendance.

6. It insures a larger enrollment of children of school age within the district.

7. It provides for fewer classes for each teacher so that each pupil may have the amount of attention that he should have in order to develop his intellectual abilities.

8. It provides educational conditions so that the children may grow up under the influence of the ideals of the farm home.

9. It furnishes a more stable basis for financing the school district.

10. It provides a place to foster and promote community ideals.

11. It becomes a meeting place for farmers' clubs, women's clubs, community clubs, literary societies, and lyceum courses.

12. It prevents needless expense due to duplication of school apparatus and equipment.

13. It usually provides for a longer term of school.

14. It insures a better working library.

15. It adds dignity, character and force to rural education.

Rural education is not local in its scope. It goes to the very basis of our democracy. It concerns every individual in this country. There must be no difference in the opportunity of one class of our boys and girls from that of another class. Both must have an opportunity to face the world unhampered with educational limitations inherited from another day under other conditions.

In this issue:—Farmers Stand Firm as Beet Fight Nears End—Prove Campbell Wool Charges True—Consolidated Schools

"For the good of the cause"

THE MICHIGAN sugar beet growers have asked the manufacturers of sugar for a conference. The request was reasonable and proper. The manufacturers have refused that conference. Their refusal is an affront not only to members of the beet growers' association, but to every farmers' organization in Michigan. It puts co-operation to a severe test.

Two courses are open to the beet growers providing the manufacturers do not change their minds soon. One of them is to withdraw their demands and plant beets. That would be an admission of failure. That might be the end of all effort to organize the beet growers and leave them at the mercy of the manufacturers. The other course is to push their demands and show the manufacturers that they mean business when they say they will plant no beets except under a contract approved by their association. This would strengthen the farmers' faith in organization and pave the way to success.

Failure Means

1st. Loss of faith in the advantages and power of organization. This would injure every farmers' organization in Michigan.

2nd. Renouncing the right to have a voice in making the sugar beet contract.

3rd. Proof that the manufacturers' statements, "the farmers will not stick" are correct.

4th. Yielding into the hands of the manufacturers profits that by right and justice belong to the farmers.

5th. Robbing the soil and the farmer to enrich the holders of sugar company stock.

6th. Surrendering all that has been accomplished in the past to secure for the beet grower a fair price and a decent profit.

Success Means

1st. Strengthening farmers' faith in organization; a boon to every farmers' organization in Michigan.

2nd. Vindication of the principle that the farmer is entitled to have something to say about the price he shall receive for beets.

3rd. Depriving the manufacturers of their stock argument that the farmers will not hang together.

4th. A fair division of the profits of the sugar beet industry; a little less money for Wall Street and a little more money for the farming communities of Michigan.

5th. One more stepping stone to economic freedom.

"For the good of the cause"

we urge every beet grower to stand firmly and loyally by the principles at stake and to grow no beets in 1920 unless the manufacturers grant the growers a conference.

A. B. COOK, Chairman Federated Committee Grange, Gleaners and Farmers' Clubs.

MICHIGAN STATE FARM BUREAU

C. E. ACKERMAN, Manager Michigan Sugar Beet Growers' Association.

Prove Campbell Wool Charges True

MILO D. CAMPBELL of Coldwater, Michigan, when a member of the Agricultural Advisory Committee at Washington declared that fleece wool growers through the manipulations of Boston dealers had lost millions of dollars durin gthe war. His charges are apparently supported by the dealers themselves who have recently returned to the Bureau of Markets of the Department of Agriculture, a large sum of money which they admit is not properly theirs.

This fact was established at an open hearing before the Secretary of Agriculture a few days ago, in which growers, Congressmen and officials of the War Industries Board, War Department and Department of Agriculture, participated.

When Mr. Campbell made his charges last summer the Boston wool dealers were almost belligerent and scornfully denied that they had taken gross advantage of the growers. The National Board of Farm Organizations shared with Mr. Campbell the wrath of the "maligned" wool dealers.

Campbell Forces Settlement

Now the campaign initiated by Mr. Campbell is bearing substantial fruit. While it is impossible at this moment to give a reliable estimate of the amount of money that should be restored by the dealers to the growers of wool it is thought that at least five million dollars can eventually be disgorged, provided the Bureau of Markets be given sufficient funds to make the necessary audits. This estimate is largely exceeded by some authorities, but all admit that but for the persistent efforts of the Michigan , man the wool dealers would never have been asked to make a settlement.

The claims affect thousands of wool growers, all of whom according to the statement made at the recent hearings before the Secretary of Agriculture, have received for their wool a price materially less than that fixed by the government. This has been done by the simple, but effective process of calling wool in the grease, scoured wool.

As scoured wool, the fleeces that had been submitted to no process whatever since they were taken from the bodies of the sheep, were sold to the government. Mr. Campbell characterized this as fraudulent and said both the government and the grower had been tricked. He met with much opposition when he sought to investigate the whole subject, but finally succeeded in forcing consideration of his demands.

In June, 1918, Mr. Campbell introduced a resolution for the consideration of the National Agricultural Advisory Committee, in which he recited among other things that the government regulations for handling the clip of 1918 were unfair to the producers. Mr. Campbell also charged that no proper or adequate methods were adopted for determining actual profits to dealers and that no adequate plans were made for requiring dealers to keep a record of their transactions for government audits.

Baruch Sustains Campbell

Former governor Stuart, of Virginia; Judge Edwin B. Parker; Bernard M. Baruch, chairman of the War Industries Boad and other eminent witnesses appearing before the Secretary of Agriculture brought out testimony that showed the government and the wool growers had been defrauded. The main contentions of Mr. Campbell were fully sustained. The only question to be determined is the exact amount that the growers are entitled to.

Congressman F. G. Lanham, of Texas, said Mr. Campbell had done good service in calling attention to the unfavorable treatment that the wool growers had received at the hands of the Boston dealers.

"I don't know how many million dollars the wool growers of the United States have lost through the peculiar manipulative methods of the Boston crowd," Congressman Lanham said. "Mr. Campbell has put the losses pretty high, but I would not be surprised if a thorough investigation should disclose that his estimate is a pretty accurate one.

"I remember when Mr. Campbell made his charges he was ridiculed by some persons and threatened with libel suits by others. Events, however, have sustained him and now the government should do all that lies in its power to obtain for the growers the compensation to which they are entitled. Some of the dealers have already confessed and in the most conclusive way, by returning large sums to the government."

Judge Parker, while denying that the War Industries Board was legally responsible for the ill treatment the wool growers declared that he and Mr. Baruch felt that they were morally responsible to see that "as far as lies within our power every men gets all he is entitled to."

Through lack of proper bookkeeping and the absence of completely reliable records it will be exceedingly difficult to determine exactly to what extent the farmers have suffered losses, but Judge Parker expressed confidence in the ability of the government to unravel the skein. Mr. Baruch told Secretary of Agriculture Meredith that if funds were lacking to defray the expenses of an investigation he would gladly go down into his own pocket for the necessary money.

"I certainly meant every word I said," Mr. Baruch declared later in an interview. "I am ready and very willing to pay the necessary expenses of such an investigation if Congress fails to provide the money. I don't believe that the work so well begun by Mr. Campbell should end before every wool grower who has lost anything is fully compensated. The wool growers made a splendid contribution toward the winning of the war and they should not be required to make unnecessary and uncalled for sacrifices.

California Bean Growers Seek Michigan Aid

ACCORDING to a telegram which Mr. Grant Slocum, head of the Gleaner organization advises us he has received from the California Bean Growers' Ass'n, the bean tariff bill has a good chance of passing Congress provided it is reported out of the House Ways and Means Committee. This is in direct contradiction to Congressman Fordney's statements. The California people are apparently unfamiliar with the fight the Business Farmer has been making to get this bill out of the committee. They seem to think with us, however, that Congressman Fordney holds the key to the situation, and believe that the Michigan people ought to bring pressure to bear upon Mr. Fordney to get the bill out of committee. The telegram is as follows:

"Believe for good of U. S. bean industry there should be all pressure possible brought on Fordney to report bean tariff out of committee. Can we have your personal assistance and support of the Gleaners to force the issue out of the committee. Our representatives in Congress advise measure would receive favorable consideration if brought before Congress. We have assistance of all California farm bureaus working on this matter. Cannot you secure support of Michigan farm bureaus."

Farmers Stand Firm as Beet Fight Nears End

Huge Meetings in Beet Territory Show the Growers Ninety Per Cent Loyal to Their Pledge to the Association

THE BEET growers have arrived at a critical stage in their price controversy with the manufacturer. Neither shows any sign of weakening. Both contend that their position is correct. Both refuse to compromise. It is necessary and right that the growers should know at once what the outcome of the controversy is to be, so that they may make their plans accordingly. Scores of the biggest growers of beets have already sown their land to other crops so they are no longer interested in the outcome as it may affect the price the current year. They have declared that they will never plant another acre of beets under a contract which does not meet with their approval and does not give them a fair share of the consumer's dollar. So no matter what settlement may be effected, or what compromise may be made, hundreds of sugar beet growers are out of the game so far as this year is concerned.

Some will grow beets. There is no question about that. In every battle that was ever fought there were always a few who would let the other fellow do the fighting, but be right on the job when the spoils are divided. Those who grow beets in opposition to the wishes and the interests of the majority of growers will have no hesitancy in accepting the extra amount that may be paid by reason of their neighbors' loyal efforts.

Some of those who will grow beets will do so as a matter of necessity. But they will be very few. Perhaps it is the only cash crop they can raise on their soil. Perhaps they actually need the money they will get from the beets. Perhaps rather than afford to lose the entire beet crop they may better afford to work for meagre wages and sacrifice their profits. If there are any such farmers as these in the State of Michigan, let their neighbors be not too severe with them. Necessity is a cruel master. It sometimes forces us to do things which we prefer not to do. But the verdict as to the necessity of a farmer growing beets should rest with his neighbors. They will know what he can best afford to do.

There will be others who will grow beets because they have no faith in organization. That is the most dangerous type of farmer with whom we have to deal. Fifty per cent of the effort required to bring success to co-operative efforts are spent in convincing the skeptical, in fortifying the faint-hearted and reconverting the back-slider.

Then there are a few who will grow beets under the old contract just out of pure cussedness, just to show their neighbors that they are free and independent American citizens and will not be bossed by anybody (except the sugar barons.) They will grow beets if they lose every dollar they put into the crop.

But there are eight to twelve thousand loyal-hearted farmers in the State of Michigan who will never bow knee to the sugar manufacturers. They are intelligent, broad-minded and fair. It is because they are fair in their dealings with others that they will insist that the sugar manufacturers be fair in their dealings with them. For the sake of the principle that is at stake they will be loyal to their neighbors, to their association and to the cause of justice and co-operation everywhere. For the sake of their word, their honesty, their respect and their standing in their community they will put aside the temptation that comes to them to grow beets, and will grow some other crop instead.

Thumb Farmers Loyal

Last week a number of meetings were held in the Thumb, at Unionville, Bach, Fairgrove, Sebewaing, etc. These towns are in the vicinity of muck lands where beets are a particularly suitable crop. It had been rumored that the farmers in the neighborhood of Unionville were on the point of taking back their contracts as a result of a statement that was spread by the manufacturers that the growers' association had abandoned their fight. A meeting was held. A number were present who had contracts in their pockets for from 50 to 100 acres of beets. Some of these had seeded their beets; some had accepted the seed and others were just fitting their ground. Without a single exception these men voluntarily agreed to drag up their fields, pay for the seed, or in the case of those who had not seeded, to return the seed and sow other crops. All voluntarily surrendered their contracts and nine men volunteered to spend the next two or three days visiting their neighbors and getting their contracts. Similar action was taken the same night at a huge meeting at Fairgrove, and at subsequent meetings in that part of the state. What for a time looked like a defeat for the beet growers' "army" in the Thumb "sector," turned into a glorious victory that may bring success to the growers' "arms" throughout all Michigan.

At Ithaca last Saturday night three hundred farmers enthusiastically declared their intention of sticking by the Association and of growing no beets except under a contract approved by the Association.

It Is Early Yet

Manager C. E. Ackerman points out that it is yet early to sow beets. He states that he sowed three separate fields last year at three different times. The first field he sowed May 15th; the second May 25th, and the third the first week in June. "The last field gave the best yield," he declares "by nearly a ton to the acre."

There is no reason for getting in a hurry to plant beets. The season is very late and beets planted as late as June 10th will undoubtedly do well. The manufacturers know this which is one of the reasons why they are slow in agreeing to a conference. They do not want a conference that is plain to be seen. They will not have a conference if they can secure enough acreage without it. So they have spent every effort to get acreage and destroy the beet growers' association, and ample time yet remains for them to agree to a conference and get their acreage through the growers' association if they cannot get it any other way. They have not yet got enough acreage to start their factories. Common sense tells us that this is so. And they will not get enough acreage if every member of the Association takes another hitch on his courage and determines to out-bluff the manufacturer, even at the risk of growing other crops.

Principle at Stake

Manager Ackerman says that the principle which is at stake in this fight is worth far more than the value of the 1920 crop. For the sake of that principle Mr. Ackerman himself will let 200 acres of his land remain idle rather than plant them to beets. And he is but one of thousands who is willing to sacrifice for the sake of this principle. If the growers fail this year, how can they expect to win another year. If the manufacturers can out-bluff the farmers this year, they will only stand firmer another year, and it will be that much harder for the farmers to overcome their opposition. Now is the time to win. Next year may be too late. Now is the time to show the state of Michigan that the farmers "will stick." If you fail this year, everyone will expect you to fail next year.

Confidence in Each Other

It is perfectly natural that when one farmer becomes traitor to the cause and plants beets, a good many others are tempted to follow suit. But this must not be. The disloyal ones are but a handful compared to the loyal ones and their aggregate acreage will not be a drop in the bucket to what the manufacturers must have. In some sections the loyal growers are threatening to use strong arm methods against those who are planting beets. Threats of dragging up their fields, painting their buildings an uncomplimentary color and ostracising them from community life, are heard on ll sides. While it would be perfectly justifiable for any farmer or group of farmers to refuse to help a neighbor who had refused to help them by standing firm in this fight, more radical methods could hardly be approved. But whether counselled or approved it is practically certain that some methods will be used which to quote the Irishman, "will bring the b'ys to their sinses."

That Dream of $16 Beets

HOPING to tempt the farmers into growing beets under the old contract, Mr. W. H. Wallace has recently issued a statement that the old contract would PROBABLY give the farmers $16 a ton for beets this year. Mr. Wallace did not explain how much it would be to the advantage of the sugar companies to pay the farmers $16 a ton under the old contract. Remember that for every extra $1 per ton which the farmer receives over $10, the manufacturers gets $1.40.

If 15 cent sugar will pay the farmer $16 gross per ton of beets, it will pay the manufacturer $40 per ton gross.

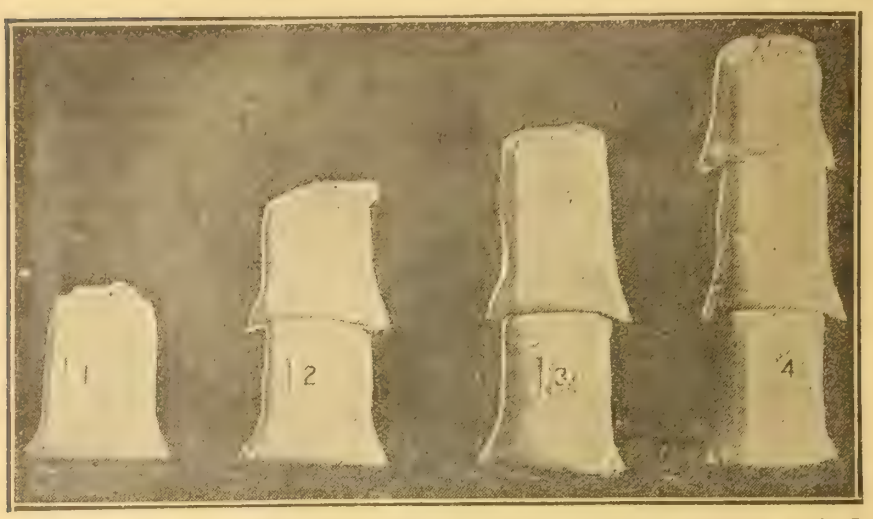
And if the cost of the beets represents 70 per cent of the total cost of producing the sugar as claimed by the Federal Trade Commission, it means that out of every ton of beets for which the manufacturers pay the farmers $16, they will make a net profit of SEVENTEEN DOLLARS. All growers ask is a share of that $17.

The farmer will NOT get $16 for his beets if the government sets the price, for if the government regulates the price at all it will never let the manufacturers get away with such profits as that. If the government sets the price it will undoubtedly allow the farmers the MINIMUM called for in their old contract for IF THE FARMERS ARE WILLING TO GROW BEETS UNDER THAT CONTRACT THE GOVERNMENT WILL HAVE A RIGHT TO ASSUME THAT THE PRICE IS SATISFACTORY. So it behooves the growers to raise that minimum and protect their interests in case of government regulation.

Value of Manure for Renewing Soil Fertility

Improper Handling Causes a Loss of $2,025,000,000 Yearly in Plant Food Elements

By M. M. McCOOL
Professor of Soils, Michigan Agricultural College



Average relative yield of wheat for twenty-five years. 1. Continuous wheat, unmanured. 2. Continuous wheat, manured. 3. Wheat in rotation, unmanured. 4. Wheat in rotation, manured.

ANIMAL excrement has been used for soil improvement throughout all agricultural epochs. Reports of ancient Jewish, Greek and Roman agriculture show that the use of manure for such purposes was common, the early writers Hesiod, Xenophon, Theophrastus, Cato, Varro and Columella calling attention to its importance. In the intensely populated regions of China, Korea and Japan practically no losses of plant-food elements from animals take place.

Although not appreciated by many American farmers, manures are the most important and far-reaching by-products of the farm. As a result of this condition the waste due to improper management of these probably exceeds all others on the farm. Indeed the success of certain systems of farming hinges largely upon the proper care and use of the farm manures.

Composition of Manure

Barnyard manure is made up of a mixture of bedding, food the animal has eaten that has not been kept in its body nor burned away into gas. It thus contains organic matter, some nutrients essential for plant growth as well as others.

The amount of organic matter regained in the manure is of value in soil management for the reasons stated in the preceding article. Since much of it is lost in the process of feeding to farm animals one should certainly derive substantial profit above that obtained from the use of the manure produced, since more organic matter can be produced successfully by other means. It has been found by means of experiments that about fifty per cent of coarse forage is digested and eighty-five to ninety of the more concentrated food. Inasmuch as a standard ration is a mixture of feeds the animals returns from thirty to forty-five per cent of the organic matter consumed. Of course, the composition of the manure that goes on the land is influenced by the kind and amount of bedding afforded the animal as well as the care it receives from the time it is voided until it is applied to the land.

The amount of the plant nutrients that is fed to livestock that again reaches the soil is of tremendous importance. Although not generally accepted some agricultural writers maintain that the agricultural value of crop producing power of manure when applied to the soil is governed primarily by the amount of these that it contains.

In the maintenance of fertility under livestock systems of farming the amount of the plant food elements that is returned in the manure must be considered and the losses entailed must be made up in some manner. They vary appreciably with the kind and age of the animal to which the food is given and in general the losses of the important constituents are as given in the following table.

Loss of Constituents of Food in Process of Digestion

	Percentage
Organic matter	
Average dairy ration...	45
Heavy concentrate ration	35
Coarse fibrous roughage	55 to 65
Nitrogen:	
Dairy animals	35 to 75
Meat animals	65 to 90
Work animals	85 to 95
Phosphorus:	
Young growing animals	35 to 50
Dairy animals	50 to 80
Work animals	75 to 95
Potassium:	
Dairy animals	65 to 85
Meat animals	75 to 90
Work animals	90 to 98

Now the composition of the liquid and solid portions of the manure from farm animals is of much interest as much as the amounts to apply for different crops as well as the value depends upon it. The figures presented in the table closely approximate conditions as they occur.

Amounts and Composition of Excretia of Several Different Classes of Animals 1,000 Pounds Live Weight of Animals

Horse—Solid, 80 per cent	14,800	1,500	11	6	8
Liquid, 20 per cent	3,700	1,800	27	trace	25
Entire excreta	18,500	1,560	14	5	11
Cow— Solid, 70 per cent	17,667	1,700	8	4	2
Liquid, 30 per cent	8,333	1,840	20	trace	27
Entire excreta	26,000	1,720	12	3	9
Sheep—Solid, 67 per cent	20,000	1,200	15	10	9

Value of Manure

Manure may be valued commercially, that is on the basis of the amount of the important ingredients and also on the agricultural basis or its value in enhancing crop production.

In deciding upon the commercial value of manure it is first necessary to fix the price of each of the most important elements, those usually considered being nitrogen, phosphorus and potassium. As a rule the price per pound is lower than that charged for these in the form of commercial fertilizers. In addition a knowledge of the composition of the material is essential.

Formerly the value of the organic matter in the manure was ignored but recently several agriculturists have placed an estimate upon this portion. Such estimates have many short comings and really should be looked upon only as means for making comparisons of manures from different classes of animals. Some of the disturbing factors that arise are the dilution by means of litter and losses entailed in several ways.

The most satisfactory way to evaluate manure is upon the basis of its power to increase crop production. This is difficult owing to the effect that the time, manner, and amount of application, the nature of the soil, climate and cropping systems and market price of product, have upon the results obtained. Although there is a deficiency of accurate information concerning several phases of this question there are on record results of long and carefully conducted field trials on the finer textured soils. At the Ohio Agricultural Experiment Station yard and stable manures were added at the rate of 8 tons per acre in a rotation of corn, wheat and clover. During the first period or 1897-1906 the value of each ton of the former was $2.12 and the latter $2.87 and during the second period for 1907-1918 these values were $2.92 and 3.45 respectively. These are calculated on pre-war prices, which are more than one-half lower than at present.

It is estimated that the plant food elements lost annually from barnyard manure, due to improper handling, approximates two and a quarter billion dollars in value. The losses are entailed during certain processes of decay, by volatilization, and also by leaching.

The decay of manure, the result of the activities of bacteria, molds and fungi, may take place mainly under two sets of conditions, namely, loose and moist, and compact and moist. Under the former conditions an abundance of air is present and the mass becomes heated. The organic matter decreases and more or less free nitrogen, and nitrogen as ammonia escape into the atmosphere. The initial losses are largely the result of the breaking down of urea in the liquid portion. During this process ammonium carbonate is formed, and since this is a volatile compound it later breaks up into gaseous ammonia and carbon dioxide and accounts for great losses of nitrogen from manure heaps. This reaction is practically completed within a week's time and the greater part may take place the first three days after manure is deposited. Under the latter conditions, air is deficient and less heat is formed and the loss of free nitrogen and the nitrogen as ammonia, is much less. Thus it follows, if a manure heap is kept moist and compact the loss of nitrogen by volatilization is greatly reduced.

The loss of nitrogen and potassium from manure thrown into the barnyard, or other places where it will become saturated and drainage water escapes, is great indeed. The loss depends upon the amount of rainfall and the temperature. **It is held by some that on a large number of farms in the humid region approximately 75 per cent of the total nitrogen, 25 per cent of the phosphorus, and 50 per cent of the potassium are not returned to the soil.** If no drainage water passes away the loss of nitrogen will be accounted for by volatilization and no phosphorus or potassium will disappear. Of course the bulk decreases or much of the organic matter is dissipated.

Where mixed manures from horses and cows were placed in bins, one set being with, another without shelter for one year the losses were found to be as follows: Loss of organic matter from the protected was sixty per cent, unprotected, sixty-nine, twenty-three per cent of nitrogen disappeared from the former and forty from the latter, four per cent of phosphorus from the former and sixty from the latter, while the potash lost from the first was three per cent and thirty-six from the second.

On this basis of the Ohio results on a farm where 50 tons of manure are voided in the stable and thrown out, or in the yards exposed to weather there is lost on an average about $60 worth of plant-food from December or January to April. The value of course would be greater if the manure were exposed to the spring rains for a longer period.

It is well recognized that there are certain ideal methods for caring for manure. The foremost one perhaps, is a concrete pit system which prevents losses by seepage or drainage as well as makes it possible to keep the heap moist and compact—conditions ideal for percenting losses of plant food. The paved feed lot where the manure is compact and leaching prevented is another important method for caring for manure. It has been shown that the saving by the use of such a system will soon pay for the installation.

Many farmers cannot see their way clear to install such systems but they can save a large percentage of the manure, both liquid and solid, by feeding under open sheds and by bedding frequently and generously. Where the above methods cannot be adopted and the manure must be piled in heaps, certain precautions should be taken. The heaps should be perpendicular and the top so arranged to catch water rather than to shed it. In addition, the heap should be tall enough to prevent leaching through the mass.

Wherever possible to practice it a cheap and effective way to handle manure is to haul it to the field as it is made. Care should be taken to avoid losses by washing from sloping land, especially when the soil is frozen.

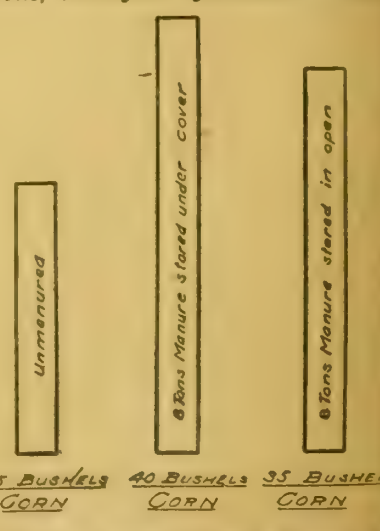
MAKING FERTILIZER

Would a mixture of chicken droppings from sixty hens, two loads of leaf mold, two wash tubs of woods ashes and fine oat straw well powdered make good fertilizer for spring wheat on high sandy soil or corn on low land?—Mrs. D. McC., Van Buren County.

The mixture you suggest together with about 300 or 400 pounds of acid phosphate should make an excellent fertilizer for your soils. If the material is fairly dry about 300 pounds per acre could be applied.

If you cannot obtain the acid phosphate for local dealers it is probable that you can purchase it from the Agricultural Chemical Co., Detroit, the Federal Chemical Co., Columbia, Tenn., or Swift and Co., Chicago.

It is customary to use 200 pounds of 16 per cent acid phosphate for staple crops twice in about a four year rotation. Where one is growing the heavy cash crops such as potatoes the application should be increased to 300 or 400 pounds per acre.—*M. M. McCool, Professor of Soils, Michigan Agricultural College.*



Effects of storage on value of manure. The future will see vast improvements in our methods of caring for manure on the farm.

A Better School System for Farm Children

Manual Training and Domestic Science are Practical Studies in Consolidated School

By WILFORD L. COFFEY
Assistant Superintendent of Public In struction

THE EDUCATIONAL efficiency of a school is determined by the quantity and quality of the work pursued, the qualifications of those who direct the work, the physical and esthetic surroundings, and the effective use made of the pupils' time and energy. The pupils' time and energy are not being effectively used unless there exists a proper relation between the time given to study and the time given to recitation. Six to eight years or more of the child's first years of school life are given to the mastery of the fundamentals of education. It is during the study period of these years that the teacher can be of inestimable value in directing the child's efforts, in training him in habits of industry, concentration of mind, systematic study, self-control, and self-direction. The formation of these habits enables him to accomplish more for himself, to co-operate with others in performing needful tasks, to be self-reliant and self-directive, to exercise initiative, and to be an efficient member of the community where he may reside.

But a good school must do more than provide for the training afforded through the study period. It must make provision for the recitation period. It is during this period that the mind of the pupil and the teacher come in contact. It is during this period that the pupil has an opportunity to put into action the knowledge that he has acquired. It is during this period that he contributes his experience and shares the experiences of others of the class. Out of this contact, action, and experience come a different insight and direction of efforts and interests. It is ,therefore, important that there be an efficient and effective recitation period.

The study period and the recitation period each have their particular function to perform. There must be such a relation between them that the attention and interest of the child will not be curtailed, and habits of indolence and mental dissipation fostered.

Manual training shop of Iron River township school district.

A few years ago teachers, to a large extent, measured their own ability as teachers by the assigning of school tasks that only the exceptional child could perform. Little aid was given by the teacher. If a few children struggled through this process ,and the teacher pleased the community socially, she was hailed as one of the excellent teachers of the county. We know better than this now. We no longer approve such teaching as administers to a small per cent out of each one hundred. We now think of the remainder of the one hundred. We disapprove teaching only the Edisons, the Burbanks, the Jeffersons, the Lincolns, the Roosevelts, the Wilsons and the Schwabs. These are the people that are often cited by some defender of the one-room school to prove that it is an unqualified success. We know now that pupils differ widely in their abilities and that there must be time at the disposal of the teacher, during both the recitation and study period, to take account of this variation so that each boy or girl will have an opportunity to measure up to the highest standard of his or her possibilities.

The one room school offers little opportunity to teach such vocational subjects as agriculture, sewing, cooking, and manual training. The already over-crowded curriculum does not permit efficient teaching of these subjects. If it did, there would not be available teachers who could teach each of these subjects and regular school work with any degree of efficiency.

Agriculture is the industry which supports the people who maintain the rural school, but how little this science is considered in such a school. The law does require that agriculture shall form a part of the instruction in the rural school. The course of study for such schools make provision for a half-year of instruction in the subject, but who must necessarily be the instructor? Most often teachers who know little concerning the fundamentals of this science. To some of these teachers the conception of agriculture is measured in terms of how rapidly they can climb a fence if a cow in a friendly attitude comes towards them. The teacher is not at fault for this agricultural teaching situation. It is the system. The wonder is that she does so well.

Is it fair to the girl today to pass her from our schools without the opportunity to learn how to sew and cook, the two vocations which will be brought more or less into constant use by her?

Is it fair to the boy to deny him an opportunity to create something with his hands? Manual training is a means of answering this desire to express himself in some tangible article. In providing for this and the other vocation subjects we are not turning our schools into places where a child gets nothing except what he may learn from a vocational subject, for no one of the subjects needs to be taught to exceed ninety minutes per week in the elementary or first eight grades. These subjects when properly taught create an interest in school life, and correlate with the other subjects of the curriculum. The child who has prepared, planted, and tended a plat of ground and harvested the crop therefrom, the child who has made a dress, prepared and canned a fruit or vegetable, and the child who has taken a piece of timber and out of it formed a bookcase, a library table, or some article useful on the farm, has ultilized knowledge gained in the academic work of the school, as well as having done something which will form a basis for much of his English work in school.

(Continued next week)

Tell Consumer Truth About Shoddy and Wool Will Come Into Its Own

THE manufacturers of woolen goods are very much opposed to the "Truth in Fabric" bill now before congress. This bill would compel every manufacturer to label his goods according to the quantity of pure wool and shoddy which they contain. One argument presented in opposition to this bill is based on the fact that the present production of wool is not sufficient to provide everyone with pure wool garments. Hence, the use of shoddy is necessary. This argument is presented as follows by Samuel S. Dae in "Textiles," a clothing trade organ.

"It will aid greatly in freeing ourselves from prejudice against shoddy and other wool by-products, if we keep clearly in mind the fact that the use of these materials is necessary for the existence of probably more than half of the people who now live outside the tropics, that is, in temperate and cold climates. Wool fabrics are required to protect the body against cold, damp and sudden changes of temperature. No other textile material provides this protection, without which a majority of the people now living in comparative comfort in such a climate as that of Northern United States and Canada would perish from exposure. The survivors would be those who in the course of time became inured to the new conditions.

Wool Supply and Demand

"Let us consider the many forms in which wool is now used for protecting the body: Clothing, such as dresses, coats ,vests, trousers, sweaters, overcoats and cloaks, underclothing, hosiery, hats, caps and blankets. In addition to these uses of wool for protecting the body a large quantity of wool is used for a variety of other purposes, such as rugs, carpets, carriage and motor cloths, felts, upholstery and horse blankets.

"The raw material for these products comes originally from the sheep, and the sheep of all countries yield approximately 1,468,000,000 pounds (scoured weight) of wool each year. This in the aggregate is a large quantity, but there is a loss of about 30 per cent in manufacturing scoured wool into cloth, so that the wool grown throughout the world each year would produce 1,027,600,000 pounds of wool cloth ready to be made into clothing. This also is a large quantity, but let us consider how many are to use it. The people now living outside of the tropics number approximately 1,169,0 0 0,- and for them wool covering is a necessity that grows greater the nearer they live to the poles. All of these 1,169,000,000 people must have the protection of wool, regardless of age, sex or occupation. If the 1,027,600,000 pounds of cloth made from the annual production of wool were divided equally among the people living outside of the tropics, each person would receive 14 ounces per year, equal to a piece of light weight cloth 44 inches square, about enough to make a respectable girdle.

"Let us keep in mind this yearly allowance of 14 ounces of cloth and then consider the approximate weight of the wool portion of various articles used for protecting the human body:

Man's suit	ozs. 56
Man's coat	28
Man's vest	8
Man's trousers	20
Man's overcoat	50
Bed blankets	80

NATURE'S ALLOTMENT OF WOOL

This is the reason, say the clothing manufacturers why the "Truth in Fabrics" bill should not become a law. It is a better reason why it should become a law. It shows the consumer that a large part of the goods he purchases is composed of shoddy and he will soon demand wool to clothe him from head to feet.

Shoddy a Primary Necessity of Life

"At the rate flocks produce wool a man would have to wait four years for enough cloth to make a suit of clothes. When we consider the large amount of wool materials now used, not only for bodily protection, but for the other uses already mentioned, and the disproportion between that amount and the annual yield of wool for each person, it becomes plain that the existence of most of the people now living in temperate and cold climates depends on a supply of wool material in addition to that which comes directly from the sheep. This extra supply is obtained by reclaiming the wool from articles of wool that have already been used for clothing or other purposes, and manufacturing this reclaimed wool into cloth and other wool goods. This reclaimed wool is known as shoddy, and thus we find that not only the health and comfort of all the people living outside of the tropics, but the existence of the great majority of them, depend a great deal on the use of the material called shoddy, and which is but another name for wool. If the wool were not reclaimed it would be far more expensive than silk.

Argument Favors "Truth in Fabric"

The above views were intended as an argument against the "Truth in Fabric" law, but it is really an argument in favor of it. It is granted that the present wool yield is insufficient. The reason this is so is because shoddy has taken the place of wool. All the wool has been produced for which there has been a profitable market. Use less shoddy and more wool, and more wool will be produced, and a great industry will be stimulated. The enemies of "Truth in Fabric" thus presents the best argument why such a law should be enacted.

Purchasers of clothing should not be deceived into thinking that the "Truth in Fabric" law would prohibit the use of shoddy, and force them to depend wholly upon wool. For such is not the case. The bill would simply require the lebelling of goods, so that a man who wanted an all-wool garment could buy one if he wanted to pay the price for it and know that he was getting what he paid for. Similarly a man who was satisfied to purchase a garment consisting of eighty per cent shoddy and twenty per cent pure wool would know exactly what he was buying. The "Truth in Fabric" bill is just what its name suggests, and would prove a benefit to both producer, consumer, dealer, and eventually to the manufacturer himself. Wool growers should write their senators and congressmen to get behind this bill.

The Awakening

FOR THE better part of the past three years the farm press and farm organization leaders have been telling the country that the world was facing a food crisis. They pointed out that the prices of farm products were not keeping pace with the prices of the materials used in their production. They showed that farm labor was drifting cityward; that men who had farmed all their lives were selling their farms and seeking an easier life in the cities; that agricultural development was being retarded while industrial development was going on at an unprecedented rate. But the heeding was not heard. Newspapers scoffed and called the warning, "another piece of propaganda put out by political demagogues who are seeking the farmer vote." And so the unequal conditions became a little more unbalanced. Farm help continued to seek employment in the city shops. Prices of raw materials and machinery continued to advance a little faster than the advance on food products. Season by season agricultural production declined. A few less acres here; a slightly lower yield there; a few more abandoned acres everywhere.

Today the nation is paying the price for its indifference. The recent sky-rocket advances in certain food products, which were at first held by the limelighters to be the result of speculation, have since been revealed as the result of the old law of supply and demand. And the consumer has learned to his sorrow that he must either pay unheard of prices for some of the most common articles of food or else go without.

The nation is now thoroughly awake to the impending menace of food shortage, and sundry and sage is the advice that is offered for its solution. The newspapers are publishing columns after columns of editorials upon the subject. The preacher, the platform spellbinder, the social worker, the politician,—all are devoting their thought to this mighty problem. But not all the wisdom of Solomon, nor all the gold of Rockefeller nor all the tears of suffering multitudes can add one cubit to the world's supplies of food.

To produce food we must first have land. To till the soil, plant the crops and harvest them we must first have labor. To secure labor and the tools for labor's use we must have money. The land we have, billions of acres. It is fertile. It is productive. Plow it, fit it, and plant it to seed and it will yield a crop, providing the elements are kind. But to plow, fit, plant and harvest requires labor, and since the farms of the country have less than 70 per cent of their normal labor needs, the farms can produce only 70 per cent of what they are capable of producing with abundant labor.

The awakening has come, but too late to help in the 1920 food campaign. Much of the planting has been done; plans for the balance are about completed. Without labor to help with the plowing and planting and with no promise of labor to help with the harvesting farmers have planted what they themselves could handle, which will be less than what is needed.

Co-Operative Farming

THE OLD idea that several farmers might pool their farms, their tools, their capital and labor and conduct a co-operative farming enterprise has again been dug up from the grave of discarded theories and put forward as a solution to the farm labor problem.

It will not work. The reason is fundamental and perfectly understandable. You cannot change an employer into an employe and get results. Neither can you change a land-owning farmer holding the position of highest authority over his acres and activities into a hired man and get results. Human nature will not stand for it.

Every farmer is a law unto himself in the conduct of his own business. He is the proprietor and no man has a keener sense of proprietorship than he. The satisfaction of being able to look over his acres and say to himself: "All this is mine to do with as I please" is worth more than gold or stock in a farming corporation. Every farm is a kingdom in itself. Shall its owner renounce his title and let it pass into the control of others? He will never do it.

But aside from the farmer's objection to such a plan, the nation cannot afford to encourage or permit the amalgamation of farms in such a manner as has been proposed. The farmers are the greatest purchasers of manufactured products. The farm home is the typical American home where the spirit of patriotism and a respect for the finer things of life are carefully fostered. The farm has been truly called the "bulwark of civilization." From it came the greatest men of the nation. From it come art, literature, religion, enterprise, initiative, and all else that contributes to the well-being of the nation. So let it remain undisturbed.

The Solution

TO SEEK the solution of an undesirable condition without first discovering the cause is as foolish as trying to carry water in a sieve. That is the trouble with the thousand and one theories that are advanced for the solution of the high cost of living, nearly all of which ignore the true causes for the condition.

One could write a book on the reasons for the high cost of living. But it is not necessary. Prosperity is the forerunner of high wages, food, clothing, rent, etc. Is it not therefore the true cause for the high cost of living? If so why should anyone seek a solution to the high cost of living when the only solution could be the destroying of prosperity? The answer is this: Not all men benefit alike in an era of prosperity any more than they do in a period of depression. Were it possible to immediately distribute the benefits or drawbacks of an inflation in the cost of any commodity so that every individual might share alike, there would be no complaint over the high cost of living. But it takes so long a time for this leavening process to take place that thousands of people are affected in unequal degrees and accordingly there is dissatisfaction.

Prosperity causes people to buy things they do not need. Hence, unessential industries spring up, and compete in the open market for the labor and raw material required by essential industries. And because it is human nature to purchase uncomplainingly of the things that are not needed, the manufacturers of non-essentials are free to advance the prices of their articles and pay as much as they please for the labor and material which produces them. The essential industries must accordingly pay more for labor and supplies and figure the increased cost in the selling prices of their commodities. It is likewise human nature to complain of the prices charged for commodities that are absolutely necessary to health, comfort and even life. Prices were never so low for these that the consumer has not felt they ought to be lower.

There appear to be only two ways to reduce the high cost of living. One of them is constructive; the other destructive. The constructive method has to do with the voluntary curtailment of production in non-essential industries and the releasing of men and materials for the increasing needs of essential industries. The constructive method also has to do with the voluntary reduction of profits on the part if those who control the raw materials of the country. It does not require the sageness of a prophet to say that this solution will never be accepted. Hence, we are free to discard it, and turn our attention to the destructive method of bringing down the high cost of living.

This method can only be brought about by industrial depression. It is a cruel solution. It is not a solution we would take by choice, but having discarded the other solution, what is there left but this? Industrial depression which would prevent manufacturers from securing capital; force them to close down their factories, and make their men and material available for the farms and the absolutely essential industries, would in short order bring down the cost of everything. More food would be produced and prices would therefore be lower. The farmer could afford to sell a little cheaper because it would cost him less to produce the food. It is likely that of all concerned, however, the farmer would suffer the least from an era of industrial depression.

TRANSPLANTED

Crop Conditions

UNLESS MAY has a change of heart and gives us warm and copious rains followed by plenty of sunshine, there is danger that the oat failure of last year will be repeated. The crop is not suffering greatly as yet. Neither is it in as good condition as it ought to be. There is considerable room for improvement. The same is true of wheat.

The western stand of oats and wheat has been materially damaged, and the average is much below normal. No amount of good weather can bring the western yield much above normal, which means another shortage in these crops and another year of high prices. If Michigan gets favorable weather for the balance of May her oats and wheat stand a fair share of yielding well and these crops would pay farmers a fair profit this year.

One Dollar Per Hour

IS THE labor of the farmer worth less than the labor of a switchman or mechanic? Does it not require as much muscle, initiative, judgment and care to plough or seed a field as to throw a switch or operate a drill? The switchman and the mechanic ask $1 per hour for their labor, and we ought not to expect the farmer to be satisfied with any less. Therefore, when figuring up your year's income, allow yourself at the rate of $1 per hour for labor, 7 per cent on your investment, 15 per cent depreciation, and a fair salary for managerial ability. If your actual net income is less than the sum of these items, you are not earning what you should from your farm.

What the Neighbors Say

APPRECIATION

Inclosed you will find one dollar for which please send the best paper in Michigan to ———, for the next six months. They are two radical Republicans and life long business men and I wish them to get the farmer's views on some of the many questions of these serious times.

I wish also to thank you for the prompt reply to my inquiries relating to canning pea prices. So long as Wisconsin farmers can raise peas for three cents or less I do not think Roach & Co., can pay much more. For several weeks past I handed out your paper where I conveniently could. From the oft-repeated reply I got, that "I get that paper", I conclude that you have a large circulation in this vicinity.

I believe that to your paper can be ascribed the strong desire for farmers to become organized. It is highly praised by all farmers who know it and as roundly cursed by certain others.

Wishing your efforts the highest kind of success.—*J. W. R., Sanilac county.*

Thank you for your kind words. I hope we may always merit your confidence and friendship. It hurts us a little bit to think there are some, who, not understanding what we are trying to do for agriculture, "curse" us for our efforts. But that's the price all have to pay who leave the beaten path and seek a better road. Understanding will some day rob our enemies of their venom, and they will be friends. But that's in the far distant future. Today we can only do the best we know how and let our enemies rave.—Editor.

SOUNDS NOTE OF WARNING

My dear Editor: So many kindly notes of appreciation came to me through my previous contribution to your splendid publication that I am tempted to accept your request for another intrusion upon the good nature of your readers.

To my mind we as a people suffer more from lack of patriotism than from any other cause. I mean we are a cowardly lot when it comes to daring to take a stand that is absolutely necessary to preserve Right and Justice. We are too indolent, indifferent or ignorant to defend ourselves, our personal rights and our property from the well organized gang of political pirates. We know they are ravishing the commonwealth of Michigan financially and morally, but we offer but slight objections. We grumble a little when we pay our State taxes which we know to be at least twice what they should be. If it were not for the crooks and grafters who we are obliged to support.

We all stand for respectability and good morals in our home and community, and more than ninety-five per cent are so called good citizens, but I have concluded that we have so many so called "good citizens" that are so good that they are "good for nothing."

Unless you are offering some resistance to this program of public wrong doing, don't dare to call yourself a good citizen.

To the man or woman who unfaltering bids adieu to the son or brothers to answer their country's call to arms, that this vigorous youth may aid in supporting the principals that are near and dear to us, we add our donation of funds and untiring labor to the cause of our republic.

The women and men will give their all to repel an invading foreign foe and yet we are mute when it comes to taking issue with the most dangerous foe of this form of government.

The scheming political pirates who are now operating more brazenly than ever before have assumed privileges in the State of Michigan unequalled in the history of any State and are so entrenched with Public Press muffled and the so called influential citizen fixed that they are operating unafraid of exposure. The extent of their plunder exceeds that of all the robbers, thieves and defaulters now in Michigan prisons and yet scarcely a word of protest dare be uttered. Our forefathers endured every privation that this form of government might be created—much blood and sacrifice has been demanded to maintain and to sustain the ideals of our country which these political vultures would destroy.

I want to ask if the present generation of sons and daughters of Michigan have enough manhood and womanhood to sustain the honor of the State.

If you sit idly by and permit a continuation of the present scandalous program by this degraded gang of political sharks, take the consequence.

I am only going to use the Newberry case as a contrast. His family and friends and certain interests who looked forward to him as being an aid to profitable legislation, contributed huge sums for his election and possibly are now headed for Leavenworth. But this gang of state politicians have had access to the state's funds for millions to perpetuate themselves in office so they can fight you with your own money.

If you haven't the courage to fight them with your ballots, your sons will be shedding their blood to displace these well entrenched enemies of free, honest and respectable government.—*Edward Frensdorf, Hudson, Mich.*

The people of Michigan must be blind if they cannot see the need for a change of conditions in the administration of our state affairs. While we would hardly put it so strong as Mr. Frensdorf has done, the situation is bad enough to require urgent attention by every good citizen. —Editor.

CONFIDENCE

Enclosed find my personal check for two dollars for which kindly renew my subscription for three years. You have been waking the farmers up to the cause, and have done more than any other farm paper to prepare the farmer for the test that is now before them, namely, the sugar beet situation and the Michigan Farm Bureau movement. I hope the boys stand pat before the sugar trust for they surely can not make sugar without beets. Believe the Farm Bureau movement is the best yet, as they are organized under one head with ample capital to push it to a finish. The Grange and other farmer organizations are all right but can not pull together as can the Farm Bureau as a national organization. Keep the M. B. F. coming and remember we are with you to the last trench.—*O. O. Watkins, Hillsdale County, Mich.*

If all the farmers of Michigan had the same confidence as you in the power of organization and in the integrity of those who seek to forge and employ that power for their benefit it would not take long to do the job that is before us. But half the energy is spent in convincing the skeptics, bolstering up the faint-hearted and re-converting the slackers. Let us have faith in one another and in the justice and ultimate success of our cause.—Editor.

HUDSON SUPER SIX

Hudson is Best Known For Its Super-Six Motor

Official Proofs Established Its Supremacy; Thus Hudson Became the Largest Selling Fine Car

Few of the 90,000 Super-Six owners have ever tried the limit of Hudson speed or power. They realize they have a vast reservoir of ability that is never called on.

Yet no one mistakes it for mere idle surplus simply because it is beyond his ordinary requirements.

For that latent capacity is Hudson's greatest value. It is the life of a car. Because of it, thousands are now getting the fullest satisfaction and service from Super-Sixes nearly five years old. They know the durability it gives. They know what it means in smooth operation. Their cars have required neither costly replacements nor constant attention to minor disorders.

Moreover, it is good to know that you have at instant call greater speed, acceleration and hill-climbing ability than any other stock car has ever shown.

80% More Efficient— Within 10% of Perfect

Many have called the Super-Six "the perfect motor." That of course, is not accurate. Perfection would mean utter freedom from friction and vibration. No machine can ever be that. But the Super-Six comes within 10% of it. Could another type approach that close Hudson's records might be matched. But for nearly five years they have stood. None has equalled them. The possibility of their being rivalled seemed never more remote than now. Certainly the type to do it has not yet appeared.

And mark this important fact. Hudson's supremacy means no added complications, weight or size. The patented Super-Six principle applied to a standard type of motor added 72% to power. Motor efficiency is increased 80%. Endurance thus has been increased to limits yet unknown.

Note These Tests Made to Prove Its Endurance

Think that a Super-Six stock chassis set the speed record at the rate of 102.53 miles per hour. A stock Super-Six holds the acceleration record. And Hudson made the fastest time for the famous Pike's Peak hill climb. The Super-Six principle in speedway-racing won more points than any racing team ever took, in a single year. And think of Hudson's double trans-continental run of 7,000 miles in 10 days 21 hours. No other car ever equalled its time in either direction.

Those tests speak for Hudson endurance—the real reason for its appeal to you today. There can be no question regarding its beauty, its completeness, its fineness—advantages patent to any observer.

You will best assure delivery when you want it by speaking for your Hudson now.

Hudson Motor Car Company, Detroit, Michigan

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

THE BABIES

DO YOU know that last year more applications were made at institutions for homes for babies. Mothers driven to desperation by the high cost of living in the cities and the fact that landlords would not allow children in their houses, has made is seem almost that a prohibitive price has been put on childhood. If it were only possible for every child to be born in the country where there was room to breathe and room to play. For those who have made a study of the subject all agree that no matter how ideally the institution may be conducted, it can never take the place of a home. Perhaps the report of the largest society in Detroit may be of interest to you:

Children In the Way

March was the busiest month in the history of the Children's Aid Society, which has unbroken records dating back to 1867, with more or less complete reports of every case handled during that time. There were 132 applications for homes for children in March, most of them being cases where parents wanted to get the children out of their way, either by paying for their board or by giving them for adoption. A peculiarly heartless case was that of a mother in excellent physical condition, who said she was tired of being tied at home to care for her child and wanted some one to adopt it.

The mother of little Lora Meggison, the beautiful baby shown above, has answered the Roll Call, but you may be sure her father, Clarence Meggison, of Charlevoix, would not have his little girl placed in an institution. She is happy in the home of Mrs. Geo. Meggison. She is two years and ten months old and weighs 25 pounds.

There is no substitute for a real mother, according to the theory as worked out by the Children's Aid. Every case is investigated thoroughly and children are taken away from their natural parents only when circumstances make it imperative. Even then children are not sent to institutions, but are boarded with families where the home life is kept up.

Negro Problem Growing

The society has a staff of workers, each of whom is responsible for a certain number of children. These she visits at regular intervals, both at home and at school. There also is a free clinic for the babies, which are weighed every two weeks and their diet changed whenever necessary.

The vast influx of Negro population, together with difficulties in obtaining proper housing has created a new problem for the society. To date all cases have been cared for, but it is becoming increasingly necessary to help these families care for their children.

Mother's Place Home

It will be a sorry day for society, Mr. Frost says, if the new woman, proud of her economic independence, prefers business life to the rearing of a family. It will be a still sorrier one if she takes upon herself the obligations of society, bears children and then refuses to stay at home and give them a mother's care, he said. The society is doing what it can to supplement the home life of the city's unfortunate children, but even a boarding home isn't what a real home ought to mean to the future citizens of Detroit, in its opinion.

THE KIDDIE-KOOP

SUCH interesting Kiddie Koops are now made for youngsters. We had our artist draw one so that you would have an idea of how simply one can be constructed at home. If a floor is put in it, and a blanket and pillow thrown on the floor, baby will not get many bumps and can pull himself up by the bars, gain strength in his arms and legs and will surely be out of danger. With just a little more work castors can be added and then the Koop can be wheeled into the kitchen or onto the porch, and with the addition of a mosquito netting thrown over the whole Koop, baby can lie down when tired and take his nap. Of course the watchful mother will be sure that a blanket is thrown over him when he sleeps.

If you have a small baby in your home, it will be worth your while to write to the Children's Bureau, Washington, D. C., for their free pamphlets on "Pre-Natal Care" and "Infant Care."

For the assistance of those who are expecting their first born, the list of articles which are really necessary, is given on this page. This list was not guessed at. It is a list which is furnished nurses who go out to care for obstertical cases. And if you have no use for it, you can do a kindness to a neighbor perhaps by clipping it out and placing it where it will be of use.

BABY'S TOILET BASKET

IF IT is not desired to purchase an expensive toilet basket, one may be made from a wire dish-drainer covered like the baby's bed, with wash material. Make pockets around the sides of the basket in which to keep absorbent cotton, the thimble, thread, soap, powder, gauze, etc., and a pin cushion for safety pines (never use ordinary pins) and needles. Keep these articles in the basket and always ready for use.

The toilet basket should contain the following:

Safety pins (two dozen small, one dozen medium and one dozen large); toilet powder, cold cream, absorbent cotton, pieces of soft linen or absorbent cotton for cleansing the mouth, castile, lanolin or ivory soap, old linen wash cloths, old soft towels, needles, thread, thimble, blunt scissors, toothpicks, infant's hair brush.

The First Wardrobe

A soft flannel blanket, two dozen diapers of bird's eye cotton 18 x 36 inches. Two dozen diapers, same material, 22 x 44 inches. Four abdominal bands 6 inches wide and 27 inches long. These abdominal bands are torn from a soft piece of flannel and unhemmed. Roll them ready for use.

Three pinning blankets, or skirts, of flannel or outing flannel. 25 inches long, gathered to a four inch muslin band at the top. These pinning blankets should be left open in front and are without sleeves.

Muslin skirts, two or three. Two or three muslin slips 25 to 27 inches long with sleeves. Three pairs of stockings, — woolen, two or three cotton flannel strips for night, two or three square flannel blankets, two larger blankets, two flannel or knitted jackets, two kimonas.

Wouldn't you just like to grab him? He's Will Gould, Jr., and weighs 23 pounds. Age eight months. Son of Mr. and Mrs. Will Gould, of Dowagiac, R 1, Mich.

Out of the Everywhere
—from—
"At the Back of the North Wind"
By George MacDonald

Where did you come from, baby dear?
Out of the everywhere into the here.

Where did you get those eyes so blue?
Out of the sky as I came through.

What makes the light in them sparkle and spin?
Some of the starry spikes left in.

Where did you get that little tear?
I found it waiting when I got here.

What makes your forehead so smooth and high?
A soft hand stroked it as I went by.

What makes your cheek like a warm, white rose?
I saw something better than anyone knows.

Whence that three-cornered smile of bliss?
Three angels gave me at once a kiss.

Where did you get this pearly ear?
God spoke, and it came out to hear.

Where did you get those arms and hands?
Love made itself into bonds and bands.

Feet, where did you come, you darling things?
From the same box as the cherubs' wings.

How did they all just come to be you?
God thought about me, and so I grew.

But how did you come to us, you dear?
God thought about you, and so I am here.

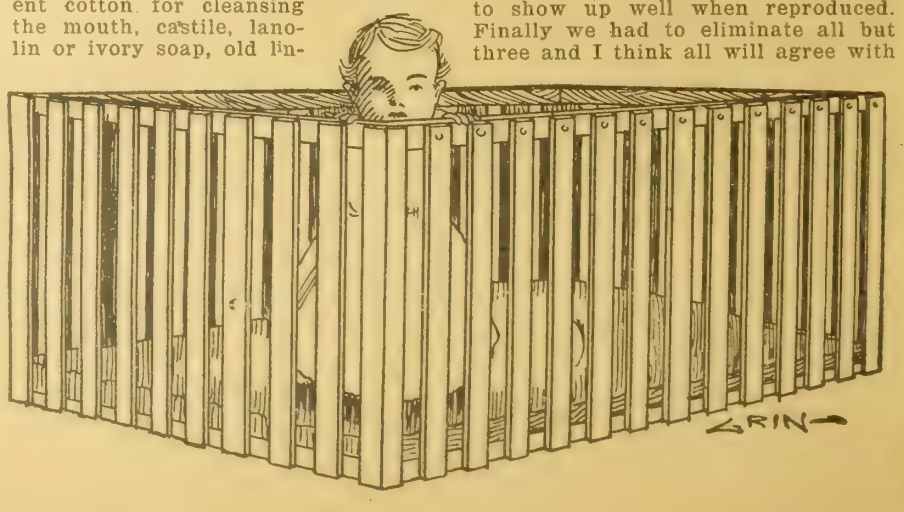
THE BABY CONTEST

"YOURS is certainly the joy department and mine the trouble department." Such was the greeting with which the attorney for this paper greeted me the other day when he came into my office and saw the array of baby pictures on my desk and I agree with him. It isn't work—it's fun to conduct the women's and children's page for this paper. Every week I get such wonderful letters from our readers and when I go into the city my eyes are always open for new ideas which I can present to our readers.

But I am getting away from my subject:—the result of the baby contest. Some perhaps might have been accorded a place in the contest but the pictures were not plain enough to show up well when reproduced. Finally we had to eliminate all but three and I think all will agree with me that the three shown on this page are prize babies all right. They are Lora Meggison, of Charlevoix, Will Gould, Jr., of Dowagiac and Wesley J. G. Russ, of North Bradley, Mich.

A little gift book has been sent to each baby.

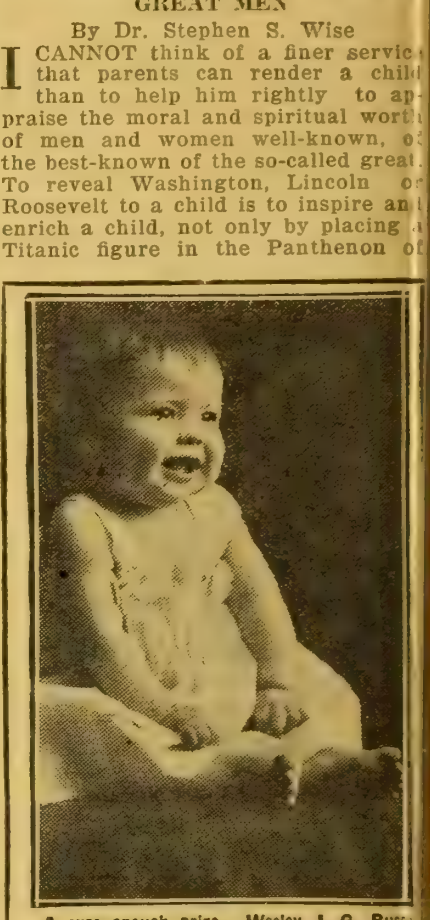
Let me thank every mother who submitted her baby's picture in this contest. If it weren't for the wonderful help you give me, we couldn't have such an interesting page.



TEACHING CHILDREN TO KNOW GREAT MEN

By Dr. Stephen S. Wise

I CANNOT think of a finer service that parents can render a child than to help him rightly to appraise the moral and spiritual worth of men and women well-known, of the best-known of the so-called great. To reveal Washington, Lincoln or Roosevelt to a child is to inspire and enrich a child, not only by placing a Titanic figure in the Panthenon of his imagination, but by making clear what are the greatnesses of the great.



A sure enough prize. Wesley J. G. Russ, age 6 months, weight 21 1-2 pounds. Son of Mr. and Mrs. Harvey Russ, North Bradley, Mich.

It was said of a most learned and distinguished Englishman that he had no shrines. I am not afraid that American children will be shrineless but I am concerned about the American child having shrines worthy of his reverance and honor. Parents cannot expect to reveal to a child the essence of greatness and nobleness in another until after they have answered for themselves the question of what greatness really is,—until they know that greatness is not a matter of passing fame, but of abiding worth moral and spiritual, and that in a democracy no man is great who does not greatly serve.

I would warn parents against the danger of filling the shrines of their children with second and third and even fifth rate figures. Parents must have the courage to say to a child—"This man, however well-known is not worthy of your respect for he lacks nobility. This man, however rich or powerful, however numerous his benefactions, is not a truly great and noble persons."

We owe our children the truth at all times and under all circumstances. Let parents be generous in their appraisals of the worthy, but let them be unsparing in the condemnation of those who are unworthy of a child's love and reverance.

The following list of books may be helpful. Parents who do not care to purchase these books may request that they be placed upon the shelves of the public library in their town. The Boy's Life of Roosevelt by Herman Hagerdorn, published by Harpers, New York, price $1.25; The Theodore Roosevelt's Letters to His Chil

ren, published by Chas. Scribner's Sons, New York, price $2.50; The Boy's Life of Abraham Lincoln by Helen Nicolay, published by The Century Co., New York, price $1.50; George Washington, an historical biography by Horace E. Scudder, published by Houghton Mifflin Co., Boston, Mass., price $.75.

A BABY IN A WINDOW

I HAD been riding all day in a train. I had been looking for hours into the face of the fields, trees, factories, stumps, men behind plows, and other things common to the eyes of a window watcher.

But as the train slowed into a small town, a view caught my sight that stamped itself upon my mind and brought up whole volumes of speculation. I saw a man, rought in appearance, with his sleeves rolled up, holding a little baby tight in his arms.

Raphael never painted a picture more beautiful than that in the window frame.

It is possible for that baby to become president of the United States! Nearly fifty other babies who have been held in windows, have become that. But more likely that baby will grow up and become a part of the millions who make up all that is good and bad in the world. We are fervently hoping that it will form its way toward all that is good.

The man or woman who doesn't feel the pull of a baby's smile, isn't worth being a part of space or time.

It's the baby that we keep carrying around in our hearts till the end of the journey ,that keeps us human, and kind, and generous, and strong.

If that man had been holding a basket of stocks or bonds, or gold eggs, I would have had a lot of pity for him. But he held a baby; And so I loved him—and, without his knowing it, I placed him among the great of the earth.

Always be glad when you see a baby in a window—or anywhere else !

BRIGHT SAYINGS OF CHILDREN

Alice Margaret, age two years and nine months, went with Mama to the chicken house, found about twenty hens on the nest and with wonder showing in her eyes said: "Oh, Ma ma, the chickens have all gone to bed."—*Submitted by Mrs. W. E. O., one of our readers.*

Wallin, aged two and a half was helping his father get his Christmas tree ready for Santa. As the father tried the lights which he was placing on the tree to see if the wiring had been properly attached, Wallin insisted on pushing the button, and as the lights went out he asked: "Daddy, where do the lights go when you put them out?"

The Children's Hour

DEAR CHILDREN: Perhaps this is just a little early to think of swimming, but certainly you all can go on a hike, find pussy willows and the first violets and dogwood and the boys can also fish—that greatest of all boys' sports and what boy does not like to fish ! We have never seen one who does not, anyway.

And very soon Decoration Day will be here. Let's plan ahead for it by planning on planting a tree in just the best spot on farm, either replacing a fruit tree in the orchard or planting a shade tree just where it is needed, and naming it for the one we would remember who is gone. You can help in this work just as well as the grown ups—can talk about it and get father and mother interested and what a wonderful way to erect a living monument for those whom we would remember on Decoration Day. This is a new custom—combining our Arbor Day with Decoration tion Day and we think it very nice and appropriate.

When you find your first flowers in the woods, write and tell me about them — where they grow and their names. How many varities grow near you? You know there are very few localities now where the Lady Slipper grows, and it is such a beautiful wild flower. It resembles very much the orchid which is the most expensive hot house flower that is marketed. I wonder if many of you have ever found this dainty little flower. Tell me about what you do when you go to the woods and what you find. Affectionately yours—*LADDIE.*

OUR BOYS AND GIRLS

Dear Laddie—My father takes the M. B. F. I read the letters over and over. For pets I have two cats, their names are Dodo and Chase. We have 3 horses and a tractor. We live on a 200 acre farm. I will write a riddle. A riddle, a riddle as I suppose, hundreds of eyes and never a nose. Answer is a cinder sifter. Yours truly, Helen Wilson,

Dear Laddie—This is the first time I have ever written to you. We take the M. B. F. and we all have one part of the paper which we like best. Of course I like "The Children's Hour" page best, although I like to look at the whole paper. We live on a forty acre farm. We have four horses, six cows. My father is dead and so my big brother who is 26 years old works the farm. I am 13 years old and I have a sister and brother younger than I. I passed the 8th grade exams last year. I am much interested in the story which is being published called 'Hearts of Three".—Angeline Dolley, Saginaw, Mich., R. 2.

Dear Laddie—I have written once before, but did not see it in print. I am a farmer's boy 10 years old and in the 6th grade. My teacher's name is Miss Margaret McCuaghna. I like her very well. I thought I would draw a picture to win a prize, but I do not know if I will get one or not.—John Hartman, Gaines, Mich.

Dear Laddie—I am a boy 12 years old and in the 6th grade. My teacher's name is Miss Mable Ludington. We live on an 80-acre farm 3 1-2 miles from town. I am sending an original drawing with this letter. I will close hoping to see my letter in print.—Grant Rose, Yale, Mich.

Dear Laddie—This is the first time I have written to you. I am a boy 10 years old. My father takes the M. B. F. and likes it fine. I live on an 80-acre farm. We have 3 horses, 6 cows, 3 calves and 23 head of sheep. I go to school and am in the 5th grade. My teacher's name is Miss Mutch. Hoping to see my letter in print I will close.—Leverne Alpin, Alger, Mich.

Dear Laddie—I have written to you before. I like the Children's Page and wish some of the boys and girls would write to me. I have a nephew and two nieces. I go to school and am in the fifth grade. My teacher's name is Florence Freed. I like her very well. I am 11 years old.—Laura Bennett, West Branch, R 3.

Dear Laddie—I have read the letters in the M. B. F. but have never seen one from Millersburg. I am eight years old and in the fourth grade. I weigh 118 pounds. I have a good teacher, his name is Lewis Steele. I have the whooping cough now and nearly all of the girls and boys in our school have it. My father to'd me if I would pass my grade this year he would buy me a sheep. I live on a 160 acre farm. For pets I have a dog named Snyder and a little white hen named Noodles. We have five cows, three horses, three young cattle and two pigs I have no brothers or sisters, but I have a little cousin who lives a mile and a half from here. His name is Robert. But I shall call him Bobbie. Here is a riddle: Over the water and under the water and never touches the water. Answer—a duck egg.—Marie Storms, Millersburg, Mich.

Dear Laddie—I have been reading the Children's page and thought it was very interesting so thought I would write. I am a girl 14 years of age and am in the 8th grade at school. My teachers name is Miss Phelps and think she is just fine. Our school is going to close the 30th of April. I have four brothers and one sister. My sister's name is Ethel she is 10 years old. My father has taken the M. B. F. for three years and could not get along without it. Hoping to see my letter in print.—Your truly, Louise Gagnon, Birch Run, Michigan.

Dear Laddie—I am a girl, 9 years old, and in the 4th grade at school. I like to go to school very much. My teacher's name is Arthur Bowman, and I think he is a very good teacher. My father takes the M. B. F. and likes it fine. I live on an 80 acre farm. I have 6 brothers and one sister. For pets I have 3 cats, 1 dog, we have 4 horses, 5 cows, 2 calves and 1 pig and 45 hens and 3 ducks. I made out the bird puzzle and thought I would send it in and see if it was right. Hoping to see this in print, will close for this time.—Miss Katherine Docherty, North Branch, R 5, Michigan.

CITIES WITHIN CITIES

BY WALTER WELLMAN

You will see the names of five cities printed on the board. Pana is in Illinois, Peru is in Indiana, Lima is in Ohio, Reno is in Nevada and Ilion is in New York. If you will fill in the right letters, you will have cities in California, West Virginia, Connecticut, California and Delaware respectively. What are they?-

Answer to last week's puzzle: POLECAT and CHEETAH.

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

Further measures were taken last week by the Federal Reserve Banks to check commercial demands for loans by advancing the rediscount rate to 6 per cent, while the Executive Council of the American Bankers' Association appointed a special committee to consult with the Reserve Board with the same purpose in view. The Council even adopted a resolution proposing a system of rationing credit to be applied by the Board. The enormous pressure upon producers and shippers by the stoppage of commodity deliveries because of the interminable strikes in the transportation service has been added to natural causes for credit scarcity. In the Southwest complaint is now being heard that the cattle men are finding it difficult to get money to carry on their operations as usual, and all grain dealers are under pressure. The resumption in the advances in prices, reported by the Federal Reserve Board agents, is a further bad sign of the times; because the advances are chargeable to "inefficiency and underproduction," as well as to the expense of getting capital, which is adding to the already high costs of production, always paid by the consumer when there is a scarcity. The hopeful sign to the Board, from the consumer's point of view, is, they say, the "anxiety concerning the over-strained situation resulting from high prices and wages." But is the anxiety found where it should be most acute—in the minds of those most responsible for both phenomena?

The agricultural outlook, the Board say, is "distinctly less satisfactory than it was in March," and the industries are represented as slowing down, at least insofar that as a whole they are not booked so far ahead, although unfilled orders are still large. The steel industries have made the suggestion and may yet themselves enforce it, that the production of pleasure motor cars be cut down 50 per cent in order that railroads may be given the steel so greatly needed to put them into efficient condition to render adequate service next winter. The continued scramble of the public for goods of all sorts, necessary and unnecessary, with exports also running heavy, gives the same impression of healthy business prosperity, to question the quality or permanence of which is however to enroll one's self among the pessimists and knockers who never are popular.—*Price Current Grain Reporter.*

WHEAT IN DEMAND

WHEAT PRICES PER BU., MAY 11, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.97		3.23
No. 2 White	2.95	3.08	3.23
No. 2 Mixed	2.95		3.25
PRICES ONE YEAR AGO			
No. 2 Red	2.70	2.50	2.38
No. 2 White	2.68	2.47	2.33
No. 2 Mixed	2.68	2.47	2.30

Wheat has forced itself into the limelight the past few weeks with almost daily advances owing to demand from abroad that some Eastern dealers say is almost unlimited. Exporters are bidding in all market at all times and are ready to pay most any price to secure this grain. The trouble, it is said, is not due so much to the amount wanted as to the pressing need of immediate supplies. Leading bankers of the East are quoted as saying that they believe the crest of high prices had passed and a few days of active movement on the railroads would satisfy the foreign demand sufficiently to bring a decline in prices. Farmers in most of the wheat sections appear to be willing to sell at the present level of prices, but shipping will have to improve considerable before much of the wheat still in the farmer's hands can be marketed.

Regarding a continued demand from overseas we quote the following from the *Rosenbaum Review*:

"There is and will continue to be an insistent foreign demand for cereals of all kinds for the next three months. Do not confuse the immediate action of the markets in response to that demand with what we think will happen on the long pull after August. Prices now might go to any altitude!"

So there you are; the bankers say lower prices and the editor of the *Rosenbaum Review* makes a statement to the contrary. I, personally, am inclined to believe the editor.

LAST MINUTE WIRES

DETROIT—Oats lower. Wheat, corn and rye firm. Beans inactive and steady. Hay continues firm. Hogs steady. Cattle higher.

CHICAGO—Corn, oats and wheat advance and market remains firm. Hogs higher. Cattle lower. Provisions higher.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

CORN STEADY

CORN PRICES PER BU., MAY 11, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		2.10	2.20½
No. 3 Yellow	2.05		
No. 4 Yellow	2.00		
PRICES ONE YEAR AGO			
No. 2 Yellow			2.02
No. 3 Yellow	1.80	1.80	2.00
No. 4 Yellow	1.77	1.78	1.98

There continues to be a bearish feeling in the corn market and the situation is getting to be very serious owing to the shortage on hand and the impossibility of securing more in quantities large enough to satisfy the demand.

Reports from various points in the country forecasts an increase in the corn acreage this year owing to the late spring which kept farmers from planting oats until it was too late so they will plant most of the ground intended for oats to corn, providing weather conditions are favorable.

OATS HIGHER

OAT PRICES PER BU., MAY 11, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.28	1.16¼	1.43
No. 3 White	1.27	1.15	
No. 4 White	1.26		
PRICES ONE YEAR AGO			
Standard	.73½	.73¼	.81
No. 3 White	.73	.70	.79
No. 4 White	.72	.68	.78

The demand for oats is not decreasing, in fact if it has changed any I believe it is increasing, due to dealers who have taken orders that they promised to fill this month. The East is in need of millions of bushels of this grain and it is thought that oats would bring $1.50 a bushel in New York if they were available. There is a large amount of Canadian oats that can be secured and dealers may try to buy these to relieve the present shortage.

According to late reports, what oats farmers were able to sow this spring are growing fine, but in some sections favorable weather came too late in the season, which may mean a short crop of oats for 1920.

RYE SITUATION ACUTE

It is said that more rye has been sold for abroad than is in the visible supply, but it will take heavy exports to get rid of all the stock on hand. Big shipments are being made by lake from Duluth to eastern ports in order to get the grain overseas.

Rye on the Detroit market is inactive and firm at $2.20 per cwt., for No. 2.

BEANS ADVANCE

BEAN PRICES PER CWT., MAY 11, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.75	7.75	7.75
Red Kidneys		13.25	15.25
PRICES ONE YEAR AGO			
C. H. P.	8.00	7.75	8.00
Prime	7.00	7.00	7.25
Red Kidneys	11.50	11.50	12.25

Firmness was a characteristic of the bean market for the past week. New York and Chicago report an advance in botn C. H. P. and Red Kidneys. The market in Detroit is steady and inactive.

POTATOES FIRM

SPUDS PER CWT., MAY 11, 1920		
	Sacked	Bulk
Detroit	7.23	
Chicago	7.40	7.25
Pittsburg	7.23	
New York	6.00	
PRICES ONE YEAR AGO		
Detroit	2.10	2.00
Chicago	2.00	2.00
Pittsburg	2.40	2.30
New York	2.50	2.35

Offerings of potatoes continues to be small on nearly all markets. Canada is supplying most of the demand, which is small, on the Detroit market as Michigan buyers are shipping out of the state to better markets. Chicago continues to receive more shipments than other large cities and consumers are readily taking all that is offered. Dealers there predict higher potato prices. It must be remembered, however, that southern potatoes will soon arrive in quantity and be a factor in making the price.

Markets continue high, although there is some gain in deliveries where freight tie-ups were particularly acute. Strikes of one sort or another continue, however, to restrict the movement of hay and this with the increasing activity in farm operations is holding back shipments and sustaining prices. Meadows and pastures on the other hand, are improving rapidly and the shipping demand in markets tributary to these feeding districts is falling off. It is the general feeling that values are on the decline, but the freight movement is at present so slow that markets are dropping back to normal very gradually and the uncertainty of labor's next move creates a decidedly speculative situation.—*Hay Trade Journal.*

LIVESTOCK MARKETS

DETROIT—Cattle: The heavy market grades above 1,000 pound average about 50c to $1.00 lower, good demand for light; best heavy steers, $11.50@12.50; best handy weight butcher steers, $11@11.50; mixed steers and heifers, $10.50@11; handy light butchers, $9@9.75; best cows, $9@10; butcher cows, $7.50@8.75; cutters, $6; canners, $5@5.75; best heavy bulls, 50c@$10; bologna bulls, $8.50@9; stock bulls, $8@8.50; milkers and springers, $85@115. Veal calves: Market strong account light receipts, will sell much lower; best $17@19; others, $10@14. Sheep and lambs: Market steady; quality very common, best lambs, $16.50@17; fair lambs, $13@14.25; light to common lambs, $8@11.50; fair to good sheep, $10@11; culls and common, $5@7. Hogs: market steady mixed hogs, $15@15.35; pigs, $15.25; heavy hogs, $14@14.50; roughs, $12.

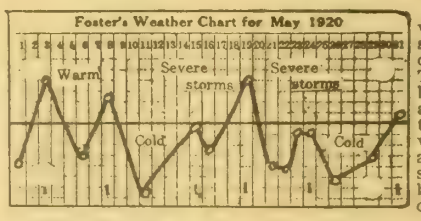
CHICAGO—Cattle: Medium and heavy beef steers slow, mostly 25c lower; light and yearlings steady to lower; top yearlings, $13.75; top heavy cattle, $13.65; bulk, $11.50@13.40; butcher stocks generally steady, supply light; veal calves are steady; bulk, $11.50@12.50; stockers and feeders steady. Hogs: mostly 10 to 25c higher, medium advancing most; top, $15.60; bulk light, $15.25@15.40; bulk 250 lbs. and over, $14.10@14.90; pigs, steady to 25c lower; bulk, 100 to 125 pounds $13.50@14.50. Sheep: Unevenly strong to 25c higher; bulk shorn lambs, $17.50@19; good 102 lbs. shorn lambs, $15; few prime shorn ewes, $13.50.

DETROIT PRODUCE MARKET

The produce market is not well supplied in any line and trading is slow. Apples are steady and inactive and other fruits quiet. Consumers want hens and chickens, but receipts are not enough to fill the need of the trade. Dressed hogs are scarce and firm, but offerings of dressed calves is sufficient and an easy market is quoted. Butter is in fair supply and quiet. Consumers and packers are taking eggs freely and all receipts are easily taken care of.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., May 15, 1920—Warm waves will reach Vancouver, B. C., about May 16, 20, 27 and June 2 and temperatures will rise on all the Pacific slope. Cross crest of Rockies by close of 17, 21, 28 and June 4; meridian 90, upper great lakes, Ohio-Tennessee and lower Mississippi valley 19, 23, 30 and June 5; lower great lakes and eastern sections 20, 24, 31 and June 6; reaching vicinity of Newfoundland about May 21, 25, June 1 and 7. Storm waves will follow about one day behind the warm waves, cool waves about one day behind storm waves.

Last half of May will bring exceedingly important cropweather that will be bad for winter wheat in most sections but may bring rain to some dry sections in the middle southwest. The second of these great storms will be due on meridian 90 near May 27 and I am now in doubt as to which of these two storms will be the most severe. Better watch both of them. I am expecting floods from these great storms in the great central valleys but can not now more definitely locate them.

Severe storms are expected during the week centering on June 4 and, following them, frosts will go further south than usual. Those storms will be the end of the present kind of cropweather. Slowly, gradually, rainfall will increase in two-thirds of the sections that have been too dry and decrease in two-thirds of the sections where it has been too wet. The general results will be favorable to better cropweather and better prospects for good crops.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, a New York millionaire, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis,' to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. Francis explores another island where he meets a young man who gives his names as Henry Morgan and proves to be a relative of Francis.' He is also hunting for the treasure. They form a partnership. Francis learns that Henry is the lover of the girl he met and that her name is Leoncia Solano. Francis returns to the first island where he is captured by Torres and the Jefe Politico of San Antonio. They proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang him when Henry appears. They release Francis and throw Henry into prison. The Solanos and Francis release Henry and they escape to the boat that Francis has chartered. They are pursued by Torres and the Jefe with his soldiers. They land on an island where they procure horses and start through the hills with the Jefe and his gang in pursuit. Torres with the Jefe and his gendarmes succeed in capturing the Morgans and their friends, but as they are about to torture Henry and Francis they are surrounded by a band of men. These men are followers of a blind-man, called "The Cruel Just One," who lives in the hills. The men take their captives before their leader who passes judgment on them. The Morgans and Solanos are freed. A price is put on the Jefe's head, which Francis pays, then the Jefe, Torres and their soldiers are freed also. Francis protects a peon who to show his gratitude tells him that his father will lead them to a hidden treasure. The peon and his father with the Morgans start on a search for the treasure. Leoncia follows and at the end of the first day catches up with them. They are attacked by a band of strange men, but they succeed in driving them off and again resume their search.

"WHERE there's smoke there's fire," Henry adjudged. "Not for nothing did the Mayas select this God-forsaken spot and stick those eyes of Chia on the cliff."

"Looks as if we'd made a mistake in leaving the old gentleman and his sacred knots behind," Francis said. "The knots should tell all about it and what our next move should be."

"Where there are eyes there should be a nose," Leoncia contributed.

"And there is!" exclaimed Francis. "Heavens! That was the nose I just climbed up. Were's too close up against it to have perspective. At a hundred yards distance it would look like a colossal face."

Leoncia advanced gravely and kicked at a decaying deposit of leaves and twigs evidently blown there by tropic gales.

"Then the mouth ought to be where a mouth belongs, here under the nose," she said.

In a trice Henry and Francis had kicked the rubbish aside and exposed an opening too small to admit a man's body. It was patent that the rock slide had partly blocked the way. A few rocks heaved aside gave space for Francis to insert his head and shoulders and gaze about with a lighted match.

"Watch out for snakes," warned Leoncia.

Francis grunted acknowledgment and reported:

"This is no natural cavern. It's all hewn rock, and well done, if I'm any judge." A muttered expletive announced the burning of his fingers by the expiring match stub. And next they heard his voice in accents of surprise: "Don't need any matches. It's got a lighting system of its own—from somewhere above—regular concealed lighting, though its daylight all right. Those old Mayas were certainly some goers. Wouldn't be surprise if we found an elevator, hot and cold water, a furnace, and a Swede janitor—Well, so long."

His trunk, and legs and feet disappeared, and then his voice issued forth:

"Come on in. The cave is fine."

"And now aren't you glad you let me come along?" Leoncia twitted, as she joined the two men on the level floor of the rock-hewn chamber, where, their eyes quickly accustoming to the mysterious gray percolation of daylight, they could see about them with surprising distinctness. "First, I found the eyes for you, and, next, the mouth. If I had not been along, most likely, by this time, you'd have been half a mile away, going around the cliff and going farther and farther every step you took."

"But the place is bare as old Mother Hubbard's cupboard," she added the next moment.

"Naturally," said Henry. "This is only the antechamber. Not so sillily would the Mayas hide the treasure the conquistadores were so mad after. I'm willing to wager right now that we're almost as far from finding the actual treasure as we would be if we were not here but in San Antonio."

Tweve or fifteen feet in width and of an unascertainable height, the passage led them what Henry judged forty paces, or well over a hundred feet. Then it abruptly narrowed, turned at a right angle to the right, and, with a similar right angle to the left, made an elbow into another spacious chamber.

Still the mysterious percolation of daylight guided the way for their eyes, and Francis, in the lead, stopped so suddenly that Leoncia and Henry, in a single file behind, collided with him. Leoncia in the center, and Henry on her left, they stood abreast and gazed down a long avenue of humans, long dead, but not dust.

"Like the Egyptians, the Mayas knew embalming and mummifying," Henry said, his voice unconsciously sinking to a whisper in the presence of so many unburied dead, who stood erect and at gaze, as if still alive.

All were European-clad, and all exposed the impassive faces of Europeans. About them as to the life, were draped the ages-rotten habiliments of the conquistadores and of the English pirates. Two of them, with visors raised, were encased in rusty armor. Their swords and cutlasses were belted to them or held in their shriveled hands and through their belts were thrust flintlock pistols of archaic model.

"The old Maya was right," Francis whispered. "They've decorated the hiding place with their mortal remains and been stuck up in the lobby as a warning to trespassers. Say! If that chap isn't a real Iberian! I'll bet he played haia-lai, and his fathers before him."

"And that's a Devonshire man if ever I saw one," Henry whispered back. "Perforated dimes to pieces of eight that he poached the fallow deer and fled the king's wrath in the first forecastle for the Spanish Main."

"B-r-r!" Leoncia shivered, clinging to both men. "The sacred things of the Mayas are deadly and ghastly. And there is a classic vengeance about it. The would-be robbers of the treasure-house have become its defenders, guarding it with their unperishing clay."

They were loath to proceed. The garmented spectres of the ancient dead held them temporarily spellbound. Henry grew melodramatic

"Even to this far, mad place," he said, "as early as the beginning of the conquest their true hound noses led them on the treasure scent. Even though they could not get away with it, they won unerringtly to it.—My hat is off to you, pirates and conquistadores! I salute you, old gallant plundereds, whose noses smelt out gold and whose hearts were brave sufficient to fight for it!"

"Huh!" Francis concurred, as he urged the other two to traverse the avenue of the ancient adventurers. "Old Sir Henry himself ought to be here at the head of the procession."

Thirty paces they took, ere the passage elbowed as before and, at the very end of the double row of mummies, Henry brought his companions to a halt as he pointed and said:

"I don't know about Sir Henry, but there's Alvarez Torres."

Under a Spanish helmet, in decapitated medieval Spanish dress, a big Spanish sword in its brown and with-

VOTING OF NON-RESIDENT

If a man, who owns no property and pays no taxes anywhere, moves into another county, can he and wife come back into the county they left and vote? They have an old shanty put up on her father's place here. Would that give them the right to vote here, or must they vote where they reside? Can a man who owns a farm here, but resides in Flint, and whose son became of age in Flint, bring his wife and son and come here to vote? Can a man who is treasurer dispose of all his property here, move to another county and go into business there, own his home and live there for the last seven months, still hold township treasurer here, and can himself and wife come back here and vote? He owns nothing here now.—K., Gladwin County.

A person is entitled to vote only in the place of his residence. Residence is largely a question of intent if there is an opportunity for two places. For if one gains a residence in one place and is temporarily absent with the intention of returning he does not loose his original residence and does not gain one in the place of his temporary quarters. He would be guilty of violating the criminal law if he voted in both places. An "old shanty" may be a sufficient residence to satisfy the law.

If the person described RESIDE in Flint they cannot vote elsewhere, but if they are there only temporarily and have a RESIDENCE in your county they may return to vote.

If the treasurer has no place in your county which can be termed a residence and he has taken up his residence elsewhere he can not return to vote, and has vacated his office by moving away.—*W. E. Brown, legal editor.*

MILLET WITH CORN

Can millet be sown with corn? The majority of farmers sow about the 15th of June. It just gets a start when the grasshoppers come and destroy lots of it. What I would like to know, will it do when it is sown early, and how much seed should be used to an acre.—C. C. H., Wexford County.

It is not advisable to sow millet with corn. If a green manuring crop is desired to plow under next spring would suggest sowing rye in the corn during the latter part of September. If fall pasture is desired would suggest sowing from 4 to 6 pounds of Dwarf Essex rape per acre in the corn at the last cultivation.

Millet is generally used as a hay crop in theis state, the best time of seeding being the first of June, the crop in this state, the best time of ing the first part of August. One-half bushel per acre is sufficient.—*C. R. Megee, Ass't Prof. of Farm Crops, M. A. C.*

RELEASING A BONDSMAN

What is the best way to withdraw from a bond I signed as administrator bond. The widow got married again and I don't like the way this man is running the business. The bonds are only on personal property.—R. P., Bay County.

You cannot be released from your liability on the bond until discharged by the judge of probate. You should petition the judge of probate to be released on your bond, have a day for hearing fixed and a citation to the administratrix and the other bondsmen if another was required. Show the reasons why you desire to be released. If the judge does not see his way clear to your release and the requirement of another bondsman they try some other form like a petion for the removal of the administratrix and the appointment of another. You should see to it that the required reports by the administratrix is also filed and that everything required be in the report. If the estate is not all accounted for and any misappropriation has occurred the judge of probate will be in position to then take such action as the facts will warrant for your protection.—*W. E. Brown, legal editor.*

BEANS ON NEW GROUND

Is it advisable to plant navy beans on new ground that produced a poor crop of potatoes due to drought the year before? —S. C. H., Nessen City, Mich.

New ground that has been in potatoes last year should be in condition to produce a crop of beans this season. An increased yield and a surer crop can be secured by plowing the ground at an early date this spring, and working thoroughly with disc or spring tooth to an excellent condition at bean planting time.

The use of 250 or 300 pounds of acid phosphate or commercial fertilizer high in phosphorus, applied broadcast or through fertilizer attachment on drill when fitting seed bed, will pay good returns.

Beans are planted between the 1st and 20th of June. On land which is well prepared, planting in the early days of that period is advised.—*J. F. Cox, Professor of Farm Crops, Michigan Agricultural College.*

CONTRACT WITH TELEPHONE COMPANY

Nine years ago the farmers around here built what is called the Grand River Farmers' Telephone Co. We got our own poles, put them up, with wires, insulators, etc, complete, to the main line. We made a contract with the Michigan State Telephone Co for ten years and now they are raising our rates. Can they violate a contract? There are several farmers' Telephone Companies around here, they have not raised their rates, and their contracts are similar to ours. Will you please give me some idea what we can do about it? Who are, and where can we find the utility commission.—F. W. T., Ottawa County.

I believe that the Rural Telephone companies, similar to yours, comes under the regulation of the Michigan Public Utilities Commission, Lansing, Michigan. The question of rates of public utilities seems to be under the control of the Commission. They should be informed of all of the facts of the investment, of the use they make of your lines, the expense and all of the matters that would affect the income based on the investment and labor performed. You can get into touch with the Commission by addressing them at Lansing.—*W. E. Brown, legal editor.*

REROUTING R. F. D. ON ACCOUNT OF BAD ROADS

I would like your advice in regard to trouble we are having on our R. F. D. Part of the road by our place is thru swamp and is in pretty bad shape. Now there has been money raised to fix this road still they don't fix it up and now they are talking of dropping this two sections and just going 1 1-2 miles along one end to accommodate two families and cutting off nine families on the other three sides. I would like to know if there is anything we could do to prevent their cutting off these two sections? My mother takes M. B. F. and we all like it fine so we are turning to this paper for advice. Can any one else beside the road commission fix this road and get their pay for it from the town. Wishing you every success, I remain yours truly. —A. F. F.

I am of the opinion that you would have to maintain a good and passable road or the postal authorities would be justified in changing the route. It would be best to talk the matter over with the postmaster. The highway commissioner has charge of the highways, and you might be able to make arrangements with him to take the buildings of the road among persons who are interested in its maintenance and he pay you the money voted for its improvement. Better talk with him about it.—*W. E. Brown, legal editor.*

RENTING EQUIPPED FARM

Can you please tell me the usual way of renting a farm where everything is furnished. I have rented my father's farm of 80 acres and he furnishes six cows and gives me half of the cream and milk and half of the increase. He furnishes horses and tools and seed, otherwise he claims I should furnish all binder twine, paris green and all other expenses. Would I be obliged to furnish all the feed for these cattle and horses and give him half of the produce? Would it not be better to rent it on a straight 50-50 basis.—H. C. S., Osceola County.

Localities differ so much in the value and fertility of the land and conveniences that no set rule or even a usual rule can be said to be established and the rental should be determined fully in each case. There have been many cases of "furnish half and take half." I have known of many cases where the owner furnished everything and the tenant received one-third. I would personally be of the opinion that you had a very favorable contract with your father upon the terms proposed by him.—*W. E. Brown, legal editor.*

BUSINESS FARMERS' EXCHANGE

FIVE CENTS A WORD PER ISSUE. MINIMUM size accepted, 20 words. To maintain this low rate, we are compelled to eliminate all bookkeeping. FOR SALE
One 22 h. p. Port Huron engine; one 32 x 54 Wood Bros. Thresher; one size 10 Reeves Clover Huller; one size 21 Rosenthal Silo Filler; one mounted steel water tank. All the above is fully equipped, always been housed and ready to go to work. Would make a good rig for a company of farmers. Will sell reasonable or trade for good truck. SHERMAN COX, R 1, Osseo, Mich.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or commissions. If you want to sell or trade your farm, send in your ad today. Don't just talk about it. Our Business Farmers' Exchange gets results. Address The Michigan Business Farmer, Adv. Dept., Mt. Clemens.

BREEDERS DIRECTORY

(SPECIAL ADVERTISING RATES under this heading to honest breeders of live stock and poultry will be sent on request. Better still, write out what you have to offer, let us put it in type, show you a proof and tell you what it will cost for 13, 26 or 52 times. You can change size of ad. or copy as often as you wish. Copy or changes must be received one week before date of issue. Breeders' Auction Sales advertised here at special low rates: ask for them. Write today!)
BREEDERS' DIRECTORY, THE MICHIGAN BUSINESS FARMER, Mt. Clemens, Michigan.

CLAIM YOUR SALE DATE

MR MILK PRODUCER
Your problem is more MILK, more BUTTER, more PROFIT, per cow.
A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.
Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.
He is one of the greatest long distance sires. His daughters and sons will prove it.
Write us for pedigree and prices on his sons.
Prices right and not too high for the average dairy farmer.
Pedigrees and prices on application.
R. Bruce McPherson, Howell, Mich.

FOR SALE
THOROUGHBRED HOLSTEIN COWS
combining blood of Traverse City and Maple Crest stock, granddaughters of Friend Hengerveld De Kol Butter Boy.
Prices $300 and up
WILLIAMS & WHITACRE
R. F. D. No. 4 Allegan, Mich.
